Students of rural life have often remarked upon the influence good live stock exerts on a community. Go into the most prosperous sections and they usually will be found centers of live stock production—and it is not beside the fact, to say that in most cases the prosperity of the community is in direct proportion to the character of the live stock. Again, the most prosperous farmers and ranchers are usually live stock men. There is something about the association with good animals of any kind that makes a man bigger and broader and finer. There is a sentiment about the production of live stock that is lacking in most lines of business—and sentiment goes far to make life worth the living. Show me a successful breeder, and I will show you a man big in heart and brain—a man the community is proud of.

I know one of the most successful business men in this state, a banker and a lawyer, and this man once said: "If I had my life to live over, and knew as much as I know now, I would devote my life to growing improved live stock. Since starting a herd of pure bred cattle, I have found a greater satisfaction than I ever found in business, and I know I am a better man." Is it strange then, that if live stock can remake communities and men, that the George Junior Republic has found that one of the surest and easiest ways in which a boy's interest can be gained is through well bred animals?

And the statement, that a better man can be made by using a $500 cow than by using a $50 cow! Think that over. Did you ever hear a better argument for improved live stock? Frankly, I never did. If good animals make better men in that little Republic up at Chino, what about our larger Republic?

Not all the live stock on the farm are pure bred, but a beginning has been made, and the foundations for the herds of Holstein cattle and Duroc-Jersey hogs have been carefully laid.

It is Manager Condee's plan to build up the herds by breeding, rather than buying, and he proposes to develope the herds in the most constructive way. He is especially firm in his belief that long distance production in a herd is worth more than seven and 30-day records, and the herd is being handled along lines calculated to establish persistent milk records.

The herd of hogs is of more recent establishment but in the short time they have been a part of the live stock operations a considerable herd has been built up.

Mr. Condee has found that one of the best ways to stimulate the interest of the boys is through showing the Republic's live stock at the fairs. A sense of pride and a desire to excel is developed in the "citizens," and the acquaintance the boys make with other successful exhibitors serves to give them a new and valuable viewpoint.

Good buildings, naturally, are a part of the general scheme. A new milking barn, and milk house, both thoroughly modern, have recently been completed, and a cattle barn is now under construction.

As an institution, the Republic is destined to be a factor in the live stock development of Southern California, and it will surely serve as a splendid testimonial to the value of improved live stock in the development of better men and communities.

Prize Calves Make Prize Boys

Agricultural News Notes of the Pacific Coast

Northern California

Many silos are being filled on farms in Grass Valley.

Esparto, Yolo County, is to have a new condensed milk plant.

Cordelia, Solano County, reports many cherry orchards showing heavy bloom.

Olive growers in the Roseville district of Placer County are getting $200 a ton.

A sale of 80,000 acres of timber land has been made in the Klamath Indian reservation.

On the first night of the salmon fishing season on Eel River 100 tons of fish were brought in.

Late planted beans in the Sacramento Valley have had their yield increased by early rains.

Five thousand acres more than last year's wheat plantings have already been pledged in Butte County.

Twelve thousand acres of beans are being harvested in the Natomas district, north of Sacramento.

The farm bureau of Placer County has purchased a tractor to help in preparing small tracts of ground.

With the close of the deer season it is estimated that more than 100 were killed in Nevada County alone.

Cattle and sheep which have been pasturing in the Tahoe national forest are being sent out to winter grazing lands.

Harry P. Stabler, formerly county horticultural commissioner of Sutter County, is again a candidate for that office.

Eight dredgers and six ditchers are at work in district 1500 of Sutter Basin. It is anticipated the work being done will reclaim 66,000 acres.

The government will grade rice this year and for that purpose has taken over the office of the Pacific Rice Growers' Association at Sacramento.

There has been an early snow fall at Summit in the Sierras which has warned stock men to rush their grazing herds out as quickly as possible.

California's honey crop for 1918 is valued at nearly two million and a half dollars by Manager Massey of the California Honey Producers' Cooperative Exchange.

The Nevada County farm bureau plans to hold its annual farm meeting early this month in Grass Valley. There are 13 local centers in the county organization.

Four hundred head of beef cattle driven down from Big Valley were shipped from Redding to San Francisco markets last week. The bunch was valued at $48,000.

The September and October rains caused considerable damage to crops in the Sierra Valley of Sierra County. There is some compensation in the green pasturage afforded.

Supervisors of Nevada County have been requested to double the bounty schedule on predatory animals. This request is made at this time because of the campaign urging farmers to raise more sheep.

The Butte County board of supervisors has petitioned the priorities board to postpone until after the war construction of the bridge on the Oroville lateral of the state highway across the Feather River. The board considers the expense not justified by war needs.

Central California

Manzanillo olives are now being harvested in Tulare County.

Tulare County growers of pomegranates are receiving $1.50 for a half box net.

Four carloads of cattle were shipped last week from Indian Wells, Kern County.

Potato growers of the Salinas Valley are planning to organize a marketing association.

W. Flanders Setchel of Fresno estimates the rain damage to Muscat raisins at 25 per cent.

Many raisin growers of Fresno Country are planning to buy hogs to feed on damaged raisins.

The Oakdale Almonds Growers' Association has shipped out eight carloads of nuts this season.

Because of the demands of the rice growers the irrigation season of the Oakdale district was prolonged three weeks.

An average price per head of $90.50 was secured at the sixth semi-annual auction sale of Poland-Chinas, held at Hanford October 9.

Mayor Edw. Berwick of Pacific Grove is purchasing necessary tools to plant and cultivate potatotes in the yards and gardens of that town.

Plans are being made for establishing schools for the children of fruit workers who go from section to section following the fruit harvest.

Supt. Chenoweth of Bakersfield has suggested that the school trustees close the schools for three weeks that the children may help pick cotton.

The first carload of Terra Bella canned tomatoes was shipped East for government use. The entire season's pack has already been disposed of.

Hanford creameries paid out $250,000 for cream checks last month. The highest price was paid by the Corcoran creamery, 68.7 cents for sweet cream.

At the recent semi-annual consignment sale of the Kings County Poland-China Breeders' Association 80 head of pure breds were sold at prices ranging from $100 to $265.

The Madera Weekly Tribune reports that 60 boys and 70 girls of the Madera high school worked with the raisin growers in saving the raisins threatened by rain damage.

An irrigation committee to guard against waste of water in Merced County has been appointed by the state council of defense. It is composed of W. C. Dallas, J. F. Clyne and J. F. Grass Jr.

A farm labor conference has been called for November 8 at San Francisco. All state organizations have been asked to send delegates, the conference to be held in the office of the state council of defense.

The prune and apricot exposition held at Mountain View, Santa Clara County, attracted a large attendance. In addition to the exhibits of dried fruit there were displays of all other agricultural crops, rabbits and poultry.

The state council of defense has three branches of a rolling tractor school ready for operation. One will move southward from Madera, one north along the Coast from Ventura County, and the third north up the valley from Modesto.

Southern California

Bean threshing is on in the Talbert section.

Feeder cattle are coming into Brawley from Arizona.

Imperial Valley's 1918 turkey crop is estimated at 80,000 birds.

New York has paid the record price of $19.00 per box for Valencias.

Sales of Valencias are being made in New York around $14 and $15.

Imperial Valley's 1919 cantaloupe acreage will be 50 per cent over last year's.

Forty-five per cent of the tomato pack has been commandeered by the government.

The San Bernardino Beekeepers' Club made a splendid exhibit at the Riverside fair.

Manager Gregg of the Whittier Walnut Association says the local crop will total 1000 tons.

Barley growers are relieved to learn of an order for immediate delivery of 10,000 tons of barley at $2.28 a hundred.

Imperial Valley ranchers have been notified that plenty of Mexican labor is available for the cotton and corn harvests.

Some 50,000 acres of wheat will be planted in the Imperial Valley this winter, according to the estimate of Walter A. Packard.

Oranges are at present beating lemons as best sellers in Eastern markets, presumably because oranges need no addition of sugar.

By the burning of an auto trailer, on its way to Los Angeles, 200 packed boxes of fancy apples from an Oakglen ranch were destroyed.

Yucaipa Valley in San Bernardino County expects to harvest 250,000 boxes of apples, mostly Jonathans, King Davids and Winter Banana.

Short courses in beekeeping will be conducted by the state university at San Diego and Riverside, the Riverside school being held from December 16 to 21.

The California Association of Nurserymen will hold its annual meeting at Riverside at the time of the State Fruit Growers convention, the third week in November.

The Orange County Produce Growers' Association is sending East two carloads of tomatoes daily. Last year Orange County shipped tomatoes as late as the 22nd of December.

E. A. McGregor, director of cotton investigations in Imperial Valley, is planning an expedition into Lower California to investigate the boll weevil and other cotton pests.

The California Lima Bean Growers Association has made its last payment on the 1917 pool. The growers in the association netted $11.58 a hundred pounds for their 1917 beans.

The California Lima Bean Growers Association has made its first payment on the 1918 crop. Checks for five cents a pound on gross weight were sent to all growers who delivered beans in September.

For the purpose of planning how to increase the bee business in Southern California, the supervisors of the Angelus, Cleveland and Santa Barbara forests will meet in consultation with two representatives of the bureau of entomology at Washington, Dr. E. T. Phillips and George E. Demset, at Los Angeles, November 23.

The Coast and General

The apple crop of the Northwest has suffered this year from worm damage.

A cablegram from China states that the Chinese cotton crop is estimated at 25 per cent above normal.

Potato growers are protesting against the limitation of the diversion privilege on fruits and vegetables.

Canadian fruit growers will next year be required to use standard containers for all fruits. The new law becomes effective June 1, 1919.

Vegetable growers on the Isle of Pines, south of Cuba, are relieved by the recent food administration ruling that winter vegetables are a "necessity."

It is reported that only 10,000 to 15,000 bales of hops have been picked by Oregon growers, the rest of the crop being abandoned because of lack of demand.

The Hood River Creamery, a cooperative concern organized by Hood River, Oregon, orchardists, was destroyed by fire, but has been rebuilt and is now ready for business.

The second "live stock squad" of the agricultural extension service of the University of Arizona is now touring the Counties of Graham, Greenlee, Cochise, Santa Cruz, Pima, and Pinal.

Dairymen of Washington County, Oregon, have requested the federal food administration to allow all wheat grown in that section to be milled there so that stock may get full benefit from the bran and shorts.

Prune orchards in the district about Monmouth, Oregon, are yielding so heavily that it is impossible to find sufficient dryer accommodations and considerable fruit has been wasted. The crop is 100 per cent larger than ever before.

The food administration has appointed a committee to investigate the dairy products situation and see what can be done towards stabilizing the butter market. The large government purchases have produced a shortage and prices are running wild, especially on the Pacific Coast.

Hearings upon the proposed official standard for oats were held in Portland and Spokane the last week of October. Upon the basis of the information received at this series of hearings the bureau will announce the standards agreed upon as soon as the information can be compiled and applied.

The maximum rate of $1.10 per hundred pounds on Washington, Idaho and Oregon apples to Atlantic seaboard points has been agreed upon by the railway commissions of the three states, shippers and the railroad administration before the interstate commerce commission. This rate takes the place of the rate of $1.25 recently authorized by Director General McAdoo.

A tractor demonstration planned by farmers, managed by farmers and pulled off in the presence of 2000 farmers was the feature of the Weld County, Colorado, fair. Every official connected with the event was a farmer, and the purpose of the demonstration was to show what tractors could do under real farm conditions. All spectacular stunts were barred, and the demonstrators held down strictly to ordinary farming operations.

Rice---California's New Profitable Crop

By R. L. Adams

CALIFORNIA'S 1917 rice crop amounted to over 36,000,000 bushels, produced from 80,000 acres. California now stands fourth among the eleven rice producing states of this country.

In the rice plant has been found a satisfactory solution for the profitable utilization of thousands of acres of level, smooth, valley lands in the Sacramento and San Joaquin Valleys of California, which for years have been the haunts of millions of wild geese, and if utilized at all were drawn upon only for a limited amount of cattle pasture.

Underlaid with a stiff, tenacious hardpan coming too near the surface to permit of profitable farming to wheat, barley, alfalfa or the usual field crops, these lands offer ideal conditions for rice. As a result, lands formerly condemned as worthless by expensive experience and eagerly sold for $10 and $20 an acre now command prices of $40 and $50 per acre and in some instances are being sold today for rice growing as high as $75 and $100 and in a few instances at $125.

Within a short period of seven years the acreage of rice plantings in California has jumped from a few small experimental plats to plantings which promise a total of 150,000 acres in 1918.

California rice is planted in April and May after all danger from spring frosts is over, on lands prepared as for any grain crop, by plowing the land and harrowing or disking until in shape for drilling the seed.

Growers in working their lands aim to hold the winter rains for germinating the rice for the sake of the greater warmth rather than to rely upon irrigation for the necessary moisture. Warmth is very necessary to start the sensitive young rice plants and to give them the necessary impetus.

When the plants are six to eight inches high they throw out white water roots, the sign for turning on the water. From then on until time to drain for harvest, the plants are kept continually in water, maintained at a constant depth of from two to four inches. About the time the rice kernels are as the farmers say "in the dough," which means that the content of the kernel is in the transitory stage between water and its final mature hardness, the land is drained. The grain should ripen in water, but its harvest would then be attended with such difficulty that draining and drying out is brought about to such an extent that harvesting can be accomplished with the combined harvester, with reapers, or by mowing and stacking.

To properly handle the water the lands are carefully leveled and checked in small checks with low levees. Supply ditches and drains are built exactly to grade, and numerous structures provide for the ingress and egress of the water. Great care is exercised in providing the land with a proper level so that the water will stand evenly over the entire check, for if the water depths vary the crop will ripen unevenly and shattering of the more mature grain will result at harvest time.

While a great many varieties of rice have been tried out in California, popular choice is for the Japanese varieties, in preference to the Honduras, Italian or the North Carolina kinds. Of the Japanese the Wataribune hold the first place for popularity with the growers. It is well adapted to the climatic and soil conditions in the rice growing sections, producing yields of from 2000 to 8000 pounds per acre of well formed, short, rounded, flinty kernels, worth in the neighborhood of $2.15 per hundred pounds to the grower during normal times, but jumping to over $3.00 in 1917. At the usual market price this represents an acreage return of from $40 to $125 per acre.

The presence of hardpan is not in itself essential to rice culture, as the rice plant is not especially exacting as to soil. But since the crop must stand with its roots in water for a period of three or four months to bring it to maturity, and evaporation is great in the long, hot season demanded where the crop is planted, a great deal of water is required. Since the rice will find soil enough to provide it with a footing on the hardpan lands, the hardpan in itself will reduce seepage to a minimum, thereby resulting in a natural saving of irrigation water.

To Balfour, Guthrie & Co. belongs the honor for the first commercial industry in California rice growing. Under the direction of their superintendent, William Grant, many varieties of rice were tried out in the vicinity of Biggs: the result of their experiments going far to introduce the rice plant to the California farmer.

In the San Joaquin Valley the first real attempt at growing rice commercially was made in 1913 by Miller & Lux Inc., big cattle and grain people. So pleased were they by their success that each annual planting has been materially increased over the acreage of the preceding year. The soil selected in the San Joaquin Valley is usually a stiff gray adobe, with no hardpan, but very impervious to water and very rich. In the past the land had not proved profitable for barley, alfalfa and the like, as in drying out it cracked badly, damaging and exposing the roots of all plants tried in it. But the rice plant finds here conditions ideal for growth.

Sacramento Valley Paddy Field
Blue Rose rice in boot near Biggs, Butte County.

Ready for Harvest In San Joaquin Valley
Wataribune rice ready for harvest near Bakersfield, Kern County. This field has water table at about two feet and was seriously infested with Bermuda which has been entirely eradicated.

The usual yields obtained by experienced growers operating under fair conditions of soil, water, climate and acreage amounts to about 2000 pounds per acre of rough rice; 4000 pounds is considered a good yield, although exceptional yields of 6000 pounds are by no means unknown.

In general the production of the good crop, 4000 pounds, will cost for the preparation of the land, seed, seeding, growing the crop, harvesting, clearing, sacking and delivery to the warehouse in the neighborhod of $40 per acre. The remaining $46 is gross profit which goes to repay the operator for his services, to cover interest, depreciation and similiar overhead charges. In general the net returns from a good crop of rice will give the land a business valuation of $125 per acre after deducting all costs of production and overhead charges.

So firmly established has the industry become that seven mills scattered over the state are now prepared to convert the field product into a finished marketable article.

So far no insurmountable obstacles have been encountered in marketing the crop. Already with the usual California progressiveness, certain San Francisco restaurants advertise "California Grown Rice" as a special dish.

California rice culture is, however, still in the experimental stage. There is much to be learned before production, preparation for market, and marketing is sufficiently standardized to be entirely stable. Growers recognize this fact and the Pacific Rice Growers Association, with a present membership of 225, is trying to bring about certain definite betterments in the rice industry, such as more scientific production methods to reduce the output of inferior rice, a proper system of grading and standardization, a publicity campaign, securing of federal legislation to protect the infant industry, promotion of a spirit of cooperation and scientific collective marketing.

Walnut Worm Threatens Industry

By Prof. Ralph E. Smith

THE worm, or codlin moth, which is attacking the walnuts in certain parts of Santa Barbara and Orange Counties has become such a serious matter that immediate action is necessary to keep it from spreading all over Southern California.

Importance

In some orchards where the worm

Harvesting Walnuts

SPECIAL FERTILIZER OFFER

We are now in position to furnish, in any quantity and for immediate delivery, ground Goat manure, in bulk, at Twenty ($20.00) Dollars per ton f. o. b. your station, carload lots, within an 80 cent per ton freight rate from Colton, California. This material is finely ground, and in good mechanical condition.

The fertilizing qualities of Goat manure are so well known that it is not necessary to extol same here. Sufficient to say that what we are offering here will analyze 2.00 per cent to 2.75 per cent Nitrogen; 1.00 per cent to 1.75 per cent Phosphoric Acid; and 2.50 per cent to 5.00 per cent Potash. With present and prospective high prices for all citrus crops you cannot afford to overlook an investment in THIS fertilizer. Samples sent on request.

602 to 610 Kerckhoff Bldg., 6th and Main Phone 60329 LOS ANGELES

When Writing Mention California Cultivator

The Choice of Those Who Know

Manufacturers and leading motor car distributors *recommend* ZEROLENE. The majority of motorists use ZEROLENE. ZEROLENE reduces wear and gives more power because it keeps its lubricating body at cylinder heat. Gives less carbon because, being refined from selected California asphalt-base crude, it burns clean and goes out with exhaust.

ZEROLENE is the correct oil for *all types* of automobile engines. It is the correct oil for your automobile. Get our lubrication chart showing the correct consistency for your car.

At dealers everywhere and Standard Oil Service Stations.

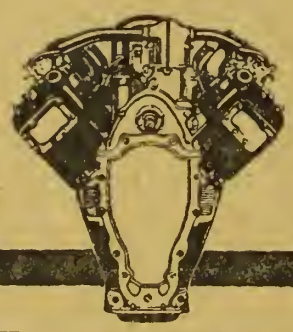
STANDARD OIL COMPANY (California)

ZEROLENE

The Standard Oil for Motor Cars

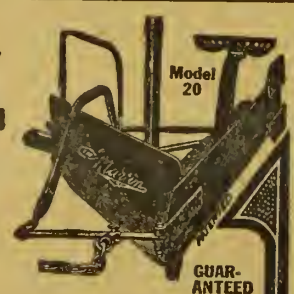
Correct Lubrication for the "V"-Type Engine

This, the "V"-Type of automobile engine, like all internal combustion engines, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. Zerolene fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*



Easy Ditching

THE "good old days" of a pick and shovel have become memories. Instead of spending a week on a mile of ditch, Mr. Farmer now completes the job in a few hours. He does a better job, too—and saves a BIG LOT of *valuable* time. He does it with THE Martin



DITCHER, Grader and Terracer

Makes new ditches; cleans old ones; grades roads; builds dykes and terraces. Cuts alfalfa, Bermuda grass or sweet clover roots from ditch banks, without plowing. Does more work and better work than 100 men with old methods.

Made In Horse and Tractor Sizes

All steel. Reversible. Adjustable. No wheels, cogs or levers. More MARTINS now in actual use than all other farm ditchers combined. Warehouses and distributing points in nearly all Western States. Write for free descriptive catalog and nearest distributing point, together with list of MARTIN users near you.

Owensboro Ditcher & Grader Co., 1590 Wazee St., Denver, Colo.

Apollo

Lightning proof— Weather proof— **Roofing Products**

For lasting service and fire protection use metal roofing—adapted to rural and city properties.

APOLLO-KEYSTONE Galvanized Sheets are carefully manufactured and highest in quality. Unequaled for Roofing, Siding, Culverts, Silos, and general sheet metal work. Sold by leading dealers. Interior of Walnut Packing House

Interior view of Irvine Walnut Association's new packing house in Orange County.

WALNUT WORM THREATENS INDUSTRY

Continued from Page 441

has been present for several years fully 50 per cent of the nuts on the trees are wormy. In many groves over 20 per cent of the crop is affected. The damage is gradually increasing from year to year and at the same time the pest is spreading into new territory. Many hundreds of acres are now affected and steadily growing worse. The wormy nuts make the worst kind of culls, as they are not only a total loss but also very hard to find in culling. A large amount of extra hand labor is required and even then some of these nuts get by. The profits from a grove 50 per cent infested are cut almost in half.

Nature of the Pest

The insect in all stages looks exactly like the common codlin moth. Its occurrence in walnuts, however, shows no connection with apple or pear trees and, judging from its feeding habits, it is a different form from that which ordinarily attacks those fruits. In France and other parts of Europe walnuts are commonly attacked by a similar form of codlin moth. Most of the worms leave the walnuts in the fall and hunt some hiding place where they spin a cocoon and pass the winter. In the spring these worms turn into moths and lay eggs upon the walnuts and thus start a new generation. Such places as under the rough bark of trees, in cracks in the trays or buildings and inside the sacks where wormy nuts have been are favorite ones for the worms to pass the winter.

How the Worm Spreads

In sections where walnut orchards are close together the insect gradually distributes itself from one ranch to another. Its spread into new territory has taken place largely by sacks, taken from infested orchards or packing houses into uninfested places. The worms crawl out of the nuts into the sacks and in the packing house they crawl into other sacks and all over the house in their search for a hiding place. Thus if only one patron of a certain house has the worm in his trees all the others will get it sooner or later. There are actually many cases where orchards far removed from other walnuts have become infested through sacks.

Beware of Sacks

Sacks are the chief danger in spreading this pest, unless wormy walnuts or shells are carried to places close to walnut orchards. All walnut growers are urgently advised to observe the following:

In non-infested districts allow no sacks, walnuts or shells to come onto the ranch from infested territory. If there is any doubt about sacks dip

Continued on Page 447

Nuts Affected by Worms

1. Appearance of green nut after codling worm has entered on open side.
2. Codling worm usually enters green nut on the stem end as here shown.
3. A round or oval opening on the stem end of the cured nut is almost a sure sign that the codling worm has paid his respects inside.
4. Section of walnut showing the codling worm doing its work.

How many kills to YOUR *shot pattern?*

MOST hunters agree that three shot pellets or more are essential to a *kill*. Less than three may mean a *cripple*, no matter what the size of shot or its velocity. Hence uniform pattern, i. e., an even spread of shot is essential to successful shooting, in the field or at the traps.

The secret of good patterns is in the *control* of the powder explosion. Good, evenly distributed patterns are the direct results of a correct system of wadding scientifically adjusted to the bore of the gun and the load. The wadding, like the piston head of a gas engine, must give the explosion something solid to work against, so that the shot may be *pushed* out evenly.

It must expand and fill the tube of the barrel, completely sealing in the gas behind it. No gas must escape to scatter the shot.

It must offer just the right amount of resistance to the explosion so as to develop uniform pressure and high velocity without danger of jamming the pellets out of shape at the "choke" or muzzle constriction.

The Winchester system

Winchester Wadding is the result of repeated experiments to determine the most efficient control of the gas blast.

The special construction of the Winchester *Base Wad* gives what is known as *Progressive Combustion* to the powder charge.

Combustion spreads instantly through the powder charge. By the time the top grains of powder become ignited the *full* energy of the burning powder behind is at work.

Though the explosion is almost instantaneous, it is none the less *Progressive*, the final energy and maximum *velocity* of the completely burned powder being developed at the *muzzle* where it is most needed.

Meanwhile, under the heat and pressure of combustion, the tough, springy, *Winchester Driving Wad* has expanded to fill the barrel snugly all around. No gas escapes. It is completely sealed in. The wadding *pushes* the shot evenly.

At the muzzle the shot pellets slip out without jamming while the wadding is checked for a brief interval by the constriction of the muzzle. *It follows some distance behind the shot pattern.*

The shot cluster travels on unbroken by gas blast or wadding and makes the hard hitting, uniform pattern for which Winchester shot shells are world famous.

Fish Tail Flash. All Winchester smokeless shells are made with the new Winchester Primer—the quickest and most powerful shot shell primer made. Its broad *fish tail* flash gives even and thorough ignition. Every grain of powder is completely burned up before the shot charge leaves the muzzle.

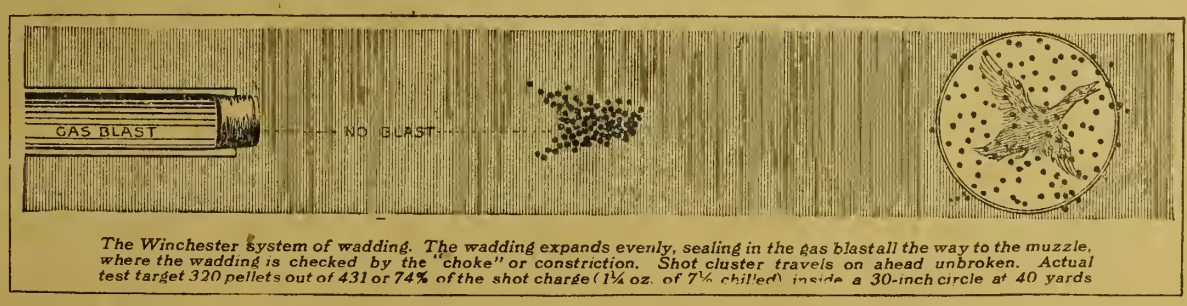
The Crimp. The required degree of pressure necessary in seating the driving wads is worked out in combination with the *hardness* or the *softness* of the *crimping* required for any particular shell.

Waterproofing and lubrication. In the cold damp air of the marshes, or under the blazing sun at the traps, Winchester shells will always play true. Winchester waterproofing process prevents them from swelling from dampness. Special lubrication of the paper fibres prevents brittleness and splitting in dry weather.

Uniform shells. From primer to crimp, Winchester shells are constructed to insure the maximum pattern possible from any load and under all conditions. $100,000 is spent annually in the inspection and testing of finished shot shells. 25,000,000 rounds of ammunition are fired every year in testing guns and ammunition.

Clean hits and more of them

To insure more hits and cleaner hits in the field or at the traps be sure your shells are Winchester Leader and Repeater for Smokeless; Nublack and New Rival for Black Powder. Write for our Free Booklet on Shells. **Winchester Repeating Arms Co., Dept. XX-41, New Haven, Conn, U.S.A.**



The Winchester system of wadding. The wadding expands evenly, sealing in the gas blast all the way to the muzzle, where the wadding is checked by the "choke" or constriction. Shot cluster travels on ahead unbroken. Actual test target 320 pellets out of 431 or 74% of the shot charge (1¼ oz. of 7½ chilled) inside a 30-inch circle at 40 yards

Grape Syrup

WHAT will California do with its 400,000 tons of wine grapes? Also what will it do with its other thousands of tons of raisin and table grapes which, in a season like the present, will, because of weather conditions, suffer great loss? The University of California has issued a bulletin in which the question was discussed, especially from the technical side, or the possibilities of manufacturing and marketing.

Now comes the state viticultural commission with Bulletin 12, "Grape Syrup: Possibilities of Production in California." In the formal statement the bulletin says:

There enters into the situation the question of the salvage of normally more than 400,000 tons of grapes, including many thousands of tons of second-crop table and raisin varieties that ordinarily have found their way to the wineries, but which, in the event of prohibition laws would not find such avenue of disposition.

The present season, because of early rains, has rendered large quantities of table grapes useless for shipment through the usual outlets, and in addition has caused considerable damage to the raisin crop.

It appears to this board, therefore, that there may be developed a means by which a part, if not all, of the crop might be saved in future years, providing a demand may be created for large quantities of grape syrup.

It is a well known fact that syrup can be made from grapes. The undertaking prompts the following thoughts:

Will it be necessary to market the finished product against the cheapest corn syrup commonly used?

What will be the effect when conditions again become normal in the sugar market?

How long would it take to create a market for 20,000,000 gallons of syrup?

What woud the cost of production of syrup be per gallon based on the payment of $15 or $20 per ton for grapes to the vineyardist?

What price per ton for grapes would make an inducement to the grower to retain his wine grape vineyard in a dry wine section, and in a sweet wine section?

Is it practical to work on the basis of producing an article to compete with a high grade syrup, such as maple, already on the market?

There is nothing novel about the idea of making grape syrup. It has been made in thousands of homes for many years, but the article has never been manufactured in an extensive or perfected way commercially, so that the whole consuming public might judge of its merit. The thought now is to make the best of an approaching situation which may bring great loss to thousands of people unless a plan is devised for taking care of a tremendous yield of grapes that heretofor has been made into wine in California.

A conference was recently held at Oakland. At the opening of the meeting Secretary Sheehan said:

"This board is charged with fostering and protecting all of the branches of viticulture and in compliance with the statute creating this department of the state government we are concerned in the welfare of the table grape man at this time. The rain damage affected particularly the northern section of the San Joaquin Valley, the Sacramento Valley and points north of Sacramento. A number of people in the table grape business find themselves possessed of grapes which are not marketable as such but which may have some value in other directions. There is quite a hazard in shipping East fruit that does not leave here in good condition.

"At Sacramento recently, a hurried meeting was called by the chamber of commerce. Professor Cruess, of the University of California, and representatives of the Japanese Agricultural Association were present and quite a lively discussion was entered into in relation to the salvage that might be gotten out of table grapes by converting them into grape syrup. Mr. Serailian, who has experimented largely in the making of grape syrup, was also in attendance at the meeting. These Japanese gentlemen present at this meeting are going to state to the board just what the plight of their people is in the vicinity of Florin and Elk Grove, where grapes are so badly damaged that they are not marketable as table grapes. Owing to the probable doing away with wineries next July, whatever solution is found at this time will be valuable in the way of good for future years when similar conditions may prevail.

After general debate of the question the conference adjourned, and the bulletin concludes:

The members of the board discussed the subject further, and the consensus of opinion was that what ever plan might be attempted in the direction of producing grape syrup should have as its aim the development of a highly perfected product. The decoloring process was not considered of the same importance as the matter of retaining the flavors. The present evaporating machinery in possession of some of the wineries was considered available for some practical experiments, but not serviceable for the retention of flavors unless improvements were added to it. These additions would require some time and it was not considered possible to enter into practical demonstrations on a large scale during the present season.

There is information at hand indicating that before another season has approached, modern machinery made of aluminum or lined with silver and equipped with flavor-saving devices will be installed by local and Eastern capital with a view of thoroughly testing the possibilities of a venture of the nature of grape syrup and grape extracts. Such undertakings will be encouraged in every way possible by this board.

Seedless Raisin Grapes

BULLETIN 298 issued by the agricultural experiment station of the state college of agriculture, by Frederick T. Bioletti, gives complete information regarding various types of raisins in California, a comparison of Muscats and seedless raisins with full list of varieties and some most practical cultural suggestions. Regarding planting:

Preparation of the Ground

The best results can be obtained with vines only if the ground is properly prepared before planting. The seedless vines are not exceptions to this rule. The ground should be cleared of stumps and rocks, properly levelled, especially where irrigation is to be practised, and plowed as deep as is practicable, at least ten inches. Any troublesome weeds, such as Morning Glory, Johnson grass or Bermuda grass should be eradicated before planting. Hardpan within three feet should be blasted at every point where a vine is to be planted. A few years as an alfalfa field is an excellent preparation. In irrigated districts, a crop of cow peas or similar leguminous crop grown in the summer and plowed in deep during the autumn prepares the soil perfectly for planting during the following spring.

Planting Stock

For planting, cuttings, rooted vines, or bench grafts may be used.

Cuttings are almost as good as rooted vines if they can be made to grow during the first year. The Sultanina, however, is rather hard to root and many usually fail during the first year. The result is that much replanting is necessary, the vines are uneven in size, the vineyard is slower coming to full bearing, and the cost in the end may be as large or larger than when rooted vines are used. The best cuttings are those of medium size with fairly close joints. Well grown laterals of the Sultanina often make the best cuttings. The other varieties root more easily. In most cases, it is best to use one year old rooted vines of moderate size. If of good quality and properly handled, practically every one will grow the first year and a full crop may be obtained the third or fourth season following planting.

In districts infested with phylloxera, bench-grafts on resistant stock must be used. These are more expensive,

but are the only known defense against the pest. The extra cost is in part counterbalanced by the fact that the vines on resistant stocks bear earlier and perhaps better than on their own roots. Many varieties of resistant stocks have been tested at Kearney and Davis. All have given good to very good results with the Sultanina and Sultana. The Corinths seem to be more difficult to please and the other varieties have not been very thoroughly tested.

With the Sultanina, the Riparia plus Rupestris hybrids 101 minus 14, 3306, 3309, have given the best results, and St. George has done fairly well. The Sultana has yielded best on 1202, though all other stocks have given good crops. The Black Corinth has done best on 3306, 41B and Riparia Gloire. It has failed to grow on 420A for which apparently the affinity is defective. The White Corinth has given its largest crops on 3306. Both Corinth grapes have done poorly on St. George.

Laying out the Vineyard

In laying out the vineyard, two points have to be determined: (1) the area to be given to each vine, and (2) the arrangement of the vines.

As all seedless vines are vigorous growers, they require abundant room. If crowded, they may give a little more in the first one or two crops, but the yield will be less later and the cost of handling greater. The appropriate space for each vine will vary from about 70 square feet to about 130, according to the variety and the soil. The Sultana may be planted a little closer than the others without injury. In rich deep soil where the vines will be exceptionally vigorous, they must be given more room; in sandy, shallow or poor soil they may be placed closer.

As all these varieties require long pruning and trellising, the vineyard should be laid out on the avenue system. The following distances are recommended for good soil: Sultana, 14x6 feet; Sultanina, 14x8; Corinth, 16x8.

NEW ZEALAND MARKETS OPENED TO AMERICAN GRAPES

As the result of fruit market investigations carried on recently in New Zealand by a special investigator of the bureau of markets, United States department of agriculture, cooperating with the American consul general at Auckland, grapes from the United States henceforth are to be allowed entrance into that country. Heretofore imports of the fruit into New Zealand have been allowed only from Australia.

It is found that large quantities of grapes are consumed in New Zealand, but owing to the opposite growing seasons in that country and the United States, the only grapes in the market during the American season are from hothouses, the prices ranging approximately from 25 cents to 75 cents a pound. It is believed that the opening of the New Zealand market will afford in time a fairly substantial outlet for California varieties such as the Malaga and Red Emperor.

WASTE PRUNES

Prof. W. V. Cruess of the University of California has been making investigation as to a syrup made from damaged prunes. A juice of about 15 per cent sugar is extracted with hot water, acid reduced by lime or precipitated chalk and evaporated in a vacuum pan to about 70 per cent syrup. It has been found that a ton of prunes will yield about 35 to 45 pounds of syrup. Other uses to which these damaged prunes may be put are the manufacture of alcohol, or prune butters or jams, or it has been found that they make excellent hog feed and fine fertilizer.

NATIONAL APPLE DAY

National Apple Day is observed each year the first Thursday in November. This year it will be November 7. Some large apple producing sections are holding apple festivals with proceeds to go to the Red Cross and are otherwise attracting attention to the day, and incidentally to the fruit which keeps the doctor away.

The sum total of any man's success and happiness is measured by his ability to give.

Oakland

PARTICULARLY under present conditions can the all-year transportation needs of farm families be well entrusted to the Oakland Sensible Six Sedan. Its exceptional fitness is based on its scientific light-weight construction which makes this Sedan weigh 300 to 500 pounds less than others of similar wheelbase, roominess and completeness. Principally for this reason it is unusually quick, active and economical, affording utmost service at low cost. Further evidence of the high utility value of the Oakland Sensible Six Sedan is noted in its large floor and seating space, permanent pillars, wide doors, efficient heater, and durable fittings.

The high-speed overhead-valve Oakland Sensible Six engine delivers 44 full horsepower at 2600 r. p. m., or one horsepower to every 56 pounds of car weight in this Sedan model. Oakland owners regularly report gasoline returns of from 18 to 25 miles per gallon and records of from 8,000 to 12,000 miles on tires.

OAKLAND MOTOR CAR CO., Pontiac, Mich.

Touring Car, $1435; Roadster, $1435; Sedan, $2035; Coupé, $2035.

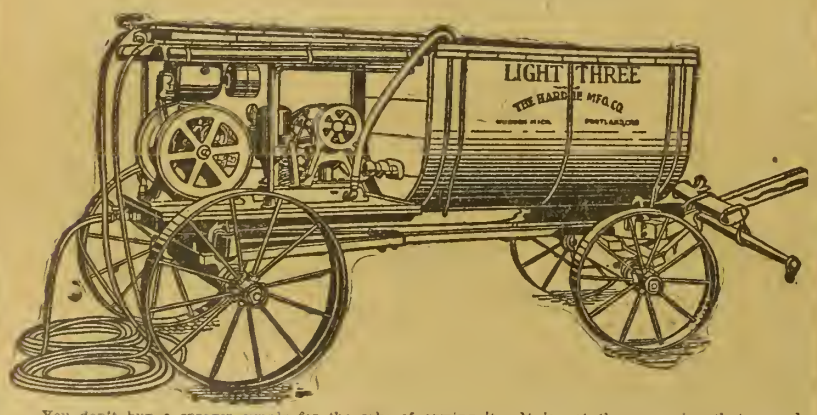
The Hardie Triplex Power Sprayer

Is a Safe Investment



You don't buy a sprayer simply for the sake of owning it. It is not the possession that appeals to you. It is the service the sprayer gives you. We could do things at less cost, but what would we have gained? A cheaper sprayer never satisfies. It gives trouble, requires repairs, fails when you need it most, and wears out quickly.

The Hardie Quality Is Like Paying Less

Saving money is the same as making money, therefore every HARDIE SPRAYER pays dividends to you through its low upkeep cost and its greater durability. High pressure, light weight, large capacity, powerful engine, perfect agitation, simple construction, and the tank refiller. The HARDIE SPRAYERS have features that are valuable in correct spraying, and not found in others. Send for the spray catalog, it is worth your time; the truth is there, backed by the largest exclusive spray pump manufacturer. Place your confidence in a Hardie and your spraying will be a success.

THE HARDIE ORCHARD GUN GUARANTEED OR YOUR MONEY REFUNDED.

Horticultural Week

THE entire force of the state horticultural commission and a big committee in Riverside are preparing for a big week November 11-16. It is to be a great five ring proposition under the auspices of the state horticultural commission. Commissioner Hecke is sending out the following live wire appeal:

Do you want to hear speakers of national reputation on the war, food production, labor and other important agricultural questions of the day?

If so attend the 51st State Convention of Fruit Growers and Farmers.

Do you know the relation of nurserymen to our horticultural industries?

The California Association of Nurserymen for the first time are holding their annual convention in conjunction with the Fruit Growers and Farmers.

Do you know that no state can effectually prevent the introduction of plant pests and diseases without the cooperation of her neighbors?

With delegates from every Western state and from the United States department of agriculture attending the First Interstate Plant Quarantine Conference a uniform policy of plant pest exclusion for the states of the Pacific slope will be accomplished.

Do you know California's war time need for more and better vegetables?

Vegetable standardization and pure seed certification are the objects of the First Vegetable Growers' Conference.

Do you know the activities of the county horticultural commissioners in the food campaign?

The annual convention of the State Association of County Horticultural Commissioners will develop into a united cooperative campaign with the state commission of horticulture for increased food production and conservation.

These five big conventions compose Horticultural Week in Riverside, November 11-16.

This is to be a real effort to unify and coordinate our energies for the work of the coming year under war conditions.

These are strenuous times.

There will be a strenuous program.

Tractor School Dates

The "flu" has played hob with dates arranged for the various units in California's various tractor training centers. We have word from J. C. Beswick, director vocational war work in California, that dates will be announced as soon as the present epidemic will permit. One school was opened at Madera by Unit No. 1, October 7, with Neil Mackay gas engine instructor and Frank Dye tractor instructor. The course in each center will last four weeks. The first two weeks are devoted to gas engine instruction, and the last two to tractor operation and repair and actual work in the fields.

Tractors available for work by the different units are:

Unit No. 1—One Holt 75, one Samson 10-25, one Best 40, one Fageol 10-25.

Unit No. 2—One Holt 75, one Samson, one Fageol 10-25.

Unit No. 3—One Best 75, one Samson 10-25, one Fageol 10-25, one Yuba 10-20.

The order in which the schools will open is indicated by the following list under each unit:

Unit No. 1—Madera, Reedley, Lemoore, Tulare, Delano, Brawley, El Centro, Hemet, Ontario, Santa Ana, Van Nuys.

Unit No. 2—Merced, Patterson, Oakdale, Lincoln, Gridley, Corning, Willows, Williams.

Unit No. 3—Saticoy, Santa Maria, King City, Salinas, Hollister, Santa Clara, Livermore, Concord, Napa, Santa Rosa.

Allies Make Large Purchase of Raisins

That raisins are at last recognized as a very important item on the rations of the soldiers of the Allies is evidenced by an order placed on September 14 with the Associated by H. Clay Miller, Pacific Coast representative of the committee on coordination of purchase for the United States and allied governments, for 15,826 tons of raisins. These raisins will be for the use of United States and allied troops.

The order was segregated as follows: 1500 tons of fancy seeded Muscats in cartons; 400 tons of Thompson Seedless in cartons; 1000 tons of three crown loose Muscatels in 10-pound tins; 34 tons of fancy seeded Muscats in 25-pound tins, 5630 tons of three crown loose Muscatels in 25 and 50-pound cases; 7260 tons of Sultanas in 25 and 50-pound cases.

Britain Is Heavy Purchaser

The greater proportion of the raisins, including the Sultanas. will go to the British government. Great Britain has a reputation of being a big raisin consumer. Ony a few years ago the consumption per capita in Great Britain was five times what it was in the United States, and this was one of the important arguments brought forward in favor of national advertising of raisins in this country.

We have made substantial sales of raisins to the United States government for the use of Uncle Sam's soldiers, and we are confident that in the future this government will be a much heavier purchaser of raisins than it has been in the past.

CITRUS SEMINAR

The University of Florida has held for the past nine years an annual seminar covering a period of some four or five days, and devoted to cultural problems of Florida. Citrus activities predominated but other agricultural topics were discussed. Oc-

Buy an Avery End Farm Slavery

The Avery is the simplest of all tractors. It does not need an engineer to run it. Every part is in plain sight and get-at-able.

The Avery Sells Here From $650 UP

The Avery costs less than any to buy and less than any for upkeep. It has patented California Lugs — these grousers enable it to work in Mud or Sand.

Write and let us tell you how to get a bigger yield with less work and at lesser cost.

F. H. Poss Company

State Distributors

237 So. Los Angeles Street, Los Angeles
67-69 Beale Street, San Francisco

casionally there have been exhibits of live stock and this year the seminar, which was held in late September, was made a demonstration of tractors and farm machinery. The two questions, however, which seemed to attract the greatest attention, and which are of vital interest to Florida, were those of fertilization and marketing.

BEET GROWERS, ORGANIZE!

I notice that the sugar shortage will be as great the coming year as it has been in the past. I see no need for it and believe that some influential agent such as your editor could reliably recommend a solution for the problem to the proper authorities. The days when millionaires grow up like mushrooms are over. The stage being passed through by beet growers resembles the one experienced by citrus growers during the season of 1892-93. Cooperation solved the problem for the citrus growers. Could the beet growers not so organize, thereby handling the manufacture of sugar from the beets and market the product? Our federal government took over certain public utilities for the period of the war. Why couldn't our food administration take over at least one sugar factory, or organize beet growers and test the above solution? Now, is the time to act if we are to feed our Allied countries until victory is won and possibly during part of the period of reconstruction. — Harry Sargent, Riverside.

THE BARLEY SITUATION

With the closing of breweries in the United States after December 1, any temporary dislocation in the barley market should cause producers little concern. Barley is an excellent live stock and poultry feed, and also it will be used to a larger extent than heretofore in making flour. New methods of milling this grain yield an excellent flour for which there is an active demand.

The country will easily absorb the entire barley crop, according to food administration calculations, and the barley formerly used for brewing will, it is hoped, result in increased amounts of milk, meats, flour, poultry products and other important foods.

When barley is to be fed to live stock the grain should be crushed. Owing to the hard exterior of barley kernels, farm animals do not otherwise secure the greatest nourishment from it. The single exception is in feeding barley to poultry. When provided with ample grit, fowls derive full nourishment from the whole grain. This year's crops should assist materially in relieving the feed situation and the high level of prices for animal products makes the feeding of barley in excess of market demands both profitable and patriotic.

TO CALIFORNIA BEAN GROWERS

"Don't give away your beans," is the message from Manager Turner of the California Bean Growers Association. "There never was a time," he writes, "when the bean grower has had less warrant to get panicky. There is positively no indication of over-production; in fact, most important bean producing sections are below last year's averages. Present low price levels are due to the grower's own acts and his acts alone. Do not blame the broker, do not blame the dealer and do not blame the government. It is you, Mr. Bean Grower, and you alone, who are to blame. How do you expect the trade to buy in any quantity when you reduce your price from day to day? Would you buy your year's coal supply if the price was going down each day? Stand pat and demand a fair price for your product.

"Reports from Michigan are that the growers there are panicky, too, selling choice hand picked beans at $9.50 per hundred and even less. That is their business; let them do it; let them sell out; let them give their beans away if they want to, but they must blame no one but themselves.

"Common sense assures you the largest demand for American food products in the history of the world. There will be a market at a fair price for every eatable bean we have. You are entitled to a fair profit and it is your own fault if you do not get it. Take the pink bean market, for example, with a crop less than half of last year's; farmers are actually selling this variety for less than the cost of production. Can anything be more foolish? If you want to stimulate the trade, stop this slump; stand firm for a living price and you will get it."

WALNUT WORM THREATENS

Continued from Page 442

them in boiling water for ten minutes as soon as received.

Growers in infested territory whose own orchards are clean should dip all sacks in boiling water as soon as received back from the packing house.

All packing houses, cracking plants and other places where wormy nuts are handled should dip or fumigate all sacks before they leave the house. Directions for such fumigation will be given by the county horticultural commissioners of Santa Barbara and Orange Counties, who require all sacks to be treated in houses within their county handling wormy nuts. It should be remembered that no effective control can be maintained in cracking plants or warehouses located outside the infested districts. The California Walnut Growers' Association, however, is taking voluntary preventive measures in its Los Angeles plant.

This may prove to be the worst pest which has thus far appeared in walnuts and so growers and dealers alike should unite in an effort to stop its further spread, and already the California Walnut Growers' Association has appropriated a sufficient sum of money for experimental work leading to the further control of this pest.

THE FUMIGATING GANG

Written for California Cultivator
By Doris Packard

It's neither by light of the midnight moon,
Nor yet of the mid-day sun,
But under the gleam of a candle beam
The deadly work is done!

By night the man of the Kill-scale Klan,
With a candle perched in his cap,
Comes out with his tools of death for the fools
Who think they can live on sap.

The tents swish upward like silk gowned ghosts
On their way to the dance of death;
And the bugs that are wise all shut their eyes,
And each of them holds his breath.

The tent is down and the gas is on,
And the bugs turn up their toes!
For Hades fumes in the white walled rooms,
—And the lemon grins, and grows!

You who have lived upon lemon pie
With lemon pie meringue,
Oh, little you knew that your pie was due
To the Fumigating Gang!

A DANGEROUS PEST DISCOVERED

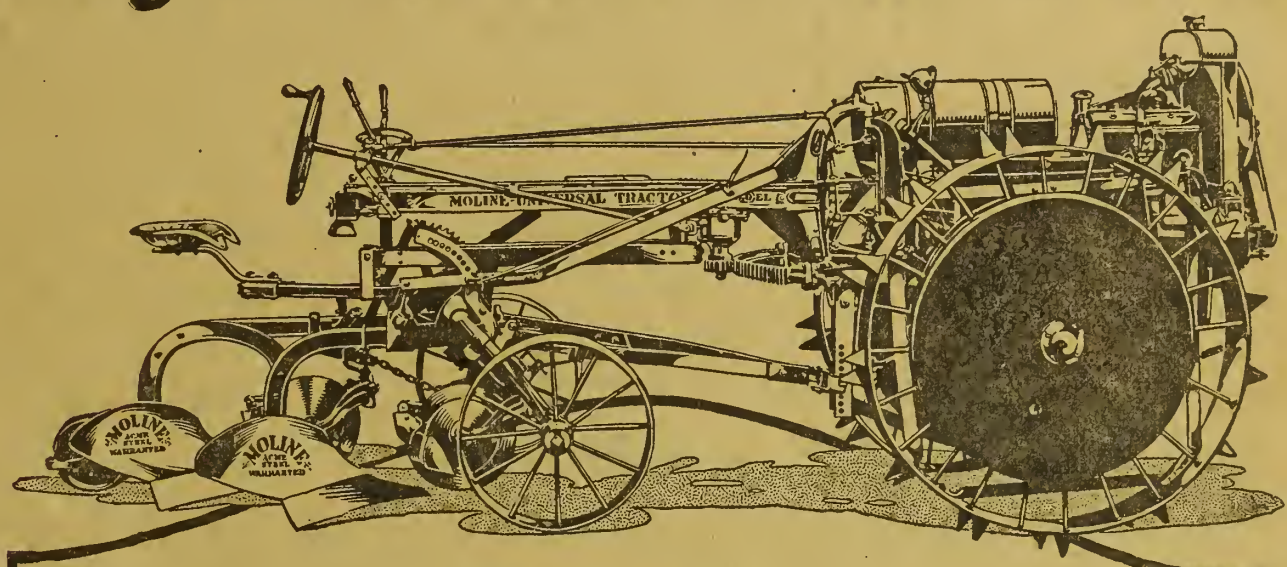
Attention of the state horticultural commission has been called by Dr. L. O. Howard to the establishment in California of an European snail, Helix pisana. This snail in Southern Europe occasions much damage to both field and orchard crops, even attacking citrus trees, particularly the buds and blossoms, as well as the leaves of loquats and olives, and of the edible cactus or fig of India. The known distribution of the pest is as follows: Italy, Austria, Dalmatia, Greece, Spain, Portugal, France, England, Dardanelles, Turkey, Madeira, Canaries and Azores, Morocco, Tunis, Algeria, Tripoli, Egypt, Cape Colony and Natal. It is now found in San Diego County and covers an area of only perhaps one half mile diameter.

GOOD WAR SUBSTITUTES

Economy—for Waste.
Cooperation—for Criticism.
Performance—for Argument.
Service—for Sneers.
Perishable—for Preservable Foods.
Conservation—for Conversation.
Common Sense—for Common Gossip.
Production—for Pessimism.

—Exchange.

Buy Your Moline Tractor Now



Because:

You may not be able to get a Moline-Universal if you delay ordering.

You will help relieve spring congestion of shipping by buying now.

You will have plenty of time to become familiar with its construction and operation before the spring rush and will be able to work your tractor in on belt work and other light jobs.

It is the only tractor which does all farm work including cultivating.

One man operates both tractor and implement from the seat of the implement where you must sit in order to do the best work.

Tractor and implement form one unit—backs as easily as it goes forward—turns in a 16-ft. circle.

It has plenty of power for your heaviest work, yet light in weight to operate economically on light jobs. All the weight on two big drive wheels---no dead weight—no extra expense.

Substantially constructed for many years of service.

Electric lights for night work and self starter for non-robust labor.

You can practically double your efficiency ---you can produce more food with less help. You will need it, order now.

Write today for full information and name of your nearest Moline Dealer. Address Dept. 49.

Moline Plow Co., Moline, Illinois

MOLINE UNIVERSAL TRACTOR

This Month in the Vegetable Garden

Northern California

Written for California Cultivator By A. R. GOULD

SOIL preparation will still be in order and in fact will form much of the work for this month. The foundation of a good garden and increased crop yields is in the soil, and while nature is ready to do her part it is up to the gardener to do the rest. See that every section of the garden gets the same careful trenching and manuring and read over the notes on manures, etc., in this department for last month. Never use a fertilizer unless you understand its worth, its properties and its probable action.

Rhubarb

This crop is a very heavy feeder, delighting in a stiff loam and lots of farmyard manure. Dig the latter well in the rows, and this will also be a good time to dig and divide the crowns or clumps for replanting. In the preparation of these new plots use manure liberally, trenching it deeply. If new stock is required the following varieties are recommended and may be secured from your seedsman: Wagner's Giant Crimson Winter, Myatt's Victoria and Strawberry.

Asparagus

Special attention should also be given this crop and the bed should be forked lightly and dressed with manure.

Onions

As advised last month, the bed for this crop should have been carefully prepared and richly manured, and after sowing it should be pressed firm. Those who may not have found it possible to clear their ground and get this into shape last month should lose no time and get this work in hand at once. As soon as a favorable opportunity offers itself after a rain, seeds of the early varieties may be sown, such as Extra Early Pearl, red and white Bermuda and Crystal White Wax, a popular market variety. Soot, frequently applied after the seed has germinated, will prove beneficial to this crop.

Tomatoes

Any well formed fruits which are still green may be collected and placed in the house to ripen or they may be used for pickles and in many other ways in their green state. The frosts will soon play havoc with this crop and it will be advisable to save all available fruits. Collect all rotten and diseased fruits from the plot and bury these with quicklime. This precautionary measure will prevent the spores from spreading and wintering in the plot.

Peas

Unless there is a continuation of the rains early this month it will not be advisable to continue sowing this crop. Watch for the first favorable opportunity and as soon as there is enough moisture in the soil sow the following main crop varieties: Stratagem, Telephone, Senator, and Yorkshire Hero. Successional sowings of the early varieties may also be made. In addition to those named last month we can recommend British Wonder and Morse's Premium Gem.

Beans

Continue the use of the hoe between the lines of these.

Lettuce

In the absence of rain keeping this plot well supplied with water and constant cultivation will repay with well developed heads.

Strawberries

Young plants of these may still be put out and those previously planted should be kept well watered.

Storage of Surplus Crops

Many root crops will have matured, and as these plots are cleared the roots not required for immediate use should be stored away in a dry place between layers of sand or they may be dried and preserved in various ways. Pumpkins, squash and casabas should all be collected and stored in the cellar or in a dry shed for use later on. Beans should be cleaned and will help out the food supply. It is a crime these days to let anything go to waste. Help feed yourself and your allies.

Southern California

Written for California Cultivator By D. F. Reichard

THIS is as truly garden cleaning time as April is house cleaning time. Deciduous trees and shrubs and berries should be pruned and thinned out. The dead wood ought to be removed from citrus trees. Corn, squash and sweet potatoes should be harvested and stored or disposed of before deterioration starts.

All plants from which crops have been harvested if not infested with disease or pests may be put into the compost heap or turned under for fertilizer. All infested prunings or litter should be burned. The infested trees and shrubs if fumigated or sprayed at this time destroy the insects and fungi as they are growing into winter form. These precautions about cleaning up go a long way toward controlling pests and disease next spring.

Unless your corn was planted late it is dry enough to shell and sack. In this condition it can either be sold or stored. Squash and pumpkins should be brought in and put under shelter before they are frosted. If it is necessary to pile these be careful not to bruise or scratch them and see that all imperfect ones are thrown out for immediate use or sale according to their condition. One bad squash or pumpkin will soon infect a large portion of the pile. Sweet potatoes must be dug before frost to retain their flavor and keeping qualities. If only a small quantity are to be put away select clean, firm tubers, wrapping each one separately in one thickness of newspaper and pack in boxes or pack in dry sand in boxes so that the tubers do not touch each other. To store in large quantities stack in a convenient place, alternating layers of sand and potatoes, then covering the whole so as to keep the rain out. The important thing about keeping sweet potatoes is to keep them dry.

This is the month to begin planning what you are going to plant next year and where and when it will be planted. On all ground not now occupied with crops and around trees and shrubs liberal dressings of barnyard manure should be applied to be leached into the soil by the rains. When there has been enough moisture to wet down two or three feet the ground should be worked at least a foot deep. Be sure to get the manure well turned under.

During these cool months it is not advisable to plant any of the tender summer vegetables such as beans, tomatoes, squash and corn. The hardy vegetables require a month or two more to mature at this season of the year than in the late spring and summer.

For early spring and continuous use plant in soil prepared as suggested in last month's Cultivator on pages 337-338 the following: Egyptian beets, Half Long carrots, Purple Top and Snowball turnips, early and winter radishes, Wonderful lettuce, Amsterdam Giant spinach, kohl-rabi, onions, seeds and sets, salsify and Laxtonian or dwarf peas. Set out plants of cabbage, cauliflower, kale and Swiss chard, horseradish, asparagus and rhubarb.

When planting seeds sow in rows about 20 inches apart so as to allow for irrigating and cultivating. The plants should be set farther apart to allow for top growth.

It is time now to be thinking of the hot bed for tender stuff for early spring planting. It takes over two months to grow tomatoes, peppers and eggplant to a size for planting out.

ANARCHIST PARALYZED MILK

The Milkman (to suspicious customer): "You won't find nothing wrong with that milk, ma'am. All our milk is paralyzed by a government anarchist."—Passing Show.

Get Full Plow Value Behind Your Tractor

John Deere No. 5 and No. 6 Tractor Plows meet fully every requirement for better and longer service in this section. We recommend them to you on the basis of proved superiority in California fields, orchards and vineyards. We want you to investigate them. It won't take you long. It will pay you to do it. See these plows at your John Deere dealer's store. Drop us a post card and we will send you a folder describing them fully. We'll also be glad to send you our free book, *"Better Farm Implements and How to Use Them."*

John Deere Plow Co.
San Francisco, Cal.

JOHN DEERE
Tractor Plows

John Deere Advantages

Steady running—axles rigidly fastened to beams.

Land wheel set back, balancing weight of plow over all wheels—even depth of plowing in uneven ground. Plowing position reached quickly. Bottoms locked down—*stay in the ground* while plowing.

Exceptionally strong throughout. Highest grade material. Beams warranted not to bend or break. Beam braces have extra long lap. Large bolts and lock washers hold all parts rigidly to place.

Simplest and most dependable power lift—no chain or sprockets. Bottoms raised high and level on half turn of land wheel.

Location of land and front furrow wheels permits work close to trees or vines throwing either to or from the row. Lever can be lowered out of way of limbs.

Quick Detachable Shares, strong and close fitting. Loosen one nut to remove share. Tighten same nut and share is on tight.

Hitch adjustable for any standard tractor.

This Month in the Ornamental Garden

Southern California

Written for California Cultivator

THIS is bulb planting month. Iris which have been in the ground two years or more should be taken up and divided. Daffodils and jonquils which bloomed in the spring and were placed in the basement over summer should be planted out. Besides, put in plenty of ornithogalum, anemones, ranunculus, sparaxis, narcissus, hyacinths, ixias, lilies, etc. It will soon be time to take out of the ground tubers of the dahlias which flowered this season as never before.

There is a big bunch of annuals which are in order almost every month in the year. In any case, the present month affords a good time for the planting of snapdragons, clarkias, candytuft, poppies, stocks, larkspur, calendula, marigold, etc. Especially, plant liberally of California poppies.

It is a bit late, however, sweet peas planted early in the month will give good results.

Practically all evergreen shrubs and trees may be successfully planted this month. Especially plant rhododendrons, magnolia, laurels, pittosporums.

Lawns which have become filled with Bermuda may be given a good raking and fertilizing, which will encourage the blue grass and prevent the browning which usually comes with the first frost on Bermuda.

Midwinter bloom of roses may be secured by very severe pruning at this period.

Northern California

Written for California Cultivator By A. R. Gould

IT IS surprising how much more forward we are by planting in the fall than if we left it all until the early spring. During this month and next we can carefully divide our perennial clumps of Michaelmas daisies, Heleniums, Shasta daisy, etc., and replanting can be carried out. It will be advisable to prepare the ground by trenching deeply and applying manure liberally. Get your orders in to nurseryman without delay for new plants and shrubs or ornamental shade trees. Quite a few of the most reliable firms who advertise in the Cultivator will be able to supply you with almost anything you desire, and do not forget that amongst the native shrubs of this state are some you should plant in quantity. A case in point is the Ceanothus, of which there are quite a few beautiful species, and many more we could mention will no doubt harmonize with your surroundings.

In our desire for new and rare imported plants we are apt to overlook our native stock and lose sight of their possibilities. For a charming range of blue shades which are in flower for quite a long time the Ceanothus are ideal. They are commonly known as the Mountain Lilas. Before planting any new shade trees dig the holes deeply and fill up with rich soil and manure. After planting the trees press the soil around the roots firmly and make the tree secure with a strong stake. If the lawn was renovated last month see that it does not suffer for lack of water. As the annuals go out of flower remove them and dig up the beds.

Violets

Plant new beds of these and manure existing beds heavily. They will also need plenty of water.

Rhododendrons and Azaleas

Extended plantings may be made of these in shady positions and those planted previously should have a dressing of decayed leaves and manure well dug into the soil around the roots. It is also important to remember that these beautiful shrubs enjoy plenty of moisture. Among the best named varieties for a choice collection are the following: Abraham Lincoln, rose crimson, Cunningham's White; Lady Armstrong, pale rose; Charles S. Sargent, rich crimson; and Giganteum, large, cherry red.

Climbing Roses

For a good fence rose, Silver Moon, semi-double white, having dark green foliage, is very suitable in every respect. It is a most vigorous grower. Before planting prepare well manured trenches. Other good climbers are American Pillar, dark pink; Aviator Bleriot, flowers in yellow clusters; Dr. Van Fleet, flesh pink; and Cherokee, pink, large flowers.

Dahlias

The tubers of these should be dug this month, carefuly labeled and stored away in a dry cellar or shed for another season. Seed of the best varieties may be collected and cleaned for sowing in a month or two.

Sweet Peas

In deeply manured trenches the following varieties may be sown: Early Snowflake, Early Heather Bell and Early Song Bird. These will give you very early bloom. To follow on sow Dobbies' Cream, Royal Purple, R. F. Felton, Illuminator and George Herbert. These will provide a succession of bloom. It is best to soak these seeds a few hours before sowing.

Polyantha Primulas

These beautiful primulas are getting deservedly popular, especially the large flowered strains, and they are among the earliest of our spring flowers. They thrive in fairly rich soil and clumps of these may now be divided and replanted.

Reasons why Styleplus Clothes are worn everywhere

Because they are stylish in appearance—designed and tailored by experts.

Because they are built for service—carefully constructed of good materials that can be depended on to wear well.

Because they are moderate in price—enable you to dress well and practice thrift.

Styleplus are manufactured on the standardized plan—a few grades in big volume, with costs reduced and clothing values increased.

At the price, each grade is always an exceptional value.

There is a big advantage in buying clothes at a store. You can *see* the different styles, try them on, and make the best selection. You can be certain of the fit *before* you order the clothes.

So make your pick today at the Styleplus Store in your neighborhood.

Two grades in Styleplus suits: $25 and $30.

Three grades in Styleplus overcoats: $25, $30 and $35.

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. AB) for Styleplus booklet and name of local dealer.

A DUROC OPPORTUNITY

H. P. Slocum & Son

Must Sell

150 Head of Modern Durocs

The junior member of the firm has been placed in Class One-A and is expected to be called any time. Because of his age, the senior member can not undertake to carry on the herd, and for that reason it has been decided to close out the entire herd.

The Best Blood of the Breed

It is generally admitted that no herd in the West is superior in point of breeding or individuality. We have the blood of High Orion; Great Wonder; Giant Invincible; King Orion Cherry and King of Orions. There is no better breeding. We selected our foundation stock for size, prolificacy, quality and bone. Our herd produced more champions and prize winners at the 1918 California and Oregon state fairs than any other herd.

Read What We Offer

Three herd boars, including Uneeda Wonder, that Eastern breeders would price from $1500 to $3000 each. Herd sows that we have refused to price. Young gilts and boars sired by some of the greatest boars of the breed.

Everything Must Be Sold

Absolutely nothing reserved and everything is priced to move.

Write at once for prices.

H. P. Slocum & Son

Willows, Calif.

sown: Hollyhocks, aquilegia, campanulas, helenium, alyssum, sweet William and gaillardia.

Hedges

These should now be trimmed neatly with the garden shears and this month and next will be a good month to prepare for planting new hedges.

PLAN GAS ATTACK ON WEEVILS

Bean and pea weevils, which annually destroy millions of dollars' worth of valuable food and feed in the form of beans, peas and cowpeas in storage, have not yet discovered the advantages of gas masks. Those who expect trouble from weevils can successfully kill them by a gas attack immediately after the crops are harvested. Carbon disulphide should be used. Place the seed in an air-tight container, such as a tin can, barrel or bin, and over the top pour a small amount of the chemical (two to four pounds to every 500 cubic feet of space to be fumigated), cover the seed with burlap or old blankets and fumigate from 24 to 48 hours. The seed should be inspected frequently to see that the weevils do not reappear. In case they do, repeat the gas treatment.

Swine Breeders Constructive Plans

Written for California Cultivator By Frank B. Anderson

WITH the assertion that at times the swine grower feels that the hog business "is not what it is cracked up to be," the California Swine Breeders' Association has set about to better the pork industry in California insofar as the aid of a big strong organization consisting of producers can make it. County units are being formed and steps taken to get market conditions which will be the most certain means of increasing pork production in this state. Many steps can he taken to increase production, but nothing will stimulate the pig growing business like a better market, so this feature of the aims and purposes of the association is being held paramount to all others.

In order to make the association strong enough to be of real help to the growers, President C. B. Cunningham has mapped out a plan of organization which will give the various directors several contiguous counties to supervise in the work of establishing county units. These directors hail from all sections of the state and represent the various breeds of swine, so that no breed nor section will be overlooked. This is not a movement for the advancement of any breed or breeder, but to encourage the raising of more and better hogs in California.

While it is taking a little time to develop the organization to such an extent as it will be able to work up the better marketing end of the business, no time is being lost in preparing a measure to submit to the next legislature asking that a pure-feed law be enacted for the California growers of swine, dairy and beef cattle, sheep and poultry. Secretary J. I. Thompson of the swine organization has received copies of similar laws from other states and an early conference will be held with the various organizations representing all the users of commercial feed stuffs, and one bill embodying all features applicable to California conditions will be submitted.

The urgent need for such a law has been demonstrated during the past year since the price of many of the ordinary feeds went skyward and the feeder was obliged to use some commercial feed which sounded well in name but which did not work out quite so good in the feed-lot. In the absence of proper legislation on this subject, the feeder was forced to take what was offered or go without. Some feeders of live stock and poultry were forced out of business.

Hog growers have been attracted by the success of various agricultural producers in organizing, and as much is expected of the swine association. In surrounding himself with a board of directors representing various breeds and localities of the state, President C. B. Cunningham, who is also a member of the live stock commission of the federal food administration, told the hog growers that he did not want the sort of directors who enjoyed the honor of being a director, but whose services ended there. Cunningham has a "working board" with him now and says he will do his utmost to advance the interests of the hog men through this association.

The officers include the following: President, C. B. Cunningham, Mills; vice president, Alex D. McCarty, San Francisco; secretary-treasurer, J. I. Thompson, Davis; directors—M. Bassett, Hanford; W. S. Guilford, Butte City; H. H. Braly, Newbury Park; Elmer Lamb, Ceres; R. K. Walker, Bonita, and Frank B. Anderson, Sacramento.

All persons interested in the hog business are invited to join the association.

AIMS AND PURPOSES OF THE CALIFORNIA SWINE BREEDERS' ASSOCIATION

To stahilize market conditions in order that the producer may he assured a reasonable profit.

To secure the enactment of a pure feed law, so that the buyer will know what he is getting when he buys commercial feeds.

To collect data on the condition of the hog industry, with recommendations wherein it can be improved, and distribute this to hog raisers.

To encourage the use of pure-bred sires.

To assist in increasing the export trade in hogs to the islands of the Pacific and South America.

To cooperate with the federal food administration in such ways and at such times as will be to the greatest benefit to the nation and to our allies.

To assist in every way possible toward the more profitable production of more and better hogs, and give the hog growers an organization which will he in a position to accomplish improved conditions which the growers desire, but wherein they are helpless through lack of organization.

Field Notes from the Live Stock Men

$38,700 for a Shorthorn Bull

William Harnett advises the Breeders' Gazette that the grand champion Shorthorn bull of the recent Buenos Aires show sold for $90,000, Argentine money—about $38,700 in our money.

Horse Values Lower

British buyers on the Chicago market state that they are able to buy better horses at less money than at any time since the war began. Lack of competition from civilian sources for the type that fills transport specifications is the reason for the existing condition.

English Berkshires for California

Berkshire breeders will be interested to know that E. B. McFarland, San Mateo, is making his plans to again enter the Berkshire business. Mr. McFarland has announced that he recently closed a deal with the Gossard Breeding Estate, Martinsville, Indiana, for eight gilts sired by the English champion, Lord of England,

and a boar by the much discussed English boar, Epochal.

California Berkshires are acknowledged to represent the best of the breed, and breeders will be keen to see how these English hogs "stack up" with the California product.

The question of introducing English blood into American herds is causing much discussion in breed circles. It is claimed by some that this new blood will raise the prolificacy of the breed, increase the size, and generally rehabilitate the Berkshire on the corn belt farms.

Sandercock Buys Baron Duke 201st

W. F. Sandercock, San Francisco, who has established an exceptionally high class herd of Berkshires on his Natomario Farm, near Sacramento, has recently purchased Baron Duke 201st, grand champion boar at the 1917 National Swine Show. Baron Duke 201st was formerly at the head of the Frank A. Brush herd.

Cochel Visiting California Cattlemen

W. A. Cochel, field representative of the American Shorthorn Association, who is to judge Shorthorns at the forthcoming Liberty Fair at Los Angeles, is now in California and is taking advantage of the postponment of the show, to investigate the cattle situation in this state.

Mr. Cochel is considered one of the keenest students of the live stock industry in this country and during the past year he has taken a commanding part in solving many of the big problems that have developed as a result of the war.

It is Mr. Cochel's opinion that for a good many years after the war the demand for meat and meat products will continue and he expressed the belief that there never was a more inviting time to enter the business of meat production than at the present time.

The South, according to Mr. Cochel, is making very rapid progress in live stock development, although all sections are showing a quickening interest.

Whittier Holstein and Berkshire Sales

N. B. Balis, superintendent of live stock at the Whittier State School, writes that the recent sales made by that institution include a December Holstein bull calf to Dante Paggi, San Gabriel, and a calf of the same age to Sargent Bros., Whittier. Both calves were sired by the Whittier herd bull King Segis De Kol Mead. The Paggi calf is out of a dam with a 16.26 pound junior two year old record, and the Sargent calf is out of Whittier Ormsby Hartog, who has a junior three year old record of 24.13 pounds.

Mr. Balis also reports the sale of a Berkshire gilt by Ames Rival 117th to W. W. Martindale, Los Angeles, and a boar and gilt to W. J. Gretten, Gardena.

Feeding Sunflower Silage

McAlister & Sons, Chino have a small quantity of sunflower silage that they are giving a trial. J. W. McAlister, Jr., states that the cattle seem to relish it, but that they have only a small amount and probably will not be able to draw definite conclusions as to its feeding value.

The Montana station has carried on a number of investigations comparing Russian sunflower and corn silage, and trials where an average of over 70 pounds of each silage was consumed daily per head, show that sunflower silage, pound for pound, was about the equal of corn silage for dairy cows.

Two New Holstein Class Leaders

The Holstein-Friesian Association of America announces that the senior three-year-old record is now held by Jewel Pontiac Segis, and the senior two-year old record by her half sister, Beauty Beets Walker Segis.

Jewel Pontiac Segis is credited with a yearly production of 27,068.5 pounds milk and 1171.15 pounds butter. The former holder of this class record was Duchess Hengerveld Korndyke, whose record was 22,897 pounds milk and 1129.22 pounds butter.

Beauty Beets Walker Segis has a yearly record of 25,343.3 pounds milk and 1040.63 pounds butter, which places her ahead of K. P. Manor Kate, whose record is 22,106.4 pounds milk and 1023.4 pounds butter. The two

Continued on Page 454

Turn This to Your Profit

Think carefully how many of the splendidly bred, heavy producing cows that will be sold by A. W. Morris & Sons Corporation you are able to buy and equipped to feed and handle. There is a fortune to be made through the purchase of some of these cows, bred to the Morris herd sires, and they will be sold absolutely without reserve or limit to the highest bidder—

90 Registered Holstein Cows

Three of them with records from 30 to over 33 pounds butter in seven days; 30 of them with records from 20 to over 29 pounds butter in seven days; 30 of them with yearly records up to over 24,000 pounds milk and over 1000 pounds butter.

75 or more of them bred to six bulls, every one of which has sired a world's record daughter or has for a dam a cow that has made one or more world's records.

Consider then what a wonderful lot of calves these cows will drop, full sisters and brothers to the young cows and heifers that the Morris Corporation will retain in their breeding herd, for remember that

The Morris Herd Contains 450 Registered Holsteins

and the sale of 105 head in this sale will leave them quite a sizable herd to work with. And remember also that the females in their herd after this sale will be very largely composed of DAUGHTERS OF THE SIRES TO WHICH THE COWS IN THIS SALE ARE BRED, and you will get the full benefit of their work if you are fortunate enough to buy in this sale.

15 Registered Holstein Bulls

In this sale will be offered several choice young bulls that should go to head pure bred herds, and besides an especial effort has been made to offer some richly bred young bulls that owners of grade dairy herds can buy and own at a profit. Owners of grade herds should plan to attend this sale by all means, for it will be a rare opportunity to buy sons of the great Morris herd sires at the highest bid.

DON'T FORGET that there are 25 FRESH COWS in this sale, big producers, and we believe they will sell at moderate prices.

Every Animal in this Sale is Positively Guaranteed to be a Breeder

No Animal in this Sale is Tuberculin Tested

Sale will be held on the Morris farm, 4½ miles Northeast of

Woodland, California
Tuesday, November 12, 1918

How the packers have helped to develop good stockyards

—and how this has benefited you as a producer

WHOSE job is it to provide and maintain stockyards, or markets, for the open buying and selling of cattle?

Who shall see that these markets have good pens where your stock can be properly watered, fed and taken care of until sold?

Stockyards, in early days, were not efficiently managed, and were not financially attractive to investors, except in the largest markets.

As the packers built their big-capacity plants at the various live-stock centers, they naturally became interested in helping to develop adequate stockyards facilities, where stock raisers could ship their animals.

The present high efficiency of most of the principal stockyards is due largely to the time, the effort, and the money the packers have put into them.

All stockyards, including those in which packers are interested, are conducted as *public* market places for the benefit of all.

They are open to all—to producer, commission man, dealer, speculator, the packer's buyer—and with exactly the same rights to each.

Packer-ownership gives no special advantages to the packer and no control over live-stock prices.

These spot-cash markets have been a factor of very great importance in promoting the growth of the live-stock industry.

If stockyards efficiency can be increased by Government ownership and operation, all well and good. Swift & Company is content to stand on its record of having helped the live-stock industry by the part it has played in developing these market places.

Swift & Company, U. S. A.

A nation-wide organization owned by more than 22,000 stockholders

HOW GOOD BLOOD PAYS

The article by Mr. Spellmeyer, in this issue brings out a number of points to which the cattle interests of this state must sooner or later give heed.

The point he raised regarding the possibility of increasing the carrying capacity of the range through better systems of range management, and particularly the use of more and better bulls, was strikingly demonstrated at the recent field meeting of Missouri, Kansas, Oklahoma and Arkansas cattlemen at Sni-A-Bar Farm, near Grain Valley, Missouri.

A few years ago Col. W. R. Nelson, owner of the Kansas City Star, began purchasing land near the little town of Grain Valley, just outside of Kansas City. From time to time more land was added to the initial purchase until the "farm" contained 1750 acres. During the development of the farm Colonel Nelson proceeded on a different plan than is usually followed by rich men who turn to the land. He did not build a show place but developed the farm along the most practical lines—just as any practical farmer would.

Colonel Nelson believed in live stock farming. He had watched the live stock of the Southwest change Kansas City from a little river town to one of the finest cities. He knew that those communities of Missouri and Kansas where one found the best farms were live stock sections. It was natural then, that he would give live stock leading place in his operations.

About five years ago he went onto the open market at the stock yards and purchased 100 cows, and some time later bought 200 head more. The cows selected were good, straight, thick red cows, with good udders and showing evidence of fairly good breeding. Starting with these cows, the next move was to buy bulls, and the best white Shorthorn bulls that could be found were purchased. The prices paid would, perhaps, seem high to the average man, but the results of such a policy have demonstrated the wisdom of using only the best bulls available.

From the first, the cattle were handled along the most practical and progressive lines. No expensive barns were provided, only such buildings as can be found on any number of corn belt farms were built. The breeding herd was carried through on blue grass pasture, with hay and silage in the winter. The steer calves were fed out as baby beef. The heifer calves from the better cows were saved for the breeding herd.

It was for the purpose of showing the results obtained under such conditions that the cattlemen were invited to attend the field day.

The cattle were lotted by ages and crosses. In one lot were cows from the original purchase, and in the adjoining lot were their sucking calves. The first crop of daughters were in a lot and next to them were their calves. It was stated that not a word of explanation or argument was needed to make the demonstration plain to the 2000 visitors. The young cows from the first cross were superior to their dams, and in turn their daughters showed marked improvement.

Perhaps the most striking feature of the demonstration was the showing of first and second cross steers. The same number from each cross were selected, all were the same age, about thirteen months, and all had been handled and fed in exactly the same manner. The steers were weighed and were valued by commission men. The first cross lot averaged 850 pounds, and were valued at $14 per cwt.; the steers from the second cross averaged 978 pounds and carried a value of $17.00 per cwt. In other words, the second cross calves, at the same age, and fed and handled in the same way, brought $47.26 more per head than the first cross calves.

That such a demonstration made a profound impression on the visiting cattlemen goes without saying, yet the story told was not new, and need not necessarily apply to beef cattle alone but is applicable to every class of live stock.

The possibility of increasing and cheapening the production of meat, milk and wool, through the use of better sires opens up a very wide field. The man who refuses to see the value of better blood is standing in his own light.

INCREASING THE CARRYING CAPACITY OF THE RANGE

Written for California Cultivator
By A. L. Spellmeyer

From the results obtained at my Apache Ranch, in Arizona, during the past four years, I have become convinced that improved methods of range management can be made to double the production of beef in the Southwest. The factors I would name as making for increased production are: Fencing, division of summer and winter grazing, development of water, more and better bulls, segregation of bulls, corral salting, long terms on cattle-loans, security of permits and destruction of coyotes. I also believe in government control "from the calf to the table." All these factors I believe would tend to make the industry safe instead of a risky gamble, and at the same time would give the consumer cheaper meat.

In September, 1914, we bought a ranch with an 1800 head permit, and, according to the seller, about 800 calves were branded a year. By fencing, close control and adopting improved methods, this outfit paid all expenses and interest at 8 per cent and paid out in June, 1918. Furthermore, it paid for improvements to nearly the amount of the original purchase price.

This year this outfit should brand nearly 2000 calves. It now carries a permanent permit for 2800 head and is paying on a 1500 excess.

During a dry year, because of water development, grass has been good and our loss has been cut to three per cent or less.

Adjoining outfits, operated under different methods, have lost cattle and are in a rather bad way. It seems to me that this fact, in itself, is sufficient proof that more cattle can be run under a controlled and rested grazing system.

About 2,000,000 head of feeding stock from the southwest have been forced on the market during the past year. When one bears in mind that the southwest is the breeding ground of the nation, furnishing yearling steers to the middle west and northwest, it must be clear that a shortage of killing steers must be reckoned with later. According to Zimmerman and others who have loked into the cattle situation, the shortage will be very apparent within two years.

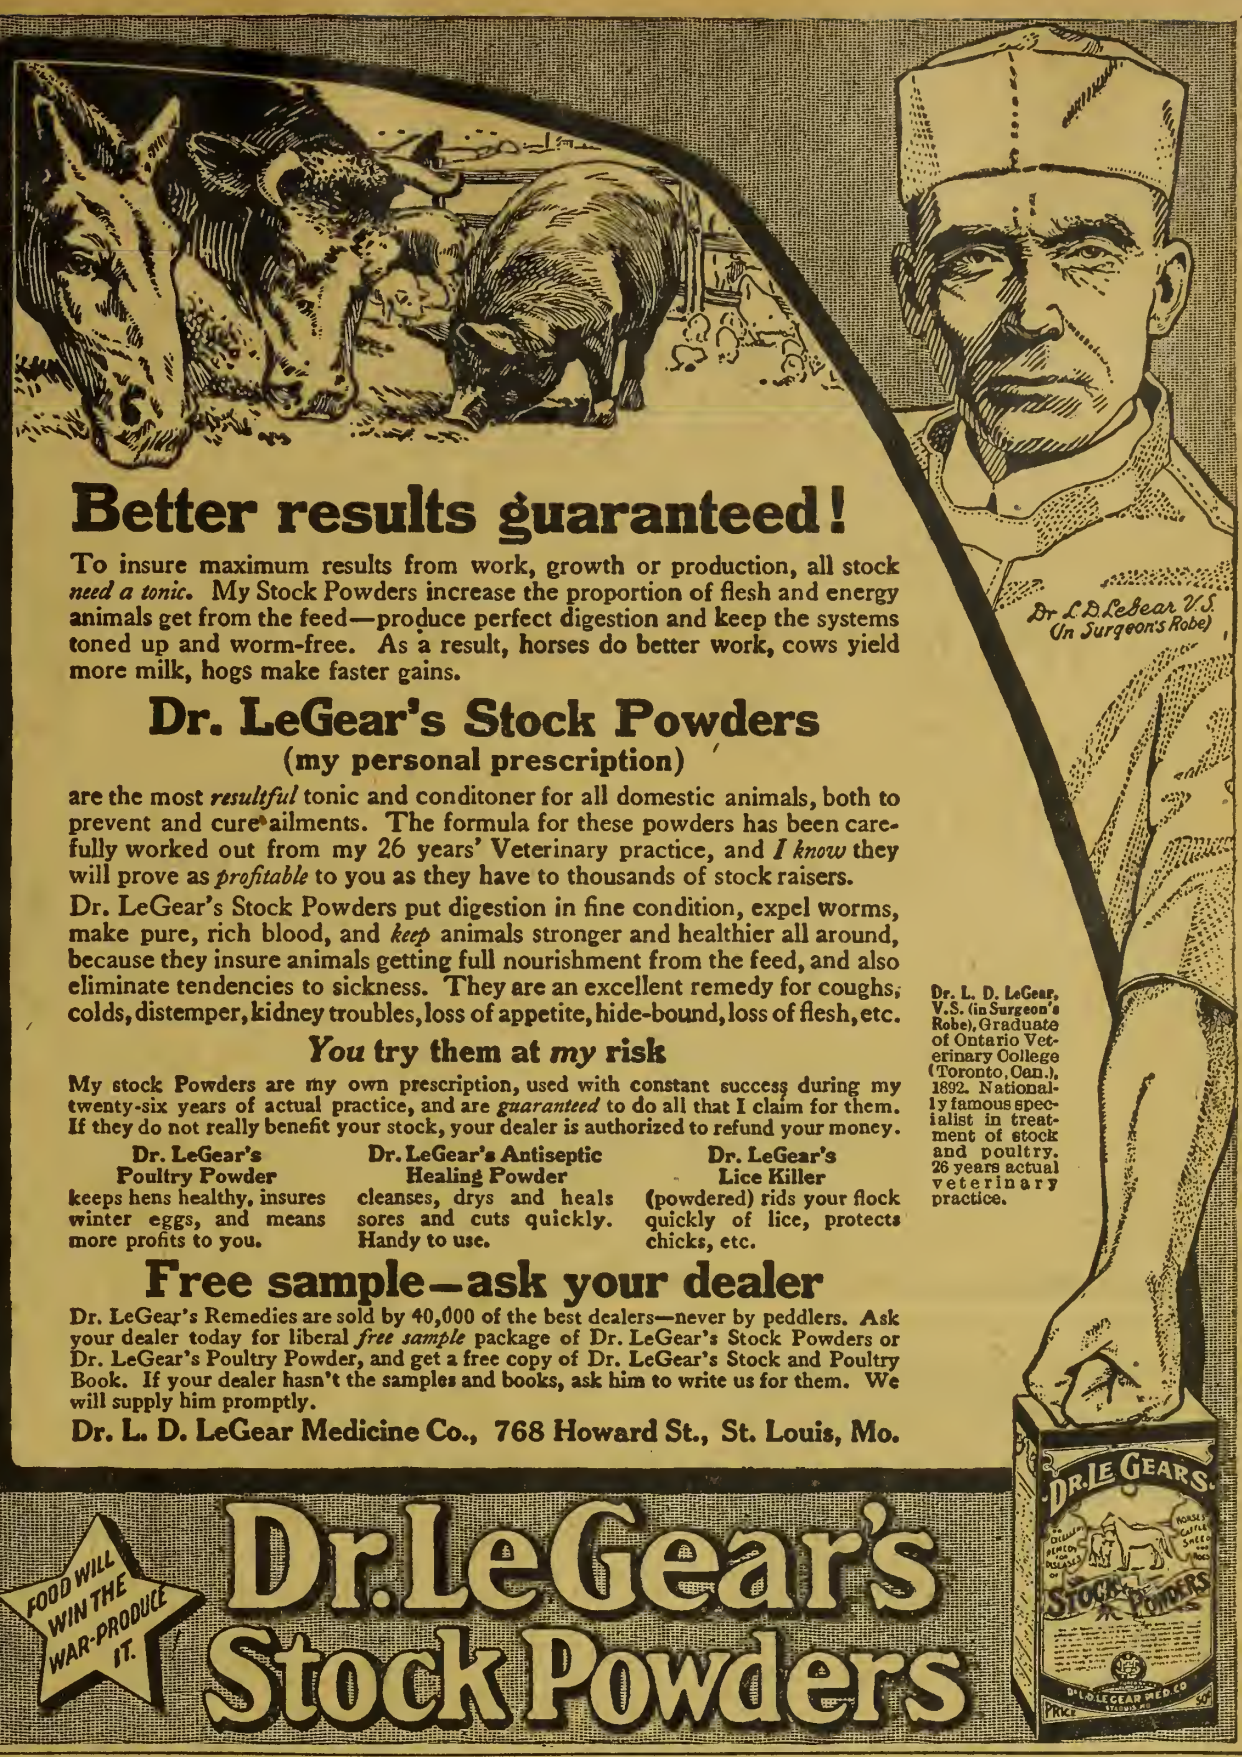
LET THE HOG FEED HIMSELF

With farm help scarce, the efficient farmer will endeavor to remove hog feeding from his list of chores. The hog can feed himself as well as, if not better than, the most expert feeder can do it if given the chance. The chance is offered by the self-feeder, a device by which the hog can choose from a variety the feeds best suited to his needs. Hogs require a variety of feeds to take care of their bodily wants. Also, one hog requires more of a certain feed than does another.

It is certain that the self feeder method of feeding is more efficient than the hand method and that it will save a great deal of time and labor. Instead of feeding two or three times a day, all that is needed is to see that the feeders are not empty and that the hogs have plenty of water.

There are several types of self feeders for hogs, but they all employ the same principle of letting the hog do the work. Some of them consist of just one compartment and are nothing more than a box with one side slightly altered. Others have several compartments with means of adjusting and regulating the opening to accommodate different kinds of feed and regulate the flow. The kind and size that a farmer will want depend on the size of his herd and his inclination in the matter.

Blue prints and directions for building different types of self feeders may be secured free by writing the Farm Engineering Department, University Farm, Davis, California. The United States department of agriculture farmers' bulletin No. 906, "The Self Feeder for Hogs," can also be obtained free by writing the Division of Publications, U. S. D. A., Washington, D. C.



Better results guaranteed!

To insure maximum results from work, growth or production, all stock *need a tonic.* My Stock Powders increase the proportion of flesh and energy animals get from the feed—produce perfect digestion and keep the systems toned up and worm-free. As a result, horses do better work, cows yield more milk, hogs make faster gains.

Dr. LeGear's Stock Powders
(my personal prescription)

are the most *resultful* tonic and conditoner for all domestic animals, both to prevent and cure ailments. The formula for these powders has been carefully worked out from my 26 years' Veterinary practice, and *I know* they will prove as *profitable* to you as they have to thousands of stock raisers.

Dr. LeGear's Stock Powders put digestion in fine condition, expel worms, make pure, rich blood, and *keep* animals stronger and healthier all around, because they insure animals getting full nourishment from the feed, and also eliminate tendencies to sickness. They are an excellent remedy for coughs, colds, distemper, kidney troubles, loss of appetite, hide-bound, loss of flesh, etc.

Dr. L. D. LeGear, V.S. (in Surgeon's Robe), Graduate of Ontario Veterinary College (Toronto, Can.), 1892. Nationally famous specialist in treatment of stock and poultry. 26 years actual veterinary practice.

You try them at *my* risk

My stock Powders are my own prescription, used with constant success during my twenty-six years of actual practice, and are *guaranteed* to do all that I claim for them. If they do not really benefit your stock, your dealer is authorized to refund your money.

Dr. LeGear's Poultry Powder keeps hens healthy, insures winter eggs, and means more profits to you.

Dr. LeGear's Antiseptic Healing Powder cleanses, drys and heals sores and cuts quickly. Handy to use.

Dr. LeGear's Lice Killer (powdered) rids your flock quickly of lice, protects chicks, etc.

Free sample—ask your dealer

Dr. LeGear's Remedies are sold by 40,000 of the best dealers—never by peddlers. Ask your dealer today for liberal *free sample* package of Dr. LeGear's Stock Powders or Dr. LeGear's Poultry Powder, and get a free copy of Dr. LeGear's Stock and Poultry Book. If your dealer hasn't the samples and books, ask him to write us for them. We will supply him promptly.

PURE BRED REGIST'D HOLSTEINS

Tuberculin Tested State Supervision

Production Butter Fat Everything Guaranteed

Prince Gelsche Walker Korndyke

(shown above)

is proving himself a breeding bull of the highest excellence. Particularly noteworthy is the uniformity of his daughters, straight backed, deep bodied heifers with splendid udder capacity and development. One of his two year old daughters sold for $1000 in Southern California a short time ago and goes as a foundation female in a high class herd now being established.

King Korndyke Pontiac

(shown below)

is proving himself a fit partner for Prince Gelsche Walker Korndyke, and is siring the kind of heifers we want to keep for breeding animals, and we have set our mark of quality high.

DAIRYMEN: We can suit you with a young bull from either of these great sires, out of dams with records up to over 32 pounds butter in seven days, and they are priced moderately, with terms to suit your circumstances if you wish.

JANE GARDEN FARM

SACRAMENTO — CALIF.

FRED W. KIESEL, PROP'R. C. W. YOUNG, SUP'T.

Individuality Breeding

We Have Been Telling You

that PRINCE RIVERSIDE WALKER is siring a mighty fine lot of calves in our herd, and prospective buyers who have come to look at his young sons have agreed with us for we have sold right down to calves all the time.

Now we have some expert opinion on the young sons and daughters of "Prince," in the form of awards at the recent California State Fair in the hot competition of the younger classes. Sons and daughters of PRINCE RIVERSIDE WALKER were placed as follows by Judge Scribner:

First Junior Bull Calf.
Fifth Junior Bull Calf.
Reserve Junior Champion Bull.
Second Senior Heifer Calf.
Fifth Senior Heifer Calf.
Reserve Junior Champion Heifer.
First Prize Breeders Young Herd contained some of his daughters.
Second Prize Calf Herd.
First Prize Produce of Dam, won by his twin sons.

Hadn't you better consider one of his young sons to head your herd, securing a rare combination of breeding and type?

Our Entire Herd is Tuberculin Tested

P. S.—Our junior herd sire, King Korndyke Pontiac 20th, was a second in class at the State Fair to the bull that was again made grand champion.

Anita M. Baldwin, Owner *W. H. Taylor Supt.*

FIELD NOTES

Continued from Page 451

cows are owned by J. M. Hackney of Arden Farms, St. Paul, Minnesota, and are daughters of King Segis Pontiac Count.

Modesto Holsteins Average $210

In the second Modesto consignment sale held at Modesto, October 17, 50 head of bulls and cows were cashed for $10,520, an average of $210. In view of the general quality of the offering the prices obtained were considered extremely conservative.

No extreme high prices were registered, but the entire offering sold very uniformly. The tried bull, Sir Chimacum Wayne Woodcrest, goes to the R. L. Holmes herd at $685. Potoki Johanna 2d, an eight-year-old cow, with a seven day record of 27.86 pounds, consigned by J. M. Campbell, Escalon, topped the female division at $675. She was purchased by the Lewis Company, San Jose.

Meeting of Cattlemen's Association

Secretary D. J. Stollery reports that at the meeting of the California Cattlemen's Association held at the Palace Hotel, San Francisco, October 12, the amended articles of incorporation and revised by-laws and constitution were ratified.

This association, under the leadership of the president, L. A. Nares, who is also a member of the federal live stock commission, is working out a plan of organization that will have a far reaching influence on the cattle industry of the state.

Secretary Stollery announced that to date the association had secured a membership of 557, representing 297,350 head of cattle.

New Marketing Association

Members of the farm bureaus of Fresno, Tulare, Kings, Kern and Madera Counties have formed a central organization to be known as the California Farm Bureau Marketing Association, with headquarters at Visalia.

This association is the outgrowth of the auction plan of selling hogs, first inaugurated in Kern County by Farm Adviser Kreutzer.

This selling plan has proven so successful that nearly every county having a farm adviser has adopted the plan.

The new association plans to handle live stock and other farm products on an extensive scale.

Cattle Inspection Beginning November 15

Beginning November 15 the new state cattle inspection regulations will be put into operation in Southern California.

Under these regulations shippers of cattle will be required to have their cattle inspected by regularly appointed inspectors before shipping by rail.

University Using Hammond's Boar

Professor J. I. Thompson of the University Farm, Davis, writes that he is now using the Berkshire boar, Hedgemere Star, owned by Dr. H. J. Hammond of Sacramento.

Hedgemere Star, a son of Grand Leader 2nd, was first prize junior pig at the 1918 state fair, and attracted considerable comment because of his exceptional size. Professor Thompson plans to use the boar on daughters of Star Leader.

O'Connor Buys National Champion

J. Francis O'Connor, proprietor of the Castleview herd of Berkshires, Santa Rosa, has purchased the sow Rookwood Lady 100th, from the Frank A. Brush herd. It will be recalled that Rookwood Lady 100th brought fame to California Berkshires last year by winning the championship at the National Swine Show.

Farmers Protest Corn and Pork Prices

At a mass meeting of representative farmers of Nebraska, held at Lincoln October 16, resolutions were adopted protesting against the recent announcement by the food administration that in arriving at the cost of corn for the purpose of figuring the cost of pork production, that the "farm value" of corn would be used instead of the Chicago price.

The resolutions also stated that Nebraska farmers were receiving $16.00 per cwt. for their hogs, and that this represented a 9 to 1 ratio instead of the promised 13 to 1.

MILK ····· *and* **WAR TIME**

In these days of high prices for dairy products, the "poor milker" is more than ever a liability.

But before you sell the cow that is not producing well, try to improve her condition. Her milk value is much greater than her meat value.

Most poor milkers are non-productive because of some defect of health, which can be quickly remedied by intelligent treatment.

Kow-Kure is a medicine that acts quickly on the organs of digestion and milk production. Its widely known tonic and curative qualities have made it the standard cow medicine for the prevention of disease and the treatment of Abortion, Barrenness, Retained Afterbirth, Scouring, Lost Appetite and Bunches.

Give Kow-Kure a trial; it will do for you what it is doing for thousands of others. Feed dealers and druggists sell Kow-Kure; 60c and $1.20 packages. Send for free treatise, "The Home Cow Doctor."

SLOCUM'S HERD OF DUROCS TO BE DISPERSED

The Duroc-Jersey interests of the state will regret to know, that owing to the fact that Clayton Slocum, junior member of H. P. Slocum & Son, Willows, is expecting to be called to national service, it has been decided to disperse their herd.

For a number of years the Slocums have been important factors in Duroc circles of California. Last year Clayton visited a number of the leading herds of the Middle West and purchased one of the best collections of breeding animals brought to this state. It was their intention to build up a herd of the first rank, and the foundation was firmly established with the leading blood of the breed. The influence of this herd for good was indicated by the showing made at the 1918 state fair by Glenn County breeders, who exbibited over 100 head—nearly all coming originally from the Slocom herd.

In a recent letter Mr. Slocum says: "It is certainly a keen disappointment that we find it necessary to break up our herd. But I nave been placed in Class One-A, and my father does not feel able to carry on the herd alone. I expect to be called any day, but I assure the Duroc breeders of California that after I come back from "going over the top" that my first move will be to assemble another herd."

It is unfortunate that such breeding establishments are forced to suspend operation. A high class herd of any kind is a national asset that can not be replaced in a day. Now, as never before, efforts should be made to hold choice collections of breeding animals together.

HEREFORD SALE AT SAN FRANCISCO

Forty-five head of Hereford bulls and females will be offered at public sale by the Pacific Coast Hereford Breeders' Association at San Francisco, November 22. The sale will be held on the grounds of the California International Live Stock Show.

The sale held by this association last spring at the University Farm, Davis, was one of the most successful consignment sales held in the state, and President H. H. Gable states that every effort is being made to sell a better lot of cattle this month. About one-half of the sale will consist of California Herefords and the balance will be made up from Colorado and Nevada herds.

From the point of breeding and quality the offering will prove especially attractive to the man who plans establishing a pure bred herd and also to the breeder who wishes to expand his own operations.

This state presents one of the most inviting fields for the breeder of Herefords, and there should be ten herds where there is one today.

A catalog of the offering can be obtained from W. R. Madden, Dixon, California, who is secretary of the association.

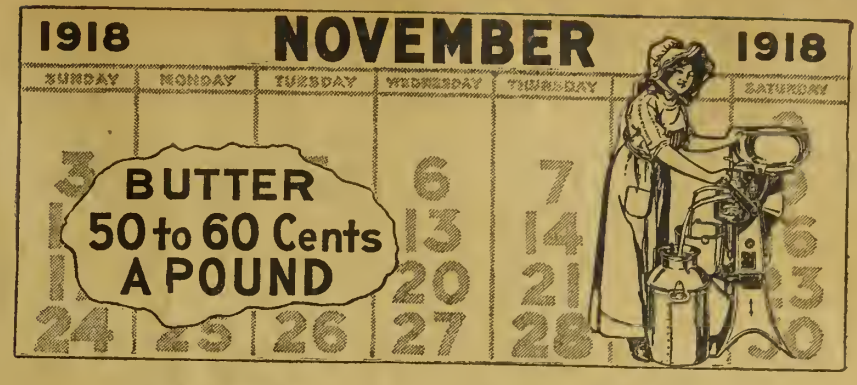
WYOMING HEREFORDS MAKING WESTERN CIRCUIT

The Hereford Corporation of Wyoming, owners of the largest herd of registered Hereford cattle in the world, have an exhibit at Exposition Park, Los Angeles, waiting for the opening of the Liberty Fair.

This herd has a long and interesting history. It was founded in 1882 by the Swan Land and Cattle Company, who made several extensive importations from England, and since the early days of the herd no females have been purchased. This fact is all the more interesting when it is stated that the herd as a whole has changed ownership at least twice since it was established. The present owners are continuing the policy of retaining the females, and at the present time there are over 900 head of cows in the breeding herd.

While the policy of adding no new females has been adhered to, the herd has always had the service of the best Anxiety-bred bulls.

The cattle are handled on a 25,000 acre ranch, just east of Cheyenne, and under conditions that tend to produce superior breeding stock. The herd is a Western herd and the owners know the kind of bulls that meet Western demands.



NOW IS THE TIME
to get your new
DE LAVAL
CREAM SEPARATOR

WITH butter prices soaring no cream producer can afford to go another month without a New De Laval Cream Separator.

This is true whether you have no separator, or an inferior or half-worn-out machine, or even an old style De Laval.

In cold weather your waste of butter-fat is relatively greater, either with gravity skimming or a poor separator; and at present prices for cream a De Laval would very soon pay for itself out of its own savings.

Order your De Laval now and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save its own cost. See the local De Laval agent, or, if you don't know him, write to the nearest De Laval office as below.

Ranch Adjoins Town

FORT WORTH, KNOXVILLE, BRANDON, EDMONTON, HONOLULU, SPRINGFIELD, DES MOINES, LINCOLN, TOPEKA, SYRACUSE, LOUISVILLE, NASHVILLE, OKLAHOMA, CHATTANOOGA.

These are Aberdeen-Angus victory points thus far in 1918. Beginning with the Fort Worth Fat Stock Show last March, when the "Doddie" steers won all single steer grand championships over all breeds in both the open and Boys' Baby Beef Classes, the victorious drive has continued with the state fairs.

At Springfield, Ill., Aberdeen-Angus won both single and steer herds grand championships; at the Iowa State Fair an Angus calf stood at the top of the class of 107, the pick of over 700 entries in the state Boys' and Girls' Calf Feeding Contest; at the Nebraska, Oklahoma and Kansas Free State Fair, Aberdeen-Angus steers were grand champions; at the Kentucky State Fair the champion six head of steers were Aberdeen-Angus; at the Tennessee State Fair the $500 Caldwell Special for the best exhibit of live stock was won by a herd of Aberdeen-Angus; at Chattanooga another Angus herd won a similar class; at the New York State Fair an Angus steer was Grand Champion. Both best beef herd and carcass contest at the first Territorial Fair in Hawaii went to Aberdeen-Angus. At Brandon and Edmonton Spring Shows in Canada the grand champion steers were Aberdeen-Angus, and the Boys' and Girls' Calf Feeding Contest winners were the same kind. Free literature.

THE MILL FEED SITUATION

It is almost impossible to secure mill feeds. This condition is not local but obtains through the country. Mills are operating under instructions, the policy of the government being to export wheat rather than flour. Wheat can be handled cheaper, and then too the foreign needs absorb all the by-products. Large quantities were being used in this country in the manufacture of proprietary feeds.

Apparently the food administration is making an effort to check the manufacture of prepared stock feeds. The following is the latest ruling issued:

Revised food administration regulations now in effect limit the amount of wheat by-products which manufacturers may combine with other feeds. The relative cheapness of wheat feeds resulting from the controlled price might, it is recognized, be an incentive for feed manufacturers to use larger amounts of wheat by-products than in the past for mixing with coarse grains and selling this mixed feed at uncontrolled prices.

A new rule in the latest food administration regulations specifically prevents this practice. The text of the rule follows:

Feed to be mixed in 1917 proportion only (as amended September 20, 1918). No wheat miller shall mix any greater percentage of his output (1918) of wheat mill feed with other feeding stuffs, or sell any greater percentage to feed mixers for such mixing, than he mixed or sold in the year 1917.

Investigations by the food administration have shown that the practice which this rule prevents has not become prevalent, and the regulation is principally one of safeguard.

In addition to this means of control, a similar rule, effective October 1, 1918, provides:

The manufacturer of commercial mixed feeds shall not use more wheat mill feed in the manufacture of the mixed feed than he used in the corresponding month of the year 1917.

The profits which manufacturers of mixed feeds may take are limited to a specified reasonable margin.

These rules do not apply to farmers who mix their own feed, but they will be asked to sign a pledge of honor "not to use wheat mill feeds for any other purpose than the feeding of dairy cattle, poultry, young pigs, young calves or the preparation of a weekly bran mash for work animals." In addition the farmers are asked to agree not to feed any more wheat feeds than is customarily fed to such animals and not to have at any time more than a 60-day supply of wheat feeds on hand.

The purpose of these regulations and pledges is to make possible an equitable distribution of wheat mill feeds so that the benefits of controlled prices may be shared by the greatest number of producers and users of wheat feeds.

It is said that the bran and middlings are now being used to pack ammunition. The bran and middlings thus used are fed to army horses after the ammunition is unpacked.

DANISH CATTLE AND BUTTER FIGURES

Due chiefly to shortage of feed, the number of cows in Denmark is expected to decrease by about 100,000 within the next six months. The present estimated number of cows in that country is 950,000, which is about 200,000 less than in the summer of 1917. According to reliable reports received by the United States food administration the reduction in Denmark's butter supply will exceed 2,000,000 pounds during the coming year.

Facts like these should remind United States dairymen of the growing dependence of foreign populations on American dairy products. In pre-war years Denmark exported butter to the British Isles which now must look to other sources of supply.

GERMANY CAN NEVER WIN THE WAR!

"She could never win it even though her armies marched simultaneously through the streets of Paris and London.

"For America has called into life those forces that not all the cannon in the world can kill—those elements of justice, of right, and of liberty, that no conqueror can long hold prisoner."

GOVERNMENT ACCREDITED DAIRY HERDS

Every dairy herd in the United States that on July 1 had been officially accredited as free from tuberculosis or that had passed successfully one test with a view to certification is listed in a publication just issued by the bureau of animal industry, United States department of agriculture. Copies of the list are available for the use of state and municipal officials and private persons.

Certificates of freedom from tuberculosis are soon to be issued by the bureau of animal industry to all the owners of the accredited herds. Certificate No. 1 is to go to the United States Soldiers' Home in the District of Columbia. The Holstein-Friesian dairy herd at this institution includes 134 registered pure bred cows and is one of the oldest accredited herds in the United States.

Control with a view to the eventual eradication of tuberculosis in cattle is being accomplished by systematic efforts of federal and state authorities in cooperation with cattle breeders' associations and herd owners.

A definite plan was adopted in 1917, whereby herds of cattle passing the prescribed number of official tuberculin tests should be certified or accredited as free from tuberculosis.

An accredited herd is one that has successfully passed two annual or three semi-annual tuberculin tests applied by regularly employed veterinary inspectors of the bureau of animal industry or of the state where cooperative work is conducted, and has otherwise complied with the regulations governing the work.

The work is thought to have been in progress long enough to justify publication of the results. If the status of any of the accredited herds should be changed, prompt notice is to be given to the officials of the various states. Additional lists are to be published from time to time.

WEIGHT FOR STANDARD PACKING HOGS REDUCED

In an open letter addressed to the food administration, San Francisco, the Western Meat Company announces that in the future their quotations on packer hogs will be based on weights ranging from 150 pounds to 250 pounds, instead of the old range of 150 pounds to 300 pounds.

Last fall, owing to the large amount of soft corn, there was a general heavy feeding of hogs, with a consequent large increase in their weight when they arrived at market. Foreign orders were filled with fatter and heavier hogs than the European populations had been accustomed to, and foreign buying agencies now request a return to the customary weights.

From the present outlook, swine producers may anticipate preference for lighter weights of hogs. This country is not likely to have to repeat any request for heavy feeding.

Heavy weight stuff will be taken, of course, but the Western Meat Company state that their spread in prices between the heavier weight and the weight for the standard packers will be determined according to the number that are received and the possibility of disposing of the heavy cuts.

HOW TO CLEAN DAIRY UTENSILS

Most of the bacteria which get into milk come from the utensils, such as cans, pails, strainers, coolers and separators, which have not been properly cleaned. The University of Missouri college of agriculture recommends the following method for cleaning the dairy utensils:

1. Rinse in lukewarm water as soon after use as possible.
2. Wash in hot water containing washing powder which will remove grease.
3. Rinse in clean, hot water and place in live steam 15 seconds, drain and place right side up until steam evaporates. On the farm where steam is not available, sunning will give effective results. Drying should not be done with a cloth, but by heating the utensils in steam or an oven sufficiently to evaporate the moisture.
4. Invert in a clean protected place when dry.

HOLSTEINS
To Suit Every Purse

The Frst Tulare Sale contains a select lot of cattle, from very highly bred, high record animals that should sell up into four figures, to clean straight cattle of sound breeding but that have not yet had an opportunity to make official records and that will no doubt sell accordingly. The sale will be held at

Unsigned communications receive no attention.

Bony Growth on Knee

I have a mule that has a hard growth on the inside of the joint of the right front knee. It does not seem to be sore to the touch but the mule limps. What can be done for it?—Subscriber, Thermal.

The bony growth was probably caused by a strain or bruise. Some of the small bones of the knee are probably growing together and the inflammation between the bones causes the lameness. Rub it with a little turpentine once a day. Use a round piece of wood and rub it hard every day; this will increase the circulation of blood to the parts and hasten the repair. You will not be able to get rid of it entirely, but will stop the growth and probably stop the lameness.

A Cold

My mule has a cough and her eyes water almost constantly. Is there anything I can do for her?—Subscriber, Thermal.

The cough and tears flowing from the eyes are symptoms of a cold or influenza. To prevent it becoming chronic or resulting in nasal gleet give these powders: Four ounces nitrate of potash, four ounces chlorate of potash, two ounces sulphate of iron and four ounces powdered licorice root. Mix and divide into 20 powders. Give one powder morning and evening in a little dampened feed.

Tape Worm in a Cow

Please give symptoms of tapeworm in cow and treatment for same. I purposely leave out cow's condition and milk flow as I wish you to cover those points in detail.—Subscriber, Galt.

To give a complete discourse and cover all the points on tapeworm in cows would require more space than can be allowed to answer one question, so the necessary points will be covered briefly. The general symptoms would be reduced flesh and impaired flow of milk. Occasionally a few joints of the worm will pass from the bowels and might be noticed in the passages. The eggs of the tapeworm would also pass from the bowels, but would be too small to be noticed. The treatment in adult cattle is not satisfactory, as the tapeworm infests the bowels far back from the stomach and the strength of the medicine given to eradicate them is exhausted before it reaches them. Powdered areca nut is probably the best remedy, and if you think that your cow has such a worm it would be worth while trying to remove it by giving one ounce of the powder every morning for 10 or 15 days. Mix the powder in a pint of milk and give it as a drench.

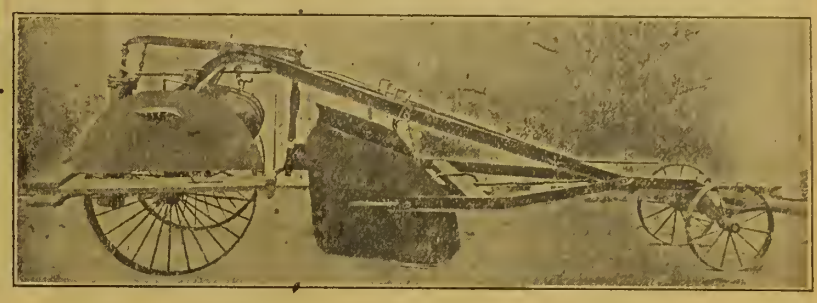
Worms in Horse

I have a mare that is seven years old and she has worms. They appear in her passages once in a while. They are long and look like fishworms. Her hair is always rough and shedding. She is also very thin in flesh. Kindly advise what to do. — Subscriber, Patchin.

Worms are usually found in horses that are overfed. Of course overfeeding does not cause worms, but it brings on conditions favorable to the worms and with those conditions it is easy for the worms to get started and multiply rapidly. Feed regularly. Divide the grain rations into three equal parts to be given morning, noon and night. Give only a handful of hay at the morning and noon feeds and enough at night to keep him eating for about two hours. Some think that a horse will not eat more than he needs, but that is a mistaken notion. One pound of hay and one pound of grain for each hundred pounds that the horse weighs is enough to last him 24 hours. To get rid of the worms get your druggist to prepare these powders: Powdered gentian, four ounces; powdered nux vomica, two ounces; powdered sulphate of iron, three ounces, and farina, enough to make one pound. Mix and divide into 16 powders. Give one powder every night in a little feed that has been dampened with water. Also get one ounce of aloin, one ounce of powdered ginger and one quart of raw linseed oil. Mix all together and shake well. Divide it into two doses and give one dose five or six days after commencing to give the powders and the other dose about a week later. If you think that the horse still has some worms after using all the powders then mix a pound of good wood ashes with five pounds of common salt and give a tablespoon of the mixture in the feed twice a day. By feeding as directed you will find him gaining slowly and his coat getting smooth and shiny.

We Manufacture Levelers for Any Power From 6 Horses to a 75 H. P. Tractor

A Schmeiser Leveler
of the "Giant" Type
WILL WORK WONDERS ON YOUR FARM



Moving immense amounts of dirt daily, and working on ground too tough for horses and Fresnos to tackle, SCHMEISER POWER LAND LEVELERS are now being used with utmost success by a great many ranchers, large and small—also by contractors—saving their owners time, labor and money.

WE SEND THEM ON THREE DAYS' TRIAL

So extremely simple, a child could operate one, as a simple twist of the wrist raises and lowers the bucket or holds it stationary, as the case may require.

YOU SHOULD
send for our LATEST catalog J-600 which is full of interesting information on LABOR SAVING DEVICES and machines for moving the earth.

Schmeiser Manufacturing Company
22 Mechanic St. Davis, Cal.

Manufacturers of
Sure Pop Almond Hullers and Separators, 3 sizes; McGarvin Fruit and Olive Graders, any size; Schandoney & Harrington Equalizing Hitches, any size; Diamond Special Harrows, Baker Clips, Clevises, and Schmeiser Portable Automatic Hay Derrick. We sell the Martin Ditcher and Grader.

Our Fertilizer booklet will be sent on application. Our Agent is at your service.

Get More Eggs Waste Less Feed

Increase income—reduce costs! Make your hens lay heavily **now** while eggs are bringing high prices. Prevent feed waste due to sluggish or imperfect digestion. Make every hen lay by using

Pratts Poultry Regulator

The sure-fire egg producer which has triumphantly stood every test of nearly a half-century of general use.

Pratts Poultry Regulator is not a severe stimulant which gives but temporary results. It does not **force** but **induces** hens to lay because it builds them up naturally, puts them in such fine physical condition that regular egg-production is bound to follow. And it keeps them laying right through the period of high prices. It assists the birds to thoroughly digest and make use of every particle of food, thus prevents waste and reduces feed costs. Test it with a part of your flock and compare results.

Our dealer in your town has instructions to supply you with Pratts Preparations under our square-deal guarantee—"Your money back if YOU are not satisfied"—the guarantee that has stood for nearly 50 years.

California citrus soils are extremely deficient in limes, sulphates. Amboy Gypsum furnishes these—makes available other necessary elements. Increases crop yield. GYPSUM BOOKLET FREE. CONSOLIDATED PAC. CEMENT PLASTER CO., 514 San Fernando Bldg., Los Angeles.

One Woman's Way

Written for California Cultivator By Jean A. Koethen

FROM the heginning of time women and poultry have gotten on particularly well together. This is not strange, for every woman is a "chicken" to the callow admirer of her girlhood, a "duck" to her hushand and an "old hen" to her critics. The farm woman has always had charge of the farm poultry, and the egg money has been her special perquisite. She raises her haby chicks with the same tender consideration she accords to her children, and doctors a sick hen as cheerfully as she sits up nights with measles or scarlet fever. That her poultry work is always a success and that she instinctively finds the easy way while her hushand is gruhhing in scientific hulletins for the most cumbersome method goes without saying.

I recently visited the ranch of a woman who is making a more than ordinary success with poultry as a side line, and by the old extensive method which our grandmothers practiced. I am not permitted to give her name, but we will call her Miss G. With the help of one hired man she farms a good-sized orange grove on one of the best known avenues of one of our most typical farming communities, and her turkeys and ducks are always in line for hlue rihhons at the county fair.

Miss G.'s poultry runs in the orange grove, and if they occasionally scratch up an irrigating furrow nohody cares. This is the easy way to keep poultry, and it is also good for the trees. That statement of Edward Brown, to the effect that only a fraction of a chicken per acre is kept on all the acreage of California ought to stick in the craw of orchardists who care more for a straight furrow than for food production. The world will go on without their chickens, hut their orchards will not.

"I want you to tell your readers how I treat broken legs," said Miss G., as she hurried me to the harnyard where her fowls make their headquarters. "Every now and then a chicken is kicked hy the horse or the cow, and I was hothered for a long time to know what to do. Finally I hit on this method. I make a thick starch and dip my bandage in it, ruhhing the starch into it till it will hold no more. When this bandage is wrapped around the hroken leg it soon hardens into a cast and stays there till the bone is healed."

Here is another discovery of Miss G.'s: "Do you know where stick-tight fleas breed?" she asked. I said I supposed it was in sandy soil. "Not at all. We were dreadfully troubled with them one year. Finally, when we caught some of the mice that were eating up our feed, we found them covered with the fleas. Apparently, they hred on the mice and were passed on hy them to the poultry."

Except for a few pens, where mother hens or special matings are kept hy themselves, Miss G. runs her poultry—chickens, ducks, turkeys and guineas—all together. The young turkeys are fed hy themselves during their tender infancy, and are hrought up on cottage cheese, nothing else. Later on they eat with the chickens. Miss G. does not heat the clabbered milk on the stove when she makes her cottage chese. Instead she pours boiling water into it. This separates curd and whey without any danger of overheating. The curd is given to the poults, and the whey used for mixing the mash for the chickens.

The hens on this ranch are mainly Black Orpingtons, but a cross of Black Orpington on White Wyandotte has proven especially prolific. The hens from this cross are a sort of mottled white and black, not handsome, hut persistent layers. The ducks are of the Quackless variety. They reach the market size of four pounds in about ten weeks, and the drakes are sold for hreeders when they attain a weight of from nine to ten pounds, which is hetween four and five months of age. The ducks weigh from four to five pounds at the same age. "When the drakes' wings cross nicely," said Miss G., "I know they are ready to hreed."

Miss G.'s method of feeding is extremely simple. The mash, which is fed to all the adult stock, is moist and is composed of coarsely ground barley soaked 12 hours and mixed half and half with hran. She does not use the ground harley as it is commonly sent out hy feed dealers, hut buys the whole grain in quantity and has it ground very coarse to suit her. This is fed in the morning to all. In the evening they get a good feed of corn, which is also bought in quantity wherever it can he had most cheaply. Some of the corn is fed whole and some is cracked. For bahy chicks it is ground into a very coarse meal. Green feed is supplied hy an alfalfa patch.

When Miss G.'s chickens get chicken-pox they are treated with a mixture of one-third turpentine and two-thirds olive oil. This is painted onto the spots with a feather. Sulphur, she told me, is looked upon in her neighborhood as a douhtful remedy, because its use is frequently followed by rheumatism. Calcium sulphide is less likely to he attended with bad effects.

The flock is watered from earthenware crocks which stand under the hydrants. To prevent the growth of algae in the hottom of the crocks Miss G. has two crocks for each hydrant. Every morning the crock which has been used the last 24 hours is rinsed and allowed to stand in the sun empty until the next morning. This keeps the crock clean and sweet and the algae never have a chance.

The Poultry Outlook

As a guide to poultrymen of the United States in conducting their husiness hoth patriotically and profitahly, the food administration outlines conditions likely to continue for several months.

The approach of winter normally stimulates a rapid movement of poultry from farms to market, with a consequent decline in market prices. Such a decline has already taken place this year and its severity may be attributed to the following causes:

Large market receipts of immature and poorly fleshed chickens.

Scarcity of lahor in the poultry-dressing estahlishments.

Inadequate refrigerating space suitahle for holding poultry.

A heavy marketing of moulting hens also has a depressing effect on the market. These fowls are seldom of desirable quality; they average from 10 to 15 per cent under their normal weight and the large quantity of pinfeathers prevents a hright, attractive appearance of the hirds when dressed.

Improve and Stabilize the Market

Producers may assist in improving the poultry market, which in some cases has fallen helow the probahle cost of production, by selling only such stock as is well developed and of good quality. The food administration asks poultrymen particularly:

To withhold from market immature chickens and moulting hens.

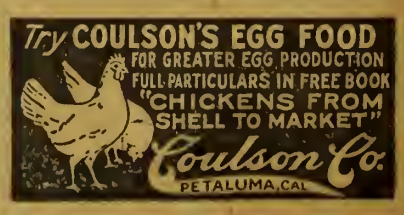
To keep chickens that are still growing until they reach maturity.

To keep all laying hens and the hest pullets.

To extend the normal period of fall marketing so that it will extend into the winter.

These recommendations, it is believed, will not only result in more actual food from poultry and in stahilizing the market, but they will hring numerous other henefits. During corn-shucking time there is a certain unavoidahle waste of corn which poultry can recover and convert economically into meat and eggs at small expense.

The food administration places special emphasis on the desirahility of furnishing the consuming public with



freshly killed poultry during the winter. This will be possible if live fowls are marketed freely during December, January and February, which in former years were months of light receipts. Such a policy of supplying the market will also conserve cold storage space required for export supplies.

Market Journey for Fresh Eggs Only

Developments in the nation's egg situation show the need, probably at very attractive prices, for all the fresh eggs that can be produced. Poultrymen are asked to gather eggs often enough to prevent freezing and to exercise unusual care in preventing all kinds of waste. More than ever before, it will be unpatriotic and wasteful to sell eggs of doubtful quality. Eggs that are unfit for human consumption, or which may soon become so, waste transportation space, clog the channels of trade, cause lower price to producers and thus discourage production.

An understanding by farmers and poultrymen of these general conditions should be of immediate benefit to the poultry industry as well as result in additional food and more stable markets.

AMERICAN EGG LAYING CONTEST

By T. E. Quisenberry

The winning pen in the American Egg Laying Contest at the American Poultry School of Leavenworth, Kansas, is not going to be settled, it seems, until the last few days of the contest. There are ten pens in the breeders' contest all very close and all approaching the 1000 egg mark. In the Leghorn contest four pens have gone over 1000 eggs, and there are only four eggs between the two highest pens. In the yearling hen contest the five highest pens of hens have averaged more than 160 eggs per hen in 11 months, which is extra good for pullets, to say nothing about yearling hens.

One Leghorn pullet from Pennsylvania stands a chance to lay 300 eggs or more. She has laid 280 eggs in 11 months and laid 29 last month. She started laying the second day of the contest last November and has laid over 25 eggs every month throughout the year and has not moulted yet. A bird of that sort is invaluable. A yearling White Plymouth Rock hen has laid 265 eggs, but she is moulting and much cannot be expected of her from now to the close.

A hen that led the contest for the first six months was a variety which is quite new to most breeders. It was a Russian Orloff hen from Iowa. She died when leading all other birds. These birds to the casual observer have a reddish-brown color and are feathered about the face similar to a Houdan, except they have no crest. They seem to be very good layers, as the record of this hen would indicate.

A pen of White Leghorns from Washington took the lead this month by four eggs.

The five highest hens for September in the breeders' contest were as follows: W. D. Holterman, 28 eggs; E. B. Thompson, 28; C. P. Scott, 28; H. A. Hume, 28; F. B. Williams, 27; C. R. Baker, 27.

The five highest pens were: S. C. Reds, Illinois, 110 eggs; White Wyandottes, Kansas, 109; S. C. Reds, New York, 91; Barred Plymouth Rocks, New York, 82; R. I. Whites, New Jersey, 82. This would indicate that the heavier varieties are good fall layers during moult and when eggs are high.

The highest hens to date are: White Leghorns, Missouri, 236 eggs; R. I. Whites, Illinois, 248 eggs; White Orpingtons, Ohio, 223.

TIGHTEN THE NUTS

A farmer recently referred to the fact that many a tractor owner is careless in the small things which have to do with the upkeep of the tractor. He felt that the time would be well spent if each farmer should spend at least a portion of the time that he formerly spent in the care of horses, in the care of his tractor. He should see that all nuts and bolts are tight; that everything is in alignment; the crank case washed out every four or five days and in fact all parts where dirt may accumulate, should be cleaned out at about the same intervals.

There's Cheer in the

Pictures from Home

To a homesick boy at the front, a picture of Dad waiting at the end of the lane while "Shep" brings up the cows is worth more than the Croix de Guerre.

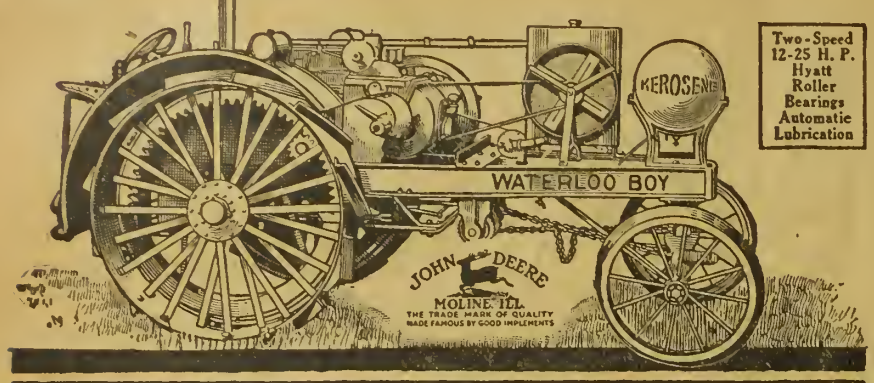
Pictures of mother, how much they mean to him now! And of kid sister—perhaps she is "wearing her hair up" by this time—all the old familiar scenes around the farm, yes, and that little girl with the big blue eyes that lives down in the village—these will mean a world of comfort to the boy who is lonesome among a million strangers.

The Y. M. C. A., the Red Cross, the Knights of Columbus and kindred organizations are doing a world of good in ministering to the bodies and minds of our boys. But in their hearts, homes are first. Cheerful letters and cheerful pictures from home—these will keep their hearts light and their courage high.

EASTMAN KODAK COMPANY

473 State Street ROCHESTER, N. Y., *The Kodak City*

Meets All Power Requirements



Two-Speed 12-25 H. P. Hyatt Roller Bearings Automatic Lubrication

WATERLOO BOY
ORIGINAL KEROSENE TRACTOR

Experience has demonstrated that this three-plow tractor, with 25 H.P. at belt is the ideal "general utility" tractor for any size farm. Its light weight, simplicity, great durability, ample power and economy give it

The Widest Range of Availability At Minimum Operating Cost

Discriminating buyers are choosing the Waterloo Boy because of its demonstrated success in the hands of users under all conditions; because it is built and fully guaranteed by a responsible manufacturer; because of its dependability in emergencies, unusual fuel economy, and because conveniently located distributors insure prompt and courteous service when needed.

Write for free illustrated catalog giving full information.

Geo. W. Brending, Milford, Ill., writes: "Your tractor has given complete satisfaction. I plowed seventy acres in eight days with a three-bottom John Deere Plow; did most of my discing with it using two 18 in. wheel discs at all times. Kept close record of operating cost—$2 per day paid for all fuel and lubricating oil when doing a full day's work."

Chas. W. Carlson, Stromburg, Neb., writes: "Your tractor is O. K. It is cheap to operate—not more than two gallons kerosene to the acre, plowing good depth, with 3-bottom 14 in. John Deere Plow. Plowed old alfalfa, sod pasture, stock and stubble ground without trouble. I use the tractor to pull 28 in. thresher and thresh 33 loads of wheat to a barrel of kerosene."

JOHN DEERE, 4506 W. Third Ave., Moline, Ill.

Plant Cover Crops

What a wonderful chance for the planting of early crops—now that the early rains have paved the way. Growers of deciduous fruits simply can't afford to overlook this opportunity.

Don't wait—prepare your seedbeds and get your cover crops in *at once*. It stands to reason that the sooner you start—the heavier your cover crop will be. And—the heavier the cover crop the more nitrogen you will put into your soil—the more fertile it will become—the larger your crop returns will be.

Morse's Melilotus Indica
(Bitter Clover)

is a tested, dependable, *scarified* seed. You can count on it—to a greater extent than many of the other legumes. It has far out-yielded common vetch—and stands the frost better. Again—it is far cheaper than vetch this year.

There's a big supply of Morse's Melilotus Indica waiting for you. Write for prices. Today!

Queries

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Lima Beans in Poultry Ration

Will you tell me what food would be good to mix with dry Lima beans (cooked) in a mash for laying hens, that the mash may be well balanced, holding as nearly as possible to the proportion of 1 to 4.6 protein to carbohydrates?—Subscriber, Orange.

A mixture of one part ground Lima beans, (by measure), two parts wheat bran, two parts ground barley and one-half part beef scrap will give you a mash with a nutritive ratio of approximately 1:4.65, which is close enough. It is impossible to figure closer without knowing the quality of the beef scrap, which varies from a nutritive ratio of 1.0 to 1:1.1.—J.A.K.

Chicken Pox

What is the proper way to destroy chicken pox virus? Had it among the hens in the spring and it continued through the young chicks until we finally vaccinated them all. Chickens have free range. Have sprayed the houses which are open except a roof with chicken wire on sides, also their resting place through the day with creosote. Can lime be used? — Subscriber, Thermal.

Cresol is recommended by experiment stations as the best poultry house disinfectant, but I cannot learn where this drug, in its pure form, is kept. There are several cresol preparations, however, of which cresylol is one, which can be had from both drug stores and poultry supply houses. I think any of these would kill the chicken pox germ, and I am sure a weak solution of carbolic acid would. Crude carbolic acid and kerosene (five parts kerosene to one part crude carbolic) is a good germicide if the crude carbolic is of the right strength, but crude carbolic is an uncertain proposition. It would be well to use boiling water wherever it can be used first, then paint with one of these preparations, making sure that not one inch of surface is untouched. Neither creosote nor lime is a sufficiently strong germicide. It is better to paint than to spray unless you have a powerful spray pump and make sure the germicide touches every bit of the walls, roosts, droppings-boards and nest boxes. Troughs and drinking fountains should be scalded and then washed with the disinfectant. This is a hard germ to kill and the greatest care must be exercised to make the job a thorough one.—J. A. K.

Hens in Pen

In the Storrs egg laying contests reported in the Cultivator, how many hens are there to a pen? Would like to figure out how many eggs are laid per hen.—Subscriber.

There are five hens to the pen. This is usual in all egg laying contests.

Acorns for Turkeys

Answering Subscriber, Los Angeles, in regard to acorns as turkey feed. I have seen wild pigeons in northern Arizona eat them and get fat, and as there are wild turkeys there also they probably fatten on them as well.—O. P. Hall, Oceanside.

Snuffles

Will you please give the best remedy for snuffles in rabbits (internal remedy preferred, something that can be given in the feed or water), something that is available at most any drug store, and which can be purchased at a reasonable price? Also give formula for good condition powders for rabbits.—Subscriber, Lakeside.

Snuffles or colds if allowed to continue for any length of time are reasonably sure to result in tuberculosis though often a case of nasal catarrh is taken for snuffles. In the case of catarrh good housing, dry warm quarters, with patient isolated from others and being fed lukewarm milk to which is added a few drops of sweet spirits of nitre. If acute case of snuffles it is probably best to put the patient out of his misery.

Fight with Concrete

¶ The way is open

The War Industries Board recognizes farm buildings as necessary to increased food production. No permit is needed for a farm improvement not exceeding $1,000 in cost.

¶ Concrete is the way

Bull's-eye hits against fire, rot, disease, rats, cyclones, expensive upkeep and insurance, are fired by such concrete weapons as *feeding floors* and *barnyard pavements, milkhouses, hog houses, manure pits, granaries, fruit and vegetable storage cellars and dipping vats.*

¶ You build once only with Concrete

You save labor, transportation, and with one stroke increase production and defeat waste.

Put up that necessary building now. Cold weather need not stop you.

Write for Bulletins 115 and 137, which will tell you how you can use spare hours to

fight with concrete.

FLOWERS IN FLANDERS

There is a field in Flanders
Where yellow kingcups stand;
Like fair princesses clad in gold
Their joyous court they proudly hold
In the gay meadow land.

There is a wood in Flanders,
A little shimmering wood,
Where the wind flowers sway among the grass
And smile upon you as you pass
As country maidens should.

There is a bank in Flanders
Where celadines a-blow
Lift up their shining head and peer
To see their lovely image clear
In a bright pool below.

And you who go in English fields,
O think not that our days
Are wholly dark or wholly ill,
For there are flowers in Flanders still
And still a God to praise.

—Punch.

VERDUN BELLE

YOU could put a plate of savory pork chops on the parapet and nothing would have induced her to go after them. She actually learned to race for the spot where an improvised gas mask, contrived by her master, could be put over her nose whenever the signal warning of a gas attack was sounded.

Before long, Belle became the mother of seven brown and white puppies They had hardly opened their eyes before the marines' regiment got orders to "hike" for another sector. Some might have thought the dog and her pups would be left behind, but this never occurred to her master. He commandeered a market basket somewhere, put the pups into it and let Verdun Belle trot behind.

In spite of the fact that the amount of equipment which each marine carries on the march is supposed to be all that a man can possibly carry, this marine somehow found strength to carry the extra weight of the basket. Forty miles he carried his burden along the parched French highway. But then came an order to march even farther, and reluctantly the marine was forced to give up the basket. Mournfully he killed four of the puppies, but the other three he slipped into his shirtfront.

Then he trudged on his way, carrying these three, pouched in forest green, as a kangaroo carries its young, while the mother dog trotted trustingly behind.

On the long march another of the pups died, and finally in the maze of men, trucks and wagons Belle was lost. The marine was at his wits' end to keep the two puppies alive, but finally he hailed the crew of an ambulance passing back from the front, turned the puppies over to them and disappeared with his comrades. The ambulance men were unable to induce the pups to eat canned beef and they had no fresh milk. They chased a couple of cows vainly.

Next morning the problem was still unsolved. But it was solved that evening. A fresh contingent of marines trooped by the farm and in their wake—tired, anxious, but undiscouraged—was Verdun Belle. Ten kilometers back, two days before, she had lost her master, and until she should find him again she evidently thought that any marine was better than none.

The troops did not halt at the farm, but Belle did. At the gates she stopped dead in her tracks, drew in her lolling tongue, sniffed inquiringly the evening air and, like a flash—a white streak along the drive—she raced to the distant tree where, on a pile of discarded dressings in the shade, the pups were sleeping.

All the corps men stopped work and marveled. It was such a family reunion as warms the heart. For the worried mess sergeant it was a great relief. For the pups it was a mess-call, clear and unmistakable.

So with only one worry left in her mind, Verdun Belle settled down with her puppies at this field hospital. In a day or two the wounded began coming in, a steady stream. Always a mistress of the art of keeping out from under foot, very quietly Belle hung around and investigated each ambulance that turned in from the main road and backed up with its load of pain.

Then one evening they lifted out a young marine, listless in the half-stupor of shell shock. To the busy workers he was just case number such and such, but there was no need to tell any one who saw the wild jubilance of the dog that Verdun Belle had found her own.

The first consciousness he had of his new surroundings was the feel of her rough pink tongue licking the dust from his face. And those who passed that way last Sunday found two cots shoved together in the kindly shade of a spreading tree. On one the mother dog lay contented with her puppies. Fast asleep on the other, his arm thrown out so that one grimy hand could clutch one silken ear, lay the young marine.

It perplexed some of the hospital workers to know what could be done when the time came to send the marine on to the base hospital. But they knew in their hearts they could safely leave the answer to some one else. They could leave it to Verdun Belle.—Stars and Stripes.

THE SOLDIER'S CHANCES

Great as the danger and large as the losses in the aggregate, the individual soldier has plenty of chances of coming out of the war unscathed, or at least not badly injured.

Based on the mortality statistics of the allied armies, a soldier's chances are as follows:

Twenty-nine chances of coming home to one chance of being killed.

Forty-nine chances of recovering from wounds to one chance of dying from them.

One chance in 500 of losing a limb.

Will live five years longer because of physical training, is freer from disease in the army than in civil life, and has better medical care at the front than at home.

In other wars from 10 to 15 men died from disease to one from bullets; in this war one man dies from disease to every every ten from bullets.

For those of our fighting men who do not escape scatheless, the government under the soldier and sailor insurance law gives protection to the wounded and their dependents and to the families and dependents of those who make the supreme sacrifice for their country.

My Wash Day Problems Are All Solved!

No More Boiling, Toiling Wash Days for Me.

I used to scoff at the idea of there being any other way to get clothes clean and white than by the old fashioned back-breaking method. But thank goodness I had sense enough to try the soap that is proving such a boon to countless housewives.

Now I get my washing out in half the time, with half the rubbing, without boiling the clothes at all—and yet my neighbors tell me I have the whitest clothes on our street. I use Cocoa Naptha Soap which is made by the Los Angeles Soap Co. It comes in a red wrapper with a monkey on it and directions how to use. Try it next wash day and be convinced.

Your guarantee of real winter underwear satisfaction

HANES
This label on every garment. Buy none without it.
GUARANTEE
We guarantee Hanes Underwear absolutely—every thread, stitch and button. We guarantee to return your money or give you a new garment if any seam breaks.

PUT the fleecy warmth of Hanes Heavy Winter Weight Union Suits or Shirts and Drawers next to your skin—and, you're fit to face the stiffest blast the North can let fly! Get the friendly hug of the elastic knit, long-fibre cotton, and prove how perfectly Hanes gives-and-takes with every body movement!

Greatest winter underwear sold at popular prices:

Shirts and Drawers **HANES** Union Suits

ELASTIC KNIT UNDERWEAR

The Pinch Hitter

It was tightening of the American belt that made this hit possible. The game is won if we keep it up.

SORGHUM RECIPES

Combine sorghum with different seasonings and see what you can do with this native supply of liquid sugar. Try a war cake with sorghum and be sure to can a supply for Christmas fruit cake and mince pies. To obtain the best results add a pinch of soda to the syrup and bring to a boil and skim before using.

Gingerbread

Two tablespoons light syrup, two tablespoons shortening, one and one-half teaspoons soda, one teaspoon salt, one and one-half teaspoons ginger, one-half teaspoon cinnamon, one teaspoon mace, one teaspoon allspice, one egg, three-quarters cup sorghum, one cup buttermilk, two and one-quarter cups barley flour. Cream syrup and shortening, add soda, salt, spices. Beat in egg, add sorghum and buttermilk. Mix thoroughly, add flour and mix lightly.

Hermit Cookies

One-half cup sugar, one-quarter cup lard, one-half teaspoon salt, one teaspoon soda, one egg, one-half teaspoon allspice, one-half teaspoon ginger, one-half teaspoon mace, one-half teaspoon cinnamon, one-half cup currants, one-quarter cup sorghum, two tablespoons butter milk or water, one and one-half cups flour, one-half cup substitute flour. Cream sugar, lard, salt and soda, add the egg and mix. Add sorghum and butter milk, mix. Add flours and spices sifted together, mix lightly, roll out and bake in a moderate oven.

Cornmeal Pudding

One cup cornmeal, one cup boiling water, three cups hot milk, one-half cup sorghum, one teaspoon salt, one teaspoon cinnamon, one-quarter teaspoon mace. Pour the boiling water over the cornmeal, add the hot milk. Cook in a double boiler for ten minutes, add the other ingredients and bake slowly in a greased pan for one hour. Serve with milk or cream.

Chocolate Pudding

One quart milk, two ounces chocolate, one-quarter teaspoon salt, one-quarter cup sugar, one-half cup sorghum, six tablespoons cornstarch, two eggs, one teaspoon vanilla. Heat three-quarters quart of milk in a double boiler to the boiling point. Add the melted chocolate, salt, sorghum and sugar. Add the cornstarch mixed with one cup of cold milk and cook for 20 minutes. Stir to prevent lumping. Add the slightly beaten eggs and cook for five minutes. Stir to prevent lumping. Add the vanilla, serve with light or heavy cream.

SURE OF ONE THING

Gen. Sir David Henderson watched a young cadet aviator who showed signs of trepidation while preparing for his first flight.

"Don't be nervous, man," said Sir David. "You'll come down again. There's no known instance of an airplane not alighting."—Los Angeles Times.

You are wasting precious time every minute that you spend in self-satisfaction.

HOUSEHOLD QUERIES

Strawberry Ice Cream

In answer to query in the Cultivator of September 7 I will tell how I make strawberry ice cream. This recipe makes one gallon.

Four or five eggs, one cup sweet cream, one pint strawberries that I canned. I use no other sweetening. One teaspoon lemon extract. Fill can to two and a half inches of top and freeze.

Possibly my cake recipe will help someone. One cup Karo, one cup of jam or canned fruit, one cup milk, one and a third cups Crisco, three eggs, spices or extract, whichever you like; two teaspoons baking powder, flour. I use this as loaf or layer.—Mrs. C. G. Coy, Tolleston, Arizona.

Pimiento Cheese and Peanut Butter

Please publish recipe for pimiento cheese and peanut butter.—Subscriber, Los Angeles.

Peanut butter is merely peanuts ground to a paste with no addition of oil or water. Some dealers, of course, mix with water. This makes the butter a little lighter in shade, more creamy looking and attractive, and some people prefer to buy it, not realizing that they could add the water as easily as the maker of the butter and pay nothing for the water.

Pimiento cheese is made by adding ground cooked pimiento to cheese of the Neufchatel type or to a fine-grained cottage cheese. The pimiento is thoroughly worked into the cheese, in the form of a smooth paste or showing individual particles of the red, according to the taste of the maker.

SALTING FISH

Large fish having soft fins, small scales, and thin skin should be scaled but not skinned. Remove the head, split down the belly to the vent, and remove the viscera. Make a cut on each side of the backbone inside of the body cavity, cut the bone in two as far back as it can be reached and remove the cut off portion, then make a deep cut along one side of the backbone for the remainder of its length and remove the tail. If the fish are too large to go into the container, cut them to the proper length. The cheeks and the portion between the jaws, including the tongue, of many large fishes are excellent when boiled, and they may be preserved by removing the eyes and gills and packing the heads, after splitting them lengthwise, in the same container with the rest of the fish.

Slender fish, such as mackerel, whiting, large herring, etc., should be split down the back to one side of the backbone for the entire length, the belly walls not being cut. The backbone need not be removed. Smaller fish of the same character need not be split but should be carefully eviscerated. Coarse scaled, thick skinned, spiny finned fishes like black bass, perch, etc., should be skinned, and unless large and thick meated need not be split.

Having dressed and thoroughly washed the fish in water containing a little salt, taking particular care to remove the blood near the backbone, cure them as follows:

Place a layer of coarse salt on the

bottom of a tight keg, barrel, or other suitable vessel, and on this spread a layer of fish, one deep, sprinkle salt thickly over these, add another layer of fish, and repeat until the barrel is full or the supply of fish exhausted. The salt and the moisture from the fish will make a strong brine in which the fish should be left for a week or ten days. At the end of that time remove the fish, thoroughly wash them, repack in the barrel, and cover with a freshly made brine strong enough to float a fresh egg. After a week this brine should be drawn off and the barrel filled with a saturated brine; that is, one in which a little undissolved salt will remain on the bottom of the vessel after the solution has been subjected to prolonged stirring. Do not reuse the old brine. The barrel or keg should then be headed and stored in a cellar or the coolest place available. If there should be any leakage, which may be discovered by the sound made when the barrel is struck with a stick at various heights, it should be made good by adding strong brine through a bunghole. If the receptacle can not be filled at once, the fish may be preserved by packing on top of them a cover made of a barrel head or of pieces of wood cleated together to fit the container and weighting it with a clean stone or other heavy article which will not be affected by the salt. The success of the operation will depend on using fresh fish, exercising care in the salting and the proper mixing of the brine, and on keeping the barrel tight and the fish covered with strong brine.

HE'S THROUGH

Capt. Joseph C. Cowell of the Brandywine, who has been submarined three times, said at a dinner in Salem:

"I used to love the sea, but the squareheads with their filthy submarines have made me hate it. When this war is over, do you know what I am going to do? Well, gentlemen, I am going to buy an anchor, sling it on my shoulder, and start walking straight inland.

"I'll walk and walk, and finally, when I come to a place where the natives hold me up and say, 'What on earth is that you are carrying?' I'm going to buy a farm there in that place and settle down for life."—Los Angeles Times.

SAVED EXPERIMENTING

Judge Brown, in commenting on the work of juvenile courts throughout the country, said:

"By long experiment we find that children are in two classes—those who must be led and those who must be driven. Once in a while we don't have to experiment to find this out. I remember one child who, on being committed, inquired:

"'Are you the matron?'

"'Yes, dear.'

"'Well, then, I am one of those boys who can only be managed by kindness, so you had better get some sponge cakes and oranges at once.'."

NO JOKE

War Correspondent Irvin S. Cobb is a poor sailor and on his last trip across the herring pond the young man's sufferings were atrocious.

Roused by his groans and gurgles one stormy night, an officer bent gently over the correspondent.

"Can't you keep anything on your stomach, Cobb?" he asked.

"Only my hands," moaned Cobb.

THE SCOTCH OF IT

Two old Scotsmen sat by the roadside, talking and puffing away merrily at their pipes.

"There's no muckle pleasure in smokin', Sandy," said Donald.

"Hoo dae ye mak' that oot?" questioned Sandy.

"Weel," said Donald, "ye see, if ye're smokin' yer ain bacca ye're thinkin' o' the awfu' expense, an' if ye're smokin' some ither body's, yer pipe's ramm't sae tight it winna draw."—Tit-Bits.

Pat-a-cake, pat-a-cake, baker's man,
Mix up the dough as fast as you can;
The hole in the doughnut for you and for me,
The doughnut for staunch Allies over the sea.

To waste is to give "aid and comfort" to the enemy—and that is treason.

Iron and steel are needed for *war*.

The U. S. Government is calling for the conservation of metals for war uses.

You can help by making your old range "do"

a little longer. Have it repaired, if necessary. If it is past repairing, and you must buy a new range, get a Majestic. It will save *fuel*—absolutely heat-tight. It will save *food*—bakes right always. It will save *repairs*—its *malleable iron* frame is unbreakable and its *charcoal iron* body resists rust 300% better than steel.

Sold by leading dealers in every County of 42 States.

Majestic Mfg. Co., Dept. 203 St. Louis, Mo.

Caution: If your Majestic needs new parts, get them from a Majestic dealer, and insist on genuine Majestic materials—not light, inferior parts made by scalpers.

SULPHUR

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards six times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

Try our new brand of VENTILATED Sublimed Sulphur, 100 per cent pure, for making Paste — (Atomic Sulphur) and for Dusting.

For Lime Sulphur Solution, use our DIAMOND S Brand Refined Flour Sulphur. We can furnish you this sulphur at such a low price that it will pay you to mix your own solution.

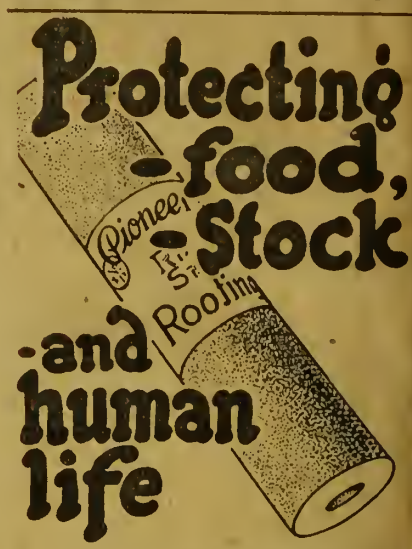
California Shorthorn Breeders Assn.
320 Sharon Building San Francisco



In these days of conservation it is highly important that all buildings be weather proof.

Losses that are irreplaceable may easily occur from defective roofs.

Repairs to buildings should be made while it is possible before costs mount too high.

This old reliable brand of ready roofing has been used in California since 1888. Thousands of farmers, manufacturers and merchants—as well as home lovers everywhere — use it because of its intrinsic worth.

—because of its long life and reliability,

—because of its comparative low cost.

There is a dealer near you who handles Pioneer Roofing and can supply your orders. If you experience any difficulty in securing it—

—write us for samples and information.

Sultanas. Packages, recleaned, 48-16s to case, 9.65; bulk, recleaned, 25-lb. boxes, 9.00.

Peaches — California Peach Growers quotes opening prices for 1918 crop f. o. b. factories California. Prices guaranteed to December 31.

Bulk basis and boxes unfaced 1 and 2 cents more.

	Practically Peeled	Yellows — Muirs (Old style)	(Old style)
Standard	12⅞c	11¼c	11⅝c
Choice	13⅜c	11¾c	11⅞c
Fancy	14⅜c	12¼c	12⅞c
Ex. Fancy	15½c	13¼c	14c
Slabs		10¼c	

Prunes and Apricots. The Prune and Apricot Growers' Association have named following prices on apricots:

Standards 9½
Choice 13
Extra Choice 14½
Fancy 16
Extra Fancy 17½
Extra Moorparks 19
Slabs 11

Cash on delivery price on all grades will be 8 cents with the exception of standards and slabs on which it will be cents.

Prunes: The government will take all the 50-60; 60-70; 70-80 sizes. The quotations sent to the trade last night are as follows:

The bulk prices will be:

Sizes:	Price per lb.
30-30	17
30-40	10¾
30-50	10
30-60	9
30-70	9
30-80	8¾
30-90	8¼
30-100	7¾
90-120	4¾
Above 120	4¼

One cent per pound, and one and one-fourth cents per pound will be added for 24 and 25-lb. boxes.

NUTS

The Almond Growers' Association has established opening prices as follows per pound:

Nonp. 27½
I.X.L. 25½
Ne Plus 24½
Drake 20

Outside dealers have named prices above these quotations and it is understood association stock is practically closed out and prices withdrawn.

Walnuts: Net prices have been named by the California Walnut Growers Association:

No. 1 Softshell 28
No. 2 Softshell 25
Jumbo 30
Fancy Budded 31½
Golden Gate Budded 29

Franquettes, Eurekas and other fancy varieties sold on sample. No. 1 Softshell guaranteed 88 per cent good; Fancy Budded, 90 per cent. In case of worms or damage by ants not more than five per cent.

RICE

California Rice—1917 crop, nominal: 8 crop, when harvested per 100 lbs.: Paddy rice, 4.32; clean fy. Japan, 7½ lb.; Japan, 7 3-8 lb.; fy. second head, 6 7-8 screenings, 5 5-8; lb.; brewers, 5¼ lb.; rice polish, $50 ton, car lots; rice bran, ton, car lots.

Light amber comb, cs. ..... 3.50@4.00
Beeswax ..... 32@34

HAY

Under date of October 26, Scott, Magner & Miller says:

Receipts past week 852 tons. The majority of the receipts still continue to be hay that was exposed to the September rains. Some of this hay is only slightly damaged but the majority of it has been materially damaged and is sold for stock feed, some as low as $6.00 to $7.00 per ton basis. To this, of course, cartage charges, etc., are added. Owing to the epidemic of influenza very little business is being done. There is some demand for fancy grades of wheat and oat hay. We look for this influx of damaged hay to be over shortly. The north winds of the latter part of the week have injured the feed considerably. At the same time they have been of some benefit in curing the late crops of alfalfa which are being harvested.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling expenses must be added according to conditions.

Fancy Wheat Hay (light five wire bales) .....28.00@30.00
No. 1 Wheat or Wheat and Oat Hay .....26.00@28.00
No. 2 Wheat or Wheat and Oat Hay .....20.00@24.00

Citrus Fruit Market

Los Angeles, Oct. 29, 1918.

Navels are being offered at the auction and commanding satisfactory opening prices. There are yet a few Valencias to go forward though orchards are practically cleaned up. There are still many cars in transit and on sidings. Florida is already shipping her early fruit, her grapefruit being of good quality.

The lemon market has been stiffened and prices are now approaching long prices which have been given for Valencias.

Shipments

Complete figures as to shipments for year ending November 1 will be given next week. Total for this year including October 28 and since November 1, 1917: Southern California; oranges 15,332 cars, lemons 5109, total 20,441. To same date last season, oranges 4417, lemons 7729, total 48,146. Central California this season, oranges 2536, lemons 115, total 2651. Last season to same date; oranges 4665, lemons 164, total 4829. Northern California; oranges 203, last year same date 845.

AT THE AUCTIONS

October 23

New York: 11 oranges, 2 lem. Val. 9.30-16.50, Nav. 6.05-7.25, lem. 9.75-11.00.
Philadelphia: 3 oranges, 1 lem. Val. 6.00-12.90, lem. 7.90-9.70.
Boston: 2 oranges, 1 lem. Val. 7.90-9.55, lem. 8.70-8.85.
St. Louis: 1 orange, 1 lem. Lem. 9.25-10.65.

October 24

New York: 24 oranges, 4 lem. Val. 7.95-16.75, lem. 11.15-11.70.
Philadelphia: 3 oranges, 1 lem. Val. 5.70-13.85, lem. 6.55-8.50.

October 25

New York: 8 oranges, 2 lem. Val. 6.00-12.90, lem. 6.00-12.40.

October 28

New York: 13 oranges, 3 lem. Val. 6.00-13.95. Nav. 6.00-6.85, lem. 8.70-11.60.
Boston: 2 oranges, 1 lem. Val. 5.90-10.25, Nav. 5.90, lem. 9.00-10.05.
Cincinnati: 1 orange, 1 lem. Val. 8.50-10.40, lem, 11.10-12.45.
St. Louis: 1 orange, 1 lem. Val. 11.60-12.45, lem. 8.25-9.50.

October 29

New York: 6 oranges, 1 lem. Val. 7.10-14.05, Nav. 8.60, lem. 11.00-11.65.
Philadelphia: 3 oranges. Val. 6.85-9.75.
Pittsburg: 1 orange. Val. 10.60-14.15.

PARTIAL LIST CALIFORNIA FRUIT AND VEGETABLE SHIPMENTS

From post card reports to the Los Angeles branch of the bureau of markets, report is made of the following shipment of cars of products from California for the week ending October 28: Apples, 189; cabbage, 5; carrots, 4; casabas, 9; cauliflower, 1; dried apples, 4; dried apricots, 13; dried beans, 124; dried figs, 10; dried peaches, 20; dried pears, 6; dried peas, 1; dried prunes, 19; grapes, 1501; lettuce, 8; mixed fruit, 3; mixed vegetables, 15; mixed fruit and vegetables, 30; mixed dried fruit, 41; olives to canners, 3; onions, 112; peaches, 1; pears, 38; peppers, 3; persimmons, 1; pomegranates, 3; potatoes, 176; raisins, 168; sweet potatoes, 10; tomatoes, 86; watermelons, 1; Arizona potatoes, 10.

F. H. POSS COMPANY OPENS LOS ANGELES OFFICE

There has been such a demand for Avery tractors in Southern California that the F. H. Poss Company has found it necessary to open offices in this section.

Walter Rainey, who has been made manager for Southern California, has spent almost a life time with tractors. He knows tractors as most men know their own names. He knows the farmers' needs and the uses that he can make of tractors. Mr. Rainey has been connected with the tractor department of the Avery Company for the past 12 years, and the farmers, ranchers and orchardists of Southern California will certainly be benefited by his experience. The headquarters in Los Angeles have been established at 237 South Los Angeles Street.

Note What It Does

How Special TrackPULL Tractor Works Orchards, Vineyards

Tractors are too important to buy without first getting all the reasons to show why some are better than others for your particular kind of work.

The Bean TrackPULL Book tells plainly why you need a Bean Tractor if you want orchard and vineyard work. Worth its weight in gold because it posts you on vital qualities in such a tractor. You know what your tractor must do. Send for catalogs of all tractor makers and compare with Bean TrackPULL Book. Then decide on your tractor.

The Bean TrackPULL operates through single track which does all pulling and steering. Full power on turns same as on straight-away. Makes no difference how far off center you hitch —pulls just the same. Works close to trees and vines. Pulls, "gees," "haws," and backs just like team; 12 year-old boys can handle.

Made by manufacturers of orchard machinery for 34 years. All their specialized experience built into it.

Advanced improvements in Motor, Track Rollers, Drive Sprocket, Bearings and Rear Wheels make the Bean the most efficient orchard and vineyard machine ever manufactured.

Get invaluable Bean TrackPULL Book Now — send the coupon before you forget it. Save money. Learn name of nearest agent who can show machine.

See These Valuable Improvements Which Mean Increased Reliability

1. Motor — Improved oiling system. Improved carburetor control. Governor equipment if desired.
2. Track Rollers — Provided with hardened steel thrust bearings.
3. Drive Sprocket — Solid steel ring, machine cut hardened and heat treated assures long service.
4. Bearings — Provided with improved dust protected greasing facilities.
5. Rear Wheels — Provided with dust cap, wear resisting bushings and improved greasing facilities.

—here's something that will wake 'em up!

It is easy enough to produce eggs in the spring; but in the fall and winter, when prices are highest—ah! that's a different story.

And yet—hens are pretty much like the rest of us: they have to be fed into action. They won't stir until you stir them up; and the biggest single help you have is Surelay.

No matter what results you may have secured heretofore—no matter how disappointed in the egg foods you may have tried—you owe it to yourself, your flock, and your profits, to use Surelay.

Surelay is a perfect balanced ration—nothing less! Its function is to give your hens the exact ingredients they need to bring about the greatest egg-production in the most natural way. Now then—

The elements of an egg are derived from so many sources that no single food will answer the purpose. This is why Surelay contains sixteen separate ingredients, blended and mixed more skillfully than can possibly be done by hand. Another thing—Surelay is always the same. Each sack must measure up to a definite standard of uniformity—or else it cannot be Surelay.

The formula that has made Surelay a prime favorite among successful poultrymen is no secret. You have a right to know what you are feeding your flock; and the manufacturers of Surelay recognize this by printing, on the back of each sack, its exact analysis.

Remember this: when it comes to a uniform, high-grade feed that will rouse your flock into a sense of duty—that will prod your hens into profit-producing—Surelay rings the bell and taps the gong every time. That's why poultrymen who know are quite frank to acknowledge that "Surelay is sure some stem-winder!"

[Be sure to look in your Surelay sack for the Certificate that entitles you to our 1919 Surelay Egg Record and Calendar]

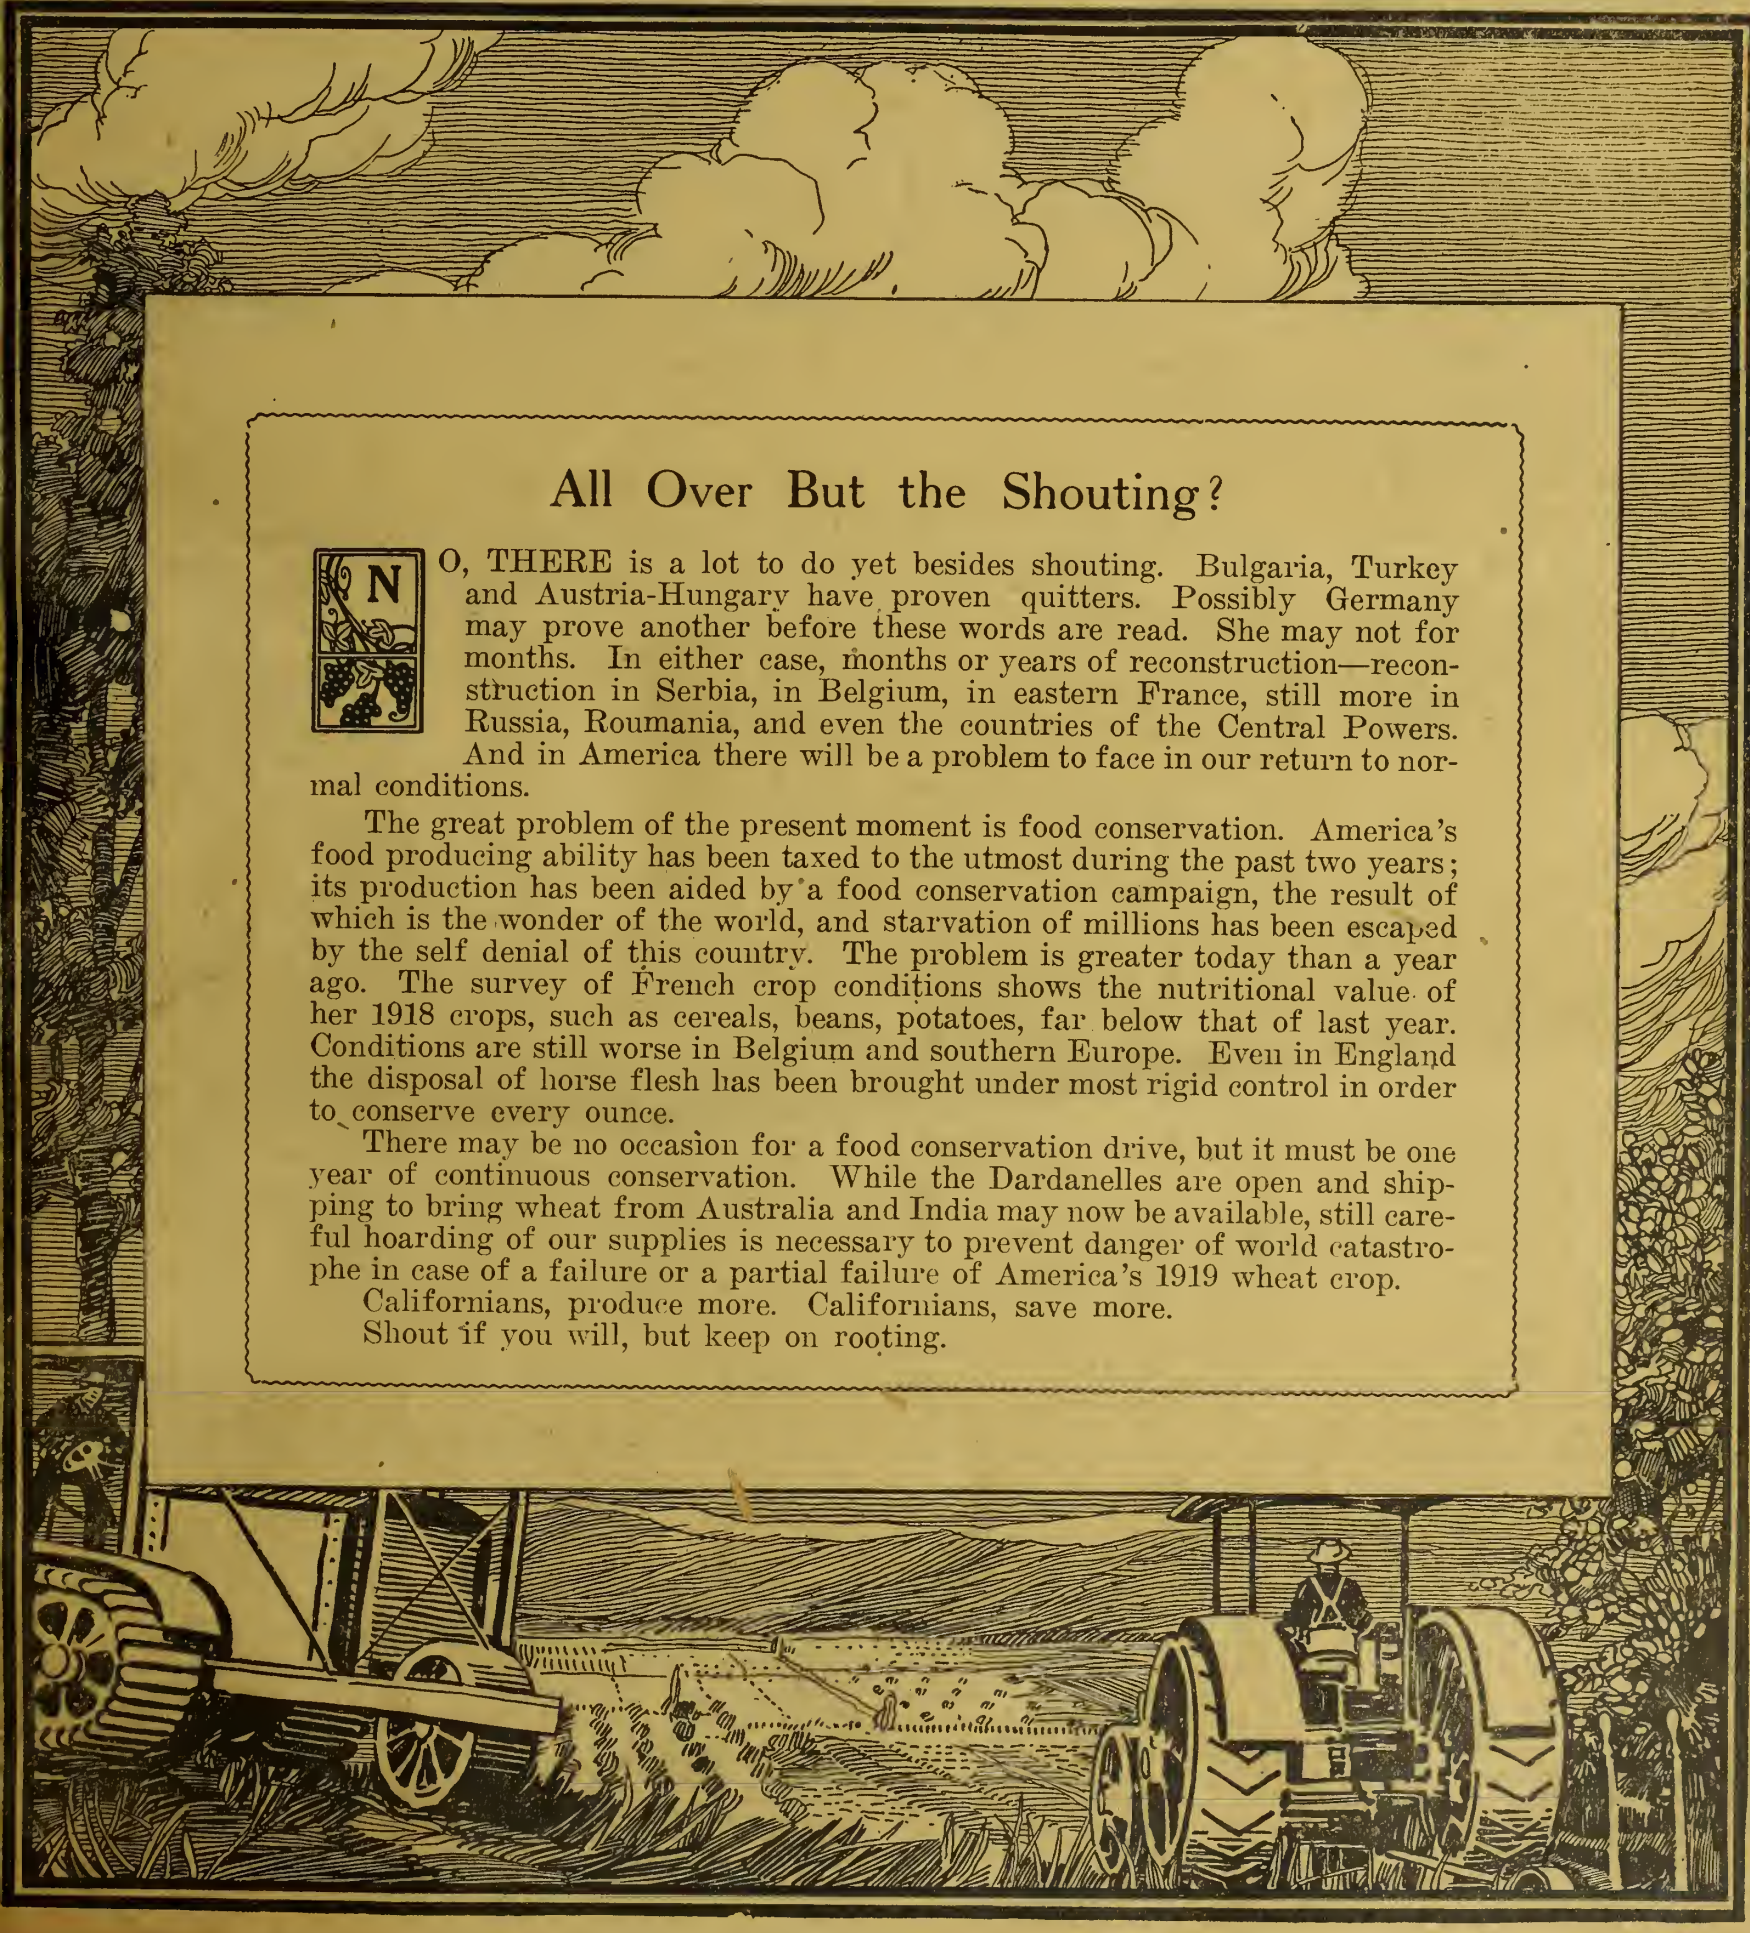
Vol. LI — November 9, 1918 — No. 19



All Over But the Shouting?

NO, THERE is a lot to do yet besides shouting. Bulgaria, Turkey and Austria-Hungary have proven quitters. Possibly Germany may prove another before these words are read. She may not for months. In either case, months or years of reconstruction—reconstruction in Serbia, in Belgium, in eastern France, still more in Russia, Roumania, and even the countries of the Central Powers. And in America there will be a problem to face in our return to normal conditions.

The great problem of the present moment is food conservation. America's food producing ability has been taxed to the utmost during the past two years; its production has been aided by a food conservation campaign, the result of which is the wonder of the world, and starvation of millions has been escaped by the self denial of this country. The problem is greater today than a year ago. The survey of French crop conditions shows the nutritional value of her 1918 crops, such as cereals, beans, potatoes, far below that of last year. Conditions are still worse in Belgium and southern Europe. Even in England the disposal of horse flesh has been brought under most rigid control in order to conserve every ounce.

There may be no occasion for a food conservation drive, but it must be one year of continuous conservation. While the Dardanelles are open and shipping to bring wheat from Australia and India may now be available, still careful hoarding of our supplies is necessary to prevent danger of world catastrophe in case of a failure or a partial failure of America's 1919 wheat crop.

Californians, produce more. Californians, save more.

Shout if you will, but keep on rooting.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

There is nothing pictorial on the cover page of this issue, but there is a word of appeal to Cultivator readers, not from the Cultivator but from people who are suffering and whose little ones go to bed actually hungry. Californians have been denying themselves and answering most nobly. The end is not yet.

LIBERTY FAIR

There are still several herds of Angus, Shorthorns, Herefords, and other stock at Exposition Park, Los Angeles, waiting for the "flu", which seems inclined to wait for the kaiser to capitulate before it makes its unconditional surrender. The management still insists that there will be a great fair, and there surely will be if the "flu" ever lets up. It is now nearly 30 days since the quarantine was declared, and at that moment the fair was practically ready to open to the public.

FIRE PREVENTION

California has talked much of the work of the forest ranger and of all the people in preserving our watersheds and our great timber lands. The talk has resulted in much real accomplishment. Fire Prevention Day came, and where schools were in session instruction was given in greater care in protecting not only our forests and our fields but the buildings on our farms and in our cities. In some schools there were readings of proclamations and statements by state and national officials, talks by firemen, essays by pupils on fire prevention.

The loss in the United States from the 1500 fires which occur every 24 hours is appalling. This is a fire every minute day and night. The great majority of these fires are from pure carelessness. Note that for every $2.10 loss in the United States the loss in France is 49 cents; in England, 35; Germany, 28; Italy and Austria, 25; Switzerland, 15; Holland, 11. It's time we reformed.

UNITED WAR WORK

The big campaign for the United War Work begins on next Monday. It will end on the following Monday, November 18. That week means success to the work of the Y. M. C. A. and other organizations which are responsible for many of the comforts, even necessities, which make our boys at the front more fit and help more than is generally appreciated in giving the proper punch to American and Allied operations. Americans are asked to contribute during that eight day campaign $170,500,000. It is estimated that the farmers will contribute 35 per cent of this amount.

SUNDAY WORK

A conference of churches of Indiana in which many rural ministers participated recently made unanimous ruling, or expression of its opinion, that so long as the worst enemy of civilzation menaces that civilization and the liberties of all it is entirely right and proper and even necessary that Sunday work should be performed where food can be produced in doing it. "Every church in Amerlca is fighting for its existence, as is every other component of civilization. If Sunday work saves crops it will help overthrow the bestial menace and becomes veritably a most chuchly work."

MACHINE FIGHTING

America is planning to have three and a half or four million men in France or in Germany by midsummer of 1919, and the war department asserts that they will be equipped with fighting machinery as no army in the world ever was. England and France sent almost unnumbered thousands to their deaths in a brave attempt to stem the Hun tide. They learned some lessons which they have passed on to America, and the slogan now is, "Let machinery do it." Therein is the success of the recent drive. Months of time have been given by manufacturing centers of America, England and France, and tanks, flying machines and guns of all callbers have been sacrificed rather than human lives.

This simply as a bit of encouragement for the farmer who finds difficulty in securing labor saving machinery and implements.

O. H. STEVENS

One of Callfornia's finest characters, O. H. Stevens, president of the Traction Engine and Implement Dealers' Association of Southern Callfornla, has passed. Mr. Stevens was a natlve of the state of Washington, but was for nearly a dozen years with the Holt Manufacturing Company of this state and for that company established the Los Angeles branch, being in charge of it for some years. The success of the Southern Callfornia tractor demonstrations has been largely due to his indefatigable work. He leaves a wife and two little ones, a brother in the trenches, and other members of his family at Dayton, Washington. He was only 32 years of age.

LESS JUNK

Clean up the junk, especially the old iron, copper and other valuables lying loose around the barn. There never was a time when it commanded so high a price as the present; it is needed in our industries, and the money is needed to equip the farm with something useful. If it is not turn it over to the Red Cross or some other organization which will attend to its utilization. Beside the iron, copper and brass which may be gathered in, there are old automobile tires, broken furniture, and we may even mention some of the old clothing hanging often in the woodshed which would serve an admirable purpose in the hands of European relief socleties. If too far gone for use as clothing it may at least make carpet rags.

THE CORN-PORK RATIO

We rather imagine that in the future the food adminlstration will "view with suspicion" any suggestion that the hog market can be stabilized on a ratio of corn to pork. Certainly the producer will!

As a matter of fact there has been plenty of evidence during the past year that would indicate that the food administration felt that they had picked up a hot brick when they adopted the thirteen to one ratio.

The economics of agricultural costs is a subject that is about as wide and deep as the ocean, and not nearly so well charted, and those adventurous souls who strike out boldly on a search for the land of "Production Costs" are very likely to hit an unseen rock.

The reason given for discarding the thirteen to one ratio was that the possibility of an early peace and therefore the releasing of large quantities of corn in South America and Africa, caused a break in the corn market that would automatically carry the hog market to a point below the minimum of $15.50.

The failure of the ratio to operate because factors beyond the apparent control of the food administration developed, prompts the question as to whether any arbitrary market can be arranged. Will not any market ine-

And yet it appears that sooner or vitably get away from the arranged basis just as soon as conditions do not coincide with it?
later the marketing of agricultural production must be based on production costs.

If markets are to be stabilized it would seem that the nearer the starting point touched the raw material the better the working basis.

LIBERTY—INTERNATIONAL

Just as we go to press word comes that the California International Live Stock Exposition will open at San Francisco, Saturday, November 16.

No definite statement has been issued regarding the opening of the Liberty Fair to be held at Exposition Park, Los Angeles, but it is thought that the opening date will be early next week.

The stage has been set for these two great shows, and the enforced postponement, regretted by all, has been taken advantage of by the management of each show to add the finishing touches.

These shows presage much for the live stock and agricultural development of California, and each show has a message to deliver that will interest every man and woman in the state who believes in better agriculture.

This Week's War Notes

Bulgaria quits.

Turkey quits.

Austria-Hungary quits.

Some quitters. Germany, next.

The early abdication of Emperor Charles of Austria and his retirement to Switzerland is anticipated.

The Ukrainian national council announces that it has taken over the administration of eastern Gallcia.

The Polish army, under the supreme authority of the Polish National Commlttee, has been recognized by the government of the United States as autonomous and a co-belligerent.

There is no slackening in the movement of American forces, and the draft calls are being issued as anticipated. The largest single call to be issued is that for November 11, which is for nearly 300,000 men.

The eyes of the world have been centered on western and southern Europe so that there has been little interest in Russia and Siberia. It is understood the lines of the Allies have been strengthened, and there can be no question that the fall of the Central Empires will result in complete collapse of the Reds.

At three o'clock Monday afternoon, November 4, Austria fired her last gun and unconditionally surrendered. Her navy is to be turned over to the Allies, as are all railway transportation lines. The Allies are to have free access over her territory, and she is now endeavoring to save a semblance of government organization and to correct her own internal affairs. Before surrender the Italian armies captured over 300,000 Austrian soldiers and 5000 guns.

It is a great satisfaction to all the Allies that the conference at Versailles has resulted in entirely harmonious action. World history has never been made so rapidly as during the past few days, and while peace is much nearer there are yet problems to solve, but the action at Versailles has given the lie to the pessimistic claim sometimes made that when peace is approached the Allies will also approach the danger line and dissensions will complicate final peace arrangements.

Turkey has surrendered; the Dardanelles are opened; the fleets of the Allies are chasing the Germans around the Black Sea. General Townsend and his troops, who were prisoners in Turkey, have been returned. Constantinople and all fortifications along the Dardanelles are now occupied by Allied troops. The conditions in Vienna seem to be practically anarchy. The royal court has ended, and it is announced that even Germany has recognized the Independence of the Czecho-Slovak state.

The Allies have continued driving at every point the Germans toward the Rhine. The Americans have done remarkably fine work in the Verdun sector and are now approaching Sedan. Some Austrian prisoners have been captured, but it is understood they are being withdrawn as rapidly as possible since Austria's surrender. The number of prisoners and guns is not announced, perhaps not even counted, but it is known there is a continuous stream and it has become embarrassing to know what to do with the great number of prisoner.

The armistice terms, which are assumed to mean practically unconditional surrender, have been delivered to the Germans. These terms were not announced in time to be given here as we go to press one day earlier than usual. It has been stated, however, that the terms are very similar to those granted Austria-Hungary. Our government has announced, however, that the terms were unanimously agreed upon by all the Allies. It is generally assumed that the boundary lines in Europe will undergo very great changes, and these will not be along the line of "frontier corrections" so often referred to by Germany early in the war.

What Causes June Drop?

NOTE that the title above is a question, and no answer to that question can be given which will be entirely satisfactory to the citrus grower and to the investigator of citrus problems. Does the usual "hot wave" of June have to answer for all of the usual June drop, or is a fungus which we call Alternaria the determining factor, or has the orchardist irrigated too much or too little, or perhaps the tree has not been pruned properly, or is there some physical sickness or chemical lack in the soil which is responsible for this most perplexing, or even exasperating, fault of citrus trees, more especially Washington Navel trees?

These are only some of the questions which the citrus grower is endeavoring to solve, and many of the other problems may in a measure have to do with this one of the June drop. While the Cultivator makes no promise of a solution of this question, it is now presenting opportunity for a most interesting discussion by arranging with a California agricultural chemist and one who has already made some years' study of these and allied questions, whose opinion is at present that while the soil may not contain a conclusive answer it may have suggestions which will aid in answering "Why this June drop?"

In order that the best information may be had on the subject we are going to open our columns to a discussion, and the first step we ask the grower himself to take. This step calls for no extended observations or keeping of records other than that where the grower has an orchard or a portion of an orchard which has shown serious drop, regardless of whether it is located in the warmer valleys or in the coast sections, we ask that he give us a sample of his soil, sample to be taken from the sides of a hole which shall be at least three feet in depth, and so taken as to give a fair proportion of surface and bottom soil and all between. Soil to the amount of at least one pound should be supplied and sent to the office of the California Cultivator.

When these soil samples are received with full particulars as to the condition of the orchard, record will be made and kept in this office, and the soils from the dropping and non-dropping orchards will be turned over to the chemist, who will make examinations with no knowledge of their character other than that the package containing the sample has a number which corresponds with a number in the records held in this office.

The results of this analysis will be later given to the orchardist as compensation for his effort. It will not be a complete soil analysis but will be sufficient to prove of value to the orchardist.

Then from other growers, or even the same grower—if a portion of his orchard does not show drop—we want soil samples taken in identically the same way, to be analyzed in the same way as the soils from the groves which do not hold their fruit.

It may be readily seen that the point to be determined in this soil examination is how serious an affect the soil has on this drop.

Lest there be a greater number of these samples sent than it would be possible for our chemist to handle we ask for samples from six different orchards which have shown serious drop and the same number from non-dropping orchards and we ask citrus growers who have typical orchards to drop postcard to this office with application for the making of the soil analysis and not to send soil samples until notified.

..... Nov. ..... 1918.

To California Cultivator,
115½ N. Broadway,
Los Angeles, California.

I would like to submit soil for chemical determination. I have..... acres of navels which have.....(not) dropped seriously in 1917 and 1918 as a result of the usual "June drop". (Or if a portion of the orchard has dropped seriously and a portion not please so indicate.) In my section are certain trees the behavior of which has been contrary to that of mine. These trees are owned by

Fertilizing Citrus Orchards

Written for California Cultivator by R. R. Snowden

THE citrus grower's experiences, often puzzling and sometimes contradictory, are easily understood when we have sufficient relevant data. Here is a recent case that proves this statement.

Mr. A., failing to get a cover crop, last winter applied 15 tons stable manure per acre to his orange grove, having previously put on one ton ground lime carbonate. With the fine tillage and moisture conditions given this grove any grower would say this was good practice and should have given satisfactory results. Yet Mr. A. writes: "This, one of my finest groves, has practically made no new growth whatever." The question arises at once, "Why, with 150 pounds of nitrogen per acre in the manure, and the lime to stimulate bacterial activity, have the trees made no new growth?" The analysis of the soil makes the answer perfectly clear to the agricultural chemist.

Here is the partial analysis: Lime carbonate, 2.03 per cent (a high per cent); nitrogen, 0.041 per cent; sulphur (in organic combination), adequate; sulphates, inadequate.

The manure was rich but fresh, and had an adverse influence on the process of oxidation, hence the sulphur present could not be converted into sulphate. There being practically no lime sulphate to fix the ammonia as fast as the ammonifying bacteria produced it, the latter was dissipated in the atmosphere and lost, and the trees thus were simply nitrogen starved in spite of its large addition to the soil. Under usual conditions the sulphur would have been oxidized to sulphuric acid, and this by reaction with the lime corbonate present would have provided the necessary lime sulphate to fix the ammonia as sulphate and the nitrifying bacteria would then have had their chance to produce nitrates, which are practically the only form of nitrogen available for plant nutrition.

Although the almost entire absence of fruit in this grove now, while two years ago it produced over 600 boxes per acre, cannot be used here for comparison purposes for the reason that other factors have of late dominated production adversely, yet it is interesting to know that during the season of high production mentioned each tree received 3.8 ounces nitrogen in nitrate form, which rendered them to some extent independent of the organic soil nitrogen. During that season the condition of the trees also advanced from "good" to "very good."

Conclusions derived from the above experiences:

Either conditions favorable to the nitrification of organic nitrogen must be secured, or else nitrates must be added. Chief of them is the promotion of oxidation.

Intermediate between nitrification and the conversion of the nitrogen into ammonia is the fixation of the latter, which must be provided for.

It is unprofitable to add lime carbonate if this is already plentiful in the soil. So also of all plant nutritives.

Manure will fail of its duty when a condition is present inimical to its assimilation either with the soil or by the plants.

Much money is wasted by even the most astute ranchers by neglect of these self-evident rules.

CONVENTIONS POSTPONED

State Commissioner of Horticulture Hecke, announces with regret that the spread of Spanish influenza has made necessary the postponement of the 51st State Fruit Growers and Farmers' Convention, the Annual Convention of the State Association of County Horticultural Commissioners, the Interstate Plant Quarantine Conference, and the Vegetable Standardization Conference. Max J. Crow, president of the California Association of Nurserymen, has informed Mr. Hecke that it has been decided to postpone the annual convention of that association. All these conventions were to have been held at Riverside during the week of November 11 to 16. The decision was made after consultation with the health officers of the state and of Riverside County, and in justice to the delegates expected to attend the Interstate Plant Quarantine Conference from all the Western states, and some from Florida, Washington, D. C., Dominion of Canada and the Hawaiian Islands.

It goes without saying that the conventions are merely postponed until control of the influenza situation has been effected, and are contemplated for not later than the spring of 1919.

NOVEMBER SCHEDULE, GLENN COUNTY FARM BUREAU

Glenn County national farm loan meeting, November 9; Codora, 11; Orland, 13; Plaza, 15; Willows, 18; Chrome, 20; Larkin, 22; directors and home department meeting, 10 a. m., 23; Elk Creek, 2 p. m., 27; Grapevine, 8 p. m., 27.

The monthly farm bureau directors meeting will be held at the Federal Building, Willows, at 10 a. m. on Saturday, November 23. On same date and hour, the women's farm home department meeting will be held at the City Hall in Willows.

Agricultural News Notes of the Pacific Coast

Northern California

Olive picking is in full swing at Fairoaks, Sacramento County.

Anthrax conditions are improving in nearly all sections of the valley.

California's fresh deciduous fruit shipments aggregate about 25,000 cars.

Ascolano and other large olives are selling in Butte County at from $300 to $350 per ton.

The Globe Milling Company at Woodland is the first to make flour from 1918 harvested rice.

"Slackers" in San Francisco who failed to wear "flu" masks are arrested on charges of "disturbing the peace".

Three hundred and fifty convicts of the state penitentiary at San Quentin are members of the San Quentin Agricultural Club.

The fish and game commission contemplates the installation of a fish hatchery on Chico Creek. Both trout and salmon will be hatched.

The valley has been given a change in weather, exceptionally warm weather being followed by a norther which was not exactly welcome.

Cattlemen about Folsom are bringing stock down from the ranges. Early snows in the mountains have melted and the feed is plentiful.

Butte County olive growers are concerned over labor shortage. Temporary relief is being had from high school boys who are out on influenza vacation.

The rice situation is very satisfactory in the Sacramento Valley and the recent warmer and more drying weather has proven very satisfactory to the growers.

California Wine Company is shipping immense quantities of wine to all parts of the United States. It is asserted that people are preparing for a long "dry" spell.

Tribble Brothers of Sacramento County will market this year the first commercial crop of pistachio nuts in the United States. They have about 500 trees in the orchard.

Tehama County cattlemen have taken up the matter of quarantine of counties to the south because of anthrax. It was decided, however, not to lay such quarantine for the time being.

Farmerettes who aided in the grape harvest at Lodi, San Joaquin County, have offered to remain through the winter if labor can be secured in the Lodi section. They are now engaged in husking corn.

The Pacific Coast Packer estimates the output of oranges from Northern California citrus districts at 400 carloads, of which 250 cars will be shipped from Butte County, 100 from Sacramento, 35 from Placer.

An irrigation system to cost about $200,000 and which will impound about 30,000 acre feet is contemplated for certain mountain valleys of Mono County. It is planned to distribute the waters to some 100,000 acres of land.

Directors of the Nevada County farm bureau have changed their meetings to night meetings instead of all day meetings and each farm center not represented will be fined $5.00. This because of the importance of war work to be undertaken.

Central California

Lemon Cove and Lindsay are picking grapefruit.

Navel oranges are coloring very rapidly in Tulare County orchards.

According to the present game law no wild ducks may be offered for sale.

The Visalia cannery is calling for more women canners to handle grapes.

The Santa Clara County supervisors have ordered construction of several concrete bridges.

Erection of a cotton gin has been started by the California Products Company at Bakersfield.

No highway commissioner has been appointed to fill the place of Henry Widenman, recently deceased.

Some excellent broomcorn has been grown on the ranch of J. J. Ralls near Button Willow in Kern County.

The Tulare County Lemon and Grapefruit Association will ship about 100 carloads of lemons this year.

The cotton gin at Fresno has received its first supply of Fresno has received its first supply of Fresno grown cotton.

A. S. Good of Bakersfield has been elected president of the Kern County branch of the California Cattlemen's Association.

Oakdale, Stanislaus County, began cutting rice the middle of October. There are in that district about 1000 acres to be harvested.

Peace Valley in the Coast Range some 30 miles west of Coalinga is said to be one glow of gold from California poppies encouraged by the early rains.

President Hansen of the San Joaquin Milk Producers Association reports plans to extend marketing activities of the cooperative marketing association.

Cattlemen of the fourth zone of the State Cattlemen's Association met at Fresno Saturday, November 2, to consider constitution and bylaws submitted at the Davis convention.

Tulare County citrus growers are protesting against the order of Los Angeles County horticultural commissioner requiring fumigation of oranges with hydrocyanic acid before admission to that county.

The California Associated Raisin Company asks all growers to cull on trays in order to maintain grades as high as possible. Close culling means valuable feed kept at home and higher price for marketable stock.

Santa Cruz County apples are shipping rapidly, and the crop is proving of a better grade than was anticipated. Both growers and packers are securing good return. Shipments have now passed the 1000 car mark.

Commissioner Collins of Tulare County reports that citrus thrips do not exist upon the citrus fruit of Tulare County at this season, though the fruit is sometimes infested with a harmless species of the thrips family.

Central California navel shippers announce strict adherence to standardization rules for all shipments this year. Testing stations will be maintained under direction of the state horticultural commission. Eight to ten sugar ratio and substantial color is regarded as essential.

Southern California

The Banning district has a very large almond crop.

Arizona is shipping large quantities of feeder cattle into the Imperial Valley.

The Holly sugar factory in Orange County is crippled because of labor shortage.

Orange County poultry yards are being afflicted with a serious attack of chicken pox.

Imperial Valley has 12,000 colonies of bees and produces about 80,000 pounds of honey.

Lamanda Park, Los Angeles County, grape growers are getting $30 a ton for their Missions.

The cotton crop of California and Arizona with its by-products will this season total $16,000,000.

The seedless apple is bobbing up again, this time Riverside claiming to have "developed" a perfect specimen.

The discovery of the syrup possibilities of the grape is characterized as the dawning of a new day for the grape industry.

Imperial Valley is making appeal for the establishment of a viticultural station where desert grape production may be studied.

From Wintersburg, Orange County, comes a report that practically all the women are busy handpicking beans, thus releasing men for heavier labor.

Wineries in the Ontario district are converting their plants to the manufacture of grape syrup. Machinery has already been installed at Guasti, Cucamonga and Rochester.

More than 100 Redlands high school girls are working in the Yucaipa apple cannery. Their work has enabled the plant to make a record daily run of 2841 gallon cans of apples.

San Bernardino is getting ready for the Ninth Annual Orange Show to be held February 14-23, 1919. W. M. Parker is president of the association and F. M. Renfro will be manager.

One walnut packing house at Santa Ana recently had stored 1600 tons of nuts valued at about $300,000. This is said to have been the greatest value in walnuts gathered under one roof.

Coachella Valley people are appealing to the supervisors of Riverside County to continue the work on the Imperial Valley road which had been begun by the Imperial County supervisors.

One of Los Angeles' Half Century men who went to Imperial Valley to pick cotton boasts one day's work aggregating 155 pounds. He received pay at the rate of five cents per pound.

The 1918 sugar campaign of the Oxnard beet factory has closed. This factory has handled the sugar beet crop of the San Fernando Valley and the Chino Valley as well as that of Ventura County.

Ventura County supervisors are trying to decide whether the county or the men whose interests are directly affected shall pay for the guards which the state has ordered placed over the warehouses containing food stuffs. There are 29 warehouses in the county, and guarding them properly will cost $150 a day, according to the estimates of the supervisors.

The Coast and General

Florida will produce about 8,000,000 boxes of citrus fruit this year.

The United States army is consuming 125,000 pounds of beans every day.

California rice millers have agreed with the food administration on price to growers.

Florida expects to have 5,000,000 boxes of oranges, and 3,000,000 boxes of grapefruit.

Winter truck farming is becoming a great industry of the Rio Grande Valley of Texas.

Eleven hundred lambs were shipped last week from Walla Walla, Washington, to Stanfield, Oregon.

Over 800 Maricopa farmers attended the farm bureau rodeo at the experiment farm at Mesa, Arizona.

The Washington State Beekeepers' Association will hold its annual convention at Yakima, November 14-16.

Honey producers of the Yakima Valley of Washington report the sale of a carload of honey at 24 cents a pound.

Olive growers are interested in the standardization rules of the government and are anxiously inquiring, "What is a ripe olive?"

A partial victory has been won by apple shippers of the Northwest in their protest against the 25 per cent increase in freight rates.

Arizona's orange crop will show a 20 per cent increase over last year's. Seventy-five carloads will be shipped and 30 carloads of grapefruit.

Damage from codling moth has been very severe in Washington apple orchards this year, the early fruit seeming to have been the hardest hit.

The grapefruit crop of the Isle of Pines is far below normal owing to hurricane damage last September. The fruit is, however, proving very sweet.

British Columbia manufacturers of evaporated potatoes have made many large contracts and alded materially in stiffening market which had been oversupplied.

The Mid-West Horticultural Exposition planned to be held at Des Moines, November 5-8 has been postponed, because of quarantine, until December 10-13.

The Satsuma orange crop in the Houston-Galveston district of Texas will amount to practically nothing this season as a consequence of the hard freeze last year.

Louisiana's citrus crop is short owing to devastating storms which have occurred during the past three years. The fruit is maturing about two weeks later than usual.

Growers of apples in New York have not been able to make deals with evaporator houses because of a difference of 25 to 50 cents per hundred weight in price asked and offered. In consequence the evaporated apple market is going up.

An advisory council of butter, cheese and egg interests has been formed in New York by delegates from the large Eastern and Middle Western market points. A conference was to have been held in Washington with the food administration but this has been postponed by the influenza scare.

California Poultry Houses

By Jean A. Koethen

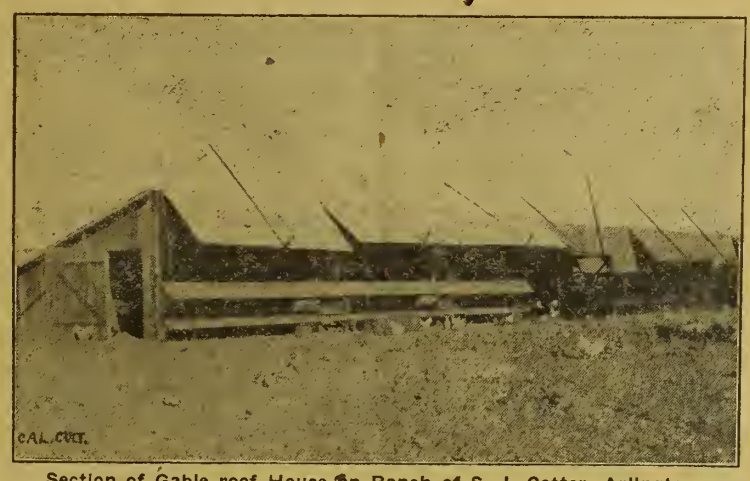
THE housing of poultry in a climate like ours is a simple matter, but not quite so simple as it would appear at first glance. We have not to reckon with ice and snow nor with the fierce winds of colder climates. On the other hand, we must plan for adequate ventilation for hot nights and for the exceptional hot spell which comes nearly every summer, as well as for protection from the blazing sun nearly every clear day in the year. Fortunately, ventilation is not expensive, and protection from the sun is largely a matter of common sense, so a good, practical poultry house should be noticeably cheaper here than in the East.

In my visits to poultry ranches the past three years—and I have made a good many—I have found three things characteristic of nearly all poultry housing: the south or east exposure, the open front, and the long laying house. In making the house front east or south protection against northwesterly winds is secured in the most practical manner. I think the east is rather preferred to south because it gives protection from the sea breeze as well, but this is a matter of locality. The east front also gives afternoon shade, while admitting the greatest amount of morning sunshine. The open front is obviously the only house for this climate, but I notice that in sections where north winds are most prevalent a modified open front is coming into use. In this house only the upper third of the front is open, but there must be more provision for circulation of air than in a house which is entirely open. The long laying house, divided into sections accommodating from 100 to 300 birds is so much more economical in every way than the colony house that it is used nearly everywhere. As a rule the different sections or divisions are connected by an alley at the front, so that every bird has the length of the alley for exercise. Only when there is some reason for separating the different flocks is the alley closed by a door.

Only two types of roof are in common use, the gable, with unequal slopes, and the shed roof. Some of our pioneer poultrymen tried the semi-monitor roof but found it unnecessarily expensive. Very little glass is required in a California poultry house, none except in some corner where a window is needed for light or ventilation. In most houses it is entirely absent. A great many laying houses are built with the hip or gable roof having its short slope toward the front and prolonged into overhanging eaves to keep out the sun. A great many others are built with the shed roof, which is cheapest of all, with an adjustable door of canvas or wood hung to the front of the roof, which can be raised or lowered at will. The accompanying cut shows an excellent model of such a house at West Riverside. I saw another at Santa Ana in which canvas covered frames were hung in the middle so that they could be tipped in any direction, letting the sun into the farthest corner or keeping it out altoegther. Most of the newer houses in the interior valleys of Southern California are built after the one or the other of these plans.

At Inglewood there are a number of houses of what is called the "double decker" plan, which seems especially suited to a locality near the coast. One of these which I visited several years ago interested me greatly. The house was built with its wooden floor about four feet from the ground, leaving a basement underneath. Little stairways from the laying house above gave the hens access to the ground below, where they could find dry scratching in the wettest weather, and doors from the basement let them into the yard. The lower third of the front of the house was closed, and the upper two-thirds protected by overhanging eaves. The roosting rooms in this house were smaller than common, providing accommodations for not more than 50 hens, but along the entire front, 100 feet or more, ran a straw covered alley where each hen might scratch as she pleased. I was told that the hens in this house laid in weather which would stop most self respecting Leghorns.

Long House on Essenberg Ranch, West Riverside



Section of Gable-roof House on Ranch of S. J. Cotter, Arlington

The long laying house, as it is generally built, is a succession of houses about 20 feet square (some a little more, some a little less) built under one roof for the sake of economy and convenience. The discussion which has been going on for several years over the respective merits of large and small flocks seems to have been decided in favor of the medium flock. A house 20 feet square will hold from 125 to 200 Leghorn hens, according to circumstances and the owner's idea of the amount of space they require. One hundred hens in such a house would rattle around; 150 would have comfortable scratching space; 200 could manage fairly well in an emergency. When pullets are put in the laying houses before they are fully grown a larger number is allowed at first, and the number is reduced as the pullets grow to maturity. The number of hens allowed in a house depends to some extent on the yard space, since a hen that is out 12 hours a day 360 days in the year requires less room inside than she would in a no-yard house. In only one instance that I recollect have I seen a no-yard house on trial. This was in Riverside, and I do not know how successful the experiment was. The no-yard house is gaining poularity in the East, but there seems little call for it here. In very many cases, however, the yards are so small as to furnish only room for sunning, and the hens are expected to live in the house.

At Gardena I know of two ranches where the Charles Weeks house is being tried out. This is a long house, entirely open in front, and divided into sections eight feet square, designed to accommodate 20 full grown hens. Each flock has its own little yard and is entirely separated from the rest. Instead of straw, sand is used on the floor, which is covered to a depth of ten or twelve inches once a year. The droppings are scraped off every few days, leaving a clean layer of sand. Its advocates claim that separation into small flocks makes for both health and egg production, and that the use of sand minimizes labor.

The ideal floor is cement, but the cost of cement of late seems to have been prohibitive—at least, I have seen few cement floors. Many poultrymen prefer the wood floor, thickly covered with straw, and many cling to the dirt floor. Probably it is a case, these critical times, of using what you have, not what you would like.

As a rule, nests, feed troughs and hoppers, and water fountains, are all arranged along the front of the house, a continuous supply of fresh water being provided by some kind of drip system. This leaves the floor, under and in front of the roosts, free for scratching. Slatted hoppers are used for dry mash and troughs for green feed and moist mash. Poultrymen who prefer to leave the whole front open arrange the hoppers within the house and the nests under the droppings boards. This gives more air but makes rather a harder house to clean.

No one who contemplates building a house should do so until he has visited the poultry houses in his vicinity and made up his mind as to their respective merits. The house shown in the accompanying cut, on the Essenberg ranch at West Riverside, is considered such a good model, and the work on this ranch has been so successful, that I understand the University of California is planning to take it over and make it a demonstration farm with Mr. Essenberg as manager.

Save the Drops

In a speech delivered recently before a meeting of farmers, W. Champlin Robinson, director of oil conservation of the United States fuel administration, told a story about a farmer who gave all his horses to Uncle Sam for war work and installed gasoline equipment. "I find," said the farmer, "that to get the best results I've got to be as kind to my motors as I was to my horses. Gasoline horses have to be fed, groomed and bedded or else they'll go lame. A man who keeps a lame motor on his place is just as bad as the man who works a lame horse."

The wise farmer will turn his attention to his machinery and there is no item of his equipment that demands as much attention as his gasoline motors. A new motor which has been running some months, requires particular attention because the "shaking down" which comes with the first year's service is generally the most telling in the life of the motor. Unless it is kept in proper adjustment after the first year's use it will lose from one half to one third of its power.

Here are some points to observe in the overhauling program:

Clean carbon from cylinders and plugs. Accumulated carbon is a fuel and power waster, besides the extra wear and tear on the motor.

Watch piston rings. See that they fit snugly. Badly fitting piston rings are responsible for the loss of power and the waste of gasoline and oil.

Go over the wiring system with special attention to timer and ignition.

Adjust the carburetor. During cold weather a rich mixture is needed for starting, but after the motor "warms up" it will give more power if the mixture is made leaner. Watch the exhaust and you will be able to determine whether you are wasting fuel or not. A smoking exhaust indicates that you are wasting gasoline or oil or both. A sharp, snappy explosion from the exhaust without smoke indicates that you are getting good service in the engine. Don't fill oil cups while motor is running, because it frequently causes spilling. Every drop of oil saved counts.

When cleaning crank case, don't throw away the oil. Strain it carefully and put it back in the crankcase. Oil cans and containers should be kept tightly covered to prevent dirt getting in and in the case of gasoline to prevent evaporation. An open container attracts dirt, insects and trash which results in great waste when using the last few gallons.

Strict supervision over farm motors is as necessary as over automobile motors. The country is badly in need of gasoline and oil for military uses. The war demands for gasoline alone are nearly a million gallons a day. These must be met. Farmers can fulfil a patriotic duty, besides putting more money in their own pockets, by observing the slogan, "Stop the leaks and save the drops."

Does Soil Analysis Pay?

It Does, when backed by long experience in interpreting the results and in the field

The work of this laboratory has added hundreds of thousands of dollars to the value of crops and agricultural property in this and other countries

The proof of the value of this work is IN THE ENLARGED BANK ACCOUNT OF THE CLIENT.

Here are testimonials,—mostly unsolicited,—that mean much to the prospective client:

"American agriculture owes Dr. Snowden a great but little recognized debt." (SOUTHERN RURALIST, Atlanta, Ga.; edited by Dr. H. E. Stockbridge, a distinguished agricultural chemist, who was strongly urged for appointment as Secretary of Agriculture when the latest change was made.)

(Mr. Frank Brown of Los Angeles,—grove at Naranjo, Calif.): "My orange and grapefruit grove was so poor when you analysed the soil that it was called the "grave-yard," and the biggest crop it had ever borne was eight cars of fruit; the first year after, it produced twenty cars, and the next twenty-two cars, with another big crop on the trees."

(Mr. H. E. Gilley, Los Angeles,—grove elsewhere): "By following your instructions based on the analysis of the soil my orange grove produced a 65 per cent crop of fruit, while the neighboring groves matured only 15 per cent crops, —their loss being due to the wide spread 'June drop'."

(Mr. R. W. Meeker, Glendale, Calif.): "I have owned the place for fourteen years, the trees (orange) are about twenty-five years old. Up to four years ago when you made the first analyses the place had never done much more than paid expenses, but since then it has gradually increased until it is now paying me approximately $800 an acre, and I have the largest crop on the trees I have ever had, as I expect to take nine cars of fruit from 640 trees. When you told me there was no reason why the trees should not bear a crop every year I doubted it was possible. For the past four seasons there has not been a failure, and owing to the heavy load on the trees I cannot afford to go without an analysis of the soil this year."

(Mr. Daniel Wiebers, Rivera, Calif.): "You have improved my orange grove so much that passers-by sometimes stop to ask what I did to it to get the results. You may write any testimonial you wish and I will sign it."

(Mr. S. W. Funk, Charter Oak, California.): "As a result of your analysis of my soil and prescription for my grove (orange) I consider the quality of the fruit will add $1000 to the value of my crop."

(Panama-California Exposition, Director of Works): "These (nursery) soils were treated in accordance with your prescription with very good results." Later, 10,000 large boxes containing their growing trees and plants were treated by my directions, and it is now only necessary to remind those who saw them, of the wonderful excellence and beauty of their shrubbery and flowers.

(Mr. G. M. Sparks, Oroville, Calif.): "My crop this year (1913) (after my analysis and direction) is the best the grove has ever had; in fact, the best in this section, and my fruit is the first to color."

(Mr. G. P. Von Stein, Pomona, California.): "Following your recommendations to the letter I have had exceptional good results, our packing house manager stating mine are the smoothest large-sized fruit he had ever seen."

(Mr. Cornelius Christiancy, Manager La Isabella groves, San Juan, Porto Rico): "Your diagnosis could hardly have been improved upon even if you had been here on the ground and made a study of the conditions." This diagnosis was based on the analysis of the soils sent me. The groves were very much improved, as I learned afterward from a Florida paper.

These growers (and many others) were richly rewarded for their small investments in soil analysis. It nearly always saves more in the fertilizer bill than its cost. And NO OFF YEARS when my directions are followed. You cannot afford to neglect it.

DIRECTIONS FOR TAKING THE SAMPLES

In the arid and semi-arid regions: Dig a hole with straight sides down to the depth stated below. Put a paper or close cloth in the bottom to catch the sample, and shave an even slice down from top to bottom. Mix this well and take out about a pound. Do this at several points and mix these several pound samples well together and send about one and one-half pounds for analysis. A soil auger or King's soil tube will answer for taking the samples, but if the small tube is used a half dozen holes should be made.

I find it best for a grove of 30 acres or less, to take an average sample from both the worst and the best portions of the grove so that I can have these for comparative study. But if the grove is small and the soil appears to be uniform in character, a single average sample of the whole grove will suffice. But it doesn't pay to stint.

In an orchard (grove) take the sample three feet deep.
In alfalfa and alkali soils take it four feet deep.
In grain and vegetable soils take it two feet deep.
In the humid region, take the sample for all purposes eighteen inches deep.

Next Year's Citrus Crop

ESTIMATE of the coming citrus crop has been made by the Pacific Coast Packer, which shows a material shrinkage over the output of two years ago, which was the bumper crop. The grand total of that year, 1916-17, was 54,506 carloads, but next year's crop, barring accidents, will be vastly greater than that of last year, which was the smallest in years. This was due to the June drop, which resulted in only less than 24,000 cars for the entire state.

The shipping ends Thursday of this week, and final and exact figures will not be possible to give until our issue of November 9. But the shipments are divided approximately as follows: Oranges from Southern California, 14,200 cars; lemons, 5800 cars; oranges from Central California, 2536 cars; lemons, 115 cars; oranges from Northern California, 203 cars.

The Packer's estimates for the coming season are as follows:

"For the coming year November 1, 1918, to October 31, 1919, the prospect is for about a 75 per cent total volume of a normal crop. This is based on the normal crop as being the largest crop produced, which was in the 1916-17 season. It is the opinion of citrus shippers that the normal crop of the state should be the year of the largest output, therefore the output for the coming season will be around 43,000 cars. The estimated figures given in detail below show that Northern California, which includes the counties of Butte, Sacramento, Placer, Glenn, Yuba, Solano and Yolo, will produce 395 cars of oranges.

"The Central California belt, which includes the counties of Kern, Fresno and Tulare, will ship about 1955 cars of citrus fruits, of which about 100 will be lemons.

"Southern California district, which includes the counties of Los Angeles, San Bernardino, Riverside, Orange, Ventura, San Diego and Santa Barbara, will produce in round figures 41,000 cars of citrus fruit, of which about 7500 cars will be lemons.

"The percentage of the crops will be, according to the best information obtainable, about as follows: Valencias, 100 per cent of a normal; lemons 100 per cent, and miscellaneous varieties 75 per cent, with navels 65 per cent, making a total volume of about 75 per cent, including everything.

"The short crop of early navels from Tulare County, which is the earliest shipping belt, means that the supplies for Thanksgiving and Christmas holidays will not be very plentiful. The first shipments from Tulare County will probably move around November 15. Opening prices, no doubt, will be high. The quality of the early fruit in the North generally is not up to standard on account of being thrip marked. Present indications are that navels will run to large sizes.

"Southern California will ship very little fruit until the Christmas holidays.

"The 1918-19 citrus crop in Southern California, according to estimates received, is going to be about the same as the 1911-12 output, or around 41,000 cars. In the southern district there are seven counties shipping citrus fruit. Los Angeles will produce during the coming season 14,035 cars; San Bernardino, 13,631 cars; Riverside, 5731 cars; Orange, 3916; Ventura, 1332; San Diego, 2000; Santa Barbara, 100, making a total for Southern California of 40,745 cars."

As to Arizona: "There will be a 20 per cent increase in orange crop here this season, 75 cars being expected compared with 60 last year. The grapefruit crop is double that of last season with 30 cars expected. Quality of fruit is much better this year than last. Oranges have sold at 4 cents per pound on the trees and grapefruit at 2 cents per pound."

Florida's crop will be larger than that of last year. It will also be a couple of weeks earlier, and presumably that state will have to furnish a large part of the holiday demand. The labor shortage is the most serious problem the Florida growers have to solve now.

"The Florida citrus fruit crop has been estimated in boxes from 7,500,000 to 8,000,000. The bureau of crop estimates, department of agriculture, on September 1 estimated the Florida orange crop at 5,050,000 boxes and the grapefruit crop at 2,900,000 boxes. The increase compared with last year is 44 per cent for oranges and 31 per cent for grapefruit. The bureau of crop estimates places the condition of grapefruit October 1 at 78 against 52 last year and 78 on a five-year average. The condition of oranges is reported as 84 against 55 in 1917, and against 80 for the five-year average. The great per cent of the crop is in the hands of the growers.

"Some sales have been made at prices for oranges ranging from $1 to $2.25 per box on the tree, or on condition that they be delivered to the packing house. Grapefruit sales have ranged from 75 cents a box to $1.75 a box on the tree.

"The packing season opened up early in September this year. To date 440 cars of grapefruit have moved and up to this week 17 cars of oranges had been shipped. The acid test of one to seven in grapefruit is the only one that will hold, it was decided this week, and the color test is eliminated. State inspectors have been instructed to seize all fruit not up to the standard test. After November 1, oranges will begin to move more freely. Wet weather this week is interfering with grapefruit picking and shipments consequently are lighter."

Other citrus shippers are Louisiana, with possibly 65,000 boxes; Texas, with possibly 2000 or 3000 boxes; and Alabama, with a few boxes. These last named states are shippers principally of Satsumas, or the hardy fruit named by the department of agriculture citranges, and the entire shipments of the three states will not aggregate one day's shipping from California.

TEST OF THE GRAPES FROM DEFOLIATED VINES

The following observations made by Fred K. Howard, horticultural commissioner of Kings County, in relation to a recent outbreak of Pholus achemon in the Delta View district where a vineyard of 18 acres was entirely defoliated, are most interesting. The grower in an attempt to protect the

fruit from the direct rays of the sun covered the denuded vines with raisin trays. Not having a sufficient number, a small part of them were left uncovered. On August 20 Mr. Howard visited the vineyard and took samples from those vines that had been covered with trays, also from those which had been left uncovered, and likewise from those which had not been subject to defoliation. A sugar test, Balling scale, showed no difference between those protected by raisin trays and those left uncovered, each registered 15 per cent, while the untouched vines showed 19.4 per cent. Again on September 4, following a hot wave when the thermometer registered from 100 to 104, tests from each group of vines were made. The covered vines in this case tested 20 per cent, while those not covered showed a sugar content of 20.5 per cent and those not defoliated tested only at 20 per cent. No effort was made to take samples of the ripest fruit.

DOMESTIC SOURCES OF POTASH

At a conference on the American potash situation, held recently in Washington, it was stated that the view of the department of agriculture is that the governmen should do all that is possible to encourage the production of potash from the cheapest sources in this country in order to enable farmers to obtain it at a low price, because foreign supplies are now unavailable.

Some of the domestic sources of potash that may be further developed are blast furnaces, from the fumes of which potash bearing materials may be precipitated; cement mills, greensand, certain shales, the brine of some lakes, mostly in Nebraska, and the giant seeweed (kelp) of the Pacific Coast.

The domestic production of potash for the coming year is expected to be about 60,000 tons, much more than the previous year, but still only about one-fourth of the annual pre-war consumption, according to A. W. Stockett of the bureau of mines.

Representatives of the bureau of plant industry of the department of agriculture pointed out that certain crops in the East are showing unmistakable signs of "potash hunger" and the general agreement at the meeting was that farmers should be informed of facts bearing on the value of potash for crop production and that all efforts should be made to supply the farmers' demand.

ARIZONA LOSES PLANT BREEDER

Prof. George E. Freeman, plant breeder of the college of agriculture and experiment station of the University of Arizona at Tucson, has severed his connection with the department of plant breeding and sailed late last month for Cairo, Egypt, for the purpose of carrying on plant breeding work in the Nile Valley. This information, writes the agricultural department of the Sperry Flour Company, was received by it with much regret, for in connection with the preparations for and since the actual launching of the statewide campaign for maximum planting of improved varieties of wheat, the company has been in close connection with Dr. Freeman during the past year.

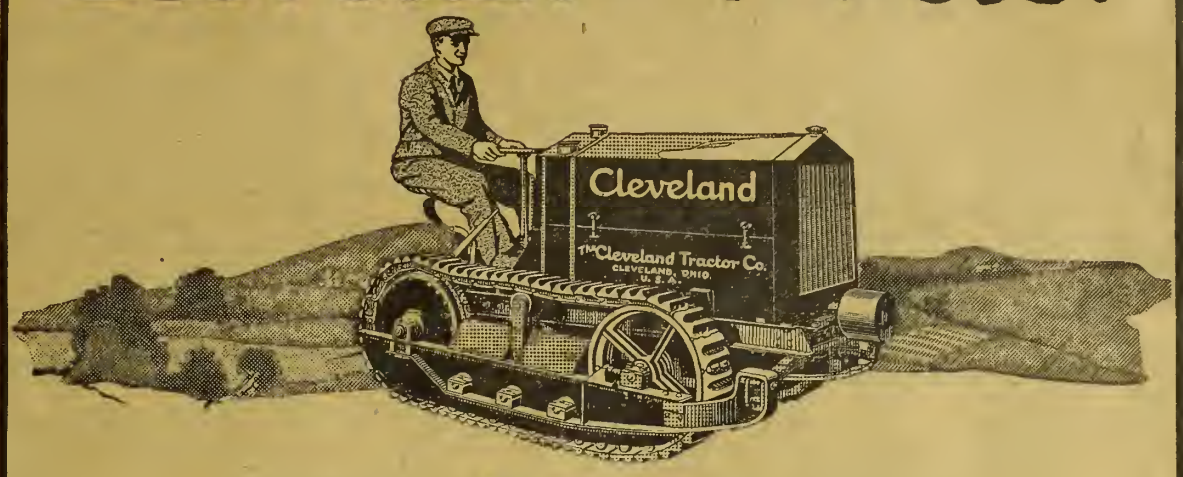
The activities of the University of Arizona's college of agriculture were responsible for saving the mill industry in that state through the introduction of Early Baart wheat from Australia about 1906. At that time the soft, white Sonora wheat, theretofore grown in Arizona, had been practically driven off the market as a result of the coming of the railroads and the entrance of the strong wheats of the Middle West, producing much more satisfactory breads.

From the start Early Baart showed up to good advantage and proved well adapted to conditions in Arizona, and it has become practically the only milling wheat there. Today Arizona stands first or second on the list of the annual reports of the department of agriculture in wheat production per acre.

W. E. Bryan, assistant plant breeder, for the time being at least is in charge of Dr. Freeman's work.

The Western Walnut Association will hold a two day session at McMinnville, Oregon, November 13. Members of the association report a very large crop of both walnuts and filberts.

Cleveland Tractor



Machinery Must Replace Muscle

Man-power is at a premium on our farms.

War has taken several million men into the service.

And in spite of these conditions, which are steadily growing worse, there must be *more* crops produced than ever before.

Machinery *must* replace muscle.

Thousands of Cleveland Tractors are successfully meeting the labor shortage and the demand for increased production.

The Cleveland Tractor, pulling two 14-inch bottoms in medium soil, plows 3½ miles an hour—eight to ten acres a day. That is all you can expect from *three* good men with *three* good 3-horse teams.

The Cleveland travels on its own tracks, laying them down and picking them up again like the famous battle "tanks." It turns around in a twelve foot circle. It gives you 12 horsepower at the drawbar for pulling, and 20 horsepower at the pulley for stationary work. It has 600 square inches of traction surface continually on the ground and will go almost anywhere. It weighs less than 3200 pounds.

But in spite of its power, the Cleveland Tractor is so small that it can easily go under and among small trees.

It will go through ditches, gumbo, sand and gravel, over unused roads, plowed fields and stubble. It will not pack the soil, will not mire or flounder.

Rollin H. White, the famous automotive engineer, is the designer of the Cleveland Tractor. It is produced under his supervision.

He has used only the best materials. Gears are protected by dust-proof, dirt-proof cases.

The track is designed for long service. The sections are joined with hardened steel pins which have their bearings in hardened steel bushings.

You must replace muscle with machinery on *your* farm.

The Cleveland Tractor offers the means of meeting the emergency.

Write us for detailed information and name of the nearest Cleveland dealer.

"30 Minutes from Service"

Prompt and efficient service for the farmer and the rancher is a vital necessity. More than ever the world at large is looking to them for sustenance.

It is our intention to place dealers and service stations throughout our territory, each equipped with a stock of parts and skilled tractor mechanics. This will enable any owner of a Cleveland tractor to telephone the nearest station in case his tractor needs repairs and inside thirty minutes have the desired parts and mechanic, if necessary, at his door at a reasonable cost.

THE Moline Wide Spread Spreader helps you to get 100% profit from your live stock. It enables you to make the best of your barnyard manure, keep up the fertility of your land and increase crops.

It is strongly built and equipped with the best mechanical devices for spreading manure in the most modern and practical way. It is a low down, endless apron, wide spread spreader and is correctly built for long life, easy loading, quick and perfect work. The Moline Wide Spread Spreader is the result of many years' experience in building manure spreaders.

The manure is subjected to a second handling by the rear beater, which pulverizes it much better than a single beater can possibly do, at the same time spreads the manure in a wide sheet instead of leaving it in streaks.

See your Moline Dealer or write us for full information and spreader catalog. Address Department 49

Flea-Beetles and Leafhoppers on Potato and Their Control

By H. J. Ryan, Special Field Agent, Bureau of Entomology, U. S. D. A.

Potato flea-beetles are now in evidence in the fields, and growers should be prepared to apply control measures. These insects are small, brown, jumping beetles which eat numerous small holes in the leaves of the plant. When they are present in great numbers they are capable of doing considerable damage. The grower should keep close watch on the condition of his plants and spray before serious injury occurs.

Bordeaux mixture alone at 4-4-50 strength acts as a repellant and has been found to be the most successful control for flea-bettles. To be effective it should coat both surfaces of the leaf.

For small gardens a compressed air hand sprayer is best, but commercial growers will find that an effective traction sprayer will give satisfactory service in the field. One which will give a pressure of 120 pounds or over should be obtained and for areas of more than a few acres, a large capacity tank will cut down operating expenses.

The Bordeaux mixture may be obtained as a stock solution ready to dilute and use, or may be prepared as follows:

Copper sulphate 4 lbs. or 4 oz.
Quicklime—4 lbs. or 4 oz.
Water to make—50 gals. or 12 qts.

Prepare the copper sulphate by suspending it in a gunny sack just below the surface of several gallons of water in a clean barrel. When the sulphate is dissolved, which requires three or four hours, remove the sack and stir into the barrel enough additional water to make exactly 25 gallons of the copper solution.

Prepare the lime by slaking it slowly and thoroughly in a clean barrel, strain, and add enough additional water to make exactly 25 gallons of lime milk. Stir thoroughly.

Pour the two ingredients together into another barrel or, better, directly into the spray tank, if it will hold 50 gallons. It is highly important to stir the mixture very thoroughly and to strain both ingredients before they are combined, as otherwise clogging of the spray nozzles might result. Use copper or bronze wire strainer of 18 meshes to the inch. Do not put copper sulphate or Bordeaux mixture into tin or iron vessels; use wood or copper containers. Mix the Bordeaux as needed and apply at once. It is never so good after it has settled.

In some cases it may be found necessary to spray for leaf-hoppers on potatoes. These are small, narrow, green insects which hop and fly very quickly when approached. They suck the plant juices just as does the aphid, and when present in sufficient numbers seriously weaken the plant.

Some success has been obtained by the use of 40 per cent nicotine sulphate in the following proportions:

Nicotine sulphate.....⅜ pint
Rosin fish oil soap.....2 pounds
Water .....50 gallons

If needful, a combination Bordeaux and nicotine sulphate spray may be applied, when both flea-beetles and leaf-hoppers are prevalent. In such case, add the fish oil soap (dissolved) and then the ⅜ pints of nicotine sulphate to 50 gallons of Bordeaux instead of 50 gallons of water.

Further information on potato pests may be had by applying to the Division of Publications, Washington, D. C., for Farmers' Bulletin 868.

Cabbage Worms and Control

Cabbage worms of various species are beginning to make their presence known on fall cabbages now in the field. The most important of these is the common cabbage worm, a green larva about an inch long when grown. The parent of this worm is the imported cabbage butterfly, white with black spotted wings. The butterflies lay their eggs mostly on under sides of cabbage leaves. The young worms hatch from them in four to eight days, feed on the leaves and reach maturity in 10 to 14 days. Then each attaches itself by a thread around the body to a leaf, stalk, fence post, or any other support, and transforms to a pupa called a chrysalis. From this the butterfly emerges in from 7 to 12 days. In Southern California there may be as many as five or six generations during the season. The last chrysalids formed in fall remain thus over winter on dead stalks and produce butterflies the following spring. All of the cabbage worms being "chewing" insects may be controlled by arsenical sprays.

Spray with an arsenical in soapy water.

To make 50 gallons of spray dissolve four pounds of laundry soap or other good soap in several gallons of water by boiling. Add this to enough water to make 50 gallons. Then stir in the arsenical (1½ pounds of powdered arsenate of lead or three pounds of paste form, or other arsenicals according to directions on package). The soap is to make the liquid adhere better to the smooth leaves.

To make one gallon of spray use one-half ounce of powdered arsenate of lead, or one ounce of paste form and an inch cube of soap.

Dusting may be substituted for spraying, using one part of powdered arsenical with four parts of air-slaked lime. In small gardens the mixture may be shaken on the plants from a cheesecloth bag. Apply thinly while the dew is on the leaves.

Since the cabbage head grows from inside the plant there is no danger from poisoning. If outer leaves are removed before cooking, spraying is safe to within three weeks of harvest. If spraying is begun early in the season there will be little damage from late broods of worms.

Plant More and Better Wheat

Even after allowing ten per cent under normal requirements owing to voluntary restrictions in consumption by the people of the country at the request of the United States food administration, there is a deficiency of 10,262,000 bushels of wheat in California for the 1918 crop under the estimated reduced requirements. This is an increase of deficiency of nearly 1,000,000 bushels over last year, which in turn showed half as much increase of deficiency over the average for the period of 1910-1913.

These impressive figures from the department of agriculture's monthly crop report furnish striking evidence of the opportunity for extending the wheat acreage in this state. California and Arizona are the only far western states that do not produce more wheat than is required for their own consumption. The surplus for the entire nation this year is figured at 318,291,000 bushels, while a year ago the average was 77,682,000 bushels, as compared with the five-year average of 108,854,000 bushels.

The normal consumption in California is figured at 5.6 bushels per capita, 0.3 bushels above the average for the United States as a whole. On a population estimate of 3,119,412, after deducting ten per cent as indicated above, the consumption is projected at 15,722,000, to which is to be added 780,000 bushels for seed. This year's production in California is figured at 6,240,000 bushels; the aggregate for the country as a whole, 918,920,000 bushels, surpassed only by the record production of 1915 of 1,025,801,000.

The 1918-19 food program is both a national and a personal obligation. The nation has never failed to meet all obligations and the individual must not.

After the war Europe will continue to look to America for help; there will be no crops raised overnight.

GILA COUNTY WAR GARDENS SURPLUS SAVED

The county home demonstration agent and county agricultural agent of Gila County, Arizona, were married a short time ago. They have also united in conserving the surplus products grown on more than 100 acres of irrigated land divided into one-eighth acre gardens. On July 1 a preliminary report showed that the value of products gathered previous to that date amounted to $81,200.

These two agents have worked together in developing two methods of saving surplus production from these gardens. The first is a cooperative marketing store located near the gardens and on the edge of town on the main traveled road. It has been found possible to market such perishable products at a cost of ten per cent to the grower. The second method of saving the surplus is the development of a community canning kitchen which is under the supervision of the home demonstration agent and free to each of the cooperating gardeners. This plan also presents the opportunity of teaching the most approved and economical methods, which are new to many of the gardeners who have always bought their products direct from the store as they were needed or did without them.

VICTORY MESSAGE OF FRANCE TO HER PEOPLE

1. Do not forget that we are at war. In your smallest expenditures never lose sight of the interests of the native land.

2. Economize on the products necessary for the life of the country: Coal, bread, meat, milk, sugar, wine, butter, beans, cloths, leather, oil. Accept rations. Ration yourself as to food, clothing, amusements.

3. Save the products of the French soil, lest some day you deprive your father, your son, your husband, who are shedding their blood to defend you.

4. Save the products that France must buy from foreign countries. Do not drain reserves of gold which are indispensable to victory.

5. Waste nothing. All waste is a crime which imperils the national defense—prolongs the war.

6. Buy only according to your needs. Do not hoard provisions; your selfishness raises prices and deprives those of smaller means of things indispensable to existence.

7. Do not travel unnecessarily. Reflect that our trains are, before all, destined for the transportation of the troops, the feeding of the population, the needs of our national production.

8. Do not remain idle. According to your age and your ability work for your country. Do not consume without producing. Idleness is desertion.

9. Accept without murmuring the privations which are imposed upon you. Reflect upon the sufferings of those who are fighting for you, upon the martyrdom of the population whose homes have been destroyed by the enemy.

10. Remember that victory belongs to those who can hold out a quarter of an hour the longest.

That France may live, she must be victorious.

* * *

Let this also be America's message to her people.

THE GARRET

There is one place in the great majority of American homes, and only one place, that ever shows a shadow of selfishness. It gathers into its confines the castoffs and greatly cherished old things, many of which are surrounded with fond recollections, and once these treasures pass into its possession, they are seldom given up. We call it the garret.

We are hoarding in these garrets thousands upon thousands of garments that will be of great comfort to the people of war stricken Europe. It doesn't make any difference how old, how faded or how tattered the garments may be, they have well organized bands of workers in Europe who will be only too happy to patch things up. Neither does it matter whether it is old shoes, old hats, dresses, underclothing, linen or bed clothing, the babies and children of Belgium and France are positively crying for anything that will protect their poor little bodies.

It is inconceivable that any American farm wife, mother or sister will permit a single garment to remain in the garret when she knows that it might add one grain of comfort to a poor soul in Belgium who has been bereft of everything because of the stand they took in the interest of world wide democracy and the protection of homes.

Let us not lose sight of the fact that America benefited by the suffering of Belgium, and it is little indeed to expect that our good housewives, and even the men, will do their utmost to cover the bodies of those poor souls with as little delay as possible. Surely our heads would hang in shame if it ever could be said that our protectors in Belgium and France died of cold and exposure for the want of what is today hanging useless in the garrets of America.

This appeal is made to our farm homes because it is generally believed that the garret is very much more of an institution in the farm home than in the city. Most of our city homes are cramped and there is no place for storage. New York, Chicago, Philadelphia and other big cities are famous for their flat dwellings. In these city flats and apartments they keep nothing beyond what is absolutely necessary, but still there have been many ship loads of warm clothing sent to those poor sufferers abroad from the big cities. We must now reach out into the rural districts with more thoroughness in order to relieve the suffering of these people.

Let every garret be searched and every ounce of clothing that can possibly be spared shipped immediately to the nearest Red Cross headquarters.

FUEL OIL SHORTAGE CAUSES FOREST FIRES

Forest fires, resulting from the enforced use of wood as fuel in engines used in logging, have become so numerous and have assumed such proportions that the logging companies in Northern Idaho are finding difficulty in filling their lumber contracts. In order to relieve the situation, the fuel administrator for Idaho has favorably endorsed a petition from the lumbermen and the forest service, asking that the use of oil as fuel in logging operations be restored during the fire emergency which now exists.

A quarrel between two people to settle things is a good deal like a dog fight in a flower bed, the only things that get settled are the flowers.

"That's the Kind of Fruit You Want"

"And that's the kind you'll always get from us. Of course they can't all be 'firsts'—there is bound to be a runt here and there—but you'll get the biggest percentage of first grade fruit if your trees are always in prime condition—as ours are."

"You see—the reason that we are successful with our trees is because we start them right. When we plant we blast out the holes with

HERCULES DYNAMITE

That loosens up the soil and gives the young trees a chance to get their roots well started. The trees need nourishment and can't get all they need unless the ground around them is loosened more thoroughly than it can be with a spade. Then, when the trees begin to bear we keep the ground around them well loosened by blasting between the rows every year or so. This keeps them in good, healthy condition; and healthy trees bear prime fruit."

"I found out about dynamite for farm use about four years ago. Sent to the Hercules Powder Co. for their free book 'Progressive Cultivation.' It tells you all about the uses of dynamite on the farm and in the orchard. The book has put money in the bank for me and I wouldn't be without it."

California Cultivator
Costs $1 per Year

Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Acorns for Turkeys

In the October 19 Cultivator a subscriber wishes to know if acorns are good for turkeys. I have never seen them fed to tame turkeys but have killed lots of wild turkeys in the mountains of Old Mexico, State of Durango, which live part of the year almost entirely on acorns, and it gives the flesh a fine flavor and makes them very fat.

The best deer meat I ever ate, in fact it did not taste like deer meat, but more like fat beef, with of course a little different flavor, was from deer that had practically nothing in their stomachs except acorns and was as fat as the fattest beef could possibly be.—R. L. Fisher, Ramona.

* * *

I have had experience in feeding acorns to turkeys, used to be in the turkey business a few years back in the extreme northern part of the state where there was an abundance of acorns, and we never cracked them for the turkeys. No sir, Mr. Turkey swallowed them whole, but not if they had a hole in them where a worm had gone in. He takes the acorn in his bill and rattles it, to test it. If it sounds hollow he knows it is wormy and rejects it. We used to gather tons of acorns for winter use for our turkeys, would gather them in sacks and dump them in a heap on a board floor in a shed and never had any trouble keeping them. By cracking them they make good chicken feed too.—Harry Miers, Galt.

Milking Before Calving

I want to ask if one begins milking a cow say a week or a couple of days before she has her calf, if it causes her to give less milk afterwards than if she had not been milked at all until after she freshened? — Subscriber, Ramona.

No, it is often necessary to milk some persistent cows through the period when they are ordinarily given a rest, and again it is necessary to keep the cow's udder in good condition before calving.

Mosquitoes

What can be done to kill mosquitoes that live in the cesspool?—Subscriber, Modesto.

A cesspool should be closed so tightly that the only escape for gas would be through the water trap and this would prevent any mosquito pest. However, where the pool or any stagnant water is open to the air and infested with the larvae of mosquitoes it can be controlled by a strong solution of lye being added, or, much cheaper, a thin layer of kerosene or other oil put over the top.

Cooperative Retailing

Somewhere in California the farmers organize a Farmer's Educational and Cooperative Union. The capital is provided by each man taking as much stock as convenient, $10, $20, $50, $100, $200, etc. They are supposed to pack their own fruit, buy merchandise at wholesale and sell at retail without profit to members. Transact all their business at actual cost to the members of the organization. But under such management as it had, profits equaled the capital invested. The management then decided it would be better to make it a stock company, or profit sharing company. Will you please tell us how the profits should be divided? Whether according to capital invested only, or whether according to patronage, or both, or how and in what proportion? —Subscriber, Morgan Hill.

As to the division of profits there have been different practices; it is impossible to say which is best under all circumstances. The greater number of these have been, we believe, along the Rochdale plan, i. e, division of profits according to purchases made. This plan calls either for a large membership in order to supply a working capital or a number of public spirited members who are willing to advance sufficient funds. Where this is done it is usually on a six or seven per cent basis so that fair return is made for the loan but there is absolutely no opportpnity for profit. We believe the more recent tendency has been toward profit sharing according to the investment in the stock of the company. This is a question which can only be answered by the community as to which plan best fits its needs.

Keeping Beans

Kindly inform me what process can be used to keep beans stored for family use free from bean weevil.—Subscriber, Petaluma.

If the beans are not infested when stored the only method to keep perfect is to store in bins, barrels or other airtight containers and keep the weevil from reaching them. However, the safest method would be to assume that the beans are infested and act accordingly by giving thorough treatment with bisulphate of carbon. Place the beans in airtight containers and set over them shallow vessels filled with bisulphate of carbon. For proportions of the bisulphate of carbon see Mr. Morrill's article on page 446 of last week's issue.

Celluloid Leg Bands

Can you tell me where I can get spiral celluloid leg bands for my chickens? Last year I bought some kind of self locking leg band, but all my pullets lost it. They were too big, and I fear it will go the same way this year.—Subscriber, Fresno.

These are carried by most large poultry supply houses advertising in the Cultivator.

Oak Root Fungus

Noticing in your book "Farm Questions Answered" the inquiry and reply regarding oak root fungus would like to tell you of a little experience we had with that trouble. About four years ago we discovered in our grove five orange trees badly affected by

oak root fungus. Part of the trees lost almost all their leaves and were apparently almost dead. The treatment consisted in digging out every particle of root to be found and in exmixing through the soil dug over a liberal supply of air slacked lime. Today every tree is alive and thrifty.—H. A. R., Pomona.

WAR EMERGENCY TRACTOR SCHOOLS

Written for California Cultivator
By J. B. Lillard

AS A WAR emergency measure the state of California is establishing in different sections tractor schools. There is at the present time a serious shortage of tractor mechanics and operators, and the organization of these schools is in response to this urgent demand.

This undertaking is being financed by the California state board of control and the controller, out of the emergency fund at their disposal, and is being administered by the department of vocational education of the state board of education. John C. Beswick, director of vocational war work, is in charge, representing the state.

The state is divided into three units, each of which will contain ten centers approximately, with a four weeks course in each center. In this way about 30 schools will be operated during the next 40 weeks.

The first center of unit No. 1 is now being operated at Madera, and centers in the other two units will be started as soon as health conditions permit. There are 25 students enrolled in the day classes at Madera and 37 in the evening classes.

The four-weeks course at each center is divided into two parts: first, the gas engine; second, farm tractors and machinery. During the first two weeks of the course the student spends his time disassembling, repairing, assembling, and operating gas engines. The third week is devoted to setting up and repairing the entire tractor, and most of the last week will be spent in operating the tractor in the field.

The instructors are practical machinists and operators who know how to impart their knowledge to others in a definite, clear way. It wi ' be noticed that there is an entire absence of lectures, as such explanations on the part of the instructor will deal with definite problems as they arise. The day classes being in session six hours daily six days a week, the student will receive approximately 864 hours of practical work under expert supervision.

The school is serving two purposes: it will give farmers, farmers' sons, and others an opportunity to learn thoroughly the repair and operation of tractors for the farm, and it will give draft eligibles an opportunity to secure special preparation for tank service at the front.

DEHYDRATION ADVANCED

The department of agriculture will inaugurate a campaign to increase the use of dehydrated fruits and vegetables, which compare favorably for table use with the fresh article. Showing the necessity for this campaign, attention is called to the fact that about 8,000,000 pounds of Irish potatoes were "thrown to the dump" in New York City alone last January, having been frosted and rotted in transit.

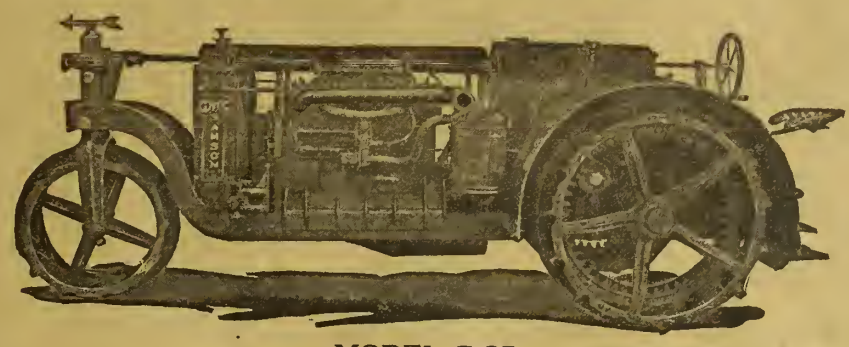
The department has just secured an appropriation of $250,000 for dehydration work and has appointed Lou D. Sweet to take it in charge.

The war department has already recognized the value of dehydrated produce. Last spring the army ordered and used 14,000,000 pounds of dehydrated food stuffs, costing about $3,000,000 and during the past few weeks have placed orders with the Canadian and American dehydrating plants for more than 40,000,000 pounds to be manufactured and delivered between now and July 1, 1919. This represents an expenditure of about $10,000,000. These orders have included chiefly potatoes, carrots, onions, and a small supply of soup mixtures. The soup mixtures comprise eight different vegetables.

GMC TRACTORS

SAMSON SIEVE-GRIP TRACTOR

GMC TRACTORS



MODEL S-25

Simplicity, dominant feature of the GMC SAMSON SIEVE-GRIP TRACTOR, goes hand in hand with efficiency. Correct design and few and accessible working parts assure low up-keep cost and long life to the GMC SAMSON SIEVE-GRIP TRACTOR.

Thousands of owners testify that where the GMC SAMSON SIEVE-GRIP TRACTOR goes the farmer's trouble ceases. This is its record for nearly two decades of trying service here and in far corners of the earth.

Mere youths are successful operators of the GMC SAMSON SIEVE-GRIP TRACTOR, and in the emergency, even women have proved equal to the task.

The GMC SAMSON SIEVE-GRIP TRACTOR performs tasks requiring the power of ten horses and does the wrok better, faster and cheaper than any other power. It is also adapted for many farm labors for which horses are unsuited.

The GMC SAMSON SIEVE-GRIP TRACTOR is simplicity itself.

Don't Let Your Stock

Lose their Summer's gain through November neglect

Your animals are now going on dry feed—hay and grain. It's a big change from the succulent, nutritious grasses of summer pastures which supply the needed laxatives and tonics.

Keep your animals' bowels open and regular—drive out the worms—keep their blood rich—keep their digestive apparatus in order—by feeding Dr. Hess Stock Tonic.

A Conditioner and Worm Expeller

Don't allow your stock to "get off feed" and in a rundown condition. Dr. Hess Stock Tonic eliminates waste and gives appetite, good health and good digestion. It enables animals to get the most benefit out of their feed.

Buy Stock Tonic according to the size of your herd. *Here's a suggestion for your guidance:* Get from your dealer 2 pounds for each average hog, 5 pounds for each horse, cow or steer, to start with, feed as directed and then watch results.

Why Pay the Peddler Twice My Price?

You buy Dr. Hess Stock Tonic at an honest price from a responsible dealer in your own town who guarantees it, and who refunds your money if it does not do as claimed.

25-lb. Pail, $2.50 100-lb. Drum, $8.00

Live Stock in War Time

Editor's Note: This article, by Dean Eugene Davenport of the University of Illinois college of agriculture, appeared in a recent issue of the Guernsey Breeders' Journal under the title of "Dairy Herds In War Time." It is such a sane discussion of the effects of war on the live stock industry, as a whole, that we take the liberty of reprinting it.

IT WOULD be useless to claim that no animal can be useful until its name and number have been recorded in a printed book, issued by some society. It would be equally useless to hold that every animal with such a printed pedigree is an efficient and valuable producer. There are differences in animals of the same breeding just as there are differences in brothers, even in twins. However, all things considered and in the long run, the so-called pure bred or pedigreed animals are admittedly superior for the very good reason that they have descended from some carefully selected stock rather than from the common run of cattle. That is, if a thousand registered animals be taken at random, and an equal number of unregistered chosen at random should be put against them, the registered stock will come out far ahead in any contest, not only at milk production, but from pork production to horse racing, and nowhere is this superiority of well bred stock more pronounced than in the dairy business. If anybody doubts this point let him study all the facts and he will find that in animals as in men "blood will tell."

Few will dispute this statement and yet many will doubt its practical application because of the increased cost of well bred animals. Particularly will they believe that a time of high prices, such as now, calls for economy, especially in production, and the temptation is strong to neglect the breeding side of the industry, whereas a period of high prices is precisely the time when everything connected with good breeding should be taken advantage of in every possible way.

The only explanation of the fact that well bred stock is upon the whole more efficient than that which is carelessly bred is that they are more economical consumers of feed either because of more general vigor, or because of a less predisposition to disease. Whatever the reasons that account for the results, the fact is well established that with the proper amounts of feed, good breeding increases the efficiency of its consumption.

Herein lies the first reason for careful breeding at a time like this. We are short of feed and we are bound to be shorter still before the war is over. Particularly will this be true of the grains, and even though pedigreed animals are more expensive than unpedigreed, yet the increased cost is negligible when confined to the bull that heads the herd, and it is insignificant as compared with the increased outlay for feed. So far as labor and barn room are concerned, the same principle holds. This is a time for the elimination of numbers and in so far as the same results can be accomplished by the reduction.

It is a common practice now to sell a portion of the herd in order to have feed for the remainder. This is certainly preferable to short feeding the herd on the one hand, and buying inordinately expensive feed on the other, but if the sale of a portion of the herd results in an over feeding of the remainder, it would be better to devote a portion of the proceeds of the reduction to the improvement in breeding of the head of the herd.

We often hear it said that registered animals command a higher price because it costs more to produce them, but that is not the real reason, because, in the last analysis, when the public buys a thing, it does not ask what it cost to produce it, but only what it can do. It may as well be understood therefore, in general, that the better bred animals bring the higher prices because they are worth more and because they can do more.

Differences in efficiency in production between first and second class animals may account for but little when feed is plentiful and cheap, but when the feed becomes scarce and costly, these differences become at once important, and that is one reason why a period of war should be a period of improved breeding, and it is the same reason which dictates the policy that an old country, if it is prosperous, is almost invariably a country of well bred live stock.

There is another reason for building up the herds of the country and improving their breeding in these times of war, and it is this. Say what we please, it is a somewhat costly job for the common run of farmers to improve the breeding of their herds. In a business whose margin of profit is as narrow as that of farming, it is extremely difficult if not hazardous for the average man to undertake systematic improvement of any kind in a period of low price. On the other hand, when prices are high and rising almost anything within reason is safe, and every desirable improvement is certain to prove profitable.

A rich man may hold his herd together through hard times and low prices, but in general, herds must be built up with rising markets, a point not sufficiently understood by many farmers, and even overlooked by many breeders.

Quite aside from individual considerations, a time of war is no time to neglect any useful and needful thing, nor is it a time to do everything in the cheapest way. It is a time to get results, to undertake constructive things. It all means, of course, additional expense, but without this additional expense, the live stock interests are certain to dwindle.

If we are to have a long and exhaustive war, the victory will come in the end to the side that best keeps his house in order and that means, so far as live stock is concerned, herds that are selected and bred for highest efficiency. Such stock will, of course, be registered. It will be in enormous demand when the war is over, if for no other reason than because there are so many people who play safe by doing as little as possible while an emergency is on, then plunging as soon as the squall is past.

It is better for the individual and vastly better for the industry and the country at large, to establish and maintain a safe and progressive policy in all times like this. Playing safe, however, is not consistent with a horizontal line of reduction in expenses, for a progressive policy means additional expense under anything like existing conditions.

Up to the present point the writer has had chiefly in mind the owner of a dairy for the production of milk, presumably from a herd of grade cattle or of common stock. So far as the breeder of pedigreed stock is concerned, his policy is clear at this time. Whatever may be the call from across the water for the restocking of European farms, we are bound to have at the close of the war a call for restocking of farms in this country. The writer believes that this call will be widespread if not universal, and that the herds will be taxed to the utmost limit in the meeting of this demand. There will be a temptation on the part of many breeders to save and record every calf not an absolute disgrace to its breed. This mistake has been made before and it will react as it has always reacted—to the disaster of the individual and to the detriment of the breed. Feed, room and labor are now too expensive to permit the saving of scrubs, no matter how respectable their ancestry, and whatever the demand for pedigreed live stock may be later on, a reasonable but high minimum should be established in every self respecting breed association, below which animals should not be furnished even for so laudable an enterprise as the rebuilding of herds after the war. It is not enough to say that animals will be so scarce that everything will "go," or to defend the practice of indiscriminate selling by the ancient argument that many an animal breeds better than he is himself.

What the world will want after this war is really superior animals. Without doubt it will pay a liberal price for animals of this kind, but the shrewd buyers, and those who will pay the best values, will insist upon records which will show whether the pedigreed animals really are performers, and the best service, in the opinion of the writer, which any breeder can now render his breed will be rendered through the keeping of adequate and accurate performance records of every individual in his herd.

CHAMPIONSHIPS AT THE NATIONAL DAIRY SHOW

The twelfth National Dairy Show was held at Columbus, Ohio, October 10-19. The show was permitted to open on time notwithstanding the ban on public meetings because of the influenza epidemic. However, the attendance was very light and before the week was over a quarantine was placed on the cattle barns.

Plans had been made for the greatest exhibit of the dairy industry ever held in this country. The principal awards follow:

Holstein-Friesians: Senior and grand champion bull, Johanna's Bonheur Champion 2nd, owned by Chestnut & Sons, Dennison, Kansas. Junior champion, Johanna Glenda Lad, owned by Maywood Farm, Rochester, Minnesota. Senior and grand champion cow, Minerva Beets, owned by R. E. Haeger, Algonquin, Illinois. Junior champion, King Segis Pontiac Tantalus Calamo, owned by R. E. Haeger.

Jerseys: Senior and grand champion bull, Raleigh's Oxford Prince, owned by Ed C. Lasater, Falfurrias, Texas. Junior champion, Noma's Perfect Raleigh, owned by Longview Farm, Lees Summit, Missouri. Senior and grand cow, Oxford Majesty's Gipsy, owned by L. V. Walkley, Plantsville, Connecticut. Junior champion, You'll Do's Pet 2nd, owned by L. V. Walkley.

Guernseys: Senior and grand champion bull, Ladysmith's Cherub, owned by D. D. Tenny, Crystal Bay, Minnesota. Junior champion, Cherub's Prince, owned by W. W. Marsh, Waterloo, Iowa. Senior and grand champion cow, imp. Bella 2nd du Grand Fort, owned by Island Farm, Island, Minnesota. Junior champion, My Figtree of the Prairie, owned by W. W. Marsh.

Ayrshires: Senior champion bull, Cavalier's Lord Stuart, owned by Adam Seitz & Son, Waukesha, Wisconsin. Junior and grand champion, Nancy's Mint Master, Wendover Farm, Bernardsville, New Jersey. Senior and grand champion cow, imp. Harleyholm White Rosie 3rd, J. A. Ness, Auburn, Maine. Junior champion, Cavalier's Hillhouse Rosebud, owned by Adam Seitz & Son.

THE MORRIS SALE OF HOLSTEINS

One of the important events of the fall season will be the draft sale, consisting of 105 head, 90 cows and 15 bulls, from the herd of A. W. Morris & Sons Corporation. The sale will be held at the Morris farm, near Woodland.

The herd is really too well known to require any extended comment. For the past few years the public has become accustomed to reading of new records, many of them world records, established by Morris cows.

The Morris herd has not only developed remarkable seven and 30 day cows, but has perhaps developed as many long distance production records, as any herd of the breed. Yearly records have fallen to this herd, and have later become a part of two, three and four year records. Some day, and that day not far distant, all the dairy breeds will discard the short record for the yearly test.

Among the cows in offer, three have produced from 30 to over 33 pounds butter in seven days; 30 of them have records from 20 to over 29 pounds butter in seven days; and 30 have yearly records—the highest of which is over 24,000 pounds milk, and over 1000 pounds butter.

By far the majority of the cows are bred to six of the Morris bulls, every one of which has sired a world's record daughter, or has for a dam a cow with one or more world's records.

The offering also includes 15 bulls, representing some of the best breeding in the Morris herd.

$100,000 DAIRY FIRE

The large dairy barn of Singleton & Haskel, eight miles north of Beaumont was destroyed by fire October 31.

Beside the building there was heavy loss of feed, silage and machinery.

The fire started in that portion of the building which had just been filled with Kaffir corn.

The loss was estimated at $100,000.

Many people possess a thousand acres of possibilities and have about a half acre under cultivation.

Market Raisins Through Hogs

Members of the Fresno farm bureau plan to utilize the large quantities of damaged raisins by feeding them to hogs.

$250,000 Paid Hanford Dairymen

Patrons of creameries in the Hanford district expect to receive nearly $250,000 for butter fat delivered the past month. For the month ending October 15 the average price paid for butter fat was 61.4 cents.

McCarty Buys a King Jones Boar

Alex D. McCarty, who maintains a herd of Poland Chinas at his Riverina Farms, Modesto, writes that he has just purchased a boar sired by the noted King Jones.

King Jones is regarded by many Eastern Poland China breeders as one of the best sires of the breed. He rendered splendid service in the herd of Fred Sievers, Audubon, Iowa, and was recently sold at public auction for $1450.

A Distinguished Duroc Establishment

R. K. Walker of the Windsor Ranch and Peters, Lamson & Walker, Bonita, San Diego County, writes that they now have on hand over 2100 head of hogs, of which 250 are pure bred Durocs. This firm is one of the largest hog producing organizations in the state, and have been one of the leading factors in making Southern California a center of Duroc interest. The hog plant is considered a model and the ultimate plan contemplates replacing all the high grade sows with pure breds, and maintaining a herd of about 2000 head at all times. Consequently it will be necessary to market practically all the produce, saving only the extreme tops for breeding purposes.

This firm is particularly fortunate in their herd boar, Great Model. He is not only an exceptionally well bred boar, being by Great Wonder, the sire of so many of the most popular boars of the breed, but he has proven his ability to sire the type of Duroc most acceptable to progressive breeders. The brood sows that are furnishing the foundation for this herd are daughters of such boars as Grand Model, Top Sensation, Grand Model Supreme, Great Wonder, Cherry Chief and Cherry's Friend, and have been retained in the herd because of their size, prolificacy and quality.

Losses of Livestock in France

United States food administration figures show that in the period between December 31, 1913, and January 1, 1918, there was in France a decrease of 2,598,710 head of cattle, including bulls, oxen, cows and calves. In sheep, including rams, the decrease totaled 6,238,390. In hogs, including boars, sows and pigs, the figure was 2,868,860. In view of these figures and the fact that there undoubtedly have been further reductions since the first of this year, it is plain that the United States must come to the aid of her great sister republic in every way possible.

Anderson Sells Berkshires

Frank B. Anderson, a Berkshire breeder of the Natomas district near Sacramento, reports having started a new breeder in the business. W. D. Howe, a milling man of Oakland, purchased a foundation herd of three young pigs for his ranch at Aptos, Santa Cruz County, and followed his original purchase with the order of a bred sow and two more weanling sow pigs. Other recent sales reported by Anderson include: A junior yearling boar to H. A. Meckfessel of Arbuckle, Colusa County; senior boar pigs to the Rogers Ranch Co. and L. N. Carpenter of Lovelock, Nev., and a junior boar pig to Nahas Bros. of Merced.

A $50,000 Farm Auction

In an auction sale held recently on the 5000 acre ranch owned by Ben E. Couch, Chico, over $50,000 worth of live stock and equipment was disposed of. Mr. Couch has leased his ranch and plans to enter the army.

English Holstein Cows Sell for $22,500

In a dispersion sale of Holsteins held in England, 77 cows and heifers brought an average of $1090 per head, and 10 bulls averaged $1940.

The sensation of the sale was the price paid for the five year old cow, Golf Sietske 10th, which changed hands for the record price of $22,500. Golf Sietske 10th was bred by H. L. de Vries, a well known Holland breeder. She gave 9664 pounds milk with her first calf, the milk averaging 4.09 per cent butterfat. With her second calf she produced (in 39 weeks) 9287 pounds of 4.02 per cent milk, and from April to June of the present year she averaged 50 pounds milk per day, under purely natural conditions.

University Live Stock to Invade East

The University of California is planning to make an exhibit at the International Live Stock Exposition at Chicago November 30-December 7, that will be a great credit to the state.

The exhibit will consist of fat steers, wethers and barrows. There will be one full carload of Duroc-Jersey barrows that will be hard to beat. Professor J. I. Thompson and herdsman Homer Stokes are now putting the finishing touches on these. Pens of Poland-China, Berkshire and Hampshire barrows are also entered. I would not be surprised if one of the Poland-China barrows did not win grand championship honors.

Alex McDonald has the great Shorthorn steer, California Marvel, and several other cracking good ones in preparation. A blue-gray junior calf, sired by the white Shornhorn bull, Sultan Mayflower, and out of an Angus cow, is considered by many to be a very remarkable calf.

George Phillips, shepherd of the University farm flocks, has as "mellow" a lot of fat wethers as you ever put your hand on.

The institution has an excellent chance of winning the college specials on cattle, hogs and sheep. They have animals good enough to win, but one

Buy Good Ones—Breed Better Ones

Never before in the history of California Holstein sales have buyers had an opportunity to buy so many high record and highly bred females in calf to such high record bulls as will be found in the

First Tulare Sale
125 Registered Holsteins
Tulare, California, November 20-21, 1918

There are females in this sale bred to two bulls out of a 40 pound dam; three bulls out of 35 pound dams; one bull out of a 36 pound dam; one bull out of a 32 pound dam; two bulls out of 30 pound dams; one bull out of a dam that made over 1300 pounds butter in one year; four bulls out of dams that made over 1100 pounds butter in one year; two bulls out of dams that made over 1000 pounds butter in one year. THIS IS THE HIGHEST RECORD LOT OF REFERENCE SIRES EVER LISTED IN A SALE IN THE WEST.

The females to be sold include: THE HIGHEST RECORD JUNIOR TWO YEAR OLD ever offered at public sale in the west; daughters of cows with records up to over 31 pounds butter in seven days and sired by such bulls as Mutual Fobes Longfield De Kol, Prince Gelsche Walker, Sir Aaggie De Kol Acme, King Korndyke Sadie Vale, Sir Skylark Ormsby Hengerveld, King Segis Pontiac, King Segis Pontiac 13th, Arcady Pontiac Wayne Hengerveld, King Mead of Riverside, Sir Veeman Korndyke Pontiac, Spring Farm King, Pontiac Jewel Butter Boy, Spring Farm Pontiac 5th, Aralia De Kol Pontiac Segis, Segis Pontiac De Kol Burke.

BULLS IN THE SALE: This is the opportunity of the season for breeders and dairymen to secure herd sires, for there are bulls in this sale by great sires and out of dams with records up to over 30 pounds butter in seven days and large yearly records, representing some of the greatest producing and transmitting families of the breed.

$7500 for a Guernsey Cow

A new price record for Guernsey females was recently established when the cow, Langwater Nancy, was sold by the Florham Farms to Anderson T. Hurd, New York City, for $7500.

Langwater Nancy holds fourth place in Class A of the offcial records of the Guernsey Club.

Thos. Harrison Buys Eastern Cow

Thomas Harrison, Glen Ellen, purchased the five year old milking Shorthorn cow, Yellow Star, in the Otis Sale, for $500.

Mr. Harrison is one of the pioneer breeders of milking Shorthorns in California, and has rendered effective promotion work for the breed.

31 Milking Shorthorns Average $987

In the recent sale of milking Shorthorns from the herd of C. A. Otis, Willougby, Ohio, 31 head sold for an average of $987.

The undefeated show heifer, Lady of the Glen, was purchased by L. D. May, Granville Center, Pennsylvania, for $5000, which is the highest price ever paid for a milking Shorthorn cow.

British Milk Yields

The British board of agriculture has just issued the first volume of its new "Register of Milk Yields of Dairy Cattle" in England. In this first volume there are entered 572 cows, all of whom have made over 8000 pounds milk. Three hundred and ninety-six of the 572 cows qualifying are Shorthorns and only three cows, including England's champion milk producing cow, a Holstein, and two runners-up of the same breed exceeded the records made by the Shorthorns. The high Holstein cow produced 19,646 pounds of milk. The high Shorthorn cow produced 16,239 pounds milk.

LIVE STOCK QUERIES

Milo Maize for Silage

What can a dairyman afford to pay for standing milo for the purpose of making silage? What would it be worth after being frosted severely? Would the headed fodder be of much value? How does a ton of silage compare in feeding value with a ton of alfalfa hay? Is it necessary to feed concentrates with milo maize silage? —Subscriber, Hemet.

Your questions can only be answered in a general way, for the reason that local conditions are important factors. Ordinarily silage made from milo maize of good quality and with heavy heads is considered somewhat below corn silage in feeding value.

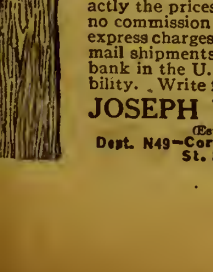
In bulletin 282, published by the University of California, the total digestible matter in 100 pounds of milo silage is given as 14.6 pounds. Henry gives the total digestible nutrients in 100 pounds alfalfa hay at 51.6 pounds. It would appear, therefore, that milo silage is worth somewhat less than one-third the value of alfalfa hay. However, it has been demonstrated that the succulent qualities of silage increase the value of a ration to a greater extent than is indicated by any analysis.

In arriving at the value of milo in the field, one must necessarily take into consideration the quality of the stand, and it should be purchased on the basis of weight. Then if one can figure what it costs per ton to cut, haul and put in the silo, he can determine what he can afford to pay for the standing crop.

Silage made from the stalks alone would perhaps be worth less than one-third the value of silage from the whole plant.

The silo is the best means for handling frosted corn or milo. It is usually preferable to allow milo to stand until after frost rather than cut it too green.

If your cows are only average producers, and are receiving alfalfa hay supplemented by a good quality of milo silage, it is quite doubtful if it would pay to feed concentrates. However, with high producing cows it is economy to add concentrates to the ration.



SULPHUR

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

Try our new brand of VENTILATED Sublimed Sulphur, 100 per cent pure, for making Paste — (Atomic Sulphur) and for Dusting.

For Lime Sulphur Solution, use our DIAMOND S Brand Refined Flour Sulphur. We can furnish you this sulphur at such a low price that it will pay you to mix your own solution.

To create additional available plant food, drill 100 to 400 pounds of our Diamond "S" Brand Powdered Sulphur per acre. It has proven to increase various crops up to 350 per cent.

Hog Prices Based on Corn Ratio Discarded

With corn prices tobogganing as a result of peace talk the food administration has been forced to abandon the 13 to 1 ratio as a basis for stabilizing the hog market and announcement is made that a positive minimum of $17.50 per cwt. for the month of November has been agreed to by the packers. This price is represented to be the daily minimum on average packer's droves, excluding throw-outs, and applies to the Chicago market.

In a statement just issued by the food administration the situation regarding the hog market is outlined in part, as follows:

"The entire marketing situation has so changed since the September joint conference as to necessitate an entire alteration in the plans of price stabilization. The current peace talk has alarmed the holders of corn, and there has been a decline of from 25 cents to 40 cents per bushel. The fact that the accumulations of low-priced corn in the Argentine and South Africa would, upon the advent of peace and liberated shipping, become available to the European market, has created a great deal of apprehension on the part of corn holders. This decline has spread fear among swine growers that a similar reduction in the prices of hogs would naturally follow. Moreover, the lower range of corn prices, would, if incorporated in a 13 to 1 ratio, obviously result in a continuously falling price for live hogs. In view of these changed conditions many swine producers anticipated lower prices and, as a result, rushed their hogs to market in large numbers, and this over-shipment has added to and aggravated the decline.

The information of the department of agriculture indicates that the supply of hogs has increased about eight per cent while the highest unofficial estimate does not exceed 15 per cent increased production over last year. On the other hand, the arrival of hogs during the last three weeks in the seven great markets has been 27 per cent more than last year, during the corresponding period, demonstrating the unusually heavy marketing of the available supply. In the face of the excessive receipts some packers have not maintained the price agreed on last month. On the other hand, many of the packers have paid over the price offered to them in an endeavor to maintain the price. The result in any event has been a failure to maintain the October price basis determined upon the September conference and undertaken by the packers. Another factor contributing to the break in prices during the month has been the influenza epidemic; it has sharply curtailed consumption of pork production and temporarily decreased the labor staff of the packers about 25 per cent.

It must be evident that the enormous shortage in fats in the Central empires and neutral countries would immediately upon peace result in additional demands for pork products which, on top of the heavy shipments to the Allies, would tend materially to increase the American exports, inasmuch as no considerable reservoir of supplies exists outside of the United States. It seems probable that the present prospective supplies would be inadequate to meet this world demand with the return to peace. So far as it is possible to interpret this fact, it appears that there should be even a stronger demand for pork products after the war, and therefore, any alarm of hog producers as to the effect of peace is unwarranted by the outlook.

In the light of these circumstances, it is the conclusion of the conference that attempts to hold the price of hogs to the price of corn may work out to the disadvantage of pork producers. It is the conclusion that any interpretation of the formula should be a broad gauged policy applied over a long period. It is the opinion of the conference that in substitution of the previous plans of stabilization, the live stock sub-committee of the agricultural advisory board, together with the specially invited swine representatives, should accept the invitation of the food administration to join with the administration and the packers in determining the prices at which controlled export orders are to be placed. This will be regularly done. The influence of these orders will be directed to the maintenance of the common object, namely, the stablization of the price of live hogs so as to secure as far as it is possible fair returns to the producer and the insurance of an adequate future supply.

These foreign orders are placed upon the basis of cost of hogs to the packers.

As the result of long negotiations between this body and the packer's committee, representing the 45 to 50 packers participating in foreign orders together with the Allied buyers, all under the chairmanship of the food administration, the following undertaking has been given by the packers:

"'In view of the undertaking on the per cent, and we can handle such an part of the food administration with regard to the co-ordinated purchases of pork products, covered in the attached, it is agreed that the packers participating in these orders will undertake not to purchase hogs for less than the following agreed minimums for the month of November, that is a daily minimum of $17.50 per hundred pounds on average of packers' droves, excluding throw-outs.

The ability of the packers to carry out this arrangement will depend on there being a normal marketing of hogs based upon the proportionate increase over the receipts of last year. The increase in production appears to be a maximum of about 15 per cent and we can handle such an ket. It is believed that the plan increase'."

(Signed) THOS. E. WILSON,
Chairman, Packers Committee.

It is believed by the conference that this new plan, based as it is upon a positive minimum basis, will bring better results to the producer than average prices for the month. It does not limit top prices and should narrow the margins necessary to country buyers in a more variable market. It is believed that the plan should work out close to $18 average.

The whole situation as existing at present demands a frank and explicit assurance from the conferees represented, namely, that every possible effort will be made to maintain a live hog price commensurate with swine production costs and reasonable selling values, in execution of the declared policy of the food administration to use every agency in its control to secure justice to the farmer.

The stabilization methods adopted for November represent the best efforts of the conference, concurred in by the food administration, and the live stock sub-committee of the agricultural advisory board, together with special swine members, and the representatives of the packers; to improve the present unsatisfactory situation which has unfortunately resulted because of the injection of uncontrolable factors.

HOW MINNESOTA LIVE STOCK BREEDERS WORK TOGETHER

County agents and farm bureaus in Minnesota have been active in organizing cooperative live stock breeders' associations. One association, recently formed through the efforts of the farm bureau in Mille Lacs County, Minnesota, to encourage the breeding of high grade Holstein and Guernsey cattle, is composed of five groups of farmers, each group owning from 50 to 75 cows. Under the cooperative arrangement the sire belonging to the group is kept by a farmer located as centrally as possible and receiving $50 a year as pay for caring for the animal. The cost of maintenance and the original purchase price of the sire is divided equally among the farmers in the group. Interchange of sires between the groups lengthens greatly the period of service of these high grade animals. Reports from Mille Lacs County to the United States department of agriculture say that the plan is working well and gives promise of assisting greatly in the development of the live stock industry.

NOTE: The opening of a new market for skimmed milk is of real importance to the Dairy Industry of the United States. The facts set forth below deserve the thoughtful attention of the farm people in America, and of all Agricultural Extension Workers.

HEBE

—and the Dairy Farmer

HEBE is a new food product—a compound of evaporated skimmed milk and vegetable fat. This is plainly stated on the label of every can.

HEBE is principally recommended for cooking, baking, in coffee, and with cereals. It contains 7.8% fat, and 17.7% non-fat milk solids. Its fuel value is 663 calories per pound.

Skimmed milk is a by-product of the Dairy Industry. Skimmed milk is very large in quantity but comparatively small in net returns to the Dairy Farmer.

Milk of the United States

1917 Production
84,611,350,000 pounds

Distribution

Direct to Consumer	43.1%
Whole Milk to Calves	4.3
Condensed	2.9
Butter	4.0
Cheese	5.0
Ice Cream	3.7
Skim Milk	37.0
	100.0%

These were once waste products

Gasoline was once a troublesome waste product to the kerosene refineries.

Coal tar was a nuisance to the gas plants; now the base of thousands of valuable products.

Gluten was thrown into the rivers near the starch factories; cotton-seed was burned for centuries. Gluten and cotten-seed are now indispensable dairy feeds, and have many other uses.

Glycerine was once a waste product of the soap factory—it is now more valuable than the soap.

In 1917, according to Government estimates, over thirty billion pounds of skimmed milk were fed to live stock, or wasted. Where there is no market for this by-product as human food, there is value in feeding it to growing animals, though only a small percentage of the solids which represent the food value of milk is recovered in the animal as meat or other product.

HEBE, by the scientific replacing of the fat solids of whole milk by another fat in the form of the pure, edible fat of the cocoanut, makes possible the reclaiming of a portion of this skimmed milk as a human food—thus creating a new and more important market for this by-product. As the distribution of HEBE widens, it will exert more and more a beneficial influence upon the Dairying Industry.

To the general public HEBE offers a less expensive food product for certain specified uses. HEBE qualifies as an essential alternative food, and its place in this field is well illustrated by the history of the use of lard for shortening and frying. Until a few years ago, it was thought that only animal fat could be used for cooking. Lard is still used—in greater quantities than ever before—but the excellent vegetable fat cooking mediums are no longer considered substitutes or imitations. They, too, have a constantly growing market.

HEBE keeps step with the trend of the times. It is the inevitable development of modern food production methods. Because of its invention the food supply of the country is enlarged, through the scientific combining of a by-product of the Dairying Industry which heretofore had been kept out of the kitchen economics of the average home, and a pure, wholesome, refined vegetable fat, the nutritive value of which is well established.

A booklet telling the interesting story of HEBE and its value to the Dairy Industry will be sent free on request. Ask for it. Your name and address on a post card will bring it post paid. Address The Hebe Company, 3108 Consumers Bldg., Chicago.

HOLSTEINS

OF WORLD'S RECORD BREEDING
AT ORDINARY PRICES

That is what we expect will be the story at the close of

A. W. Morris & Sons Corporation Sale

90 Registered Holstein Cows
15 Registered Holstein Bulls

Tuesday, November 12, 1918

We take into consideration that while this sale will contain some of the very cows that have made the Morris herd world famous, a number of them are past ten years old, some have blemished udders, and these are bound to sell at very modest prices considering their tremendous records and the world's record bulls to which they are bred.

What a splendid opportunity it will be then for buyers to secure these great cows even for the calves they are carrying and every one of them is positively guaranteed to be a breeder or money back.

Think of being able to buy such females as these: Pet Salambo of Riverside, the 33 pound cow that made over 1000 pounds butter in one year, bred to King Morco Alcartra, son of Tilly Alcartra; the 30 pound cow Pauline Creamelle Mercedes, bred to Sir Aaggie De Kol Acme; the 29.87 pound cow Leda Gerben Alcartra 2nd, bred to King Morco Alcartra.

LOOK AT THESE BRED TO PRINCE GELSCHE WALKER: The 28 pound Laura Netherland Gerben 2nd; a 19 pound three year old; a granddaughter of Tilly Alcartra; a 20 pound cow; an 18 pound granddaughter of Jetze Zwarthak; and others with A. R. O. records and splendid breeding.

AND THESE BRED TO KING MEAD OF RIVERSIDE: A 16 pound three year old; an 18 pound three year old daughter of Prince Gelsche Walker; a 23 pound four year old daughter of Prince Gelsche Walker; a 25 pound daughter of a 28 pound cow; a 22.90 pound three year old daughter of Colantha Sir Pontiac Aaggie; a daughter of Korndyke Queen De Kol's Prince that made 634 pounds butter in one year as a junior two year old; a 24 pound daughter of Ignaro De Kol that made 762.73 pounds butter in one year; a 17 pound two year old daughter of Prince Gelsche Walker; and others with A. R. O. records.

AND REMEMBER that a large number of other high record cows are bred to King Morco Alcartra, Sir Aaggie De Kol Acme, Segis Pontiac De Kol Burke, and King Korndyke Pontiac 20th.

EVERY ONE OF THESE SIX BULLS HAS SIRED A WROLD'S RECORD DAUGHTER OR HAS FOR A DAM A COW THAT MADE ONE OR MORE WORLD'S RECORDS.

15 Bulls Will Be Sold

Sired by the great Morris herd bulls and out of dams with good seven day or yearly records. DAIRYMEN, attend this sale for it will be bargain day for you.

Every animal positively guaranteed to be a breeder.

No animal in this sale is tuberculin tested.

The California Cultivator

Weekly—24 to 32 Pages One Dollar per Year

A STOCKMAN IN THE MAKING

Written for California Cultivator
By Howard L. Henrick

A pig contest having been arranged for the Southern California Fair, Riverside, I decided to enter, and having won a prize I thought a few words from me might be of interest to the readers of the Cultivator.

I first built a pen and covered one end with a good roof, leaving the other end open to the sunlight. I then purchased, in May, a young Hampshire shote, weighing about 40 pounds.

I fed him a mash of ground barley and bran, and after that I fed him rolled barley, soaked over night. He liked this feed. He was given plenty of green feed and last of all a finishing feed. I think the rolled barley is the best finishing feed.

The neighbors were very kind and gave me their scraps and also a lot of windfall pears.

His feed up to the time I took him to the fair cost about $10. He was then six months old and weighed about 150 pounds. I think he will weigh almost 200 pounds now.

I also made a self feeder so constructed that he has feed before him all the time.

The care of the pig has been a pastime, and I think he will prove a paying investment.

I have taken over my father's poultry and am going to try my hand at poultry raising. I also deliver papers before and after school, and most of the money I have earned has gone into Thrift Stamps. I have now about $25 worth. I am 11 years old.

ABERDEEN-ANGUS AT CALIFORNIA SHOWS

California cattlemen, who visit the Liberty Fair at Los Angeles and the California International Live Stock Show at San Francisco will have an opportunity of studying one of the choice collections of Aberdeen-Angus owned in this country. The herd, owned by Congdon & Battles, North Yakima, Washington, is exhibiting at the California shows before going to Chicago for the International Live Stock Exposition.

Angus are a comparatively new breed for California although there are a number of herds in the state. The University of California has maintained a small herd at the University Farm, Davis, and some of the best Angus steers produced in recent years have been developed at Davis. The successful showing of Angus steers by the university has attracted the attention of cattlemen, and considerable interest is being manifested in the breed.

Quite recently a carload of pure bred bulls were purchased from the Washington herd by a California cattle operator.

The show herd, now at Los Angeles, consists of 14 head and among them are some rare types that will undoubtedly be heard from at the great Chicago show.

FIRST TULARE HOLSTEIN SALE LISTS SELECT OFFERING

A study of the catalog of Holsteins offered in the first Tulare sale, to be held at Tulare, November 20 and 21 reveals the fact that California Holstein breeders are in a position to make a sale offering in which the 14 service bulls listed for reference, constitute the highest record groups ever represented in a Western sale.

Such a statement is naturally good advertising, but it means much more to the dairy interests of this state.

There is no mystery regarding high production of milk and butter fat. There are just two ways in which high producing herds have been built up—by breeding and feeding—and the man who figures that he can "beat the game" by using inferior or plainly bred animals is doomed for failure just as certainly as is the kaiser.

The whole business of modern dairying is developed along such clear cut lines that there is really no excuse for the many failures. One of the first precepts of modern dairying is: Buy the best bred bull you can afford, or buy a heavy producing cow bred to a proven sire and raise your own herd bull.

The Tulare sale will afford a wide opportunity for selection as the consignors have listed 125 head of cows, heifers and bulls, and included in the lot are cattle to suit every purse.

Shells every ear *right!*

Big or little, wet or dry, without injuring corn or breaking cobs.

Thorough shelling! Appleton "clean shelling" is *clean shelling.* Remarkably flexible finger-like devices hold *any* size ear with exactly right tension for best work—biggest ears can't get damaged by too much pressure; nubbins can't get thru partly shelled by too little pressure.

APPLETON Sheller

Thorough separating. U-shaped, raised-lip screen agitates both upward and forward—allows *all* shelled corn to fall through to cleaning pan below, where all trash and dirt is blown out. No other method does such *complete* separating and thorough cleaning. The Appleton does

more work with less power

because it is simpler—fewer chains, sprockets and gears. This also means less repair trouble and longer life. The Appleton proposition is *certain to win you* when you *know* all about it. Send for booklet *today.*

CALIFORNIA JERSEYS ARE DELIVERING THE GOODS

Beauty of Walnut Park, a six year old registered Jersey owned by J. E. Wherrell, Riverside, recently completed a Register of Merit test with 12,966.5 pounds milk and 756.63 pounds butter in one year.

Grant A. Brown, El Monte, has been making some very creditable Register of Merit records with the registered Jerseys which he purchased at C. G. McFarland's sale at Tulare last year. Lottie of Willowwood, a junior two year old, made 8482.5 pounds milk and 517.37 pounds butter, while Jennie of Willowwood at just past five years made 8620.4 pounds milk and 522.36 pounds butter. The latest record in Mr. Brown's herd was made by the junior four year old Elodine of Willowwood, who finished her year with 11,316.6 pounds milk and 709.29 pounds butter. She is sired by Gertie's Son and out of the R. M. cow Elodine B, and qualifies in Class AA.

J. W. Coppini, Ferndale, was doing something during the past season besides winning a big share of the prize money in the California Dairy Cow Competition, as is indicated by the official reports of the American Jersey Cattle Club. Mr. Coppini is building up a herd of registered Jerseys and nine of his cows and heifers have completed good Register of Merit records this season. The nine include Marigold Olga Ann, 9153.3 pounds milk and 621.95 pounds butter; Olga Fern Smith, 9521.2 pounds milk and 679.27 pounds butter; Marigold of Ferndale, 8561.6 pounds milk and 639.76 pounds butter; Pride of California, a junior three year old, 7820 pounds milk and 601.11 pounds butter; Melia Olga Pogis, a senior two year old, 6993.0 pounds milk and 491.59 pounds butter; Bellina Darling, 8099.9 pounds milk and 565.23 pounds butter; Tormentor's Eastern Lily, 7379.7 pounds milk and 558.14 pounds butter; Gertie Olga of F, a junior four year old, 9921.8 pounds milk and 698.40 pounds butter; and Olga Darling, a junior three year old, 7692.2 pounds milk and 576.56 pounds butter.

WON SECOND ON HIS PIG

Written for California Cultivator
By Harold Taylor, San Bernardino

When I decided to enter the pig club contest, I wrote to the National Duroc-Jersey Record Association for the book they publish for boys and girls who belong to pig clubs. I studied this book to get the experiences of other boys and girls.

My pig was just an average one from a litter of ten pure bred pigs in my father's herd. When I started feeding my pig he weighed 72 pounds. I fed him entirely on prepared pig feed, with a little fresh cut alfalfa. He was fed twice a day.

I weighed him every 10 days and the lowest gain was 18 pounds in 10 days and the highest gain was 24 pounds. During the first 34 days he doubled his weight.

At the close of the contest he weighed 206 pounds, but before I took him to Riverside he weighed 214 pounds. Because he was with strange hogs during the fair he lost eight pounds and that represented about a week's feed cost, and for that reason my cost was increased.

My account shows that he ate 468 pounds of feed. The labor was figured at $2.50, and the total cost of feed and labor was $14.67.

A GREAT DUROC OPPORTUNITY

The big auction sale at Tagus Ranch, Tulare, December 10, 11, 12, 13, will offer a splendid opportunity to buy registered Duroc-Jersey hogs. There are 20 proven brood sows in the herd, headed by the famous boar California's Defender, who was junior champion at the Panama-Pacific International Exposition. There are in the herd over 150 gilts and boars, all out of the brood sows mentioned, and all sired by California's Defender.

SWEET CREAM RULE EXPLAINED

By a new rule speciyfing that cream sold for direct consumption shall contain no more than 20 per cent butterfat, the United States food administration seeks to limit the luxury use of this important fatty nutrient. The 20 per cent maximum restricts the sale of so-called "double" and "whipped cream" and other kinds prepared chiefly for special purposes not permissible in the face of present shortages of fats abroad. This does not affect nor in any way apply to cream used for butter making, ice cream making or other manufacturing purposes.

MOTOR TRUCK FOR TRANSPORTING LIVE STOCK

The use of motor trucks in transporting live stock to market has grown to such proportions at St. Joseph, Missouri, that the drive-in receipts at this point last year doubleed all previous records. For the nine months ending September 30, 75,211 hogs were handled, as compared with 33,286 for the same period in 1917. Points not conveniently located on railroads send practically all their live stock to market in this manner from distances of 75 miles, while even railroad shipping points within that radius utilize this method. Truck drivers have established a business of hauling live stock, making regular trips at certain stipulated charges, and on many trips pick up a return load, taking concentrated feeds, stock hogs, and cattle back to points having no railroad connection.

Brawley, Imperial County, has just shipped a car of wool to Boston.

You Can Make a Handsome Income by Trapping

Raw furs are extremely high now and the demand was never greater. Just think, even Skunks have sold this fall for over $9.75 each, and we know trappers who caught 19 Skunks in one night.

Wonderful Chance for Boys and Middle Aged Men

There's a splendid chance for you to make money by trapping; it's pleasant work. Don't worry if you've had no previous experience. Our beautiful 36-page book, "Trapping for Profit," tells all about trapping and handling of furs, so that even the beginner can have wonderful success trapping and get the highest market price for his catch.

The Book and price list are yours for a post card; they're absolutely free.

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

"Better Farming" is all that the name implies. It tells you how to do a hundred and one farm jobs cheaper, quicker, easier and better.

This pocket farm library is published by a company with more than a half a century of experience in making explosives especially to meet western agricultural conditions. You should know the low cost and thorough methods by which they have cleared western land and boosted yields of crops and fruits. Whether you blast or not, you need these 52 pages, fully illustrated, of modern, improved farm methods.

"Better Farming" is sent you free of charge, postpaid. For the price of a postage stamp you get something it has cost us thousands of dollars to prepare. Merely fill in and mail this coupon, or send postal mentioning this paper. Write now.

Try This One-Man Stump Puller 30 Days FREE

SEND NO MONEY!

If you have useless stump land, I want to PROVE to you on your own stumps—*30 days before you pay me a penny*—that ONE MAN with my famous Kirstin Stump Puller can pull big, little, green, rotten, low-cut, tap-rooted stumps, hedges, trees or brush. I want to convince you that this is the easiest, quickest and cheapest way to pull stumps.

I pulled one pine stump 8 ft. across top. My One-Man Kirstin pulls bigger stumps than I ever expected. *Mr. J. Erkkila, Calumet, Mich.*

My Kirstin pulls stumps up to 2 ft. blind maple 8 to 16 inches. Pulled tree 160 ft. high and 22 inches at base, in 15 minutes. *A. H. Jeffery, Goble, Oregon.*

My Kirstin pulled stumps we thought it could not pull. *Mr. E. A. Buckley, Bay Springs, Miss.*

Quick Shipment From Escanaba, Mich. Atlanta, Ga. Portland, Ore. Soo, Canada

After 30 days trial—if satisfied, keep puller. If not pleased, send it back at my expense. *You don't risk a penny.* Four easy ways to pay. **Single! Double! Triple Power!**

Kirstin One-Man Stump Puller Single, Double, Triple Power!

Weighs less—costs less—yet has greater *speed, strength, power* and *lasts longer!* Clears one acre from one anchor! Easily moved around field. A few *pounds* pull or push on handle exerts *tons* on stump—due to wonderful leverage principle. 3-year guarantee against breakage!

Get My Big New Book NOW!

Tells how one man pulls stubborn stumps in few minutes at low cost. Explains all about different speeds. Also patented quick "take up" for slack cable. Describes Kirstin one man Clutch Model; Kirstin One Man Drum Model; and Kirstin Horse Power Model. Get the book and Special Agents' Offer. Shipment from nearest distributing point saves time and freight. Write today.

Your Soil Needs Amboy GYPSUM

APPLY IN FALL. Almost every soil is deficient in lime, sulphates. Supply these with Gypsum. Mix with manure to hold valuable ammonia. Gypsum Book Free. Consolidated Pac. Cement-Plaster Co., 614 San Fernando Bldg., Los Angeles.

Significant Wheat Yields from Illinois

Wheat threshing has begun on the University of Illinois experiment fields. The acompanying tahle of yields from the Oblong field in Crawford County, is reported by Harrison Fahrnkopf, who is superintendent of several soil experiment fields, including that at Oblong.

Soil treatment applied—	Bushels
None (average of three tests)	8.8
Farm manure	15.8
Manure and limestone	22.7
Manure, limestone, rock phosphate	33.4
Crop residues	13.2
Residues and limestone	30.5
Residues, limestone, rock phosphate	36.1
Residues, limestone, phosphate kainit	38.8

These records show that as an average the yields of wheat were increased nearly six bushels per acre by the organic manures, about 12 bushels more by limestone and eight bushels in addition by phosphate. In permanent systems of soil improvement, with ground limestone, fine ground raw rock phosphate, and home grown manures, the average yield was nearly 35 bushels per acre, or about four times the yield from untreated land, which of itself produced less than nine bushels of wheat.

The Oblong experiment field is located on the common prairie soil of southern Illinois, and these systems of practical, permanent soil improvement are equally applicable to millions of acres of similar land. Why expend labor to farm forty acres when the same amount of wheat may be grown on ten acres?—Cyril G. Hopkins, University of Illinois.

To the Farmers of America:

Three million American boys, on the battlefields in France, in the cantonments on this side, and on our great ships everywhere, are fighting the battle for democracy.

Back of them is another army—the splendid, untiring men and women on the farms of America, who have taken up the additional burden laid upon them by the absence of many of their boys, and by their toil and sacrifice have produced the crops that today are helping to feed the allied world. From you, who are the soldiers of that army, every patriotic call has had an unhesitating and united response.

Today in the name of the President of the United States another call is sent to you on behalf of your sons and brothers. They are far away from their own homes; yet through the generosity of the American people the influence of the homes which they have left still follows them. Seven great organizations have taken it upon themselves to do for the boys in camp and at the front the things which every parent would wish to do for them if he could.

These seven agencies are the Y. M. C. A., Y. W .C. A., National Catholic War Council, Jewish Welfare Board, War Camp Community Service, American Library Association, and the Salvation Army. Together these splendid societies represent every one of the best elements in our American life. Their huts are the soldier's church, his college, his library, his club, his theatre, and his gymnasium.

To provide this comfort; to make the American home follow the American flag, requires money in large amounts. These seven agencies will need more than one hundred and seventy millions to push their work forward through the forthcoming months. And, because their work is done in the same spirit, and for the same great end, they have wisely agreed to make their appeal to the public not separately but together.

That appeal, which will be made of you in the week of November 11-18, will offer the American people one of the most splendid opportunities of the war to signal across the seas their united support of the boys who are fighting there. The cause is great; the total amount asked for is great; but not greater than the patriotism of the American farmers. Every house that flies a Service flag will have a special interest in the success of that campaign. For every dollar means cheer and comfort to the son of such a house.

On behalf of the administration I send you this great call. But more particularly on behalf of the boys themselves. In the chill and damp of those French villages they are waiting for your answer—waiting for you to say to them: "No matter how great the sum, we promise that you shall have the comforts of life over there. The success of this United War Work Campaign is the proof that we are standing shoulder to shoulder behind you."—D. F. Houston, Secretary of Agriculture.

Safeguard Stored Products

By G. H. Hecke, State Commissioner of Horticulture

What would it profit California or the nation if the farmers produce bumper crops and feed them to the weevils and rodents in public or private warehouses? This is the question which is squarely up to the farmer! Answering the emergency call for increased crop production California is preparing to harvest one of the greatest yields in the history of the state!

Now in the life history of the average crop there are three important phases, between the time it is planted and the time it reaches the consumer: Planting, care and nourishment and harvesting and warehousing.

The first two phases are accomplished hy the expenditure of much money and labor—no one knows as well as does the farmer—but unless the third phase—warehousing, is successfully accomplished — all the money, and labor, and effort have been wasted!

Why should any package of cereal, of rice or of dried fruit, bearing the imprint of the state of California, advertising that it was grown and packed in California, be condemned and destroyed because it was infested with filthy moths, worms or weevils?

This is due principally to negligence! Whose negligence? Well, you might use the legal phrase, and say it was contributory negligence! Is it the fault of the state which does not regulate the sanitation of public and private warehouses and packinghouses? Any army officer who stored his troop's food in a filthy warehouse would lose his shoulder-straps —and that quickly! These emergency rations are war munitions! Is it the fault of the wholesaler and retailer, who knowingly sell an article which they cannot guarantee? Is it the fault of the careless consumer, who persists in patronizing an article, that he knows falls short of the accepted standard? Thus it looks like we are all somewhat negligent!

Especially under stress of the present extraordinary conditions no great quantity of perishable food materials should be warehoused until the warehousing facilities are guaranteed to be clean, wholesome and uninfested by insects or rodents. While it is not possible to give with any degree of accuracy the actual losses due to this pernicious source of damage, careful observation indicates that they are much greater than it is possible to estimate.

The approximate loss to the people of the United States through noxious insects and plant diseases is stated variously at two thousand million dollars per annum—and a large portion is debited against "stored product insects"!

Now stop and think—those losses are, in the main preventable!

There are in California many insects which damage stored products, and their destructiveness is twofold—

since they render unwholesome and unfit for food all that portion which they do not actually devour!

Among the insect pests most destructive to stored flour, meal, cereals and grains are the Indian-meal moth, the Mediterranean flour moth, the meal snout moth, the fig moth, the saw-toothed grain beetle, the confused flour beetle, the granary weevil, the rice weevil, the common bean weevil, the horse-bean weevil and many other weevils and moths and beetles of economic importance.

It is expected, that with the exercise of care and cleanliness within the next 12 months, to show a marked decrease in this class of damage, not only because of the requirements demanded by war activities—not only because of our state wide pride in "Better Products", but also because it makes for good practice and in the end it makes for satisfaction to every one and will become a financial asset instead of a loss!

Have you any suspicious insects in your mills, warehouses, storehouses, packinghouses? Don't guess at them! Send them to your state commissioner of horticulture at Sacramento, and he will have them identified for you at the earliest possible moment and advise you how to control them.

The Fumigation of Granaries

By A. W. Morrill

AT this season stored grain is frequently severely damaged by several grain beetles and weevils, also a species of moth, which insects not only consume the substance of the grain but in some cases give it a flavor which is objectionable to stock. The report of the Arizona commission of agriculture and horticulture includes a brief account of the damage done by insects at a farm granary near Phoenix in the fall of 1917, together with an account of the methods employed in fumigating with carbon bisulfid. This circular is prepared to give information concerning this method of control so that it may be more generally used by farmers and seedsmen in Arizona.

Carbon bisulfid is a clear liquid which when exposed evaporates or volatilizes very rapidly, forming a poisonous gas. This gas is about two and a half times as heavy as air. When mixed with certain proportions of air it is highly inflammable and explosive. On account of its penetrative powers carbon bisulfid gas is very effective against insects in stored grains and other food products. It is commonly called "high life" and is well known in some sections on account of its use against prairie dogs. The chemically pure carbon bisulfid does not have an objectionable odor, but the commercial grade manufactured particularly for the destruction of insects and rodents has a disagreeable odor owing to hydrogen sulfid which it contains.

In fumigating a granary the first step is to make the building as tight as possible. The bottom can usually be made reasonably tight by throwing dirt all around the sides and packing it down with a shovel. Strips of heavy brown paper should be pasted over all cracks and openings in the side walls. It is, as a rule, best to employ a professional paper hanger to do this. One door should be left open as an exit, but everything should be in readiness for prompt work as soon as the operators have finished their work inside. Wet newspapers are useful in preparing a building for fumigation, especially in closing openings around sliding doors. The wet paper should be tightly rammed into the openings with a stick. If the roof is provided with a ventilator one or more wagon or hay stack covers may be thrown over it in order to check the circulation of air. All openings should be covered for as far as possible above the highest sack of grain, but a margin of three or four feet proved sufficient in one instance where it was impractical to close a corrugated iron building tightly at the eaves. Sometimes it may be necessary to rearrange the sacks of grain in order to have all of it well below the eaves.

The exposure should start preferably about midday, since insects are easiest to poison when most active, and up to a certain point they are most active when the temperature is highest. Do not fumigate when the temperature is below 70 degrees. The granary should be kept closed for twenty-four hours, by which time much of the gas will have escaped.

Carbon bisulfid will not injure the feeding value or the germination of grains and seeds. A convenient method of exposing the liquid in granaries therefore is to open the cans and when everything is ready turn them upside down so that the contents can run out onto the sacks of grain. The cans should first be placed at suitable intervals on top of the sacked grain and arrangements made between the men as to the part each will do in order to turn over all the cans, get out of the building and close the exit, as heretofore advised, as quickly as possible.

Small lots of grain, seed or other products can be fumigated in watertight barrels or boxes closed, after emptying the dose of carbon bisulfid, by tying tightly over the top a double thickness of heavy wrapping paper or two or three thicknesses of tight canvas. Paper is more nearly gas tight than canvas and is to be preferred.

Two gallons, or approximately 20 pounds, of carbon bisulfid to 1000 cubic feet of space, with the outdoor temperature slightly over 90 degrees at the beginning of the exposure, proved a satisfactory dosage in fumigating the granary heretofore mentioned. This building, as has been stated, was not closed tightly at the eaves. With tight storage rooms or granaries 15 or even 10 pounds of carbon bisulfid to each 1000 cubic feet of space is sufficient. With tight barrels or small approximately gas tight bins one fluid ounce of the liquid to six cubic feet of space might be sufficient, but for the fact that the rate of leakage is proportionally much greater in small compartments or containers than in large ones. In other words, a barrel or box must be much tighter in proportion than a large granary in order to secure equivalent results with a fumigant at a given dosage rate. It is advisable, therefore, when fumigating small quantities of materials in barrels or boxes, to use proportionally heavier dosage unless it is certain that the container is approximately gas tight. One ounce of carbon bisulfid to two cubic feet of space should be sufficient with a reasonably tight container.

Attention has been called to the fact that carbon bisufid gas when mixed with air in the right proportion is highly inflammable and explosive. The same care should be used in handling carbon bisulfid as is used ordinarily in handling gasoline. Smoking must be avoided and lamps, lanterns, matches or electric lights must not be used in a building after the exposure is started. Carbon bisulfid is not a quick acting or violent poison like hydrocyanic acid gas, but it is advisable for the operators to hold the breath after starting to expose the liquid until they have reached the open air. A building, bin, barrel or box which is being fumigated with carbon bisulfid or any other poisonous gas should be conspicuously labeled in order to avoid accidents. After the end of the exposure the place fumigated should be ventilated by opening doors or removing covers. The odor of carbon bisulfid will remain for some hours or even days after the exposure, but after an hour or two of ventilation the gas will not remain in poisonous quantities.

The normal price of carbon bisulfid in five-gallon cans is about $1.00 a gallon, not counting the freight from the factory. Large quantities are quoted at the factory in drums at as low as 6 cents a pound. Everything considered, the expense of fumigating granaries, grain bins and small lots of grains and seeds with carbon bisulfid is insignificant when compared with the damage which the numerous insect pests destructive to grains and other stored products are capable of doing.

The United States department of agriculture has published a Farmers' Bulletin (No. 799) which gives detailed information in regard to the use of carbon bisulfid as an insecticide. Any farmer or seedsman who has suffered losses from granary and seed pests should secure a copy of this bulletin, which will be supplied without expense to anyone who applies to the United States department of agriculture directly or through his representative or United States senator.

There is a difference between notoriety and merit. A thousand dollars' worth of roses will barely fill a room with perfume, but with a dollar's worth of fried onions you can scent up a whole town.

The food program is a fighting program and every fighter counts.

Key to Plan View

1—One-Piece Main Frame—Holds all shafts, bearings and gears in proper alignment.

2—Motor Set Crosswise—Eliminates bevel gears, worm friction or chain drive.

3—Hyatt Roller Bearings at all important places.

4—Cut Steel Gearing in transmission.

5—All Cut Steel Gearing between crank shaft and gear box.

6—All Cut Steel Helical Timing Gears.

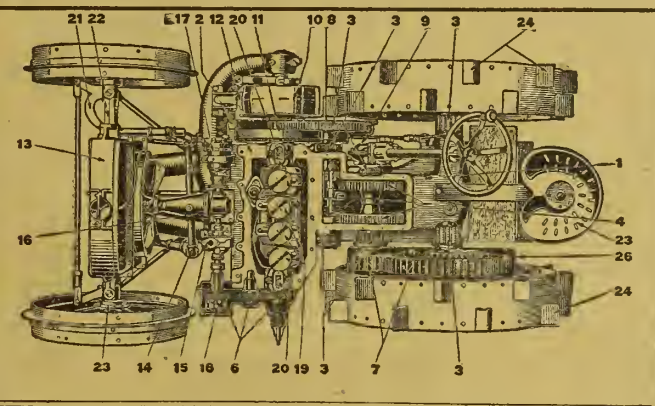
7—Forged Cut Steel Master Gear and Bull Pinion with differential (fully enclosed).

8—Oil-Tight Housing for all gears between crank shaft and transmission.

9—Worm and Sector Steering Gear, enclosed.

10—Clutch Pulley on crank shaft.

11—Fly Wheel—Next to main bearing (normal speed 1050 R. P. M.)



Key to Plan View

12—Brake for belt or road work.

13—Cast Frame, 5-piece, Army truck type, non-clogging Radiator.

14—Sylphon Thermostat.

15—Centrifugal Pump.

16—Spiral Gear-Driven Fan; gears enclosed.

17—Dust Proof High Tension Magneto.

18—Speed Governor, enclosed.

19—Pistons—Diameter 3¾ in. Stroke 5 in.

20—Main Crank Bearings, 2¾ x 4½.

21—Steel Steering Knuckles.

22—Drop Forged Front Axle.

23—Dust Proof Hubs.

24—Detachable Tire Lugs—other styles furnished if ordered.

25—Spring Seat.

26—Dust Proof Housing for final drive.

Study This Chassis

of the Case 10-18 Kerosene Tractor

ABOVE we show a plan view of the Case 10-18, with an explanation of the details. Study this chassis—note its features.

In many ways, you will find the Case 10-18 far in advance of today's usual offerings. For instance, it is the first to offer a one-piece main frame with a four-cylinder motor, mounted cross-wise. This is merely one of the dozens of betterments. The one-piece frame casting constitutes a dust-proof housing for the rear axle, bull pinion shaft, transmission and the bearings for these parts.

This type of construction brings rigidity, reducing vibration, preventing disalignment. Power is conserved, while we multiply strength.

The belt pulley is mounted on engine crank shaft, doing away with bevel gears. It is part of the tractor—not an extra-cost accessory.

The Case Sylphon Thermostat insures complete combustion of gasoline or kerosene, and prevents raw fuel from passing by the pistons and diluting oil in the crank case.

The Radiator has a cast frame. The Core is copper—fin and tube non-clogging type.

A Case air-washer prevents grit or dust from getting into the cylinders.

These are but a few of the greatest advancements in tractor history. Case offers you today, NOW, what others will attempt later on.

The Case 10-18 is rated according to the conservative Case policy.

It develops nearly 14 horsepower on the drawbar and about 24 horsepower on the pulley. Thus we insure abundant reserve power.

Our booklet and specifications point out dozens of other advancements, all of which demand your consideration before you buy.

HOW EDITORS GET RICH

A man tells of a country editor who started out poor 20 years ago and has retired with the comfortable fortune of $50,000. This money was acquired through industry, economy, conscientious efforts to give full value, indomitable perserverance and the death of an uncle who left the editor $49,999.50. —Kansas City Times.

Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Boulevard, Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.

Unsigned communications receive no attention.

Sick Cow

I have a six year old Jersey cow that is falling off in flesh rapidly from loss of appetite. She eats and drinks very little and the best of alfalfa hay or green alfalfa will not tempt her to eat much. Have given her epsom salts several times, about three tablespoons at a time, and have also given her tablespoon doses of cow cure, but nothing seems to do her any good. Her kidneys and bowels are acting all right. Her whole appearance is rather dull, but her eyes are still bright. She seems to have some trouble in remasticating her food and is groaning occasionally as if she were bloated. What would you advise doing for her?—Subscriber, Lancaster.

The fact that the cow grunts occasionally makes it a very serious case. That with the other symptoms you describe indicates that she has inflammation of the third stomach or has swallowed a piece of wire or a nail and that it has penetrated the walls of the stomach and there is no telling what organ it is headed for. Would advise giving her one pound of epsom salts, half a pound of common salt, two drams of powdered nux vomica and two drams of powdered ginger. Dissolve all in two quarts of hot water and when cool give all at one dose as a drench. If this seems to give any relief then in 36 hours give her one quart of raw linseed oil, two ounces of turpentine, four drams of aloin and two drams of powdered nux vomica. Mix and give it all at one dose. If she continues to improve give her a tablespoon of baking soda in a little feed twice a day. Do not feed much bran nor ground feed of any kind but encourage her to eat dry hay that will form a cud. Give her plenty of water. If she has swallowed something that will not pass, of course this will do no good, but if the trouble is caused by some stoppage the giving of the physic may relieve her.

Diabetes

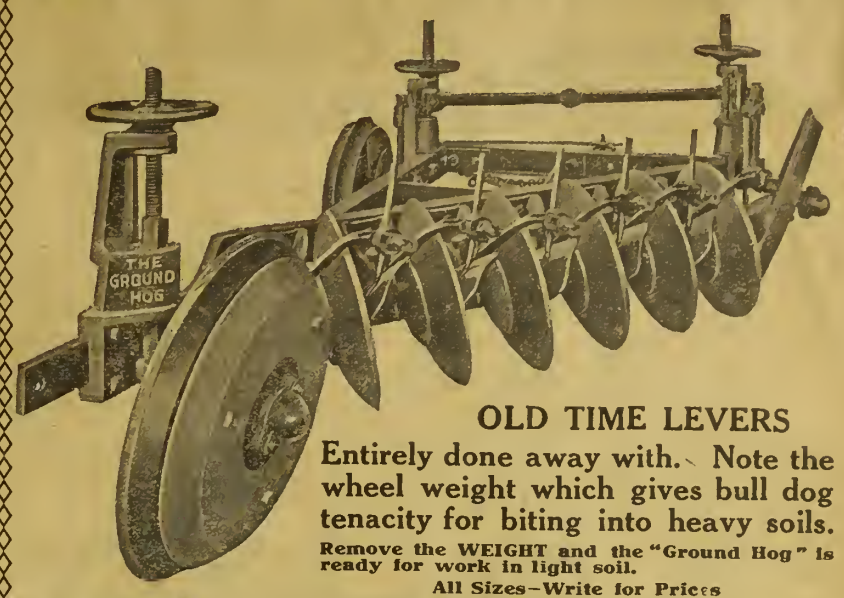
Please tell me what to do for my three year old colt. He is bothered with frequent urination and the color of the water is white.—Subscriber, Palmdale.

The symptoms are those of diabetes. It is a disease that affects the kidneys and is quite serious. If neglected it becomes chronic and weakens the animal very much. The colt should not be worked, as that aggravates the disease. Here is the remedy: Two ounces of the iodide of potash dissolved in one pint of water. Give half an ounce of the solution in the drinking water or on a little feed morning and evening. Your druggist will give you a half ounce bottle for a measure. Also get five pounds of ground flaxseed and once a day put a a gallon of boiling water. Let it stand for one hour, then fill the bucket with handful in a clean bucket and pour in cold water and let the colt drink from it. The flaxseed tea will sooth the kidneys and assist the iodine treatment. You may notice this trouble coming back occasionally but a few doses of the remedy given right in the start will stop it and the colt will probably recover completely in a short time.

SMITH BROTHERS TO DISTRIBUTE CLEVELANDS

Smith Brothers, 1616 South Figuroa Street, Los Angeles, have been made Southern California distributors for ten counties for the Cleveland tractor. It is the plan of the firm to secure additional sales and service stations at once and give a service to the users of Cleveland tractors that will enable every user to be within "30 minutes of service," in their territory.

HERE IT IS The New Model "GROUND HOG"



OLD TIME LEVERS

Entirely done away with. Note the wheel weight which gives bull dog tenacity for biting into heavy soils.

Remove the WEIGHT and the "Ground Hog" is ready for work in light soil.

At the bottom of your letter to advertisers just say "California Cultivator" and prompt reply is assured.

GREATER STRENGTH
Fewer Spoonfuls
BIGGER SAVINGS

The value of baking powder is based on its *leavening strength.* You can't judge it by the size of the can—or by the *amount* you get for your money. You must estimate it by the amount of baking powder *used* in each baking and the *results* you get.

CALUMET

is the greatest value ever offered in Baking Powder—it has greater raising *"force"*—it *goes* further than most of the other brands. You use only a rounded or heaping teaspoonful where others call for two teaspoonfuls or more.

But Baking Powder is not all you'll save when using Calumet. You save baking *materials.* Calumet *never* fails. The last *level* teaspoonful is as powerful as the *first.* Calumet is perfectly manufactured—*keeps* perfectly—and is moderate in price.

You save when you buy it—You save when you use it

One trial will satisfy you of these facts—will demonstrate beyond doubt that "Calumet spells economy."

Your grocer sells it on a guarantee of money back if you are not pleased with results.

Calumet contains only such ingredients as have been approved officially by the U. S. Food Authorities.

ELSINORE

Written for California Cultivator
By C. A. McDonald

The clouds are drifting overhead, with sunshine in between;
The trees that line the city's streets are clothed in living green.
The gentle zephyrs bend their tops and twist the limbs in glee,
And hie away to other lands across the deep blue sea.
The birdies hide within the tops where they have raised their young,
And in the morning sing to us their reveille of song.
The mountain range along the coast keeps back the ocean storm,
While nature tries to shelter us and keep us from all harm.
Lake Elsinore, that perfect gem, lies cradled 'tween the hills,
With healing waters from the gods, a cure for every ill.
And so, we have a heaven on earth, a place not made by hands,
A spot of healthful happiness not found in other lands.
'Tis here the farmerettes first tried their hands at farming out,
And ploughed the soil and tilled the lands and drove the teams about.
They hoed tomatoes, picked the worms, out in the broiling sun,
And saved the crops and helped our boys in victories they won.
'Tis here the cripples come, and sick, with their rheumatic pain,
And none that ever came in faith, were known to come in vain.
But time is swiftly passing by, all things must have an end,
And in eternity at last, another life we'll spend.
But when we wake in that new day, upon that golden shore,
Well find we've been home all the time,—at home in Elsinore.

A STRANGE OCCURRENCE

Written for California Cultivator
By Ida M. Blake

MR. MORRIS closed his desk with a bang.

"I'm going out, Miss Gordon, and may not be back until late. Send those letters I gave you, then run over to Smith's with that order. Leave the door closed but unlatched so that if anyone comes they can wait until you return. Tell Jack to see that the radiator is fixed so it won't leak, and no fooling about the job this time."

With these instructions he went out, leaving Miss Gordon alone. She finished her letters and then left the office as her employer had told her. When going through the hall to the elevator, two men passed and gave her such a scrutinizing glance that she shuddered but tried to think that it was only imagination that made her suspect them. So she left the building.

It was several blocks to Smith's, but the air was clear and cool on that January day and the few minutes consumed in walking she thought would surely do no harm, so she decided to walk. But the unexpected occurred and she was gone much longer than she had planned.

Hurrying back to the building she returned to the office, passed the same two men loitering in the hall, and entered the office. Finding no one there she went out again without taking off her hat and ran down stairs to tell the janitor about the radiator. Not many minutes were consumed on this errand, but when she returned to the office again, lo and behold, the door was locked.

"Why, that is strange," she said to herself, "I'm sure I didn't lock that door."

Her own pass key soon admitted her to the room, but—

At Mr. Morris' desk sat one of the men whom she had passed in the hall. The curtain at his side was drawn down, a most unnecessary move, for the sun never reached those windows. Miss Gordon had never known it to be done before.

Miss Gordon may have been a bit nervous or somewhat anxious, but she held her ground and self control and left the door wide open. As it happened, there was no one in the offices either side of this room, so she felt precaution would be prudence.

Very calmly she removed her hat and gloves and said: "Did you wish to see Mr. Morris?"

"Why, yes," the man replied, "but I'm in somewhat of a hurry, but I'm very anxious to see him."

"Well, he is not here and I don't know when he will return. Will you wait?"

"No, I think not. I'll write a note."

After making several attempts at the note writing, and tearing each one up, he remarked: "No, I'll not bother, but will drop in later."

"Leave your name, please, and I will tell Mr. Morris you called."

"Mr. Wright, and tell him I have those orders he wanted me to get for him. Good afternoon." And he left the room.

All during this conversation Miss Gordon never took her eyes from his face, and she stood with her back to the desk, grasping in one hand a heavy paper weight. It was not many

Oh Joy! More Time to Knit

And I'm Through With That Everlasting Rub! Rub! Rub!

I've found a new way to wash clothes—by the aid of that dear Cocoa Naptha Soap.

First of all I wet the clothes thoroly and rub them well with Cocoa Naptha Soap, particularly the soiled places. Then let them stand 30 minutes or over night and presto!—the dirt comes out like magic with just the littlest bit of rubbing, and they're ready for rinsing, bluing, and hanging out. No boiling mind you; I don't even use hot water. It is the soap that does the work—so be sure you get the genuine Cocoa Naptha made by Los Angeles Soap Co. It contains pure cocoanut oil and is the biggest cake of laundry soap for the least money I've ever found.

seconds after he had left when he returned and asked what the telephone number was, at the same time sending a searching glance around the room.

As soon as he had left again Miss Gordon looked around the room and through her desk, which she had left open during her absence. Nothing seemed disturbed. Walking over to Mr. Morris' desk she discovered in the chair where the stranger had been sitting, a skeleton pass key!

CHRISTMAS PACKAGES FOR SOLDIERS AND SAILORS

The war department is desirous that each man serving in the American Expeditionary Forces in Europe shall receive a remembrance from home at Christmas time, and advises that because of transportation and distribution difficulties but one parcel of standard size and weight can be sent to each. To this end arrangements have been made with the war department whereby Christmas parcels may be mailed to members of the American Expeditionary Forces in Europe under the following conditions:

1. Each soldier or other member of the American Expeditionary Forces in Europe will be allowed to receive one Christmas parcel for which purpose he will be furnished, through army channels, a "Christmas Parcel Label" bearing the correct name and address of the soldier or member and also the name of the person designated to mail the parcel. The labels will be prepared to serve as address labels for the parcels. The label furnished each soldier or other member of the American Expeditionary Forces will be sent by him to the person who is to mail the Christmas parcel. No Christmas parcel for members of the Expeditionary Forces in Europe will be accepted for transmission without such label.

2. All Christmas parcels must be of standard size, three inches by four inches by nine inches, and shall not exceed three pounds in weight, for which purpose cartons of the size prescribed will be distributed through the local Red Cross chapters throughout the country. No person will be furnished a carton except upon presentation of a "Christmas Parcel Label" received from abroad.

3. The parcels must contain no prohibited or unmailable articles. Perishable food products are not permitted.

4. After the cartons have been filled by the persons who receive them, they shall be returned to a Red Cross receiving station, where inspectors appointed by the Red Cross will carefully examine each parcel and supervise its wrapping and the affixing of the "Christmas Parcel Label" and the necessary postage stamps, the latter to be furnished by the sender of the parcel. When the parcels have thus been packed and wrapped and otherwise prepared for transmission, the Red Cross will affix to each parcel a certificate in the form of a seal showing that the parcel has been inspected and contains no prohibited or unmailable matter. Such certificates will be accepted by the postal service and army authorities as evidence that the parcels conform to the conditions prescribed and obviate the necessity of subsequent examination. The parcels must be left at the Red Cross receiving stations, which will deposit them in the mails for dispatch.

5. Christmas parcels must bear the name and address of the sender and will be addressed substantially as follows:

"Christmas Box Department, Port of Embarkation, Hoboken, New Jersey.
For.....
Organization.....
American Expeditionary Forces."

Parcels so addressed will be chargeable with postage at fourth class or parcel post zone rate applicable between the office where mailed and Hoboken, New Jersey, to be prepaid by stamps affixed.

6. Parcels may bear inscription such as "Please do not open until Christmas," "Merry Christmas," "Happy New Year," "With Best Wishes," and the like.

7. In order to assure the arrival of Christmas parcels abroad and the delivery to the addressees by Christmas all such parcels must be mailed on or before November 20, 1918.

The foregoing does not in any way change the instructions heretofore issued regarding the acceptance of parcels up to seven pounds in weight for members of the American Expeditionary Forces in Europe which contain articles sent in response to the written request of a member approved by his regimental commander or other officer authorized to approve such requests.

For Men in the Naval Service

The navy department has advised that parcels intended for officers and men on United States naval vessels in home waters and abroad or stationed at naval bases or stations in foreign waters should conform to the following conditions:

1. Parcels may not exceed 20 pounds in weight and must be so prepared for mailing that the contents can be readily examined. Substantial boxes or other suitable containers should be used.

2. The parcels must bear the name and address of the sender in the upper left hand corner of the address side and be addressed in the following manner:

(a) Name of addressee in full together with his rank or rating.

(b) The designation of vessel or station or naval base to which addressee is attached.

(c) "Care of Supply Officer, Fleet Supply Base, 29th St. and 3d Ave., Bush Terminal Station, Brooklyn, New York."

(d) The words "Christmas Box" or "Christmas Present."

3. Parcels prepared and addressed in accordance with the foregoing will be chargeable with postage at the fourth class or parcel post zone rate applicable between post office where mailed and Brooklyn, New York.

4. No perishable food products other than those packed in tin containers should be inclosed in Christmas parcels.

5. Parcels may bear inscriptions such as "Please do not open until Christmas," "Merry Christmas," "Happy New Year," "With Best Wishes," and the like; also the names and quantities of articles inclosed together with such other marks or words as may be necessary "for purpose of description" of the articles.

6. Christmas parcels for naval officers and men should be mailed as soon as possible so as to reach Bush Terminal Station not later than November 15, 1918.—A. M. Dockery, Third Assistant Postmaster General.

WAR POINTERS

Eat less—Breathe more.
Talk less—Think more.
Ride less—Walk more.

A Mark of Value

There are many kinds of raincoats at varying prices. You cannot estimate their value by their looks.

But you can recognize the Raynster Label and avoid uncertainty. The Raynster Label identifies honest worth—it is the manufacturer's assurance of full value in materials and workmanship.

The Raynster Label is found in a complete line of weatherproof garments—heavy rubber surfaced work coats, smart cravenetted cloth coats, slip-ons, featherweight silks, and warm, heavy ulsters.

Many of these coats look like good overcoats and are generally worn as overcoats as well as raincoats.

Outfit your family with Raynsters. There are Raynster models for women, men, girls and boys. You'll find a Raynster at just the price you want to pay.

LIVESTOCK

Report of live stock conditions on the Los Angeles market as compiled by the United States Department of Agriculture, Bureau of Markets, through the local office:

Bulk of steers reaching this market are bringing $11.50. A few loads of very good quality stuff brought $12 f. o. b. Los Angeles. These $12 steers will find an outlet through export orders recently placed on this market.

Some excellent Utah cows were sold this week.

The supply of calves is moderate and have advanced about 50c per cwt.

The supply of hogs has been liberal. The recent heavy runs on the Eastern markets being reflected on the local market which was overloaded last week. The market this week is about 50c better than last week's closing.

There are a lot of ewes reaching this point, but the market for them is very draggy as most of them are old shelly ewes. The quality of lambs is improving. Arizona lambs being especially good. Few wethers reach this market.

Hog prices quoted below are based on 200 pound average hogs. Driven-in, or truck hogs sell for ½c less.

NUTS

The Almond Growers' Association has established opening prices as follows per pound:

Nonp. 27½
I.X.L. 25½
Ne Plus 24½
Drake 20

Outside dealers have named prices above these quotations and it is understood association stock is practically closed out and prices withdrawn.

Walnuts: Net prices have been named by the California Walnut Growers Association:

No. 1 Softshell 28
No. 2 Softshell 25
Jumbo 30
Fancy Budded 31½
Golden Gate Budded 29

Franquettes, Eurekas and other fancy varieties sold on sample. No. 1 Softshell guaranteed 88 per cent good; Fancy Budded, 90 per cent. In case of worms or damage by ants not more than five per cent.

RICE

Prices which rice millers of this state have voluntarily agreed with the food administration for California to pay to growers for paddy rice are as follows:

No. 1 and No. 2 Japan, in sacks, $4.32 per 100 pounds.

No. 3 and No. 4 Japan, in sacks, $4.16 per 100 pounds.

Prices for other grades will be paid for on a basic value proportionate, and no higher prices than those quoted above for any grades whatever will be paid.

The millers agree further to sell cleaned rice and by-products for prices not to exceed the following:

Fancy Japan, 1½c per pound.
Choice Japan, 7⅜c per pound.
Fancy second heads, 6⅞c per pound.
Screenings, 5⅝c per pound.
Brewers', 5¼c per pound.
Rice polish, $50 per ton, carlots.
Rice bran, $36 per ton, carlots.

HAY

Under date of November 2, Scott, Magner & Miller says:

Receipts past week 644 tons. This is very low for the present period. No one is buying any feed beyond what he absolutely must have to get along on. The recent north winds and warm weather have done irreparable damage to the green feed, and unless heavy rains are forthcoming almost immediately it is generally conceded that stock will have to be fed throughout the winter months the same as they were last winter, as new grass cannot be expected before spring and then it is a question as to how much there will be after the volunteer was so generally started as it was by the September rains. The government will probably be heavy buyer throughout the entire season, as whether the war is over or not we do not believe the stock will be disposed of for some time to come.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling expenses must be added according to conditions.

Citrus Fruit Market

Los Angeles, Nov. 6, 1918.

The citrus shipping year ended Thursday night, October 31. It has been noted by the figures below that it is vastly lower than last year. Also contrary to last year's condition Valencias are practically all cleaned up. On that date last year there were nearly 1500 cars of old crop Valencias yet to move. This year Valencias are cleaned up and only the new crop navels are in line to supply market needs. Floridas are however, going to market in larger quantity than usual at this time.

On the other hand lemons are in warehouses and on trees in greater quantity than any preceeding year and this is most unfortunate for influenza demands are heavy on even the large stock on hand. The totals for the year November 1, 1917 to October 31, 1918 are given below:

Shipments

Southern California; oranges 14,346 cars, lemons 6197, total 20,543. To same date last season; oranges 40,702, lemons 7748, lemons, total 48,450. Central California this season; oranges 2536, lemons 115, total 2651. Last season to same date; oranges 5044, lemons 165, total 5209. Northern California; oranges 203, last year same date 845.

Total of all citrus for the state for this year, 23,397, last year 54,504.

Shipment for year ending October 31, 1916: Southern California, oranges 31,757, lemons 6940, total 38,697; Central California, oranges 5416, lemons 69, total 5585; Northern California, oranges 610, lemons 1; total for the year of 44,893.

Shipment for the year ending October 31, 1915: Southern California, all citrus fruits, 40,160; Central California, 5893; northern 632; total 46,685.

Shipment for the year ending October 31, 1914: Southern California all citrus fruits, 41,978; Central California, 5951; Northern, 409; total, 48,338.

* * *

The year opens with a remarkably satisfactory general condition. The Valencias are practically all shipped and Central California is making shipments much lighter than last year. Her shipments will materially increase within a few years.

The lemon market is somewhat affected by ruling on the part of the food administration which maintains that owing to vastly increased demand and the necessities of the influenza situation price control or at least distribution is essential. This may materially lower present long prices.

Shipments

Shipments of citrus fruits to date since November 1, 1918: Southern California, oranges 12 cars, lemons 108, total 120. To same date last season; oranges 276, lemons 41, total 317. Central California this season; oranges 3, lemons 8, total 11. Last season to same date, none.

MARKET NOTES

The present outlook for rice in this state is that the crop will aggregate 3,500,000 sacks of 100 pounds each, valued at approximately $20,000,000. The California mills have agreed on selling terms, which will be cash on presentation documents, less ½ per cent discount, or net cash arrival inspection goods.

A Los Angeles bean broker reports: "The bean situation is not improved so far as the prices are concerned. In fact dealers and brokers say that the market is weaker than ever and that there is practically no demand for California stocks at present. On the other hand growers who are anxious to get their money out of the crop are insistent on selling and the result is that the market continues to sag. Just now such California stock as is going East has to compete with the splendid Michigan crop and also with beans from Colorado from both of which points lower freight rates prevail than from California, thereby giving them an advantage."

Los Angeles milk dealers contemplate advancing milk prices to 9 cents per pint and 16 cents for quarts. They are now paying producers on butter fat basis $1.07 per pound.

Early frosts have caught some tomato districts and prices are advancing sharply.

Poultry on the Dairy Farm

By J. E. Dougherty

THE best place to raise more poultry and eggs at least cost is on the farm where the feed, to a large extent, is grown. Poultry will pick up from the fields and around the barns a large amount of feed that would otherwise be wasted and will turn this feed into eggs and poultry meat.

How many fowls a farmer should keep will be governed by the size of his farm and the percentage of the total ration that the farm can supply, as well as his personal attitude toward chickens. A laying fowl will consume approximately 75 pounds of grain and mash per year, nearly all of which can be grown on the farm, as is clearly shown in the following simple, yet well-balanced laying ration designed to meet the present war conditions:

Grain Mixture — Fifteen pounds whole barley, 15 pounds whole milo.

Dry Mash Mixture—Five pounds ground barley, five pounds wheat bran, five pounds wheat shorts, two pounds soy bean or linseed meal, three pounds meatscrap or fishscrap, one-half pound granulated charcoal, one-tenth pound sifted dairy salt.

Feterita, Egyptian corn, Indian corn, etc. may be substituted for all or a part of the milo in the grain formula and plump oats for the barley. Where sour skim milk or buttermilk can be kept before the fowls in drinking vessels so that they consume from 35 to 40 pounds of milk per 100 fowls per day, investigations conducted at the California experiment station indicate that no meatscrap, fishscrap, soy bean meal, linseed meal, etc., need be fed in the mash, as the milk will take the place of other high protein feeds. Milk is one of the very best animal feeds that can be fed to poultry and both the small and large dairyman may well consider the use of poultry as a most profitable means of utilizing such dairy by-products as skim milk, buttermilk, whey, etc.

A Practical Demonstration

County Agent C. R. Adamson of Cochise County has arranged to cooperate with a resident of Douglas in securing a start of pure bred White Leghorn hens. It is proposed to keep a back-yard flock of 200 hens and cater to a select trade. With years of practical experience in the poultry business this is a safe and valuable demonstration for County Agent Adamson to conduct. The poultry man has every assurance of success if he follows the instruction given him. This is not only a benefit to the poultry man but to his neighbors who will have their attention called to the results through the farm bureau plan of work. Each consumer who can be economically changed to a producer is directly assisting in the solution of the high cost of living problem associated with the war. Our Liberty Bond money purchases food which must first be produced.

Mongrel flocks in the opinion of County Agent Adamson seldom produce eggs at a profit to the producer. His investigations in comparing pure bred Leghorns of a good strain with mongrels show by the scales that the pure bred ones actually produce larger eggs.

Short Courses in the Art of Beekeeping

A series of short courses in apiculture will be given this year by the division of agricultural extension, University of California, in cooperation with the extension service, United State department of agriculture, as follows:

San Diego, November 25 to November 30, 1918.

Davis, December 2 to December 7, 1918.

Visalia, December 9 to December 14, 1918.

Riverside, December 16 to December 21, 1918.

"The purpose of these short courses is to afford experienced beekeepers an opportunity to become acquainted with the most successful methods in practice among their fellow craftsmen, and to learn under the instruction of scientifically trained men, the fundamentals of bee behavior, a knowledge of which is essential to the successful practice of beekeeping. Also to offer to those of limited experience and to students contemplating beekeeping as a business, a period of intensive training, to the end that we may all become better beekeepers."

These courses will be under the general supervision of George A. Coleman of the University of California, assisted by such experts as Dr. E. F. Phillips and George S. Demuth of the United States department of agriculture bureau of entomology, and M. H. Mendleson, E. R. Root and F. C. Pellette, practical beekeepers and authorities.

Transfer Bees to Modern Hive

Hundreds of thousands of bee colonies, representing about one-third of the number kept in the United States, are housed in box hives and produce for their owners an insignificant amount of honey compared with what they might do if they were transferred to movable-frame hives and handled by improved methods. Much of the honey produced by colonies in box hives is wasted by crude methods of securing the crop, and these colonies are reduced in earning value by uncontrolled swarming and by the annual loss of bees which die in winter because of lack of protection and sufficient food stores.

While bees may be transferred at any season when they are active, the bulletin states that the best time is during the season of fruit bloom when the combs contain little honey and when the bees will gather nectar rather than rob honey from a hive which is being transferred. Another good time for transferring is immediately after the first swarm of the year when the number of bees in the hive is greatly reduced and when there is no danger of losing or injuring the queen. She goes with the swarm, leaving queen cells in the hive. Transferring when robber bees are active requires that the work be done inside a screened or bee-tight building.

There are five methods of transferring. One consists in cutting the combs from the box hive and placing them in a new movable frame hive and transferring the bees by shaking or drumming them from the old hive. Another way is to drum the bees out and move them to new hives which have been previously provided with full sheets of comb foundation. The third method consists in catching the swarm as it issues from the old hive and immediately putting it in the new hive placed on the old stand. In the fourth method the new hive containing comb foundation is placed on the old one, and an opening for the bees provided between the two. The fifth method requires a little special equipment, and takes advantage of the fact that in some localities the bees are almost sure to swarm. Place the new hive near the old one and provide it with a queen trap near the entrance in such a way that when the bees swarm the queen will be caught, and the worker bees automatically will enter the new hive. These methods are described in detail in Farmers' Bulletin 961, which will be sent free, so long as the supply lasts, on application to the United States Department of Agriculture, Washington, D. C.

CANADA'S NEW WEIGHT STANDARD

Canada has established the following weights, by the bushel, by which vegetables must be sold:

Artichokes, 56 pounds; beans, 60; beets, 50; bluegrass seed, 14; carrots, 50; castor beans, 40; clover seed, 60; hemp seed, 44; onions, 50; parsnips, 47; potatoes, 60; timothy seed, 48; turnips, 50.

Any bag of vegetables sold by the bag shall contain: Artichokes, 84 pounds; beets, 75; carrots, 75; onions, 75; parsnips, 65; potatoes, 90; turnips, 75.

Chickens Sick or Not Doing Well?

An Extraordinary Offer: Germozone is a standard remedy everywhere for chicken troubles, roup, colds, cholera, swelled head, bowel complaint chicken pox, canker, not doing well, not laying, etc Now our proposition If no dealer there handling Germozone and you will agree to use it and pay if satisfied, we will send you a 75c package without a cent in advance No pay if not satisfied Can we do more? And we will send free 5 poultry booklets Write today

Local dealers handling Germozone will do the same.

Are You Paying Taxes On Your Stump Land? Clear It and Make Money.

Increase your acreage and you will increase your bank account

Clear your stump land cheaply no expense for teams or powder

ONE man with a "K" can outpull 16 horses. Works by leverage—same principle as a jack. 100 lbs. pull on the lever gives a 48 ton pull on the stump. Made of the finest steel—guaranteed against breakage. Works equally well on hillsides and marshes where horses cannot operate. Endorsed by U. S. Government experts.

Write today for special offer and free booklet on Land Clearing

WALTER J. FITZPATRICK
Box 17 182 Fifth St., San Francisco, Cal.

Your opportunity is here to-day

STOP paying taxes on your stump land turn it into *money*. Never in the history of the World was there such a demand for the product of the soil.

HAND POWER
K Stump Puller

Man or woman single handed can pull from 50 to 150 stumps a day. Weight without cable 171 pounds. NO STUMP TOO BIG.

The Answer To Your Tillage Problems

is right here -- proved by forty years of bigger and better crop production since George M. Clark began to perfect the modern disk harrows and developed the "CUTAWAY" tools.

Produce your share by right disking -- be one of the up-to-date and prosperous farmers who rely on one of the complete line of

Clark "CUTAWAY" Disk Harrows

More CLARK "CUTAWAY" tractor harrows are sold than any other, because they are designed and built for tractor use -- for hard service and deep disking -- often taking the place of the plow. Rigid frame forces rear disks to cut midway between the cut of front disks, pulverizing every inch of the soil, and leaving it level and fine. Think what such thoroughness means in better crops! Once over does it!

A size for every tractor; universal hitch, adjustable; two levers set all four gangs; draft rods distribute pull; hardwood, oil-soaked bearings in dust proof boxes. These are but a few reasons why this is the best and most popular tractor harrow.

Save money -- make your tractor pay by looking up the light draft CLARK "CUTAWAY" Tractor Harrows today at your dealer's -- or write us direct for further information, with catalog and recommendation of proper tools for your tractor (or for the one you expect to buy.)

Write today for this free book on tillage. Tell us your problems. We will gladly advise you free.

Make certain they bear the name -- CLARK "CUTAWAY" to distinguish these genuine implements from many so-called Cutaways.

Greater Strength and Quality with Lighter Weight

Disks of cutlery steel, *forged* sharp -- cut better and easier; last far longer -- at no extra cost to you.

THE CUTAWAY HARROW CO.,

718 Main Street, Higganum, Connecticut

VICTORY

LIBERTY

The war is over.

May it never again cause the awful suffering of the past four years.

Peace is not yet here; it may take months, possibly years, to secure for all the peoples of the earth their liberties and the right to pursue happiness in their own way.

"The present and all that it holds belongs to the nations and the peoples who preserve their self-control and the orderly processes of their governments; the future to those who prove themselves true friends of mankind."

Meantime God grant America's victorious sword may prevail and continue swift in the protection of our own Goddess and the liberties of all the world.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

The spirit of Liberty Enlightening the World has risen as Liberty Militant to sweep from the world the evil thing in Central Europe that plotted to enslave it. Now, with that thing beaten to its knees, she stands as Liberty Victorious, still poised with watchful eye and sword in hand to render justice and to aid the newly freed peoples of the earth to establish normal free and happy lives.

ANOTHER LIBERTY LOAN

The federal reserve bank is offering to member banks 4½ per cent tax certificates. As this is similar to the action which has preceded every other Liberty Loan, it is presumed that the country must be prepared to meet the demands of another great loan some time during the coming spring.

INCOME TAX

The war may or may not be over, but the income tax will live forever. The amount of the income tax and, in fact, all its details, are yet to be settled in Congress, but one point already is definite, and that is that after January 1 a return or report will have to be made by everyone to the Internal revenue collector. A year ago the Cultivator was urging its readers to so keep their accounts that this return could be made intelligently and with equal fairness to the government and to the one making the return. The costs of war have been enormous but the burden will not be great if all play fair.

LIBERTY FAIR

Liberty Fair hopes now to become true to name, and plans are in the making for turning it into a great victory or peace celebration. For more than a month all plans have been held in abeyance while the influenza has taken possession of all public gathering plans the country over. The influenza seems to be loosening its grip upon the people, and it has been decided to open the fair on Thursday, November 21. Features not contemplated in the first plans will be added, and a great celebration, as well as fair, will result. Several herds of pure bred live stock have already waited more than five weeks for the opening of this fair.

WAR RELIEF FUND

Let no one imagine that if war is ended the needs of war relief work will be any the less. It has been estimated that for at least two years to come American troops will remain in Europe. This will be necessary as an aid to reconstruction and in securing stable government. For soldiers who are waiting for a chance to participate in active field service there is a zest which will not be given by ordinary police duty, and the work of maintaining the morale of our troops will be even greater under the conditions which will now prevail. Support the United War Relief Work, campaign for which is under way this week.

FARMS FOR SOLDIERS

California's land commission, which is responsible for the movement which established the state land colony in Butte County, has started something toward which the forces at Washington are looking with an idea of encouragement of a similar movement under federal management as an aid to returning soldiers. For some months experts of the department of agriculture and the reclamation service have discussed colonization schemes.

After the Civil War every returned soldier was given a free farm under the homesteading act, and while that movement resulted in some abuse in the form of land speculation, in the main it resulted in the development of vast acreage, larger production of food and a home and occupation for the soldier.

EUROPE MUST HAVE MEAT

With the ending of the great world tragedy comes a call for food from stricken Europe that discloses a condition bordering on famine in the countries that once formed the Central Powers.

Herbert Hoover has just issued a statement to the effect that during the coming year Europe will require 20,000,000 tons of food stuffs.

Details of the demand are not furnished, but it goes without saying that included in the total will be a vast amount of meat and meat products, milk and milk products. The live stock industry of this country will be called upon to furnish these supplies. And the producers should lose no time in preparing to meet the demand. Every class of live stock will be drawn on—and to imagine that the demand will end in 1919 is an assumption for which no basis can be found.

With the way ahead marked so clearly every producer should order his operations with confidence and determination.

It is not expected that these food supplies will be delivered on a basis that is not profitable, but the amount of profit will depend very largely upon economy of production. Production can be definitely cheapened by the more general use of pure bred sires.

GREATEST LIVE STOCK NEED

The biggest problem that confronts the live stock producers of this state is the marketing problem. It has been admitted for a number of years that our Coast markets were not developing as fast as our live stock industry—as a matter of fact, it is generally thought that our markets have held back the logical development of the industry in this state.

The whole business of live stock production is predicated on a fair market and with the certain knowledge that our markets are not all that they should be it would appear that now is a very good time to set in motion any and all agencies that promise relief.

Every live stock organization in the state realizes the conditions that exist and all have discussed the question of markets in their various meetings.

Has not the time arrived when some concerted action, backed by these organizations, should be taken?

Why not a combined meeting of all the organizations for the purpose of discussing this question of markets? The cattlemen are organized, so are the hog producers and the sheep men, but it will require the combined force of all to bring about any change in our present system.

There is no limit to what can be accomplished by clear sighted, keen minded men organized for a common purpose.

AGE OF ACCOUNTABILITY

Some folks require a long time to reach the age of accountability. At least it seems so from some transactions recorded in the newspapers—even sometimes in the county recorder's office. Often all that such people need is a jolt, then they become wiser.

Once upon a time A. Layma went to A. Wise One and said, "I have opportunity to buy stock in a copper company. Valuable lands have been secured and capital is needed to develop the property—and pay the salary of the promoter. The promoter assures me I will secure 100 per cent per annum on my stock 'just as soon as the property can be developed.' Now my money is drawing only 4¼ on Liberty Bonds and 7 per cent on mortgages, which is not sufficient for a living, while 100 per cent from 'high producing' copper property will be attractive. Now, shall I sell my Liberty Bonds and invest in 'copper'?"

A. Wise One looked even wiser than usual and said, "Before advising you to change your gold for copper permit me to ask—How old are you?"

Now, unfortunately Mr. Layman's hair was streaked with gray, excepting a saucer shaped spot which was not, so he did not wish to confess the burden of his years to the wise one, who would say no more. So with his right hand he slowly rubbed the saucer shaped spot and sat a long long time—

Thinking.

RECONSTRUCTION

Great as were the problems of war, the world is now confronted by greater in the reconstruction and building for peace. The first question of all is production, conservation and distribution of food. The world is hungry, and the first request sent out by humbled Germany was: "Send us food; we are starving." America's production in part, but to a greater extent, her conservation, directly resulted in saving our Allies and victory. With little question before our vessels return many of the American boys they will be used to distribute food. This at first must almost entirely come from America, but with the Dardanelles open, and with ships released to go to Australia, there will ultimately be food brought from southern Russia, from India and from Australia. After food, it is probable the most important question will be that of finance. Civilization has never been confronted by such a financial situation. The gross debts of the world exceed $200,000,000,000. Food and material property to the value of almost another $200,000,000,000 has been destroyed. Ten millions of men have gone to a premature death. The interest on the war debt alone will amount to more than the administration costs of all the governments of the world before the war. Other millions of men who for the past two or four years have been engaged in the business of destruction are now to come back and take up the work, with the rest of the world, of reconstruction.

If the forces of food producers and distributors can act swiftly enough to keep hunger away it is probable that anarchy may be stood off and reconstructive methods proceed rapidly, but if sickness and hunger prevail to a great extent the world over our problems will increase. Civilization cannot live under hunger conditions. As quickly as possible cantonments of America should release their men that the help needed by food producers may be secured.

This Week's War Notes

A Shout!

The War is Finished!

The Shout soon became a Roar of human voices, bells, whistles, guns and everything which would make noise.

Officially hostilities ceased at the eleventh hour of the eleventh day of the eleventh month, Paris time.

Difference in time gave the Pacific Coast advantage of many hours, and soon after One A. M., November 11, the din of joyous celebration began and continued for 24 hours.

The failure of the last German loan, the hunger of the German people, the rumble of approaching rebellion, convinced even the militarists of Germany that the end had come. Delegates were sent to Marshal Foch; the terms of the armistice, amounting virtually to unconditional surrender, were given to them and sent to the military authorities at German great headquarters; Foch gave a time limit of 72 hours; instructions to the delegates were received in that time; terms of the armistice were agreed to by the delegates; and the first step toward world peace was taken November 11, 1918. The Allies gave the parting salute with the firing of practically every gun on the line from the North Sea to Switzerland as the hour of 11 approached.

Germany is hungry and has made appeal through Foreign Secretary Solf to President Wilson to intervene and mitigate the conditions of the armistice so as to admit food to the German people who are starving. Emperor William signed a letter of abdication Saturday morning at German great headquarters. A few minutes later Crown Prince Frederick William likewise signed. The kings of Bavaria, Saxony and other lesser kingdoms have likewise abdicated. The former kaiser has escaped to Holland and is interned. He has been indicted in England for murder of innocents, and it is possible England may take steps to secure his extradition.

The total strength of the American army when hostilities ceased was 3,764,677 men. There were already in France, Italy and Russia, 2,200,000.

The spontaneous celebration started by the signing of terms of armistice and which was observed the world over has given suggestion that November 11 be made a holiday the world over.

Under date of November 12 a dispatch from Paris says: "The death of the crown prince is confirmed by The Hague correspondent of the German news agency at Munich, according to advices to the Matin."

Charles, Emperor of Austria, has abdicated, according to Copenhagen dispatch of Tuesday, and a general strike has been declared in Vienna. Internal conditions in Austria-Hungary are most unsettled. She has returned more than a million Italian prisoners to their own country.

Latest reports from Germany indicate great shortage of food. In fact, the people are almost on the verge of starvation. Final draft of armistice terms as amended by Marshal Foch are even more exacting than those first published. Foreign Secretary Solf has also made appeal for as swift arrangement for final peace terms as can possibly be made.

Schwab, director general of the Emergency Fleet Corporation, announces that the ship building program will be continued as an aid in tiding over the labor situation in the earlier reconstruction days. Pending developments in the situation the President directs that all general and voluntary special calls now outstanding for the induction and mobilization of all registrants be cancelled.

The foundation of a new German republic has been proclaimed by Phillip Scheideman from the steps of the Reichstag building. Frederick Ebert has been appointed temporary chancellor. The entire German northern fleet and the island of Helgoland are in the hands of Socialists, and Berlin and many of the principal centers of Germany are entirely in sympathy with the republican movement.

Why Not The Satsuma Orange in California?

By Robert W. Hodgson

THE Satsuma or Unshui orange has recently been brought into the foreground through the announcement that several distinct strains have been isolated within the variety, some being comparatively worthless, while several are high yielding and excellent in quality. This orange was introduced into California from Japan, where it is one of the principal varieties grown, about 1876, probably by Thos. A. Garey. Among the oldest trees of this variety in the state is one planted by Mr. Garey on the old Garey place above Duarte, now owned by W. A. Spinks of avocado fame.

The Satsuma orange grows astonishly well in California and bears large quantities of fruit of excellent quality, which comes on early in the fall and always commands good prices. At present it cannot be said to be grown commercially in this state, being represented largely by occasional specimens in gardens and nursery collections. Why, in the face of all these desirable features, has this variety not been more extensively planted? The writer has never been able to answer this question to his own satisfaction. Apparently it has been due somewhat to a lack of knowledge on the part of growers as to the many desirable qualities of this orange as well as to the fact that successful orange growing in California started in a part of the state where better known and more desirable varieties proved entirely satisfactory.

With the great extension in planting, which followed the demonstration that orange growing in California was successful, however, there came the establishment of orchards closer and closer to the frost line until many hundreds of acres were planted in sections where satisfactory crops could be expected only four years out of five on account of climatic conditions, including both summer heat and winter frost. To remedy the frost factor orchard heating was instituted and efforts to alleviate summer heat are still under way, the most promising at present being the summer cover crop. Nevertheless, the fact remains that there is a considerable acreage in oranges at th present time, particularly in the navel variety, which produces little or no profit because of high costs of orchard heating and small crops set on account of high summer temperatures. This acreage would undoubtedly be much more profitable if planted to a more hardy variety provided it were suitable in other respects. Such a variety has been found in the Satsuma or Unshui orange, which is much better adapted to the extremes in climatic conditions prevailing in these sections.

In addition, there is a vast acreage in California below the foothill thermal belts and extending out on the valley floors where it is recognized that climatic conditions are too severe for either the Valencia or navel orange. A great part of this acreage is admirably adapted to the production of the Satsuma orange; indeed, much more so than portions of Texas, Louisiana and Alabama where this orange is now grown to a large extent.

The writer has been familiar with a planting of 86 trees of Satsuma oranges owned by William MacNamee of Thermalito, in Butte County, for a number of years. There has never been a crop failure and Mr. McNamee considers the trees extremely profitable, having netted better than ten dollars per tree for several seasons past. An interesting fact is that in the fall of 1912, the season of the big freeze, he received an excellent crop and the trees went through the freeze without suffering any injury whatever, although the thermometer reached 16 degrees and practically everything else in the shape of citrus was badly damaged. Mr. MacNamee's trees are on the deciduous stock, Citrus trifoliata, and have made an excellent growth as shown in the picture. They are remarkably thrifty and heavy yielders, the fruit being harvested in October and November when it is perfectly sweet although the rind is still only pale yellow.

The Satsuma orange is seedless and thornless and ordinarily considered a dwarf tree. The fruit is small and flat, and possesses, in common with other members of the Mandarin group, the very desirable feature of the "kid glove" oranges that the skin is loose and easily separated from the flesh and the segments easily pulled apart without crushing. The flesh is deep orange color with a very sweet pleasing aromatic flavor.

The Satsuma in the Gulf Coast States

As mentioned above, the Satsuma orange is now grown to a large extent in the Gulf Coast states, there being approximately 12,000 acres planted in Mobile and Baldwin Counties, the two most important orange growing counties of Alabama. The industry is of very recent development, the first grove having been set out in 1898. Commercial planting did not begin until 1910. As is always the case with a new industry, many mistakes were made, and it is now estimated that at least 30 per cent of the plantings will never reach the profitable stage on account of poor care and unsuitable location. Although the Satsuma orange on the trifoliate root will endure more cold than any other variety of edible citrus fruit, excepting perhaps some of the Webber-Swingle hybrids, great care is necessary in the selection of planting sites in the gulf coast states. The thermometer occasionally gets down to 15 degrees and unless good air drainage is present the trees are apt to be severely damaged, especially if the low temperature prevails for any length of time. One of the commonest mistakes made was in locating orchards too near small bodies of water where cold air is readily formed and where the natural topography does not favor its dissipation.

The young industry has suffered several severe setbacks which have discouraged many growers. On July 5, 1916, a very severe storm was experienced which practically defoliated the trees and also reduced the crop to a minimum. The trees immediately responded by new growth and as a consequence were in no condition to stand the very severe freeze which occurred in February, 1917. As a consequence many trees were killed outright and many others severely damaged. In September, 1917, another severe windstorm was experienced and again the crop was reduced from 50 to 75 per cent. These setbacks, however, will undoubtedly prove blessings in disguise in preventing and correcting errors made in the earlier plantings.

Nevertheless, although the Satsuma industry is considered a success in Louisiana, Alabama, Mississippi and Texas, the fact remains that the gulf coast states are subject to several drawbacks to the growing of Satsuma oranges which are not present in California. Winter temperatures are on the average more severe. Violent windstorms of the hurricane type are apt to be experienced during the summer months, causing the loss of the greater part of the crop. In no part of the California citrus section does this condition prevail. Again, although the Satsuma orange matures early and shipping begins late in October, it is a rare occurrence for the season to be finished without losses being sustained from early frosts. This condition does not exist in large areas in California where this orange could be profitably grown. And last, but not least, we have been growing oranges for years and should have the benefit of all the experience accumulated in the past in the way of cultural operations. Moreover, in the Exchange we have already organized the most competent fruit selling agency in the world.

The Satsuma is no longer a novelty on the market. During the last five years it has been introduced into the principal marketing centers of the East and West, and wherever introduced has met with favor and has stood well the test of competition with other varieties. It would almost seem that California orange growers, especially in the interior valleys, are "overlooking a bet" in not trying out the Satsuma orange more extensively.

LIBERTY FAIR BECOMES VICTORY FAIR

A sober agricultural fair planned as a war aid but which was deferred because of flu quarantine is now to become a victory, peace aid event.

The great Victory Celebration at Liberty Fair, Exposition Park, Los Angeles begins Thursday morning November 21 with a great military opening event, Army, Navy, Air Service all will unite.

Nine days harness and saddle events.

Thangsgiving football and Thanksgiving features.

Two days horse show, and great society events.

Pageants, fire works and other night events every evening.

Great educational exhibit of agriculture, war and other departments of federal government all the time.

In live stock, Friday morning, November 22, will be devoted to weighing in stock. Saturday, 1:30 p. m., live stock parade.

Monday morning, November 25, judging of Shorthorns will begin and continue with various classes till completed.

It will be a great fair of tractors, implements, products, fine arts, home economics, education—everything.

Terms of the Armistice

GERMANY makes unconditional surrender or rather a surrender which has so many conditions that she will be helpless to do other than she is directed to do by the Allies.

The President proclaims: "The armistice was signed Monday morning. Everything for which America fought has been accomplished. It will now be our fortunate duty to assist, by example, by sober friendly counsel and by material aid, in the establishment of just democracy throughout the world."

The Terms in Outline:

Military clauses on western front:

(1) Cessation of operations by land and in the air six hours after the signature of the armistice.

(2) Immediate evacuation of invaded countries, Belgium, France, Alsace-Lorraine, Luxemburg, so ordered.

(3) Repatriation of civilian hostages and prisoners of war of the Allies. German prisoners not released.

(4) Surrender in good condition 5000 guns (2500 heavy, 2500 field,) 30,000 machine guns, 3000 minenwerfer, 2000 airplanes (fighters, bombers —firstly, D73's and night bombing machines.)

(5) Evacuation by the German armies of the countries on the left bank of the Rhine. A neutral zone shall be reserved on the right of the Rhine.

People in countries to be evacuated to be unmolested. Five thousand locomotives, 150,000 railway cars and 10,000 motor lorries in good working order, with all necessary spare parts and fittings, shall be delivered to the associated powers.

The German command shall reveal all mines or delay-acting fuses, and shall assist in their destruction, also all destructive measures that may have been taken (such as poisoning or polluting of springs, wells, etc.,) under penalty of reprisals. Requisition shall be exercised by the Allies and the United States armies in all occupied territory. The upkeep of the troops of occupation in the Rhineland (excluding Alsace-Lorraine) shall be charged to the German government. Repatriation without reciprocity, of all Allied and United States prisoners of war. Sick and wounded who cannot be removed from evacuated territory will be cared for by German personnel.

All German troops at present in any territory which before the war belonged to Russia, Rumania or Turkey shall withdraw within the frontiers of Germany as they existed on August 1, 1914.

Evacuation by German troops to begin at once.

Abandonment of the treaties of Bucharest and Brest-Litovsk.

The Allies shall have free access to the territories evacuated by the Germans on their eastern frontier.

Unconditional capitulation of German forces in East Africa, afterwards changed to evacuation.

Reparation for damage done.

Surrender of all submarines, both cruisers and mine layers and surrender to neutral governments of disarmed battle cruisers, battleships, practically all war vessels.

Freedom of the Baltic. Allies empowered to occupy forts and fortifications.

Allied blockade continues. Black Sea ports evacuated. Russian vessels delivered to Allies. Neutral and Allied merchant vessels which have been seized to be released.

Germany to notify neutral governments that restrictions placed on the trading of their vessels with Allies are cancelled. No transfers of German merchant vessels to neutral flags.

Duration of armistice 30 days.

Agricultural News Notes of the Pacific Coast

Northern California

There are 28,906 acres of tomatoes grown in this state.

Chico cotton fields are estimated to average around a bale per acre.

California has shipped nearly 27,000 cars of fresh deciduous fruits.

The total number of influenza cases in San Francisco is now nearly 25,000.

The Shasta County farm bureau has a permanent home demonstrator.

Eldorado County produced this year 11,622 bushels of wheat, 21,586 bushels of oats.

The San Francisco weather bureau reports temperature for October as far above normal.

The first car of oranges out of Oroville, Butte County, went forward November 6.

Much plowing has been done in all sections of the Sacramento Valley, and grain seeding is progressing.

Corning estimates now that its prune crop damage will not exceed ten per cent.

Olive growers of Butte County are insisting on not harvesting fruit until at least 75 per cent of the surface of each fruit has reddish color.

Millers claim they can secure barley flour from Eastern manufacturers and ship to California cheaper than they can grind California barley.

San Francisco wholesale butter prices hold around 60 cents while eggs are 88½ cents as against 58½ cents last year same date.

Time for filing applications on land in the second state land colony south of Chico has been extended to November 20. Write George Kreutzer, Durham, Butte County, for information.

The state horticultural commission has given warning to pear growers that serious infestation of pear thrips may confront the pear growers next spring.

The University of California is conducting its tractor school this week with approximately 200 students attending. There are 14 tractors aiding in the school work.

The farm bureau of Eldorado County is financing a lime project which will aid in the production of lime for its members to use for agricultural purposes.

The Sutter County farm adviser with pupils from the manual training school at Sutter City has erected the first silo in that county of the farm bureau type.

Fruit shippers are concerned over the new track charge regulations which provide that ten dollars a day shall be paid after 48 hours free time for unloaded cars.

Ranch eggs extras have already reached 99 cents wholesale store prices, and it is predicted that before Thanksgiving $1.15 will be the regular retail.

Heavy storms in some of the rice districts caught grain not yet ripened and caused serious damage, in some cases as high as 50 per cent. Some rice late planted refuses to mature because of the cooler weather.

Answering the request of the state council of defense to place guards at each large warehouse containing food products the board of supervisors of Butte County estimates it will cost the county $4000 a month and suggests that the state bear the expense.

Central California

Harvesting of rice has begun in the rice fields of Wasco, Kern County.

Late shipped Emperor grapes have gone to market in poor condition.

Central California orange groves are suffering from shortage of labor in harvesting the early crop.

Kern County farm bureau's last fat hog sale netted producers around $16, one bunch going at $17.

The Madera creamery has been sold to the local dairymen's association.

The state highway from Tipton to Tulare has been completed and is now opened.

Lindsay, Tulare County, reports some of its fruit testing 11.7 solids to one acid.

Terra Bella cannery has shipped several cars of canned tomatoes to Eastern markets.

Hanford's fat hog auction resulted in $14.75 to $14.95 prices on exceptionally fine stock.

California's production of tomatoes during the past year has exceeded $10,000,000 in value.

The last of the table grapes have been shipped from practically all table grape sections.

Tulare County's orange shipping which began late in October shows increase daily. All fruit must test up to 8-1 standard.

Springvale, Tulare County, reports exceptionally heavy olive crop which has sold at the longest prices ever secured in that section.

Dunlap, Fresno County, recently suffered severely from forest fires which were brought under control by rangers and near-by farmers.

Claus, Stanislaus County, reports rice harvest under way, and where sufficient water was had the yield was very heavy.

Dairymen of the San Joaquin Valley are pleased at the recent shading of prices of alfalfa hay, in some cases a $4.00 lowering in quotation being made.

One Terra Bella, Tulare County, castor bean grower produced 15 bushels per acre and maintains that he can make a profitable crop.

Olive growers of Tulare County are testing out a new olive picker which is reported to save more than half the harvesting labor.

The Kings County farm bureau auction sale held recently at Corcoran resulted in only $14.90-$15.40 per hundred prices. This was somewhat lower than former markets.

A rodent expert of the department of agriculture is directing the work of rodent control in Tulare County He is working in conjunction with Commissioner Collins.

Geo. P. Weldon, deputy state horticultural commissioner, is aiding in the standardization work in the Monterey and Santa Cruz County apple orchards.

The annual farm bureau picnic of Santa Cruz County will be held at Capitola Saturday this week. It will be an all day basket lunch proposition.

Apple picking houses at Watsonville, Santa Cruz County, continued packing through the influenza scare, notwithstanding serious inroads were made in the working force.

Southern California

Ventura County has sold some walnuts at the rate of $600 per ton.

National Orange Show dates, February 18-23.

The Chula Vista Citrus Association held its annual meeting in the packing house November 4.

California has shipped about 12,000 tons of honey valued at about $2,500,000.

Riverside orange growers are planning for liberal use of women's land army helpers in the orange harvest.

The Southern California Fair Association at Riverside has approximately $3000 cash left after the expense of its recent fair.

Southern California's bean crop 1918 will bring greater return of money to the state than its orange crop.

Imperial County is discussing matter of highway from that section by way of Warner's Springs in San Diego County.

Bean threshing is practically completed, and no serious damage has been done to Lima bean sections by the light rains.

The first car of walnuts shipped by the Hemet Walnut Growers' Association netted over $7000. Another car is loading which will net $12,300.

Chino and San Fernando Valleys are contemplating larger plantings of sugar beets. Prices were so low last year that these two sections planted practically none.

The big wine grape vineyards east of Ontario, San Bernardino County, are planning to save their vineyards and make the products into grape syrup.

The bean market is still somewhat on the down grade, some predicting that it may reach the ten cent price. Recent sales have been made at 12 cents.

One Bloomington, San Bernardino County, orange grower netted ten cents per pound for Valencia oranges as they came from the tree. This only from one exceptionally favorable shipment.

One bean thresher near Oxnard, Ventura County, has made money for its owner and bean growers by threshing over old straw, the beans from which were threshed under unfavorable circumstances, and good results were secured in rethreshing this straw. One particular setting netted $1.00 per minute.

Ventura County Lima bean growers are endeavoring to perfect a movement looking toward stabilizing bean prices. A contract is issued pledging all signers not to take a price lower than 40 cents less than the quoted f. o. b. Coast price of the California Lima Bean Growers' Association, the contracts to be conditioned on 100,000 bags being signed.

The American Beet Sugar Company with plants at Oxnard and Chino is offering a contract to growers. If sugar is sold by the factory at 4½ cents net, the grower will receive $4.20 a ton for beets of 12 per cent sugar content, or $7.00 a ton for beets containing 20 per cent sugar, which is an ordinarily high grade beet. With sugar selling at 10 cents, the grower will get $10.66 a ton for 12 per cent beets and $19.55 a ton for 22 per cent beets.

The Coast and General

The season's first cargo of Almeria grapes sold in New York on October 28 for prices around $10 per barrel.

The Catskanine fish hatchery has received over 16,000 Chinook salmon eggs.

The California state insectary has shipped ladybirds (Delphastus catalinae) to Florida.

Wenatchee, Washington, has shipped over 3000 cars of apples and is now shipping over 100 cars daily.

Chicago price on potatoes is shading. Good sack stock is running around $1.60 to $1.90.

The National Farm Exposition and State of Ohio Apple Show will be held at Toledo, Ohio, December 6-14.

Wheat stocks on hand this date compared to a year ago same date show nearly three times greater this year.

The Yuma Valley of Arizona produced over 300 acres of peanuts this year.

The Walla Walla County agent has 85 pounds of lady bugs in storage ready for release next spring in aphis infested truck farms.

Owing to labor and storage shortage Seattle is finding difficulty in disposal of immense holdings of winter apples.

The state of Wisconsin is offering $1000 in cash awards for cheese to be exhibited at the Milwaukee Cheese Convention, January 8-10.

The Farmers' National Congress and National Farm Women's Congress will meet in Jacksonville, Florida, December 3-6.

Eastern Washington orchardists are complaining because of ravages of codling moth; the amount of fancy fruit is running very low.

Texas turkey growers are figuring on disposing of their stock around 20 cents though many are holding for higher offers.

The Yakima Valley, Washington, has had all of its dairy cattle tuberculin tested, finding only 14 reactors in 1400 head of stock. One per cent is better than the average.

Schools of Hood River, Oregon, closed to aid in the apple harvest, and in the three weeks they were closed the various pupils earned something over $18,000.

Apple growers of the Yakima Valley are appealing to the government to give aid or at least to investigate the ravages of the apple worm in that section.

A war emergency and reconstruction conference under the auspices of the Chamber of Commerce of the United States will be held in Atlantic City, December 4-5.

Ohio state agricultural college extension service is providing outline and suggestions for a Thanksgiving or harvest festival in the schools of Ohio.

Prof. Newell of the Florida experiment station staff is to come to California and study California fruit growing conditions and especially law enforcement.

Prune growers of Oregon and Washington who depend entirely on artificial heat have taken advantage of California's loss from the storms. The Northwest's output this year is estimated to be around 40,000,000 pounds.

Onion Production In California

By R. G. Risser, Department of Agriculture

THE production and consumption of the onion in California is continuous. There is not a month in the year in which the crop is not growing in one or more of the important districts, nor a month in the year when the product is not being marketed in the cities which are supplied from this state. Harvesting of the commercial plantings of the early, intermediate and late crops alone covers approximately half of the year. From the time the first Bermuda onions are pulled in the Coachella and Imperial Valleys until the last of the late crop of the San Joaquin Delta has been sacked more than six months have elapsed. The period of heaviest shipments covers the months from May to November inclusive.

One-third of a Yard of White Onions

Localization

While the largest areas of onions are concentrated in a few well defined districts, the crop is grown quite widely in the state, 20 counties producing sufficient for straight car shipments. Carlots originate as far south as the Mexican border and as far north as Lassen County. The crop is grown both on the Coast and in the interior valleys. It is grown extensively on the desert soils, on the peaty soils, and on the sediment soils. The most important districts for the Bermuda type are Riverside and Imperial Counties; for the intermediate crop or early reds and yellows, San Joaquin, Yolo and Sacramento Counties; and for the late crop or main planting, San Joaquin, Contra Costa and several other counties of less importance.

Utilization

The onion as grown in California is used for local consumption, distant shipment, storage, evaporation and seed production. The quantity used in the manufacture of pickles and catsup is small, but the amount used by the army cantonments is more important. The volume dehydrated or evaporated depends largely upon government contracts. The supplies of bulbs required by seedmen for planting are a considerable part of the crop, aggregating over a thousand cars when a large area of seed is grown. The quantity used for this purpose depends upon the prospective demand for seed as viewed by contracting seedmen, the seedmen's ability to let contracts with growers at acceptable terms, and the price of onion bulbs prior to planting.

Growing Conditions

In common with other Western districts and in contrast with districts in the Eastern and Central states, the yields of onions in nearly all sections of California in 1918 were extremely light due largely to thrip injury which stunted the growth of the bulbs. Entomologists explain the severe thrip damage in the Western states and the big yield farther East by saying that the winter of 1917-18 was unusually mild in the far West and unusually severe in the East, which had much to do with the prevalence of thrips on the Pacific Coast and in the Rocky Mountain districts, and the exceptionally good growing conditions in the large Eastern districts.

Quality

Aside from small sizes which have been conspicuous in early, intermediate, and late crops this year, the quality of the late crop was seriously impaired by the general development of black mold. The keeping quality of the product has been ruined by the development of this fungus, which is often called smut, but differs widely from true onion smut. Rains during the harvest period are chiefly responsible for the unusually severe infection of this disease.

Acreage

The area harvested in 1917 and 1918 is as follows:

Bermuda Type: Early onions of Southern California, 1250, 1412.

Intermediate Type: Early Reds and Yellows of Central California, 1500, 1300.

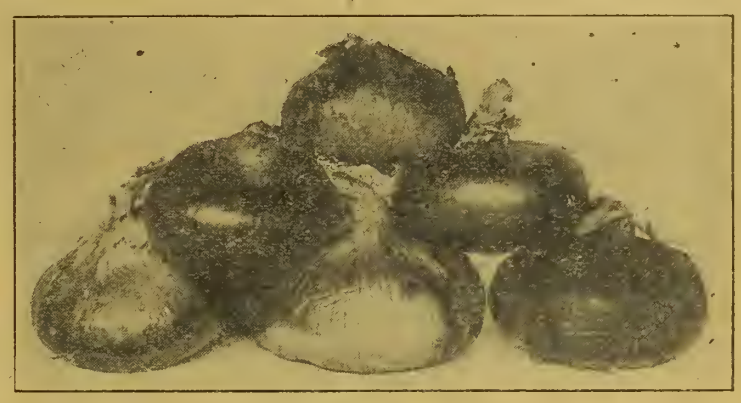
Late Type: Main crop Central California, 8700*, 9400*.

Total of three types, 11,750, 1°,112.

* Includes acreage of bulbs under contract to seedmen.

Varieties

The standard varieties of the Coachella Valley of Riverside County and also the Imperial Valley are yellow Bermudas and Crystal Wax, the standard varieties of the intermediate crops are strains developed locally, known as early reds and yellows, and the most popular late sorts are Australian Browns and White Globes. The so-called "Buckskin" which gets its name on account of its remarkably tough skin has attracted much attention in the past two or three years. It is more closely related to the Australian Brown grown in Australia than is the ordinary Australian Brown as grown for many years in this country and generally known on American markets.



Typical Australian Onions

United War Work Campaign

By W. M. Jardine

THOUSANDS of American farm boys are already in the front line trenches. Other thousands are in the training camps or on the farms awaiting their call. American agriculture has contributed its share of the man power that is to win the fight for the world's liberty. The farm boys in the service bave written home of the friendly workers of the Y. or the K. of C. perhaps, that they find on every hand, and of the huts that remind them of home with their various comforts, writing materials, musical instruments, a place to play games at night, to attend church services, or join classes in French.

Despite the ever pressing farm work, parents have taken time from the farms to visit their sons in the camps. There they have found the Hostess House where they may meet and visit with their boys in homelike surroundings. In the neighboring cities they have found agencies ready to aid them in securing suitable lodgings, and information bureaus that make confusion impossible even to the most inexperienced travelers. Farm folk know that when their boys leave for the training camp and the front, the influences that made life comfortable, safe and happy for them go with them every step of the way.

This work of safeguarding the boy physically, mentally, morally and spiritually, is under the direction of seven great affiliated, cooperating agencies that operate under an executive order of President Wilson. They are the Young Men's Christian Association, Young Women's Christian Association, National Catholic War Council, Jewish Welfare Board, War Camp Community Service, American Library Association and the Salvation Army. The budget of each is scrutinized and passed upon by the war department; and their work is governed by a war council of nationally known men and women.

In France the soldiers are not gathered into great cantonments as they are in America. They are spread over hundreds of muddy, chilly little towns. There is no store in this town, no theater, no library, no place to write a letter or be warm or dry—until the hut comes. With it comes books and writing paper, baseballs, bats and gloves, chocolate and tobacco, motion pictures, lectures and theatrical entertainments. Home comes with the hut, bringing all the love and care and cheer of the folks who have stayed behind. When the troops move, as they are doing constantly, the hut moves with them.

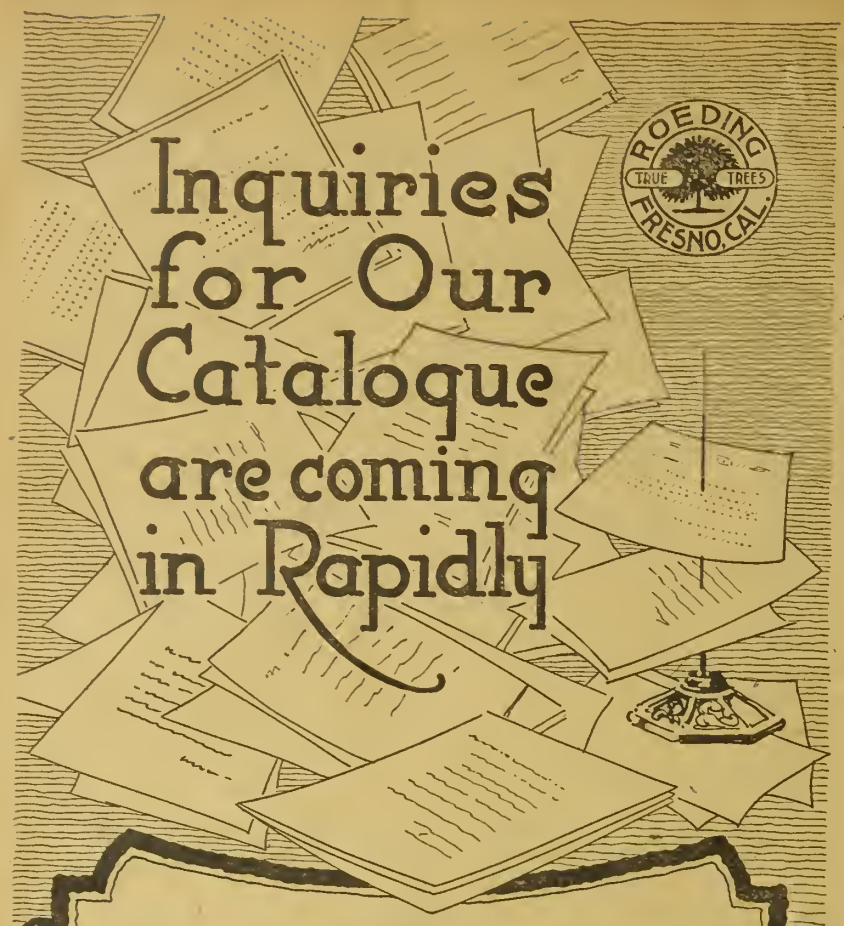
All this work of carrying the influences and comforts of home with the boys costs millions of dollars. Every dollar spent for the work is from voluntary contribution. The funds are exhausted now. They must be replenished. The amount necessary to carry the work forward is $170,500,000. To secure this sum the different agencies have consolidated at the request of President Wilson, in the United War Work Campaign. From November 11 to 18 the American people will have an opportunity to contribute to this fund.

In the different Liberty Loan drives, the Red Cross, the Y. M. C. A. and other campaigns, the farmers of America have demonstrated their loyalty, their staunch patriotism, and their financial strength. The United War Work Campaign is a direct appeal from the farm boys in the training camps and trenches to the farm folks at home. The comforts afforded the boys by the secretaries and the huts is the best proof we can give them that we are backing them to the limit. I am confident that the farmers of America will come forward with funds not only to take care of their own boys, but hundreds of thousands of dollars besides to aid in the general relief measures of the United War Workers.

The greatest sum to be collected in voluntary contributions at any time in the history of mankind is that to be raised in connection with the United War Work Campaign, November 11 to 18. This campaign is to obtain a fund of at least $170,500,000, to be divided on a satisfactory basis among the seven organizations recognized by the war department for serving the American soldiers and sailors at home and overseas. These seven agencies have been requested by President Wilson to unite in one campaign, rather than to have seven successive separate drives in the late autumn and early winter. The president felt that this arrangement would be a great saving in time and energy, and that it would be welcomed by the American people, not only for this reason, but also as affording an additional evidence of the patriotic duty of the entire nation.

To insure such a vast sum as $170,500,000 requires that every loyal American man, woman and child cooperate. Owing to the constant growth of the American army and navy, it is most desirable that there be a large over-subscription. This will not be accomplished without the most liberal giving on the part of the people everywhere.

No section of America has manifested a larger patriotic interest in this war than the rural population.



"A Real Help To Fruit Growers"

Our fine big illustrated catalogue is a practical planter's guide—useful to both beginners and experts, tells what to plant and how to make fruit growing more successful.

Lists and describes hundreds of tried varieties of deciduous citrus and ornamental trees, vines and roses. Gives information that you should know before planting.

Eradicating Citrus Canker

By Karl F. Kellerman, Associate Chief, Bureau of Plant Industry, U. S D. A.

FOR a little more than two years the federal government and the Gulf States have been engaged in a joint campaign for the purpose of eradicating from the United States the disease of citrus fruit and trees called citrus canker.

This undertaking is unique in character in that it is the first instance of the use of federal funds appropriated specifically for the eradication of a plant disease. It is of overwhelming importance to the citrus industry because citrus canker has been recognized as the most contagious of all known plant diseases and the most destructive to commercial values.

Citrus canker is probably a native of Korea or China from where it was introduced into Japan.

In 1913 and 1914 efforts were made by the state inspectors to check the spread by complete defoliation and applications of strong Bordeaux. These treatments were ineffectual. The plan of spraying infected trees with oil and burning was then originated. This was first done by private subscription. Later the secretary of agriculture recognizing the fact that a severe epidemic menaced the citrus industry, promulgated a quarantine and appealed to congress for aid. The federal horticultural board cooperating with officials of the Gulf States made a rapid inspection. The disease was studied in laboratories of the United States department of agriculture and the state experiment stations.

If a tree is found to be infected with citrus canker the wisest course to pursue is to burn it at once. This method of eradication is used throughout the affected region of the South.

Inspectors wear overalls which completely cover their regular clothes. These are disinfected in a 1 to 1000 solution of bichloride of mercury before entering and after leaving citrus property where the disease occurs. Shoes, hands and face are also disinfected.

Cost of conducting work of this character is very heavy, but, in view of the magnitude of the industry involved, the total sums expended to the present time represent but a small fraction of one per cent of the capitalized values that are threatened, and the continuation of the work appears to be both essential and well justified.

There remains always the hope that some less drastic method of combating citrus canker may be discovered.

A New American Industry

Written for California Cultivator By F. H. Mason

SINCE the commencement of the War, which brought with it the isolation of the German supply, the United States has been rapidly building up a potash industry. Besides being the base of a large number of industrial chemicals, potash is one of the prime essentials of plant life, and therefore one of the necessary ingredients of all well balanced fertilizers. Soon after the commencement of the war, some of the German professors boasted that, if in no other way, Germany could bring her enemies to their knees by cutting off the only known extensive source of potash in the world, that of Strassfurt, and thereby so depleting their agricultural output that they would be unable to provide the necessary food for their people.

American ingenuity, however, has again proved too much for Germany, and it is beginning to look as though when the war is over we shall be independent of the German supply. What makes the achievement the more palmary is that this new industry has been evolved, not by the finding of any fresh big supply of potash in the United States, but by conserving small known sources of the material that, prior to the war, had been considered to be too trifling to be worthy of consideration.

The output of potash and potash material produced and marketed in the United States in 1917 was 126,577 tons, containing 32,366 tons of potash. This is an increase of more than 300 per cent over the 1916 output. Of this total, 63.9 per cent of potash — not potash material—was produced from natural brines, 11 per cent from kelp, 8.8 per cent from molasses residues from distilleries, 7.4 per cent from alunite, 5 per cent from cement fume, and 3.9 from other sources. In all there were 82 producers, but 36 of these operated on wood ashes, which contributed only 1.3 per cent toward the total. Only eight cement works of all those operating in the United States saved their potash, but many more either have installed or are installing plants to arrest the fume, so that in 1918 the potash from this source will be considerably increased. There were ten producers of potash from natural brines, but one of the largest deposits in the country, that at Searles Lake, San Bernardino County, California, was unavailable on account of litigation. This litigation has since been settled, and potash is now being obtained from Searles Lake, so the production from natural brines will be considerably increased this year. There is every reason to hope, then, that the output in 1918 will show as great an increase as did that of last year.

Killing Morning Glory

The ever recurring question as to killing out or controlling the morning glory pest is usually answered in the Cultivator by recommending the thorough use of a cultivator, or better still a weed cutter which is presumably the most satisfactory method. However, the questions continue to come as to chemical methods. We do not believe that a satisfactory chemical method has as yet been discovered. Of course there is the spraying with sulphate of iron, covering the ground an inch or two with salt, which of course poisons the ground for at least two years afterwards, spraying with arsenicals, and in fact many other methods. Consistent study has been given to this topic by Prof. G. P. Gray, chemist of the University of California. Prof. Gray has been working in connection with the Santa Cruz County farm bureau, certain members of which have given their lands for experimental purposes. The Farm Bureau Monthly says:

All of the owners agreed to let their morning glory patches grow to maturity from the middle of August until the middle of October. The material used for the control of this pest is an arsenical spray which has a more killing effect on mature plants than on young plants, and which must be sprayed on the plants during a foggy spell. If applied to the morning glory during clear warm weather, only the tops of the plants are killed, but if applied during two or three days of foggy weather it is absorbed by the plant and taken to the roots where decay sets in during the following week or ten days. The cost is around $5.00 per acre.

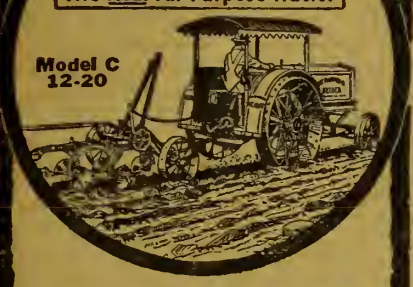
Another remedy, claims for which may perhaps be taken with a grain of salt, is taken from a daily paper:

"The planting of tomato vines will eradicate the morning glory pest that has been menacing the bean crops of Southern California is the information that has been announced from Ojal. This discovery was the result of five years' careful experimentation. We had a theory there is a natural law of antagonism between plants, and that where one is a pest there can be found another that will eradicate it.

"The experiments show that if a tract of land is planted in tomatoes, the morning glory will not grow there.

Heider

The Real All-Purpose Tractor



Less Gears
Cut Upkeep Cost

"I have plowed hundreds of acres with my Heider, pulling three fourteen-inch plow bottoms," says one farmer, "and in one year's time I have had only 40 cents' worth of repairs."

Do you know of any other tractor that can equal this record? This is simply *one* of the many advantages of the Heider special friction drive—backed with 11 years of unbeatable service. Friction transmission means fewer parts—less trouble—less chance for breakage—easy control—7 speeds forward or reverse with one lever. Especially designed manifold burns kerosene or gasoline.

Heider Model D, 9-16 H. P.

Carrying Rock Island No. 9 two bottom plow. Handiest plowing outfit you could own. Your hands operate the tractor while your foot raises or lowers the plows. Automatic power lift. Gets into fence corners easier than you ever could with a team. Sold with or without plow attached.

Write for Tractor catalog.

Use Rock Island Tractor Plows

and get good plowing no matter what tractor you own. With 2, 3 or 4 "CTX" bottoms. "Front furrow wheel lift." Extra bigb clearance.

Rock Island No. 38 One-Man Tractor Disc Harrow

Heavy steel construction especially adapted to tractor work. Close-up levers permit one man to operate tractor and disc. Extremely flexible. Note the unusual clearance. This disc can't get clogged. Two sizes, 8 and 10 feet. Can be used behind *any* tractor.

Heider Tractors and Rock Island Tractor Tools are backed by 63 years' manufacturing experience. Made and sold by

Too many men salt away money in the brine of other people's tears.

There is more power in kindness than there is in dynamite, but it takes longer to develop it.

So if the bean growers will give up sections of their acreage each year to tomatoes they can get rid of the pest and at the same time raise a profitable crop."

THE RAISIN SITUATION

Thousands of tons of raisins are developing fermentation on the trays because of poor drying weather. From observations made upon the rain damaged prunes in Santa Clara County and upon the Thompson Seedless grapes in Sutter County, Prof. W. V. Cruess of the college of agriculture of the University of California recommends that where artificial evaporators are not available the raisins be exposed to the fumes of burning sulphur for three hours to arrest fermentation. This will also hasten drying. Should the sulphured raisins develop fermentation later, the sulphuring should be repeated. This process will save the fruit that has not fermented so badly that it is no longer edible. Where sulphuring houses are not at hand, balloon hoods can be built of light wooden frames covered with roofing paper. Each hood can be made large enough to cover two stacks of trays about four feet high. These can be made in "knock down" form for convenience in storing after the season is over.

Tests are being made in the zymology laboratory at Berkeley to determine the value of the damaged raisins for syrup, alcohol, acetic acid and acetone manufacture.

WOOLLY APHIS

Denver Field and Farm refers to a method of control of woolly aphis which is certainly simple, harmless, and if effective, should lessen them especially in a country where freezing of the ground is possible. But in lieu of the freezing, California may be able to drown the pest. Field and Farm says: "There are two things this insect can not stand, one is freezing and the other is water. Let it be borne in mind that the woolly aphis winters over in the ground. Some of the insects crawl up the bodies of the trees in the summer but none remain above ground during the winter. Where the ground freezes a foot or two deep during the winter as it does in the northern tier of states very few survive and but little harm is ever done by this pest. By chance it has been found that where water stands around any of the trees in irrigating, the woolly aphis disappears."

FIGHT RODENTS TO SAVE FOOD

Systematic and organized campaigns in which the entire community is interested are suggested as means of successfully exterminating injurious rodent pests on the farm by the bureau of biological survey of the United States department of agriculture. There are about 750 forms of rodents inhabiting the United States, and the annual loss which they cause in food and feed crops is estimated at fully $300,000,000. They feed upon crops in the field and in storage, in some cases destroy grass land so completely that erosion follows. In the irrigated sections of the West some species burrow through the dikes, releasing the water and flooding the crops. Methods of exterminating these pests by trapping and poisoning, which the individual farmer as well as the community can employ, are told in Farmers' Bulletin 932, recently published by the United States Department of Agriculture, Washington, D. C. It will be furnished free on request.

PROPORTION OF FOOD FREIGHT TO TOTAL

Considerable light is thrown on food marketing problems by investigations just completed by the food administration which shows that from 10 to 15 per cent of the total railroad freight in this country is food or feeding stuffs.

Such facts lend added weight to the food administration's request asking every one to use home-grown products as much as possible, thus releasing railroad tonnage for speeding up war activities. Use of local food includes especially the perishable products, and implies the liberal canning of fruits and vegetables and the home curing of meat for family consumption.

TEAGUE QUALITY

CITRUS TREES

AWARDED THE GOLD MEDAL AT FOUR INTERNATIONAL EXPOSITIONS.

For Productive values, fine quality of fruit and vigorous growth Teague's bud-selected, (pedigreed) properly trained and carefully handled orange and lemon, pomelo and lime trees are the trees to plant. An experience covering a third of a century warrants the assertion that Teague Quality Citrus Trees possess these qualifications in a superlative degree. All the standard commercial sorts, and garden and ornamental varieties; the largest assortment of citrus trees in America. . . . We invite correspondence from intending planters. . . . Consultations on citrus planting by appointment. 1918 Price list just out; send for a copy.

BLIGHT--The Pear-Growers' Nightmare

Several years since, it was our privilege to first make known to California orchardists the many advantages of the Jap root for pears, with the result that nearly all nurserymen now bud most of their pears on this stock. which is so much more blight-resistant than the French seedling or the quince root.

This season it is our great good fortune to announce one of the most important discoveries ever made in connection with blight control. If you are interested in pears, you must write now for our new booklet, which describes

U-SU-RI-EN-SIS

the new, practically blight-proof, Chinese seedling—incomparably superior to the Jap root—by use of which orchards are going to be made 75 per cent blight proof. Professor Reimer of Oregon, the highest authority on blight-resistance, recently stated that he believed the least resistant variety of this species more blight-resistant than the most resistant of any other known!

The only stock of U-su-ri-en-sis in an American nursery today is our own limited supply, from which we are reserving enough to plant 60 acres of our own orchard in the spring.

Because we do not know when we can again offer Usuriensis (owing to an uncertain seed supply) and because we desire to supply the requirements of as many orchardists as possible, in order to bring about a wide distribution of this most desirable species, we urge intending planters to send TODAY for the booklet, informing us of their probable planting for 1919.

The booklet may be worth thousands of dollars to you, if you intend to plant a large orchard. It's free, of course, but if you will take the trouble to give us the addresses of a few friends who will plant pears we will certainly appreciate it.

In addition to Usuriensis we have our usual fine stock of pears on Jap root, and a moderate quantity of superb apples and other stock.

Care of Sugar Beets

THE following information as to methods of preparing land for sugar beets, seeding and after care is from a circular issued by the Nevada-Utah Sugar Company:

While we advocate deep plowing of land for sugar beets, we do not want too much new soil. What we mean by this is that land having been plowed for some years—say five or six inches deep—we suggest that it be plowed not more than seven or eight inches because the new soil is not fertile and will require three years to do proper work. This new soil is thrown immediately on top in plowing so that the beet or other seed is planted directly in the unfertilized portion of land and therefore the tender plant will not make a proper growth. Land plowed—say two inches—deeper than formerly should be especially well worked so as to well mix the new with the old and better fertilized portions.

After plowing the land some farmers use an ordinary drag-tooth harrow, which smooths the ground until it looks quite even, therefore may be considered ready for seeding. Now the ordinary harrow puts its teeth from two to four inches into the ground. But what about the ground turned over, say from six to eight inches? The surface being smooth and fine does not mean that there are no openings or apertures deeper down. In many instances these apertures are what cause the tardy growth of many plants. Of course cereals root down but a few inches, but sugar beets root deeper until they find an opening not seen from the top, and it is then the plant is retarded and stunted and it at once begins to throw out small fibrous side roots seeking and fighting for life. I am sure you have pulled sugar beets, and other deeper rooted plants, when you have found side by side, the one has made a long and direct growth while its neighbor is much shorter and has, perhaps hundreds of small side roots as they have shot out prompted by nature, seeking for strength and life. The former makes a rapid growth and matures splendid weight while the latter is weakly and puny and not only fails to make the weight desired but is of inferior quality. What we want and must have to insure the best results is deep cultivation of the soil before the seed is planted.

All plants depend on their roots for power to grow and properly mature, and if stunted by reason of having to fight for life, failure is the inevitable result. It is just as necessary to fill the apertures at a depth of eight inches as it is to a depth of two inches. We admit that air is essential to plant life but too much air dries out and consumes the moisture, causes the plant to wilt and spend its energies fighting for existence, whereas proper cultivation of the soil before seeding will obviate this waste of time and tonnage. Land should be fairly well packed or at least well pressed together before any kind of seed is put into the ground. Let me call your attention to the head-lands of your fields. Wherever there is a shortage of moisture the seeds fail to germinate, and there is a poor stand, while at either end of the head-lands, the stand is good. Here is the proof, and so why not make the entire tract firm at least and thereby obtain the results desired? When you think the land fairly well prepared go over it once more. Horse power is cheap and every time you go over the land with a proper implement you increase the tonnage no matter what sort of crop you have planted or will plant, but especially is this true of sugar beets. Beets should not be planted more than about two inches deep, and since it must have some moisture to germinate we can see at once the importance of properly preparing the seed bed before seeding.

Of course different kinds of soil require different treatment. Sandy soil can hardly be worked too much while the heavier soil must be worked when its condition is right. If worked when too wet it will pack and become hard, having many hard particles, very little real fine dirt, which renders it almost worthless. At least the best results cannot be expected.

I have been asked time and time again, "How many times should beet land be cultivated after the beets are well put and ready for work?" To this question I always ask the person seeking information how many tons of beets he would like to harvest. Each time you go over the land with a proper beet cultivator increases the tonnage. Let me call your attention to the way the ordinary gardner operates. He is always stirring the ground with a garden hoe. As a matter of fact it is generally conceded he usually gets more truck off an acre of land than anybody in the neighborhood. The only reason is that he is constantly stirring the land; inviting the nitrogen into the ground. He keeps the weeds down, preserves the moisture and strength which go directly into the plant he wants to mature. He gets the results as we well know. Cultivate the beets. Then cultivate them again and again and you will be more than paid for every time you do so.

Early thinning of sugar beets is especially desirable. In a test made some years ago on an acre tract the following results were obtained: One-third of this tract was thinned at an early stage. From this one-third acre were harvested 15 tons of sugar beets per acre. Seven days later the second one-third acre was thinned, which yielded at the rate of about 12 tons per acre. While seven days later the last one-third was thinned which yielded at the rate of about nine tons per acre. The entire tract, other than thinning was handled exactly the same way. This is very substantial evidence that early thinning is necessary.

Cotton Growing in California

Only nine years ago the entire cotton crop of California was purchased by the California Cotton Mills Company of Oakland for $14,000. Since that time, however, the cultivation of cotton has rapidly increased until this year there are planted in the Imperial Valley and other sections of California, more than 135,000 acres in cotton. The value of the crop this season at present prices will be over $20,000,000.

The rich soil of the Imperial Valley of California, a few years ago a desert, is now the richest cotton-growing section of America, the yield per acre being nearly two and one-half times that of the total average of the United States. Its yield is only exceeded by the rich Delta lands of the Nile in Egypt.

During the first years when cotton growing was in its experimental state, the farmers were handicapped for lack of facilities for ginning the cotton, also for stripping the linters from the cotton seed and utilizing the cotton seed and the cotton oil and other by-products. However, as the cultivation of cotton has increased, these facilities have grown rapidly until now there are nearly a score of cotton gins in the Imperial Valley and cotton seed products are a valuable by-product.

Cotton is a crop which, raised in the same soil year after year, rapidly decreases in output unless the soil is fertilized from year to year. The water used for irrigation in the Imperial Valley and Southern California sections is drawn from the Colorado River. This water is full of a rich silt washed down by the river which spreads over the soil through irrigation and supplies both irrigation and fertilizer at the same time. Government experts figure that there is about $1.20 worth of fertilizer in every acre foot of water used for irrigation.

Cotton is a crop that is very easily damaged or deteriorated by drouth or excessive moisture. The cotton-growing sections of Southern California are peculiarly favored in that while they have almost no rainfall they have abundant water for irrigation and have the supply of moisture regulated to suit the needs of the growing crop. These advantages combined with a warm climate and long hours of sunshine make this district an ideal cotton-growing section.

At present prices the farmers are all making money and there is little doubt that cotton growing is destined to be one of California's largest industries.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Tax on Homestead

Referring to the paragraph "Tax on Homestead" in California Cultivator October 18, you seem to imply that the settler who has received from the government final certificate becomes actually the owner of the land, and that the land is therefore rightly subject to taxation. As a matter of fact, however, possession of final certificate does not amount to ownership of land. The government permits sale of the land, or mortgage by settler—but only under restrictions. He cannot sell outright, but only to persons legally competent to file on land—homestead or desert entry—said purchaser is not, in fact, a purchaser, but must take the land as an assignee. Title insurance companies in making the transfer, vest the title of the land in the government, not in the possessor of the final certificate. As for mortgages, theoretically the land may be mortgaged. In practice, however, the trust companies of California, wise as to the methods of the interior department, will not lend on land still under its jurisdiction. I, myself, have had for almost 16 months, final certificate to a quarter-section taken up under desert entry laws. A muddle and change of purpose about resurvey in the land office at Washington has held up my patent. It may be held up indefinitely, the land office refusing to give me any satisfaction, further than that the issue of patent will be taken up in "regular course of business." Although land in this district is in great demand, agents tell me there is no use attempting to sell or raise money on my place until I get my patent. I am therefore unable to develop the land and am losing the chance to raise valuable cotton crops. Nevertheless, I find myself taxed on the land. How can the state and county make this stick? Since they cannot acquire title from me, they would have no title enabling them to sell at public action. How can they sell land whose title vests in the government of which, since it was withdrawn for resurvey, they do not yet know the description or boundaries? —Subscriber, Blythe.

The vital distinction is between the right of the government to be relieved of taxation and an exemption from taxation for the individual occupant of government lands. As to lands owned by the United States, commonly known as the "public domain" the state has no right of taxation, but the state has the right to tax any interest possessed by an individual therein. Thus, when the individual has entered the land at the land office, paid for it, or fully completed his residence or improvements, and a certificate has been given to him, the contract between him and the government is executed and the land belongs to him, the government holds only the dry legal title in trust for him; in other words, the land is segregated from the public domain and is thenceforth private property. But to bring the land to this status the equitable title must be perfect and complete without further act to be done by the entryman; hence, the land is not subject to taxation before its survey and the approval of the survey, nor in the case of a homesteader is his interest taxable before he is entitled to make final proofs.

However, an entryman upon public lands thereby acquires certain individual property rights; he acquires a possessory interest in the land which is recognized. This possessory interest which the individual may hold in the public lands of the United States is taxable as it is individual property. This applies whether the interest is for mining, agricultural, or other purposes.

The Political Code of California defines real estate for the purposes of taxation as follows: "The possession of, claim to, ownership of, or right to the possession of land; all mines, minerals, and quarries in and under the land, all timber belonging to individuals or corporations growing or being on the lands of the United States, and all rights and privileges appertaining thereto.

The section of the Political Code under which answer is made as to the title procured by the state under the tax sale which is 3805a, provides: "Whenever the possessory interest in land belonging to the United States is sold for delinquent taxes upon verified application of the owner of the land, the board of supervisors may direct the cancellation of the assessment, except in cases where the applicant would be relieved from paying taxes for the full time of his possession of the property." So it is to be seen that it is in fact, the possessory interest which is sold, and this tax sale would form a lien against the property whenever the title was acquired by patent duly recorded from the government.

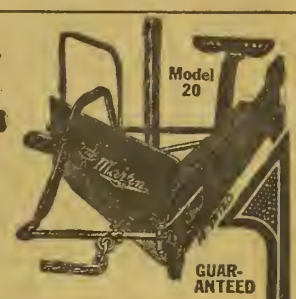
Married Woman's Estate

A lady has money and property from her first husband. What part of her money and property can the second husband get-—Subscriber, Modesto.

In case she survives her second husband he can get none which she does not voluntarily give to him. In case he survives her and she leaves no will and the money and property is all within this state, she being a resident of this state at the time of her death, and there are no children of either marriage, the husband is entitled to one-half of her money and property; if the real property is in some other state, it will be dealt with in accordance with the laws of that state; if she was a resident of another state at the time of her death the personal property will be dealt with according to the laws of that state. If she leaves a will, according to the laws of nearly all, if not all the states, she can dispose of her property as she sees fit.

Every dollar that is spent to arm a soldier or a sailor, to feed or clothe one; every dollar that is spent for munitions or cannon, for coal to drive our warships, and transport supplies, must come from the treasury, and the treasury has no source from which to obtain money except the people of the United States.

Easy Ditching



THE "good old days" of a pick and shovel have become memories. Instead of spending a week on a mile of ditch, Mr. Farmer now completes the job in a few hours. He does a better job, too—and saves a BIG LOT of *valuable* time. He does it with THE Martin

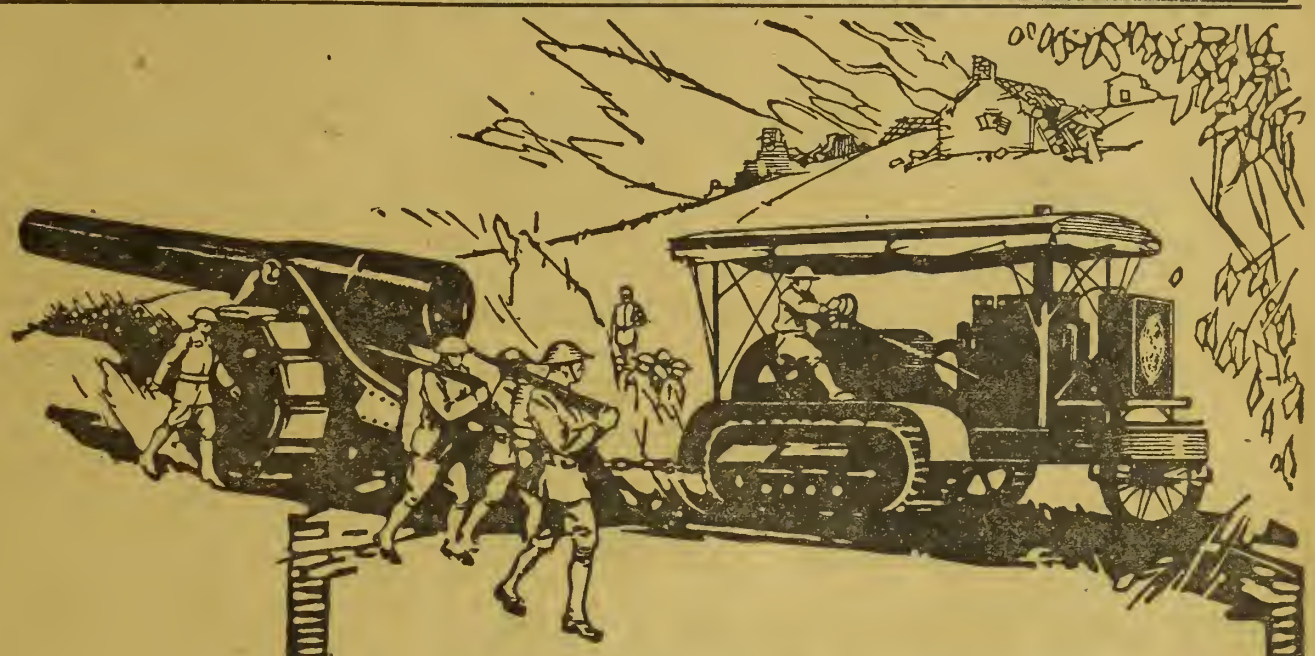
DITCHER, Grader and Terracer

Makes new ditches; cleans old ones; grades roads; builds dykes and terraces. Cuts alfalfa, Bermuda grass or sweet clover roots from ditch banks, without plowing. Does more work and better work than 100 men with old methods.

Made In Horse and Tractor Sizes

All steel. Reversible. Adjustable. No wheels, cogs or levers. More MARTINS now in actual use than all other farm ditchers combined. Warehouses and distributing points in nearly all Western States. Write for free descriptive catalog and nearest distributing point, together with list of MARTIN users near you.

Owensboro Ditcher & Grader Co., 1590 Wazee St., Denver, Colo.



WITHSTANDS *the* TESTS *of* WAR *and* PEACE

The terrific tests withstood by the "Caterpillar" Tractor in four years' work in the war zone simply serve to emphasize in a spectacular manner two facts already established through many years of world-wide use in the agricultural field—

First, *the superiority and soundness of the principle employed in the "Caterpillar" Tractor* — which substitutes a continuous track of enormous traction surface for the limited traction of the wheel tractor, and—

Second, *the efficiency and durability of the "Caterpillar" Tractor*—due to more than three decades of Holt manufacturing experience, the perfection of Holt design, and the high grade of Holt materials.

The "Caterpillar" Tractor effects a big saving in man and animal power, and by giving longer and better service, lowers operating and up-keep costs, and increases profits.

Write today for full information regarding the "Caterpillar" Tractor.

Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Estimating Weight of Stover

How many cubic feet of dry corn or sorghum stover will it take to make a ton? How long would it settle?—Subscriber, Palmdale.

We have no information as to number of cubic feet in a ton of corn stover. As we have given many times the cubic feet per ton of hay or straw will vary from 300 to 500 according to the stamping done when stacking or mowing, the fineness of the hay or stover, and still more, the length of time it has been settling. Estimating weights is not satisfactory at best, though a man with good judgment and knowledge of conditions can make a reasonably close guess. See suggestions in "Rules for Measuring Hay," on Page —.

Poultry Ticks

I am enclosing a specimen of bug found in an old chicken house we tore down. It is new to me. What is it?—Subscriber, Gorman.

This is the poultry tick, hardy enough to live the entire year without food and very insistent on continuing to live in old poultry houses. If buildings are of little value the pest can best be eradicated by burning the old buildings and the old lumber around it. In any case burn all nests and needless lumber and fill cracks and biding places where the ticks congregate with crude oil, turpentine, benzine or a carbolic soap dip. A final painting of all the old roosts and the side walls with hot coal tar is effective but hard on the light colored fowls. Spraying with a strong solution of sheep dip has also given relief.

Tobacco for Worms

For worms in chickens a pamphlet published by the experiment station advises giving one pound tobacco stems soaked and stewed for about two hours for 100 fowls. I cannot secure tobacco stems but can get powdered tobacco. How much powdered tobacco would you say should be used?—Subscriber.

This question was referred to Prof. J. E. Dougherty of the Davis university farm, and he writes:

"Powdered tobacco may be quite a different product from finely ground tobacco stems. In the treatment of round worms in poultry, it is desirable to use a tobacco product containing a minimum of nicotine. Our investigations have indicated that tobacco itself contains too much nicotine for the purpose, whereas tobacco stems contain a sufficiently small amount of nicotine together with the very desirable properties of the tobacco which render these stems very effective for the treatment of worms. We have found the dust somewhat more desirable than the tobacco stems because it runs more evenly."

Poultry Feeding Costs

What is the average cost or how much feed does it take to keep a hen, such as Rhode Island Red or Plymouth Rock, a year? How much, a Leghorn hen? How much, a pullet from time of hatching until she begins laying? How much, a turkey from time of hatching in the spring until marketed in November or December, and what should a turkey weigh at that age?—Subscriber, Woodlake.

According to the food record of the All Northwest Laying Contest for the month of July, it costs 33.14 cents to feed a Rhode Island Red hen for a month, which would be about $4 a year. A Barred Rock cost 37.89 cents for one month, or approximately $4.50 per year. Records kept by the Connecticut station in 1915 showed that it takes 24 pounds of feed to bring a Rhode Island Red pullet to 24 weeks of age. At that time the cost of the 24 pounds of food was a little over a dollar. In 1918 it is considerably more. Just how much would be hard to say, for prices of feed vary from month to month and in different localities. I should not expect to bring a pullet of the heavy breeds to laying age for less than $2.00. As for turkeys, it all depends on how much range they have. I have seen no

figures for turkeys since war prices came in, and should not dare to guess. A tom turkey six months old usually weighs from 16 to 20 pounds; a hen, from 9 to 11.—J. A. K.

Symptoms of Tuberculosis

Symptoms of tuberculosis are emaciation (going light), lameness, and a liver studded with yellowish white cheesy nodules of various sizes. The first two may or may not indicate tuberculosis, for they are symptoms of other diseases as well. The condition of the liver is the most certain indication. Even then you cannot be positive without a bacteriological examination. Should you find a hen greatly emaciated, and on killing her find the liver covered with these white nodules, and should you have a suspicion that other birds were similarly affected, you would be justified in asking the state experiment station to make a bacteriological examination for you. If only a single hen is affected, take it for granted the trouble is malnutrition or something of a less serious nature than tuberculosis. The lungs are very rarely affected. Isn't it possible you make the tobacco tea a little too strong, or that some hens get more of the mash than others, and have been upset by it? Tobacco is poison, you know, and it doesn't take a very big dose to kill an animal.—J. A. K.

Poultry Literature

Where can I get best literature dealing with poultry raising, giving information as to care of chickens, cost of keeping them, different breeds, the egg laying qualities, which breeds have quickest growth, best breed for market broilers, etc.? What is considered the best breed for broilers? What is the leading breed for laying? Can I get literature from the government and whom should I write? Can I get literature from University of California and whom should I write? Where can I get literature dealing with capon raising and what is the best breed for capons? What is the average price that capons bring on the San Francisco market in the winter or early spring, also late spring? How much feed does it take for a capon from hatching early in spring until marketed at a year old?—Subscriber, Woodlake.

The Cultivator poultry book, "Poultry for Profit," gives most of the information you need for raising chickens, but it was written before America went into the war and its figures for cost of raising and keeping chickens need revision. The leading breed for laying so far is the White Leghorn. For small broilers there is nothing better than this same White Leghorn. For the larger broilers and fryers Orpingtons, Rocks and Wyandottes are preferred. You can get government literature by addressing United States Department of Agriculture at Washington, and state experiment station literature by writing the College of Agriculture at Berkeley. I have written to San Francisco to find out the average price which capons bring, but receive no answer. Will try again and let you know. The best breed for capons is probably the Light Brahma, though a cross of Light Brahma on Wyandotte or Rock is considered excellent. I think it would cost at least as much to feed a capon for a year as a laying hen. The Beuey Capon Book is sold by the American Poultry Advocate, Syracuse, New York, for 25 cents.—J. A. K.

THE TRACTOR HAS COME TO STAY

It is like the silo. Once the farmer becomes accustomed to its use it will become a part of the regular farm equipment.

Adjustable coil rag iron springs

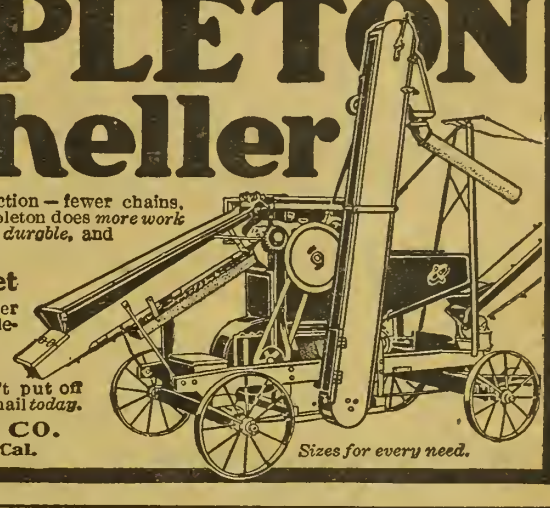
The Appleton Rag Iron Device works just like fingers. All sizes of ears are forced with just the right tension against the shelling mechanism. The big ears cannot be damaged by too much pressure; nubbins cannot get thru partly shelled because of too little pressure. No flat springs to break in zero weather.

Shells every ear right—handles big or little ears, wet or dry.

Under *all* conditions it does *thorough* shelling, *thorough* separating, and *thorough* cleaning. That's why the Appleton is the recognized leader everywhere. Appleton self-feed is absolutely non-cloggable—ears are forced in right position into shelling parts—even smallest ears can't get cross-wise. Appleton Separator is an exclusive feature—U-shaped, raised lipped screen agitates both upward and forward.—allows *all* kernels to get through to cleaning shoe below, where large and adjustable fans blow all dirt and trash out.

APPLETON Sheller

Because of simple construction—fewer chains, sprockets and gears—the Appleton does *more work with less power*, is *much more durable*, and repair expense is much less.



Get our Free Booklet

You can't afford to buy a sheller without investigating the Appleton. Booklet fully describes all sizes, with or without extension feeder, wagon box, elevator, sacker, etc. Don't put off writing; get your letter in the mail *today*.

How Special TrackPULL Tractor Works Orchards, Vineyards

The Bean TrackPULL Book tells plainly why you need a Bean Tractor if you want orchard and vineyard work. Worth its weight in gold because it posts you on vital qualities in such a tractor. You know what your tractor must do. Send for catalogs of all tractor makers and compare with Bean TrackPULL Book. Then decide on your tractor.

The Bean TrackPULL operates through single track which does all pulling and steering. Full power on turns same as on straightaway. Makes no difference how far off center you hitch — pulls just the same. Works close to trees and vines. Pulls, "gees," and "haws" and backs just like team. Twelve year-old boys can handle.

Made by manufacturers of orchard machinery for 34 years. All their specialized experience built into it.

Advanced improvements in Motor, Track Rollers, Drive Sprocket, Bearings and Rear Wheels make the Bean the most efficient orchard and vineyard machine ever manufactured.

Get invaluable Bean TrackPULL Book Now—send the coupon before you forget it. Save money. Learn name of nearest agent who can show machine.

Use Standard Poultry

STANDARD poultry, as the phrase is commonly used in America, is poultry bred to the standards established by the American Poultry Association. The object of making standards for poultry is the same as the object of making standards of weight, volume or quality for any product or commodity, i. e., to secure uniformity and establish a series of grades as a basis of trading in the article.

In making standards for poultry which apply in the process of production the principal points considered are size, shape and color.

Breed Characters

Size and shape are breed characters and largely determine the practical values of poultry. Many standard breeds are divided into varieties differing in color, but identical in every other respect.

Color is not a primary utility point, but as a secondary point often comes in for special consideration. For example, a white variety and a black variety of the same breed are actually identical in table quality, but because black birds do not dress for the market as clean and nice looking as white ones, it often happens that they are not as salable.

When a flock of fowls is kept for egg production only, uniformity in color is much less important than approximate uniformity of size and type, yet the more attractive appearance of a flock of birds of the same color justifies selection for color as far as it can be followed without sacrificing any material point.

When a poultry keeper grows his own stock year after year he ought by all means to use stock of a well established popular standard breed. By doing so and by selecting as breeders only as many of the best specimens of the flock as are needed to produce the chickens reared each year, a poultry keeper maintains in his flock a highly desirable uniformity of excellence in every practical quality, and with little extra care and no extra cost can have a pleasing uniformity in color.

Each Breed Has Its Place

To the novice in poultry keeping it often appears that there is no real necessity for so many breeds and varieties as have been standardized in America. Further acquaintance with them, however, shows that although color differences are in most cases made merely to please the eyes of persons having different preferences for color, the differences in shape and size which make breed character have been devoloped with a view to adapting each to particular uses or particular conditions.

Leaving out of consideration the breeds kept as novelties, most of which originated before industrial progress created a large demand for poultry products, all the standard American breeds of fowls have been made and developed on the general principle of practical quality, the foundation of breed character and value.

Classification of Useful Breeds

In harmony with this principle the common classification of breeds according to their place in the general scheme of poultry production divides them into three principal classes, namely, laying breeds, meat breeds, and general purpose breeds—that is, breeds that are not as ready and persistent egg producers as the laying breeds, and not as meaty and as easy to fatten as the meat breeds, yet combine in one individual fowl very good laying capacity with very good table quality.

The Leghorn, Minorca, Andalusian, Ancona and Campine are well known breeds of the laying class; the Brahma, Dorking and Cornish of the meat class; the Plymouth Rock, Wyandotte, Rhode Island Red and Orpington of the general purpose class.

Characteristics of Egg Breeds

The breeds mentioned as of the laying class, with the exception of the Minorca, are relatively small, very energetic and lively, mature early and are easily kept in good laying condition. The Minorca is of larger size and modified somewhat in the other particulars mentioned, yet has more the character of the laying class than of any other.

Characteristics of Meat Breeds

In the meat breeds there is not the same uniformity of type that is found in the laying breeds. The three mentioned are all quite different. The Brahma is most popular because it is at the same time the largest and most rugged in constitution. The Dorking excels in quality of meat but is generally considered somewhat lacking in hardiness. The Cornish is rather hard meated but being very short feathered has its special place as a large meat producing fowl in southerly sections where the more heavily feathered Brahma does not stand the summers well.

General Purpose Breeds

Among the popular breeds of the general purpose class there are also differences in type, adapting breeds to different uses. The Plymouth Rock is generally regarded as the type meeting the widest range of requirements in the general purpose class.

The Wyandotte is a little smaller and earlier maturing but still very well meated and easy to fatten.

The Rhode Island Red has nearly the same standards of weight as the Wyandotte but is a more active bird, not putting on fat so readily; consequently it approaches the laying type and is popular with those who want eggs and meat, but want eggs most.

The Orpington is at the other extreme in the general purpose class, being a heavier, meatier fowl than the Plymouth Rock.

A Breed for Everyone and Every Purpose

Such a list of breeds affords so wide a range of choice that poultry keepers can always select a standard breed better adapted to their locality and their purpose than any nonstandard stock they can procure, and having the further advantage of reproducing true to type.

EVEN A CHICKEN CAN HELP

One night recently when the men at work at the Vallejo Mills of the Sperry Flour Co. were unloading a car of wheat just received from the Sacramento Valley they found a healthy Plymouth Rock hen in one end of the car. The hen was well fed because it had lived and thrived on wheat during the time the car was in transit. The men at the Sperry Mills did not know what to do with the hen until Louis Vierra, one of the employes, thought it a good idea to raffle it off and turn the proceeds over to the committee for relief in Belgium and France. The Sperry employes took to the idea at once with the result that $46.40 was raised during the raffle and promptly turned over to the committee for relief in Belgium and France. Then the employes unanimously decided if "Matilda," as the hen had been named, could be the means of raising so much money at the Vallejo Mills, similar raffles should be held at all the other Sperry mills and offices in California. The hen was then shipped to the Sperry family at Stockton, where $43.50 was raised, and from there to Sacramento, Fresno, Los Angeles, San Jose, Oakland and San Francisco. Raffles were held at each place by the employes of the Sperry Flour Co., with a result that several hundred dollars has been donated to the good cause of rescuing and feeding Belgian babies.

THE YOUTH'S COMPANION

is worth more to family life today than ever before. Today, those who are responsible for the welfare of the family realize the imperative need of worthwhile reading and what it means to individual character, the home life and the state. Everywhere the waste and chaff, the worthless and inferior, are going to the discard.

The Youth's Companion stands first, last and continually for the best there is for all ages. It has character and creates like character. That is why, in these sifting times, the family turns to its 52 issues a year full of entertainment and suggestion and information, and is never disappointed.

It costs only $2.00 a year to provide your family with the very best reading matter published. In both quantity and quality as well as in variety The Youth's Companion excels.

Don't miss Grace Richmond's great serial, Anne Exeter, 10 chapters, beginning December 12.

The following special offer is made to new subscribers:

1. The Youth's Companion—52 issues of 1919.
2. All the remaining weekly issues of 1918.
3. The Companion Home Calendar for 1919.

All the above for only $2.00, or you may include

4. McCall's Magazine—12 fashion numbers. All for only $2.50. The two magazines may be sent to separate addresses if desired.

The Youth's Companion, Commonwealth Avenue and St. Paul Street, Boston, Massachusetts.

Highest Record Jersey Bull in State

A REGISTERED Jersey bull of outstanding breeding and very high excellence of type has taken his place at the head of C. D. Hayworth's Rico Vegas herd at Modesto, and as his dam is the second highest record senior three year old of the breed his coming is of more than ordinary importance to the dairy interests of California.

Silken's Golden Glow Chief is the name of the great youngster, and he carries a preponderance of the blood of Golden Glow's Chief, who has 35 Register of Merit daughters and four proven sons, 30 of his daughters, ranging in age from yearlings up, having Register of Merit records averaging 10,223.26 pounds milk and 704.73 pounds butter in one year.

The sire of Silken's Golden Glow Chief is Morning Glow's Chief, who is by Golden Glow's Chief and out of Chief's Morning Glow, a daughter of Golden Glow's Chief and Birdie La France, with a record of 8874.20 pounds milk and 638.61 pounds butter in one year. Chief's Morning Glow it will be noted is out of the same dam as Sugar-in-the-Barrel, who is the dam of Vive La France, 12,744.8 pounds milk and 1115.79 pounds butter in one year, the world's junior three year old record.

The dam of Silken's Golden Glow Chief is Lady's Silken Glow who made a Class AA Register of Merit record of 9686.20 pounds of milk and 777.88 pounds of butter at two years five months of age, and came back at three years nine months, with another Class AA Register of Merit record of 13,305 pounds milk and 1103.20 pounds butter, which is the highest on the Pacific Coast and second highest for the Jersey breed in class. She is by Pride's Olga 3d's King, who already has 15 Register of Merit daughters, and he is by Pride's Olga 4th's Son and out of Pride's Olga 3rd, thus carrying in the closest manner the blood that produced Olga 4th's Pride, 16,275.8 pounds milk and 1064.75 pounds butter in one year. The dam of Lady's Silken Glow is Lady Mollie Moore, 8296.6 pounds milk and 567.75 butter in one year, who in turn is by Golden Glow's Chief and out of Lady Glow, 6912.3 pounds milk and 647.80 pounds butter in one year, who is also a daughter of Golden Glow's Chief.

The three nearest dams of Mr. Hayworth's bull average 10,158.6 pounds milk and 769.85 pounds butter in one year, including the three year old record of his dam, who is expected to still further increase her record.

Silken's Golden Glow Chief finds a worthy home in Rico Vegas herd. When Mr. Hayworth started in with registered Jerseys some years ago he was in possession of most limited capital and set out to carve, or rather milk out, his fortune through registered Jerseys on a 44-acre farm. The farm is now one of the best in the rich Wood Colony section of the Modesto district, and the Jersey herd ranks among the very best in the state. There are now 15 Register of Merit cows in the herd, and from these there is a very choice group of heifers sired by Lorna's Altama Interest, who is by Guy H. Miller's famous breeding and show bull Altama Interest and out of Miller's grand champion and gold medal cow Lorna of Venadera, who has a Register of Merit record of 11,234.1 pounds milk and 735.25 pounds butter in one year. His first daughters in Mr. Hayworth's herd are unusually promising those that have completed the Register of Merit records at first calving averaging 6715.8 pounds milk and 445.9 pounds butter on two time milking and ordinary dairy feed.

Silken's Golden Glow Chief was selected by Mr. Hayworth only after a most painstaking search for a bull to meet his requirements, and he was purchased at the end of a long journey that his new owner made in order to inspect not only the bull himself but particularly the dam. It will be noted from the picture of the dam which accompanies this item that she possesses a wonderful amount of type, and that she has a most beautifully hung udder with well placed teats of good size. Among her many other accomplishments she won the butterfat contest at Oregon state fair over 27 entries of all breeds.

Lady's Silken Glow

At two years five months: Milk 9686.2 pounds, butter 777.88 pounds. Register of Merit Class AA. At three years nine months: Milk 13305 pounds, butter 1103.2 pounds. Register of Merit Class AA. Her butter record is highest on Pacific Coast and second highest of the Jersey breed in class. She is dam of Silken's Golden Chief now heading the Rico Vegas herd of registered Jerseys, owned by C. D. Hayworth, Modesto.

Proven Breeders Are Best

At first thought, the man making his plans to enter the pure bred live stock business is very apt to think it good business to make his initial capital buy as many individuals as possible and with that idea in mind he probably will decide to buy young females and a young male rather than "lay in" older animals at a higher cost. Such a plan is ill advised. A much better plan is to select older animals and if possible select an animal that is a proven breeder even though the price asked seems high. By making purchases along such lines the element of chance is largely eliminated and the buyer can count with more certainty on satisfactory results.

The majority of successful breeders of cattle, beef or dairy, hogs or sheep, advise the beginner to invest his money in fewer numbers of better quality.

It is not always possible to pick up proven breeders, but if one takes time (and one should take plenty of time in establishing a herd or flock) there will be opportunities. From time to time established and successful herds are dispersed for legitimate reasons and these dispersions furnish the opportunity to make selections of the better animals in the herd.

It also happens quite frequently that a breeder finds it necessary to sell a successful sire on account of wanting to keep his daughters. That fact alone is usually a good reason for buying such a sire. Again, a breeder may decide to put in one or more of his

A DUROC OPPORTUNITY

H. P. Slocum & Son

Must Sell

150 Head of Modern Durocs

The junior member of the firm has been placed in Class One-A and is expected to be called any time. Because of his age, the senior member can not undertake to carry on the herd, and for that reason it has been decided to close out the entire herd.

The Best Blood of the Breed

It is generally admitted that no herd in the West is superior in point of breeding or individuality. We have the blood of High Orion; Great Wonder; Giant Invincible; King Orion Cherry and King of Orions. There is no better breeding. We selected our foundation stock for size, prolificacy, quality and bone. Our herd produced more champions and prize winners at the 1918 California and Oregon state fairs than any other herd.

Read What We Offer

Three herd boars, including Uneeda Wonder, that Eastern breeders would price from $1500 to $3000 each. Herd sows that we have refused to price. Young gilts and boars sired by some of the greatest boars of the breed.

Everything Must Be Sold

Absolutely nothing reserved and everything is priced to move.

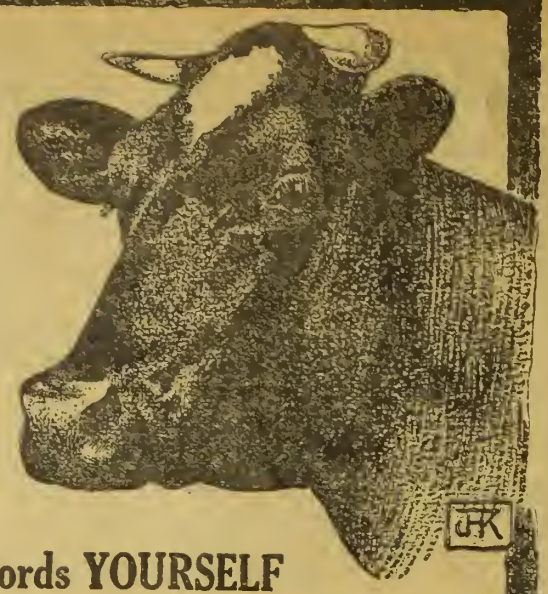
Perkins, Cal.

Record Holstein

This four-year-old is first of all HEALTHY. Her record shows it. Her yearly production record is 30,230.2 lbs. milk and 1,111.56 lbs. butterfat. Surprising results are possible if a dairy cow's condition is kept perfect.



Go After Records YOURSELF

Production records of dairy cows are not just to read about—they are distinctly worth trying for, this year more than ever.

The fact is, the health condition of most dairy cows is decidedly lowered, especially during the winter and spring months. They need some medicinal aid to keep their digestive and genital organs in proper working condition, and to enable them to throw off disease.

KOW-KURE, besides being invaluable in the treatment of Abortion, Retained Afterbirth, Scours, Barrenness, Bunches, etc., is also a great PREVENTIVE of disease—a conditioner that works on scientific principles. It strikes at the seat of ailments peculiar to cows. By raising the health standard, it directly aids nature in increasing the milk flow.

Use KOW-KURE this winter to keep your cows healthy and then compare your milk records with other seasons. KOW-KURE can be bought of feed dealers and druggists; 60c. and $1.20 packages.

best females in a sale a an attraction.

It can be stated as a definite propositon that if one starts with a good quality of stock and is careful in the handling of them that he will always have good stock.

Another point the beginner should bear in mind is that a herd built from a foundation of comparatively few outstanding females is usually more successful than those built from a greater number of females, for the reason that with the first type of herd it is easier to find a sire that will breed uniformly.

Live Stock News Notes

San Francisco Live Stock Show Postponed to February 8

After carefully considering the influenza situation in Northern California, the management of the California International Live Stock Show, but recently postponed from November 2 to November 16, has decided that it will be to the best interest of all concerned that the show be again postponed to February 8.

By selecting a date in the early part of February the management is certain that they will escape any handicap resulting from the present epidemic, and by selecting the particular date of February 8 the San Francisco show will follow the Western Live Stock Show held at Denver in January, thus affording an opportunity to attract many of the exhibitors from the Rocky Mountain show, and will perhaps be able to stage a much stronger event.

Cochel Returns East

W. A. Cochel, Western fieldman for the American Shorthorn Breeders' Association, who was to judge Shorthorns at the Liberty fair, Los Angeles, has returned to the Middle West in order that he could attend the Shorthorn show and sale to be held at Kansas City, Missouri, during the week of the American Royal Live Stock show.

Mr. Cochel stated that in his opinion California was due for a tremendous live stock development during the next few years.

Professor Miller Accepts Texas Offer

Professor R. F. Miller, who for the past four years has been in charge of the sheep work carried on by the University of California, will leave about December 15 to become acting head of the animal husbandry department of the University of Texas.

Professor Miller is regarded as one of the leading sheep and wool experts engaged in college work and the service he has rendered the industry of this state has been of such a constructive and practical kind that his leaving will be a keen loss.

During the past year Professor Miller has been devoting a large part of his time in an effort to organize the sheep and wool industry on a war basis, and his work for distributing small flocks of sheep on the ranches of this state will continue to bear results that will mean much to California.

Miller's Shorthorns to Be Moved North

T. T. Miller, Los Angeles, plans to move his herd of Shorthorns to a ranch he has taken over near Hollister.

This herd has attracted a great deal of attention since it was established, something over a year ago. It is doubtful if any Western herd has been assembled with greater care, or has been founded with a higher class of cattle than has this herd. The greatest care was exercised in the selection of the herd material—both bulls and females, and as the herd stands now, it represents one of the choice collections of Scotch cattle to be found on this coast.

The senior herd bull, Diamond Goods is one of the good Bellows Bros. productions. He is a beautiful roan of considerable scale, very smooth, and is especially attractive about the head. He is sired by Good Choice, the Choice Goods bull that did service in the Bellows herd, and is out of a Queen of Beauty dam, that, by the way, is also by Good Choice.

Assisting the above bull, and considered by many to be a more imposing and valuable herd bull, is the white Greendale Sultan, sired by the great show and breeding bull, Lespedeza Sultan, and out of a Victoria dam from the Ed Hall herd.

This bull, showing in the two-year-old class, reminds one of his famous sire, being very much of the same pattern—plenty of scale, but in addition, is tremendously wide and remarkably deep and standing close to the ground.

The Miller females represent the very choicest of Scotch families and included in the herd are several foreign matrons with international reputations.

The herd is represented with a show string, now at the Liberty Fair grounds, Exposition Park, Los Angeles.

Guaranty Holstein Sale Postponed

The guaranty sale, scheduled for December 5 at Sacramento, has been postponed. One of the several causes of postponement was the difficulty in securing a large enough number of cattle that would meet the exacting requirements of this sale. For the first time in several years there will be no fall sale at Sacramento.

Banks Lend to Boys' Pig Clubs

Eight banks in California have loaned money to members of boys' pig clubs this year. The average amount loaned per bank is $409.39 and the average number of boys dealing with each bank is about 25.

California Headed for a Horse Shortage

The annual report of the California Stallion Registration Board has just been issued and contains some facts that should challenge the attention of all who are interested in farming and live stock production.

In 1912, the first year a report was issued, there was a total of 1957 licensed stallions in this state. Each succeeding year has seen a marked decrease. In 1913 the decrease was negligible, amounting to only 30 head; 1914 the decrease amounted to 18.1 per cent; 1915 the decrease amounted to 13.9 per cent; 1916 there was a decrease of 15.1 per cent; in 1917 the decrease jumped to 24.2 per cent; and in 1918 there were 31.2 per cent fewer registrations than the preceding year.

The 1918 report covers the registration of 590 stallions of all breeds, or about 30 per cent of the number registered in 1912.

The conclusion to be drawn from the above facts is obvious. Owners are not breeding their mares, and such a policy can only result in a very marked shortage of horses in the next few years.

The only hopeful feature of the report is the decreasing number of mongrel and cross-bred stallions applying for licenses. In 1912 41.4 per cent of the total number of licensed stallions were mongrels, cross-breds or nonstandard. In 1918 these "undesirables" had been reduced to 20.5 per cent.

In general, the number of jacks has been decreasing, but the decrease has not been so marked as with stallions.

Reports from stallion registration boards in other states show a decrease, but few, if any, states are restricting horse breeding operations to the extent indicated by the California report.

It takes about five years for a horse shortage to manifest itself, and in our opinion the next few years will see good sound draft horses and mules selling on very high levels.

Lamb Sells Entire Duroc Herd

Elmer Lamb, Ceres, who has been one of the staunchest Duroc supporters in this state, has recently sold his entire herd to Miller & Lux.

Causes For Bitter Flavor in Milk

Written for California Cultivator By S. L. Denning

Milk sometimes contains a distinct bitter flavor which may be caused by (1) the action of bacteria, (2) feed which the cow has eaten, (3) an abnormal condition of the cow's udder, or (4) an advanced stage of the lactation period.

All milk is affected to a greater or lesser extent by the action of bacteria. The normal souring of milk is caused by a bacteria which is nearly universally found in milk. Besides the souring type of bacteria there are types which produce very disagreeable flavors and odors and among these are the bacteria which give milk a bitter flavor when they are allowed to grow and develop in sufficient numbers. They usually gain entrance to the milk with the dirt which drops into the bucket while milking or from dust in the air. Once they are in, they will multiply very fast and as their number increases the bitter flavor becomes more pronounced.

When buckets, pans and other utensils used in handling milk are washed in hot water, most of the bacteria are killed. There are a few, however, which may survive this treatment. If the utensil remains wet after washing, these bacteria which are left will immediately begin to grow and multiply so that when the utensil is again used it will contain large numbers of them. These then go directly into the milk. If they are present in sufficiently large numbers the bitter flavor may be developed in a few hours, especially if the milk is not properly cooled. After the utensils are once infected, the bacteria may be passed on in the milk from day to day providing the utensils are not sterilized.

Utensils should be thoroughly washed and sterilized after each using. The milk may first be rinsed out with a small amount of warm water and then thoroughly washed with hot water and soap or washing powder. After they have been scalded with boiling water, or sterilized in live steam, they should be completely dried by then placing on the stove or in the hot sun. If placed in the sun, care should be taken to see that they are not contaminated with dust. If thoroughly cleansed after each milking, utensils will not carry the bacteria from one day to another.

Milk absorbs readily flavors and odors from such feeds as ragweed, onion, cabbage, kale or the highly flavored feeds. These should be eliminated from the cow's ration or at least not fed until just after milking. During the later summer and fall the pastures contain a number of strong flavored weeds which will produce a bitter flavor in the milk. An abnormal condition of the cow's udder is not an uncommon cause for bitter milk. If any irregularity is noticed either in the milk when first drawn or in the udder, the milk should not be used. The advice of a competent veterinarian is always advisable in these cases.

As a cow nears the end of the lactation period the milk becomes more or less abnormal. When within six to eight weeks of the close of the period the fat content begins to rise materially, the fat globules get small and hard and the milk sometimes takes on a pungent, bitter flavor. If the bitter flavor becomes prominent, the cow should be dried up. At this time of the year bitter flavors come largely from this source. The cream during the latter part of the lactation period requires considerable churning to make it into butter as the fat globules are too hard and small to adhere readily.

Cream which is held from three to five days before churning will usually make a bitter, off-flavored butter. Good butter cannot be made from poor cream. If the utensils are well washed and sterilized after each milking and strong feeds are not fed and the cow's udder is normal, bitter flavors will usually not be noticed. Milk from cows in the latter stages of lactation may, however, be bitter even if the other sources of trouble are removed.

Believes in Good Draft Horses

Written for California Cultivator By Wayne Dinsmore, Sec'y Percheron Society of America

A good many farmers have been a bit discouraged over their inability to sell horses just when they want to. You know some men think there should always be a good cash market for anything they have to sell, at the moment they want to sell it. These are the fellows who have sacrificed their wheat at a discount rather than borrow money and wait a few months till railroads and elevators could handle their product. The world is full of such fellows, and just now some of them are knocking good horses. It is refreshing, therefore, to have such a statement as the folowing, which I recently received from Peter Wagner of West Butte, Montana, when he called at our office. Wagner is a practical ranchman who has made a comfortable fortune in the live stock game. His comments were substantially as follows:

"I believe good draft horses are the best buy a farmer or ranchman can make right now. We are short on feed, and I have no more than I absolutely need to carry through the horses and cattle I now have; but if I had the feed available or could purchase it, I would buy a thousand head of the best young draft horses I could get.

"What money I have made has been by going contrary to the road most men follow. In 1893, when no one wanted horses, I went into Southern Iowa and bought seven carloads of good grade Percheron mares. I did not buy any that weighed less than 1600 pounds, and they were good, clean, well shaped mares. I paid from $50 to $90 per head for them, and they cost me an average of $65 per head on the farms where I bought them. The same kind of mares are today bringing from $175 to $225 per head, yet farmers are now grumbling about low prices. They don't know what low prices are.

"History repeats itself. Today foreign countries are almost stripped of horses suitable for farm work. All European countries will want horses as soon as ships are available to take them over. Good, big drafters are bringing from $800 to $1000 apiece in Great Britain, and in France $600 is the lowest price for even a common sized chunk. The American consul's report from Stockholm, Sweden, in August, states that the German military commission had recently bought 250 horses at 3400 crowns each, Swedish money, which means that they paid $1740.21 per head for them.

"The United States is the only nation with any surplus of big horses. I know Russia does not have them, for I lived there for twenty-one years and know Russia as only a native of that country can.

"Some men fear the influence of the tractor on the horse market. As a practical farmer, with long years of experience in the West, I know that they will not displace the horse. Don't fret about them. While my chief interests have been in cattle, I have sold $27,000 worth of horses off the range since 1911, have twice as many horses left as I ever had, and my horses have made be more clear profit, proportionately to numbers, than my cattle.

"My advice to my friends to to get rid of their inferior horses, and to put in all the good ones they can handle now. Don't sacrifice a single good drafter, and go in debt, if necessary, to put your teams on a first class basis now while horses are relatively cheap.

"The time to buy is when the average man is discouraged and wants to sell. You can never go wrong on that plan."

I give you the comments of this practical old Russian ranchman, who has achieved success in the West and whose son will soon be on the fighting line in France, as he gave them to me.

Livestock Queries

Angora Goats

Is it profitable to raise goats in California? What breed is best? How many pounds of hair per head could be expected? What price does it command? What is the value of goats as meat producers? Do kids need great care when very young?—Subscriber, Bakersfield.

It is quite profitable to raise Angora goats in the rough, rocky sections of this state where sheep will not thrive. Furthermore, goats are kept in some of the valleys to good advantage, there being about 100,000 head in this state.

There is but one strain of Angora goats, and the majority of goats in the state are grades which are being improved by crossing the native goats with pure bred Angora bucks. The average clip throughout the state is approximately three pounds per goat, although, by good feeding, it is possible to produce four and five pounds per goat.

The price of mohair varies from 65 cents to 75 cents per pound at present. While the market somewhat discriminates against goat meat, young goats furnish excellent meat and fat does are selling for $5.00 and $6.00 per head.

Young kids are more difficult to raise than lambs, as they require special attention. For further information apply to the Department of Agriculture, Washington, D. C., for Bulletin 573, "The Angora Goat."—Prof. R. F. Miller, University of California.

Wool Questions

Please inform me through the Cultivator as to how I can find out whether my wool which I have shipped to the government is graded by the government or by a wool buyer. I have shipped my wool through a buyer who says he is an agent of the government. I shipped to Stockton. Is the wool in government hands since it arrived in Stockton? Is it insured? Who pays the insurance? Do I receive any interest on my money invested in the wool while it is in the hands of the government?—Subscriber, Fruto.

I would advise the inquirer that the wool shipped by him to Stockton is not in government hands until it reaches the Atlantic seaboard. The government pays 6 per cent interest on all wool shipped to Boston from the time of arrival, as shown by the railroad receipt. All wool dealers carry insurance on their stocks of wool, and no doubt the party's wool is safely insured, but he will not receive interest on his wool until it arrives at Boston.

There has lately been appointed an appraising committee b the government, at San Francisco, and this committee is in position to appraise wool upon request, and they are usually called upon when the buyer and the grower cannot agree on the price.—R. F. Miller, Secretary, California Wool Growers' Association.

Bitter Milk

For the past three or four weeks the milk from our Jersey cow has been developing a strong, bitter taste after standing a few hours. It is almost impossible to churn the cream.

About a month ago we ran short of alfalfa hay and for a couple of weeks fed first class red oat hay. For past two weeks we have been feeding fresh alfalfa hay, but do not notice any improvement in the milk. What is the remedy?—Subscriber, Lindsay.

Answer: We have recently received so many letters outlining similar conditions that we have asked S. L. Denning of the University of California to prepare an article on the causes of bitter milk and you are referred to his article appearing in this issue.—R. P. R.

UNITED STATES FOOD ADMINISTRATION VIEWS

Hon. Herbert Hoover in recently discussing the live stock situation, expressed himself in part as follows:

"It must be the desire of every American to see our herds maintained and improved, for not only have we an enormous burden to carry in furnishing food during the war, but after peace has come this burden will be even greater if the world is to recover from the enormous destruction of animals without even greater human hardship than at present."

FERTILIZERS

Lime—Slaked. Corrects heavy sour soils quickly. H. B. Matthews, 495 Douglas St., Pasadena.

ENGINES

Several New and Slightly Used Engines. ARNOTT & CO., Implements, 112 E. Los Angeles St., Los Angeles.

Fire guards of one or more furrows should be plowed around all fields of shocked or stacked grain to prevent conflagrations starting from the sparks of locomotives, tractors, thrashing engines or from the careless use of matches, pipes or cigarettes.

Live Stock Field Notes

Splendid Backing for First Tulare Sale, November 20-21

The catalog of the First Tulare Sale of registered Holsteins is an object lesson in community effort. A study of the reference sires in the catalog reveals several interesting facts: First that Tulare County is the only county in California that can boast of three Holstein sires in active service each out of a dam that made above 35 pounds butter in seven days. The three are Higdon's King Korndyke Pontiac 20th, out of the 36.81 pound state record junior three year old, Miss Valley Mead De Kol Walker; Guerin's King Sadie Vale Idyl Segis, out of K. P. Idyl Segis, the state record junior four year old, 35.57 pounds butter in seven days; and Sturgeon's Segis Pontiac Abbekerk, out of Changeling Tidy Abbekerk Gem, 35.07 pounds butter in seven days, and she is the only 35 pound cow in California that made over 34 pounds at the previous freshening. The yearly record backing is represented in Tulare County in this sale by two reference sires out of dams that made over 1100 pounds butter, one out of a dam that made 1077 pounds, another out of a dam that made 808 pounds, another out of a dam that made 711 pounds, another out of a dam that made 767 pounds. The mere figures fall far short of telling the story, for the breeding represented in these bulls is in the very front rank of the Holstein breed today.

Sir Aaggie De Kol Acme 2nd, another of the royally bred Holstein bulls now in service in Tulare County deserves an item all by himself. His dam made over 1100 pounds butter in one year, and five of his seven nearest dams average over 1100 pounds butter in one year, an average equalled by only one other Holstein service bull in the world. Mr. Whaley was exceedingly fortunate in getting this bull as immediately after he bought him one of the biggest Eastern breeders tried to buy him. The same breeder bought another young at public sale not long after for $10,000, and he fell considerably short of having the yearly record or seven day backing of Sir Aaggie De Kol Acme 2nd.

Tagus Ranch Sale

In many respects the four-day sale of live stock and equipment to be held by the Pacific States Corporation at their Tagus Ranch, Tulare, will prove one of the greatest public sales ever held in California.

This ranch has long been regarded as an exceptional tract of land and a recent decision to subdivide and offer it for sale furnishes the motive for the sale scheduled for December 10, 11, 12 and 13.

The offering will consist of 90 head of registered Holstein cattle; 200 grade Angus cows; 15 registered Angus bulls; 100 grade Shorthorn cows; three registered Shorthorn bulls of serviceable age; 24 registered Percheron and Belgian mares; 15 registered Percheron and Belgian stallions, several of the Percheron stallions are sired by Fernand, 72763 (65262) now owned by the University of California; 100 high grade brood mares, work horses and mules; seven tractors and an immense amount of implements of all kinds.

A sale as extensive and varied as this event promises to be will doubtless contain a great many bargains that can be turned to the advantage of a keen buyer.

The event will be under the management of C. L. Hughes, Sacramento, and will be cried by Col. Ben A. Rhoades and Harold B. Rhoades.

Higdon's Holsteins are Producers

Tulare Holstein Farm, owned by W. J. Higdon, Tulare, is starting the test season with some promising records. Troutbrook Pontiac Starin, a granddaughter of King of the Pontiacs, has 25.48 pounds butter in her first seven days on test, while Ellen Hartog De Kol has made 22.45 pounds butter in seven days. The latter cow and her daughter are both in the Tulare sale. Two very creditable eight months after calving records are being made by cows now on yearly test. Hertinga Willis has 17.78 pound butter in seven days to her credit 250 days after calving, and the junior three year old, Coloma Beauty Butter Maid has 16.20 pounds to her credit. Both of these are making big yearly records. Harry L. Redd, herdsman, has a full season of work cut out for him with the splendid cows and heifers to freshen in this herd between now and spring. The herd enjoys a steady demand of bulls to go into dairy and breeding herds and is kept sold down close.

Kiesel Holsteins Producing Well

Jane Garden Farm, owned by Fred W. Kiesel, Sacramento, will have a choice lot of registered Holstein cows and heifers to go on test this winter. One of the young cows, Beauty Mercedes Nudine, recently made 23.89 pounds butter in seven days and 98.13 pounds in 30 days. Two daughters of King Korndyke Pontiac have recently made very good records, one of them, King Korndyke Pontiac Charlotte, making 22.92 pounds butter in seven days as a junior three, and another, Natoma Superba Pontiac making 19.25 pounds butter in seven days as a junior two year old. The daughters of King Korndyke Pontiac are showing up especially well and several of them may be expected to do something big.

Harlan Heifer Going Strong

Nadgy Korndyke Mooie 3d, a junior two year old daughter of King Mead of Riverside, owned by J. H. Harlan Company, Woodland, had 10,426.7 pounds milk and 549.18 pounds butter to her credit at the end of 189 days on semi-official test, with an average test of 4.22 per cent for the period. She promises to round out the year with a most satisfactory record.

PURE BRED REGIST'D HOLSTEINS

Tuberculin Tested State Superfficial Production Butter Fat Everything Guaranteed Individuality Breeding

King Korndyke Pontiac

(shown above)

by every right of inheritance should transmit great production and high class type. His sons and daughters have already proven his ability to transmit type of the first rank—daughters with the big, deep bodies and the ample, fine textured udders that go with large dairy production. As for his sons, one of them sold for $6500.00 at public sale, going to head W. J. Higdon's fine herd at Tulare.

Two daughters of King Korndyke Pontiac recently freshened in our herd and made very satisfactory records. King Korndyke Pontiac Charlotte, under official test made 22.92 pounds butter in seven days as a junior three year old. Natoma Superba Pontiac, freshening at two years four months, made 19.25 pounds butter in seven days. We have several other of King's daughters to freshen this winter and they look especially promising.

You need one of his young sons in your herd. Come and see what we have on hand or write for pedigrees and prices. We make liberal terms if desired.

"He Has Developed Wonderfully"

Is the universal statement of all who saw our great junior herd sire

King Korndyke Pontiac 20th

when we bought him as a calf, and who again saw him out on the show circuit this year, where at California State Fair he was defeated in class only by the twice grand champion bull.

The way he is deepening and lengthening out, and the splendid vigor which he possesses, are most pleasing to us, as he is doing even a little bit better than we expected of him.

And his first calves that are now coming are certainly beauties. It is not too early to begin to figure with us on one of his young sons for your herd. Come and see them or write for description and price of one.

NOTE: We are selling some choice, highly bred cows and heifers bred to King Korndyke Pontiac 20th in the Tulare Sale, November 20-21.

THOSE GOOD OLD DAYS

Gone are the days when my steak was young and rare,
Gone are the pork chops from my bill o' fare;
Hoover has said we must economize.
I hear my Uncle Sammy calling
Hooverize!

CHORUS

I'm willing, I'm willing,
Let's all economize.
I hear my Uncle Sammy calling
Hooverize!

Why should I grieve for my fast departing cash?
Why should I weep when my wife brings in the hash?
What though my cakes are the very smallest size?
I hear my Uncle Sammy calling
Hooverize!

Why should I mourn when my bread is made of rye?
Why should I sigh for the good old custard pie?
We'll do our bit until the kaiser dies.
I hear my Uncle Sammy calling
Hooverize!

—Author Unknown.

A QUESTION OF SPEED

By James William Jackson in Youth's Companion

"PILE this lot of planks fast, Tom! Mr. Gardham will be around pretty quick; and I'm afraid he has the idea that you're slow."

Tom Harcourt, who was rolling up his sleeves, flushed at the yardmaster's remark. A questioning look on his face led the yardmaster to tell him a little more. Mr. Gardham, the owner of the lumberyard where Tom worked, had asked why he was half an hour late the day before in delivering a load of lumber at Thompson's new house.

"I was blocked by a long freight at the crossing," Tom explained. "The locomotive stalled for fifteen minutes and—"

"The gates were up and the way clear when Mr. Gardham drove by," the yardmaster interrupted a little sharply. "Why did you go off and leave your team standing idle in the street instead of moving along? You knew it was a hurry order."

The busy yardmaster moved off without waiting for an answer. Tom drew a deep breath. It was discouraging to have the head of the firm question his efficiency, especially at that moment, for a well built young teamster with first class qualifications had only yesterday applied for a wagon. Tom feared that he was to be pushed down another peg in the industrial scale. He had been a clerk with good prospects in the office of the Valley Foundry Company until the company had gone out of business. Work had been scarce then and he had been glad to get a job driving a wagon.

Positions were still scarcer now; and with a thought of the people at home who were dependent upon him the young fellow worried over the apparent disfavor into which he had fallen. With all his heart he wished that circumstances had not played him such a trick the day before.

He had left the yard with a full half hour's time in which to make only a twenty-minute trip. Outside the gates he had turned up the grade that led round a street corner and thence to the railway crossing. He had had Bess, the most valuable horse in the yard, on the off side; and she had just recovered from a leg sprain. With all the solicitude of a fond master, Tom had taken special care of her and had watched for any signs of a relapse.

Near the corner he had suddenly spied in the road a heap of wood, evidently dropped from a house wrecker's wagon. There was one piece from which big nails protruded, and a jagged piece of tin on a fragment of roofing timber made it even more dangerous. A carelessly driven horse or an automobile would have been sure to come to grief on that piece of wood unless some one had removed the obstruction.

Tom had driven to the top of the grade and, rounding the corner, had stopped his horses on level ground. There he had left his team, and running back had picked up the debris and dumped it into a convenient open lot.

When he had reached the railway track a few minutes later the gates were just going down. Then the passing freight locomotive had stalled and Tom had decided that luck was against him; but he had not known until now that the senior member of the firm had passed in his carriage and had seen the abandoned team standing idle.

"And excuses, I suppose, will sound weak!" Tom muttered to himself now, as he hurriedly piled the lumber. "I'll just have to sail in and make a new reputation for fast work."

There was much activity in the busy lumberyard. Wagoners threaded the stacks of timber making up loads, a shifting engine was taking out and putting in cars on the sidings, a big creaking crane was unloading coal from a canal boat and sending it rattling down the chutes.

Caston, a yard worker, joined Tom on the pile. A few minutes later Mr. Gardham came down the yard with the superintendent. The senior member was accompanied by his small son, Benny.

While Mr. Gardham and the superintendent went some distance along the siding, the youngster stopped to watch Tom and his mate pile the planks. Later the boy walked over to the sand pit next to the lumber pile, and started to play in it.

The conference of Mr. Gardham and the superintendent beside the tracks led to some decision that made them need a messenger. Tom, trying to hurry his work along, happened to look that way, and saw the superintendent beckoning to him.

As Tom approached, the superintendent and the senior member were discussing the lumber piles. One pile in particular had met with Mr. Gardham's disapproval. It stood on the farther side of the sand pit and was made up of especially long planks. Only because the yard was so badly congested had lumber been piled there at all, for the driveway swept inward at that point, and so the stack had crowded perilously close to the railway siding.

"See that!" Mr. Gardham cried, with a frown.

The yard engine at the moment passed out along the siding, and the car that it was hauling was almost scratched by the projecting timbers.

Cozy, Comfortable Warmth
Perfection Oil Heater gives cozy, comfortable warmth for many hours on one filling with Pearl Oil, the ever-obtainable fuel.
Lights at the touch of a match — gives instant heat. No smoke or odor. No dust or dirt. More convenient than coal or wood.
Portable. Economical.
Buy Perfection Oil Heater today. Dealers everywhere.

The Cultivator Patterns

9033—Ladies' and Misses' Cape. Cut in sizes—large and medium. The smart roll collar is joined to a shaped band and this in turn is joined to the semi-circular cape.

9013—Girl's Dress. Cut in sizes 6, 8, 10, 12 and 14 years. The straight waist has no fulness and no opening, for the dress slips on over the head.

9043—Ladies' and Misses' Dress. Cut in sizes 16, 18 years, and 36, 38, 40 and 42 inches bust measure. A silk cord girdle holds the blouse in place.

9023—Ladies' Waist. Cut in sizes 36, 38, 40, 42 and 44 inches bust measure. The collar is cut to form reveres and to drape softly at the neck.

9012—Girls' One Piece Dress. Cut in sizes 6, 8, 10, 12 and 14 years. The dress may be made with either long or short sleeves.

9020—Ladies' One Piece Dress. Cut in sizes 36, 38, 40, 42 and 44 inches bust measure. The fulness of the dress is held in by a narrow belt with unique closing.

9031—Ladies' and Misses' Two Piece Skirt. Cut in sizes 16, 18 years, and 26, 28, 30 and 32 inches waist measure. A wide belt of the material is worn with this skirt.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

PATTERN DEPARTMENT
CALIFORNIA CULTIVATOR
Los Angeles.

However, it was not a high pile, and a large part of it was to go out of the yard immediately. The superintendent promised to give the matter his attention; then the two proceeded to discuss the general lack of room in the yard. Tom stood respectfully by until they should be ready to use him. Meanwhile he watched the engine. It disposed of the car it had taken out; then it backed up to a loaded car and, with loudly screeching wheels, began to push it to the switch.

Mr. Gardham remarked that it was time for him to take his son downtown to meet Mrs. Gardham. At the mention of Benny, Tom glanced toward the sand pit and discovered that the boy had left the fort he had been building in the sand and was gingerly climbing up the face of the lumber pile that his father and the superintendent had been discussing a moment before.

The incoming car of timber had by that time cleared the switch and was already heading down the side track toward the group. Tom caught his breath sharply.

"Look!" he cried, as he suddenly leaped away in the direction of young Benny.

The car was stacked high with new lumber, and its heavy cargo had made the retaining posts bulge out. Tom had seen at a glance that Benny Gardham would be crushed against the lumber pile.

Oblivious of the fact that the car was bearing swiftly down on him, the boy continued his interesting climb. The shrieking of wheels as they crunched over the switch points drowned Tom's warning shout. And there was no one near to pull him down. The engine men were not aware of the situation; and Caston, the yard worker, had gone into the driveway to help chain a big girder on one of the wagons.

Tom was nearer than anyone else to the child, but even he was two hundred yards away. He bounded along the track toward the lumber pile, and Mr. Gardham, calling in terror to his son, hurried after him as fast as he could.

"Come down, Benny, quick!" Tom shouted as he drew near the pile. "Come!"

The boy turned a questioning face toward Tom and then started to obey. But to Tom's dismay, he saw that the youngster's foot had wedged tightly between two planks!

Setting his teeth and clenching his fists, Tom increased his speed. He had left Benny's father and the superintendent far in the rear. The loaded car was shooting down the track now only a hundred feet away. Tom could see that its load would barely scrape by the lumber pile. Meanwhile Benny, with his fat little body humped out from the stack, was trying valiantly to free his foot.

The engineer of the locomotive was on the wrong side of the cab to see the boy's predicament. Tom realized that everything depended upon himself.

When he reached the pile, the loaded car had cut the hundred feet of distance in two. Breathless, but with undiminished speed, he went up the "steps" of the stack like a cat, and reached the captive boy.

Holding to the stack with one hand, Tom worked fast with the other. The planks seemed to grip the little foot like a vise. Beads of perspiration came out on Tom's face as the shadow of the oncoming, screeching timber car seemed about to fall upon him.

Once, twice, three times he tugged at the boy's shoe, although he was in momentary terror lest he pull the child down on the track in front of the train. The car was within twenty feet of them now; the engineer had at last seen the danger, but Tom knew that the train could not stop in time.

The bulking load seemed fairly to rush at the lumber pile; but at last Tom freed Benny's foot. "Climb!" he shouted; and he himself leaped a step higher. There was not time to go down, and the top of the pile was only a yard or so farther up. With a lightning snatch Tom grasped the back of the child's blouse and lifted the little fellow. For an instant the child's feet trod on empty space.

The car had already reached the far side of the lumber pile, and its brakes were snapping fire as they ground on the wheels. A protruding plank, two inches thick, snapped like a match stem. With a sudden burst of strength Tom lifted the boy and threw him up to the top of the stack.

The car was almost upon him. Tom instinctively shot out a hand to ward it off. That hand actually touched the car; at the same time his other hand let go its hold, and he went tumbling backward. As he landed in the sand pit a dozen feet below, the onrushing mass tore a plank out of the side of the pile and hurled it vengefully after him. It struck him a heavy, glancing blow on the knee, which caused a sharp pain.

A moment later, when he slowly picked himself up and emerged limping from his sand bath, he had the satisfaction of seeing the frightened Benny safe on top of the quivering pile.

Caston carried the child down. At the foot of the stack Mr. Gardham gathered his son into his trembling arms. The senior member then wrung Tom's hand and told him to come into the office to patch up his wounded knee.

"By the way," Mr. Gardham said on the way to the office. "Thompson—you know, the owner of the house—saw and told me what it was that delayed you with his load yesterday. As a lover of horses he forgives you; so do I."

That seemed to make Tom's knee less painful. Mr. Gardham probably did not realize that, for he took an emergency roll of bandage linen from the drawer of a desk near his own and set to work deftly to wrap Tom's black and blue knee. Meanwhile he talked with apparent irrelevance about the semi-confidential clerk who had last presided at that desk.

"He was a rapid worker," Mr. Gardham admitted; "but he was sometimes rapid when he ought to have been slow and careful. The man before him never made a mistake; but he could not rise to speed even in an emergency—like that you faced a few minutes ago, for example."

Tom blushed a little, and Mr. Gardham, tearing the end of the bandage into two strings, tied them neatly. Then he smiled at Tom.

"I've heard that you've had experience as a clerk," he said. "Perhaps you would like to give up your wagon to Brannigan and help out at this desk with my personal work? If you would, I feel sure you will combine the desired degree of carefulness and speed."

You do not operate this player-piano—

You Play It!

THIS player-piano gives you—not the temporary novelty of operating a mechanical instrument—but the soul-satisfaction of personally playing a piano. The

House of Baldwin

Manualo

The Player-Piano that is All But Human

is controlled from the *pedals*, the point where you instinctively try to put your natural musical feeling into the playing of the instrument. Each pedal stroke does not merely make certain notes strike, but it makes them sound with the exact volume and accent which your musical feeling desires. The force and style of the stroke are transmitted from the pedal to the piano strings as the striking of the artist's fingers is transmitted from the keys to the strings. It is as if you were in *direct contact* with the piano action, so sensitive is the Manualo mechanism to your every wish.

The Manualo is built into four standard instruments of the House of Baldwin, the Baldwin, the Ellington, the Hamilton and the Howard. The price varies with the price of the piano. The immense production of the House of Baldwin factories at Cincinnati and Chicago insures your getting the highest value player-piano at whatever price you pay.

Before you buy a player-piano, ask for "The A B C of the Manualo", giving complete information on the development of the player-piano and explaining in detail why the Manualo will give you continuous satisfaction.

LOOK for the K-W TRADE MARK on the MAGNETO

Before Buying Your Tractor Make Sure Of Its Ignition System

Every K-W Magneto carries the K-W trade mark. It is put there for your protection. It is a symbol of quality. It assures you of continuous, reliable, no-trouble ignition regardless of working conditions.

K-W High Tension MAGNETOS

give immediate and easy starting regardless of the weather, how large the motor or how slowly the engine is cranked. K-W Magnetos fire any kind of fuel and increase the power derived from the same amount of fuel over that of any other ignition system. They enable you to plow additional acreage *without additional fuel cost.* They are protected against powder-fine dust, oil and water.

The Time To Avoid Ignition Trouble Is When You Buy Your Tractor

Forty tractor manufacturers pay more for K-W Magnetos but it is their assurance that you—the tractor buyer—are being provided with the most reliable ignition system, guaranteeing to you a "no-trouble" service day in and day out.

If you are *not* using a K-W now write us. Let us show you how a K-W Magneto will give quick and easy starting, and get full power out of the cheaper grades of fuel. There is a type for *your* tractor that will do this.

Before You Buy A Tractor

look up one neighbor or a dozen using K-W Ignition and talk it over with them. Then we know you will *insist* upon a K-W Magneto on *any* tractor you may decide to purchase.

Write for list of K-W equipped tractors and full information.

LIVESTOCK

Prospects for a better hog market in this city were never better than at the present time. Some of the local killers who formerly slaughtered only sufficient hogs to supply their ordinary requirements are now increasing their capacity as they have found that an available supply to keep their gangs working constantly can be obtained through the recently organized Farm Bureau Market Association that conduct sales in the various counties of the lower San Joaquin Valley almost daily.

Prices obtained for the hogs sold through this association average from 50 cents to $1.00 per cwt. higher than those sold by individual raisers.

Greater inducements for the cattle feeder to increase his stock of feeders have been brought about by the recent government export orders now being filled in this city. The requirements of the government for export beef are high and this city will get its share of this business if the cattle men of Southern California produce three-quarters finished steers of a quality meeting with export standard. Prices being paid for this class of live cattle fully justifies feeders to enlarge their feeding operations.

The demand for good lambs continues strong and active and yearlings are also meeting with good offers. The market is very slow and the quality of ewes now coming in is such that buyers are not anxious to take them.

Report of live stock conditions on the Los Angeles market as compiled by the United States Department of Agriculture, Bureau of Markets, through the local office:

NUTS

The Almond Growers' Association has established opening prices as follows per pound:

Nonp. 27½
I.X.L. 25½
Ne Plus 24½
Drake 20

Outside dealers have named prices above these quotations and it is understood association stock is practically closed out and prices withdrawn.

Walnuts: Net prices have been named by the California Walnut Growers Association:

No. 1 Softshell 28
No. 2 Softshell 25
Jumbo 30
Fancy Budded 31½
Golden Gate Budded 29

Franquettes, Eurekas and other fancy varieties sold on sample. No. 1 Softshell guaranteed 88 per cent good; Fancy Budded, 90 per cent. In case of worms or damage by ants not more than five per cent.

RICE

Prices which rice millers of this state have voluntarily agreed with the food administration for California to pay to growers for paddy rice are as follows:

No. 1 and No. 2 Japan, in sacks, $4.32 per 100 pounds.

No. 3 and No. 4 Japan, in sacks, $4.16 per 100 pounds.

Prices for other grades will be paid for on a basic value proportionate, and no higher prices than those quoted above for any grades whatever will be paid.

The millers agree further to sell cleaned rice and by-products for prices not to exceed the following:

Fancy Japan, 1½c per pound.
Choice Japan, 7⅜c per pound.
Fancy second heads, 6⅞c per pound.
Screenings, 5⅝c per pound.
Brewers', 5¼c per pound.
Rice polish, $50 per ton, carlots.
Rice bran, $36 per ton, carlots.

For sacked grain add 9 cents per bushel of 60 pounds to above price. Deduction of three-fourths of a pound is made for weight of standard grain bags. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to merit.

Barley—Feed, 2.10@2.17½ per cental for choice spot; shipping, 2.20@2.25; milling, 2.25@2.30.

Oats—Red feed, 2.55@2.70 per cental; seed, do, 2.95@3.05, with recleaned at 3.15 @3.30; black, 2.55@2.65 for feed and 3.00 @3.15 for seed.

HAY

Under date of November 9, Scott, Magner & Miller says:

Receipts past week 815 tons. The large amount of damaged hay which has been forced into this market has hurt sales materially as it is disposed of on the market for whatever it will bring, consignees refusing to warehouse it. The shower in the northern part of the state during the past week has been of much benefit to pasture lands. The entire city is still tied up with the influenza epidemic and between that and peace reports the market is at a standstill. Arrivals of damaged alfalfa from the river districts has been the feature of the market this week and is being sold at all kinds of prices according to demand and condition of same. The government is again in the market for a large amount of hay.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling expenses must be added according to conditions.

Citrus Fruit Market

AT THE AUCTIONS

November 6
New York: 10 oranges, 3 lem. Val. 4.50@13.20, Nav. 5.25-6.40, lem. 10.25-11.95.
Cleveland: 1 orange, 1 lem. Val. 6.85-8.70, lem. 7.65-9.15.
November 7
New York: 7 oranges, 5 lem. Val. 4.25-13.65, Nav. 5.80-5.85, lem. 7.70-10.00.
Boston: 2 oranges. Val. 5.00-11.65.
November 8
New York: No sales oranges owing to strike.
Boston: 2 lem. 4.50-7.70.
Cleveland: 1 orange, 1 lem. Val. 4.55-7.60, lem. 6.50-7.65.
November 12
New York: 5 oranges, 5 lem. Val. 4.60-12.45, lem. 5.35-6.90.
Pittsburg: 1 orange, Nav. "off bloom" 4.55, lem. 3.45-6.80.
Cincinnati: 2 lem. 4.15-6.90.

Los Angeles, Nov. 13, 1918.

The bureau of markets estimate for California's orange crop is 14,322,000 boxes. It divides the state as follows: Northern California 138,600 boxes; Central California 1,339,800 boxes; Southern California 13,000,000 boxes. Last year's total was 7,893,270 boxes.

Off bloom navels are occasionally in the market and claiming good price. Northern and Central California are also sending some new crop navels. All are being well received. Valencias are not so spectacular as they were some three weeks ago. However, market conditions are firm and good prices are being secured.

All lemons are being taken as soon as offered, a keen demand being made by influenza. Prices are ranging from 4.50 to $10.00.

Shipments

Shipments of citrus fruits to date since November 1, 1918: Southern California; oranges 22 cars, lemons 290, total 312. To same date last season; oranges 743, lemons 101, total 844. Central California this season; oranges 22, lemons 31, total 53. Last season to same date; oranges 2, lemons 13, total 15. Northern California; oranges 1, last year same date, none.

SOIL BLASTING

The time is past when it is enough to talk of soil blasting, for there are as many different ways of doing it as there are of harrowing. Unlike harrowing, however, each kind of which has its place under certain conditions, there is just one kind of blasting that is right. The others are wrong. They may be merely ineffective to accomplish the desired purpose, or they may be actually harmful.

The soil should have a heaving, breaking impulse extending over many feet in all directions from each charge of explosive used. Simple as this looks, it is not to be secured except with certain comparatively slow acting powders that are made on purpose for this work. If an ordinary explosive made for blasting hard rock is used in the soil, it pulverizes some of the earth close to the charge, say within twelve or eighteen inches, and forces it into the earth outside that range, making a compact wall that more than once has been dug out and found strong enough to stand alone and hold water.

This kind of pulverizing of soil is bad business. It quickly puddles again. The packing of soil is very bad business, as nothing short of another blasting, properly done, will undo the harm accomplished. The whole effect is limited to a few feet, however, which denotes a very poor blast. The reason is that the violent explosive uses up its strength in grinding to powder the little bits of earth close to the charge.

The slower explosive, with an action designed for this business, instead of grinding a little earth, tends to lift large masses. Probably before much or any of the gases have escaped to the surface, the soil for ten to fifteen feet or more about each charge has been lifted and disturbed. The effect after all is over is that the whole area has been split, shattered and crumbled.

Pot holes after blasting are an indication either that the powder used is too violent for the purpose, or that the soil is too damp. Once in a while proper blasting will leave small cavities underground, or rather spaces in which the soil is so loose as to permit a stick or bar to thrust through with little effort. But violent powder almost always leaves large pot holes, while the blasting with any powder in wet soil is likely to cause them. It must be understood that these cavities are well underground and that the surface is bridged over. A man even may walk on the surface without sinking into the hollow beneath. They can be detected by ramming a stock or bar into the blasted ground.

The foregoing comments apply alike to blasting ground for trees and for other crops. There is no essential difference—it is all intensive tillage of the soil, with the idea that root penetration will be assisted, that drainage will be bettered, that the moisture holding capacity and capillary movement of water will be helped, and that a general mellowing effect will be secured as a secondary effect through the deep penetration of cover or other crop roots which die after a season.

SEED CORN

California corn growers have found that well selected acclimated seed means success if other conditions of a corn crop are met. The best of seed secured in the East will not produce as well the first year as the second and third. On the other hand, there seems to be a time when California seed runs out, but if proper selection is made each year, it is very probable that this running out feature will become less prominent. This is the time of the year for selecting next year's seed corn, or at least it will be time in a very few weeks. Careful observation of the behavior of individual stalks of corn may aid in selecting the ears which will give thrifty, bearing plants next year. As to what good seed corn should be the department gives the following:

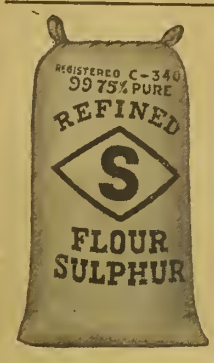
Well adapted to the seasonal and soil conditions where it is to be planted. Grown on productive plants of a productive variety. Well matured and preserved from ripening time to planting time in a manner that will retain its full productivity. This sort of seed corn can best be secured by gathering the ears from the stalks as early as they mature in the fall, by promptly drying the seed immediately after it has been gathered, and by keeping it constantly dry and safe from rats, mice and insects.

HUMUS

Humus is a constituent of the soil that plant life requires. It is the substance that makes the soil buoyant and mellow. It is the opposite of sour, heavy soil. It stimulates plant growth by making possible the influx of the sun and air into the ground. It does more than this. It dissolves solid matter and transforms it into the elements that can be used for plant growth. Humus is the product of decaying vegetable matter. It comes from the turning under of corn-stalks, stubble or some growing crop such as clover or peas, and all straw and refuse that accumulates when crops are harvested. A growth of growing vegetation ploughed under at the proper time is a wonderful soil stimulant.—Fruit World of Australasia.

Owing to lack of markets for their corn, farmers in Argentina, South America, are in some cases disposing of it for fuel at 40 cents per bushel.

The province of Milan, Italy, shows a decrease in live stock, based on the census of 1908, of 21 per cent for horses, 18 per cent for mules and eight per cent for swine.



SULPHUR

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

Try our new brand of VENTILATED Sublimed Sulphur, 100 per cent pure, for making Paste — (Atomic Sulphur) — and for dusting.

For Lime Sulphur Solution, use our DIAMOND S BRAND refined Flour Sulphur. We can furnish you this sulphur at such a low price that it will pay you to mix your own solution.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre of our Diamond "S" Brand Powdered Sulphur. Write direct to

San Francisco Sulphur Co.

Over there! Over here

THROUGH mud and rain, through gas and shrapnel, our boys are pushing on to Victory. It's a task that tries the souls of strong men. They *must* have rest and recreation.

At the canteens, they buy the little comforts of life at cost. In the war-service huts, they find everything needful to write the letters you receive. They attend a show, see a "movie" or hear good music—all free. Always, they find in the hut secretary a friend. They forget for a while the grim scenes of war and return to duty refreshed. These are some of the things that keep fighting men at top notch.

YOURS is the task of growing the food these fighting men must have. The toiling millions in the munition factories, arsenals and shipyards also look to you for sustenance. And they do not look in vain.

Your work is vital to winning the war and you are doing it manfully, mindful of Country, forgetful of self. You are working early and late, putting forth your strength unsparingly. You have produced bounteous crops that feed a hungry world. Yet to you are spared the comforts of home and the presence of loved ones. Yours are the privileges of earning and giving.

Give to "keep good men good and brave men strong." Give to bring cheer to those who are daring their all for you and yours. And when the boys come home victorious, you can honestly say, "I have done my part, too. I have backed you to the limit."

Seven allied activities, all endorsed by the Government, are combined in the United War Work Campaign, with the budgets distributed as follows: Y.M.C.A., $100,000,000; Y.W.C.A., $15,000,000; National Catholic War Council (including work of the Knights of Columbus and special war activities for women), $30,000,000; Jewish Welfare Board, $3,500,000; American Library Association, $3,500,000; War Camp Community Service, $15,000,000; Salvation Army, $3,500,000.

Thanksgiving Proclamation

By the President of the United States of America.

It has long been our custom to turn in the autumn of the year in praise and thanksgiving to Almighty God for His many blessings and mercies to us as a nation. This year we have special and moving cause to be grateful and to rejoice. God has in His good pleasure given us peace. It has not come as a mere cessation of arms, a mere relief from the strain and tragedy of war. It has come as a great triumph of right.

Complete victory has brought us, not peace alone, but the confident promise of a new day as well, in which justice shall replace force and jealous intrigue among the nations. Our gallant armies have participated in a triumph which is not marred or stained by another purpose of selfish aggression. In a righteous cause they have won immortal glory and have nobly served their nation in serving mankind.

God has indeed been gracious. We have cause for such rejoicing as revives and strengthens in us all the best traditions of our national history. A new day shines about us, in which our hearts take new courage and look forward with new hope to new and greater duties.

While we render thanks for these things, let us not forget to seek the Divine guidance in the performance of those duties, and Divine mercy and forgiveness for all errors of act or purpose, and pray that in all that we do we shall strengthen the ties of friendship and mutual respect upon which we must rely to build the new structure of peace and good will among the nations.

Wherefore, I, Woodrow Wilson, President of the United States of America, do hereby designate Thursday, the twenty-eighth day of November next as a day of thanksgiving and prayer, and invite the people throughout the land to cease upon that day from their ordinary occupation and in their several homes and places of worship to render thanks to God, the ruler of nations.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

GREATER PRODUCTION

Peace has not ended the problems confronting the American farmer, and it is apparent that the federal department of agriculture contemplates a program of more strenuous farming operations. The editors of farm papers of the country have been summoned to Washington to confer with Secretary of Agriculture Houston on the agricultural situation in this country. No announcement is yet made of the details of this conference, but the editor of this paper, who is now in Washington, will keep Cultivator readers informed. We think that without question California producers will devote as much energy and enthusiasm to working for world peace as they did to working for victory.

STAY ORGANIZED

During the past year and a half the producers of this state have formed numerous organizations. Most of these organizations were made possible through war conditions.

Enough constructive work has been accomplished to indicate the far reaching possibilities of organized effort, when directed along sane lines.

The problems of peace promise to be greater than the problems of war. War is temporary; peace must be permanent.

In the process of readjustment many grave problems must be solved and constructive policies formulated, and if the producers of this country are to receive the consideration they are entitled to, they will need big, strong, working organizations.

LOS ANGELES EXPECTS YOU

The people of a state or county or district make the fairs. Without their support no fair can exist. The success of fairs is judged always by the attendance and each person within reach of a fair is responsible for the attendance.

Of course it is recognized that fairs and expositions are educational institutions. They, therefore, perform a distinct service to the community and the people can show their interest and appreciation by attending. Perhaps they could not afford to go for this purpose alone, but they are certain to receive some valuable suggestions and inspirations that will aid them in their work.

The Liberty Fair, now open at Exposition Park, Los Angeles, has stressed educational features to a degree in keeping with the original motive for bringing the fair into existence, namely, as a powerful aid in increasing the production of meats, grains, fruits and dairy products.

Now that the war needs are past, the greater needs of a hungry world claim our attention.

The message that the Liberty Fair was to deliver in war time is of as great, or greater, importance in peace times.

And besides, if you haven't properly celebrated the coming of Victory and Peace, the stage is set out at Exposition Park.

GRAIN FOR SALE

Judging from the letters that are coming to our desk, there is widespread dissatisfaction among the bean and barley growers of California over the present state of the market.

The growers want to know why they are not offered more; whether the price will improve; if it is true that the food administration plans to enter the market as a buying agent for Europe, etc.

Frankly, we have no definite information on any of the above questions, but our advice to the growers is not to get panicky.

The food situation in this country is rather misleading. Reports indicate that the warehouses and elevators at the terminal markets are filled to their capacity. Movement of grain has necessarily been restricted the past few months because of the amount of tonnage diverted to transport work.

Government figures indicate that there is a net decrease of primary grains, and in view of the fact that the United States will be called on to maintain our supplies to our allies and in addition will be expected to furnish vast quantities of food to the defeated powers, it is our opinion that, with a general release of shipping, the congested terminals in this country will be relieved and the movement of grain from country points to the seaboard will develop to large proportions.

With a hungry world clamoring to be fed, raw food is valuable property.

CAR WINDOW NOTES

Going to Washington—Washington, D. C.!

Going to the capital of the world to learn about agriculture and what our government expects of the farmer—especially the farmer in California, Arizona, the Northwest, the Whole West.

Like a genuine country boy, I've glued my eyes to the car window.

Awful interesting thing, a car window is.

I've seen gardens, alfalfa fields, orchards of fig, olive, pomegranate, orange, all the fruits of the earth, and vineyards where the most luscious of all grapes grow, more—contented homes.

We climbed the grade till ruddy apples and pears appeared.

Then the sages, greasewoods, ceanothus and chaparral.

A look backward over the hills and valley, one of the richest in the world—sunny, prosperous, homeland—California!

Tree-yuccas, sages dwarfed, desert, desolation. The train stopped. The wind howled around the car. Lump in throat—want to go back.

The Colorado—worth more than Rockefeller to the Southwest.

Up. Pine, fir and patches of snow.

San Francisco peaks, glistening white and floating off a great banner of white as the wind endeavors to tear off its cap. The sun's rays working more quietly will succeed better.

Canyon Diablo. Rocky sides very deep, very diablish.

Stock ranges, miles and miles, with little feed and stock in poor condition.

Little town. School house dry goods box type of architecture, without sage brush or even a fishin' hole near it.

Country church, dwarfed little spire with mute appeal to look upward and not too critically at broken windows and siding removed—perhaps—during some cold spell.

More trees. Cars on siding with logs.

More scenery and stovewood.

Perhaps better farming from tomorrow's car window.

SEND THE BOYS HOME

A Fresno subscriber writes: "This is the time of the year in California when the grain must be planted, and we need the help of our boys. They should be returned as soon as possible from the army in France."

True, and we believe they will be. The need of food production was never so great, and none appreciate this more than those in control at Washington.

But the "as-soon-as-possible" time may not come as swiftly as we all wish. Eastern Europe is in turmoil. Western Europe is almost prostrate and will need every possible aid in reconstructing homes, in blasting out concrete trenches and in getting the soil into producing condition.

Presumably French soldiers will be discharged in greater proportion than will the American.

There will be need of policing, of guarding and—possibly—of some fighting yet. As the editor writes this aboard train eastward bound, there are more men in uniform than there are civilians. Whether these men go "across" or not we do not know; presumably many of them will. Our army is not westward bound yet.

A conference in Washington this week has under consideration the needs of American agriculture. Every one of the participants, many of whom are connected with the agricultural press, are primarily and vitally interested in the farm. They know the need that "The boys come home."

But America is vastly bigger than she was a couple of years since; her problems have increased. We started out to preserve our own liberties and have become big brother to all the world—excepting William Hohenzollern.

Buy more tractors and farm power. Plan work to best advantage. Produce more—and still more.

Pretty soon the boys will come home and work as they have fought.

World Doings

A Hungarian republic has been proclaimed in Budapest.

British casualties in the war, it is announced in the house of commons, total 3,049,991.

Reports indicate that the War Work Campaign has secured generous oversubscription of the amount asked.

Several clashes are reported between American and British forces and Bolshevik troops south of Archangel.

Edward N. Hurley, chairman of the United States shipping board, has gone to Europe to arrange for the prompt return of our overseas forces.

Wages of railroad telegraphers have been again advanced by Director McAdoo and eight hours prescribed as a working day.

Dispatch from Amsterdam: "So lavishly did the German kaiser bestow iron crosses during the war that they now are selling for five pfennig (one American cent) apiece."

Draft slackers who have taken refuge in Mexico have made tentative "offer" to return to the United States on easy terms. The department of justice has not accepted.

White bread, entirely of wheat flour, is back on the American table; California and other sugar producing states are now allowed four pounds of sugar per capita.

The Dardanelles are open. The British are occupying the forts along the lower Dardanelles, which the Turks are turning over. They have already placed 200 cannon in the hands of the British.

Instructions have been issued to all bureaus under the war department for slowing down work on war material in such a way as to give time for industrial readjustment and to give the war workers a chance to resume civilian work. Over-time, holiday, and Sunday work has been stopped.

The Allied armies are on the march toward Germany and German forces are slowly withdrawing. Allies are bringing up rail and wire facilities, guns and ammunition, to the present line. Airplanes have been used in feeding civilians and in mail and dispatch service.

Ships carrying 200,000 tons of food for Northern France, Belgium and Austria now are en route. They are proceeding under sealed orders to Gibraltar and Bristol channel ports, and on arrival will await word from Food Administrator Hoover as to their final destinations.

The refugee populations which have been freed in Belgium and France are moving back to their homes—or to the place where their homes once were—in the Hun-devastated regions. Great preparations are under way for the entry of the king and queen of Belgium into Antwerp. Brussels is not yet freed from the Germans.

President Wilson has decided to attend the council of peace in France. Although not yet officially announced, it is reported that the peace delegation from the United States, headed by President Wilson, will also comprise E. M. House, Secretary of State Lansing, Secretary of War Baker. The fifth member is variously reported to be Ex-President Taft, Charles E. Hughes, Former Ambassador Morgenthau, Elihu Root or Justice Brandeis. There is manifested a disposition to delay the holding of the peace conference until the political situation in Europe has somewhat crystallized.

Rumors persist that the former German emperor has returned, or is planning to return, to Berlin to take advantage of the general turmoil into which Germany has been thrown since cessation of hostilities. Junker influence is suspected in the extreme socialistic demands now being made in many European countries. Statesmen in Allied countries and the more moderate branch of the socialists in Germany are in agreement in suspecting the former emporer and his following of still being capable of and perfectly willing to hatch more trouble for the world in general. The Allies however have not gone to sleep on the job.

The world is passing strenuous days during the armistice period, with uprisings not only in Germany but in hitherto non-belligrent countries. It is reported that the queen of Holland has been requested to abdicate; that King Albert of Belgium has been asked for a constitutional monarchy; that the red flag is threatening to take possession of governmental affairs in Switzerland and in Sweden; that the king of Bavaria is missing; that Esthonia, Livonia, Courland and Oesel Island have decided to form a joint Baltic state; that Grand Duke William Ernst of Saxe-Weimar has abdicated; that republics have been proclaimed in Wurttemberg and Hesse, etc., etc.

Pruning Deciduous Fruit Trees

By Leonard Coates

THIS old subject is always new, because of constantly added experience. There can be no end to a discussion of anything that lives, be it vegetable or animal. And, moreover, so long as mankind exists will opinions vary, which is as it should be, or it would be a tame world we live in.

The difficulty in formulating exact rules as to pruning lies chiefly in the fact that soils, moisture quantity, extremes of temperature and other physical conditions vary greatly. A tree may with impunity be planted deeper in sandy soil than in heavy adobe, but that does not change the foundamental law that there is a "collar" to every tree, or an exact point designatlng which part of it should be above and which part below the ground.

So with pruning: While there are certain principles applicable in every case, in practice a certain modification is necessary for the reasons just mentioned.

The prime object is to assist the tree to produce fruit as soon as possible while maintaining a sturdy and vigorous growth. How shall we do this with

The Apricot

to begin with? Take the climatic extremes of winters in Solano County and Watsonville or Aromas in Monterey County, and it would not be practicable to prune the trees after one pattern. In the former section the trees are headed very low, allowed to branch out at a very acute angle and kept very vigorously shortened in every year. This low, spreading form is intended to prevent, to a great extent, injury from the direct rays of the sun, the tree acting as its own unbrella, as it were, while, if branches were longer, and more vertically inclined, they would bend to the weight of foliage and fruit, and get sunburnt. Furthermore, it may be considered a rule to always prune more heavily in proportion to the greater aridity of the atmosphere. Consider for a moment the tremendous evaporation going on in the Solano climate as against the loss of moisture ln the humld atmosphere of Monterey: and yet both are noted apricot sections, and, more strangely still, both using the same varlety, the Royal, whlle in Alameda and Santa Clara Counties the Blenhelm is always first cholce. In these latter counties the practlce of prunlng the aprlcot is midway between the two extremes.

The Almond

is very closely related to the apricot, and yet it is still deemed by many rank heresy to prune it as you would the apricot. Thls idea was born of expediency and ignorance, and should have "died a-borning": expediency, because lf the almond would grow and bear good merchantable crops without pruning, why prune it, and ignorance, because of a lack of a little botanical trainlng in plant classification. Therefore, treat the almond and the apricot similiarly.

The Prune

The necessity, or even the advlsability, of pruning the French prune tree regularly is denied by most growers, and practiced by still fewer. And yet how it tries to renew itself when an old, lichen-covered, semi-decayed limb breaks off, and how much finer the fruit on the strong young shoots that force their way up, showing that the only part of the tree that the owner can't reach — the root — ls as good as ever!

I am often asked: "How long will such a fruit tree live?" I answer, "As long as it is properly cared for." And this is true, as one does not figure beyond one's children and grandchildren. But the fruit tree usually has a different boss, or guide, or trainer two or more times in every decade of its life, and, as a result, dies prematurely.

Is it not better to prune the prune little and often than to mutilate it by savage butchery when, its strength exhausted, it refuses longer to bear profitable crops?

The Cherry

is another tree whose culture is largely carried on in a school of prejudice. It is usually taught that the cherry must not be pruned at all, or at least not after the first year or two after planting. The result is a tree 20 or 30 feet high, the crop being gathered at great expense, hundreds of fruit spurs being broken off every year, the fruit being forced to extremities of limbs which thus become unduly exposed to the sun, causing a dlseased condition of the bark.

The walnut, too, is commonly regarded as a tree which must not be cut back. You need not cut back the branches if you don't want to, and if you are satisfied with its shape, but there is no reason, botanical, promological, horticultural or physiologlcal why you should not prune the walnut.

The Peach

is pruned more closely than any other fruit tree, as it bears its best fruit on the young wood, and we must get a sufficient annual extension of such growth. It has, also, a greater tendency to over-bear, when the fruit would be small.

The Apple and Pear

may be said to require more of an automatic, mechanical training than other deciduous fruits. After the young trees are established, an annual pruning to balance the tree and enable it to hold its crop without props is all that is required. Always remember that pruning is less near the Coast and more in the interior valleys.

These generalizing remarks are made with no apology, knowing the intelligent class of Cultivator readers who wlll understand how to adapt any of these suggestions to their own immediate conditions and environment. Boiled down, or very briefly stated:

Do not plant tree deeper than lt stood in the nursery.

Leave the tree at least 24 lnches above the ground after planting. Thls will enable you to select the main branches to remain from one to two feet from the ground, with several inches between them, instead of forcing them all to grow from the top, which must happen if tree is headed too low. Shade at once with some "protector."

In one year from planting prune to leave three branches spaced as in preceding paragraph, and shorten these to about five inches. The subsequent growth from these will be nearly upright, with a more or less spreading direction. These three branches are the real foundatlon of the tree, and will never break if so started.

Two years after planting these three branches will have so increased

Drake Almond Tree
Pruned regularly every year—close cutting and open head.

Liberty Fair to Open

THE California Liberty Fair will open! After a six week's battle with the flu, the strength, vigor and optimism of this youngest of Western fairs was sufficient to bring it through the epidemic that has been sweeping the country.

The gates were scheduled to open six weeks ago, October 12, to be exact —but on the day set for the opening the board of health issued an order preventing all public gatherings.

Much has happened in the intervening time. Originally the fair was planned as an aid to increased food production—it was to be "a war fair over here to help the warfare over there," and as such it would undoubtedly have proven a powerful stimulant to increased production of all food products, but now that the war is won, it has been deemed appropriate and fitting that the whole organization be turned into a great Victory and Peace celebration, and it will be a Victory Fair when the gates open to the public.

But the real motive for the fair is just as important—more important, as a matter of fact—now than before the armistice was signed. Food won the war—but the world needs food even more keenly now than when battles were being fought on the various fronts. That the world's larder ls dangerously low was made plain immediately after the armistice became a fact. The first call that came from stricken Europe was for food.

So even in a larger way the California Liberty fair finds an opportunlty to be of servlce to the world.

And how well it will meet the obligation is evidenced by the completeness of the almost endless exhibits.

It would require a great deal more space than is at our disposal were we to attempt to vis lize all the different departments and exhibits. Just picture the most complete fair you ever attended, and place it in a setting that is beautlful to a degree rarely associated with fairs, and you wlll have quite a good ldea as to what to expect.

Among the leading features is the large exhibit made by the United States government whlch completely fills the armory.

The agricultural and horticultural buildings are filled to the roof with exhiblts that indicate the possibilities of this state.

The manufactures and liberal arts building contalns over 100 separate exhibits. Every square foot in the tractor tent is reserved. The University of California exhibit is housed in a separate building and the overflow is given space in the horticultural building.

Perhaps the most striking feature of fhe fair, aside from the completeness of it all, is the character and quality of the live stock show. The management has made a partlcularly strong effort to assemble, not only the best herds and flocks in California, but some of the leading herds from the older live stock sections. It is doubtful, excepting the Panama-Pacific International Exposition, if any California fair has ever attracted live stock from as wide territory. There are herds from Missouri, Wyoming, Washington, Colorado, Arizona, and from Canada, as well as many California herds.

The Hereford show promises to be exceptionally strong, although the exhibitors are all from outside this state.

The visiting Shornhorn herds will be forced to measure strength with California cattle, and it is certain that the local exhibitors will hold their own.

One herd, but one of the best herds of the Angus breed, will be on exhibit.

The showing made in the fat classes, particularly the car load lots, will be the most extensive staged in this state.

The swine barns are full—all California herds, and of a class that indicates the remarkable progress made in this branch of animal husbandry in California during the past few years.

California shows always bring out splendid herds of dairy cattle. Indeed, this state has some of the top herds of the different breeds and many of the best are in the stalls at Exposition Park.

One of the features of the live stock divlsion will be the extensive showing made by the milk goat industry. Every important breed is represented, and the showing made clearly demonstrates the importance and rapld development of thls industry.

The sheep department is hardly up to what mlght be expected, but the sheep breeders of Callfornia are capable of making a much stronger show.

The horse department will not be burdened with entries, but sufficient numbers are in the stalls to insure a pleasing show.

Many racing events are on the cards and a matinee horse show is planned for two afternoons.

As a whole the live stock show will be good and will undoubtedly prove an inspiration to many new breeders.

One feature of the fair that should not be overlooked is the opportunity to visit the art gallery and the museum. There is not a state fair that the writer is familiar with that offers such a splendid exhibit of the fine arts, and certainly none have an exhibit of natural history that compares to what may be seen at Exposition Park.

The management has provided a program for each day that is of the widest interest.

Liberty Fair will be a Victory Fair and every man, woman and child in California is invited to attend and celebrate in a fitting way the victory that has come to the United States and the nations allied with us, and to take home the message that is evident throughout each department—the message of needed increased food production.

Agricultural News Notes of the Pacific Coast

Northern California

Thirty-five thousand acres of rice are being harvested in Butte County.

Many silos are being built in Shasta County this fall.

Happy Valley, Shasta County, is picking a big olive crop.

Heavy frosts in Nevada County have caused a rush to fill silos.

A large acreage will be sown to wheat in the Redding district of Shasta County.

Sierra County and Tehama County have both made the wearing of influenza masks compulsory.

All the olive factories in Tehama County are busy. Most of the olives are pickled though some oil is made.

The olive crop on the Natomas project in Sacramento County has been very satisfactory this year.

Butte, Tehama and Sacramento Counties have had an exceptionally heavy yield of olives.

Headline in a San Francisco paper: "Price of eggs drops to 80 cents a dozen!"

Mrs. Fowler, home demonstration agent, is visiting the farm centers of Butte County this month.

There has been serious loss of honey in Butte County through the inroads of foulbrood.

Rice mills in Butte County are now running day and night on the new crop.

Butte County reports the cold weather putting color into the oranges rapidly. Several carloads have already been shipped.

There will be local meetings of the El Dorado County farm bureau at Union, November 22; North Side, 26; Placerville, 28.

Siskiyou County had an inch of snow the first Sunday in November. Seven inches fell on the divide between Sisson and McCloud.

According to the last report of Horticultural Commissioner Mills of Butte County prunes have the largest orchard acreage, 6430.

A successful orange grower in Thermalito, Butte County, reports having raised enough Blackeye beans in his orchard the past year to pay all expense of upkeep.

A meeting of officers of the Northern California Counties Association and interested land owners is soon to be held at Hayfork, Trinity County, to go into details of the proposed irrigation district.

Early construction of the Feather River highway is promised. The Sacramento Valley Development Association has received assurance that $400,000 of federal money will be available for building operations as soon as construction work becomes possible.

Farmers on the first unit of the Durham State Land Colony have organized a stock breeders' association. They have adopted the Holstein for dairy cattle, Duroc Jersey for hogs, Durham for beef cattle, and Romney Marsh and Rambouillet for the two breeds of sheep.

It has been announced by the management that the sugar factory at Hamilton City will not be operated next year. The reason given is the labor situation and the impossibility of securing beet sugar seed until the end of the following year. The large acreage owned by the company will be planted to grain.

Central California

Several crews of orange pickers from the Woman's Land Army are at work in the Terra Bella district.

Fresno olive growers are showing good yield. Plantings have been light this season.

Kern County alfalfa growers are objecting to the low prices offered for alfalfa hay.

Delano, Kern County, reports a large acreage of kafir corn being harvested.

Plantings of rice in the Delano district of Kern County have proven very satisfactory.

Growers of castor beans in the Porterville district report returns of about $60 per acre.

Terra Bella canneries are still shipping canned tomatoes on government contract.

The Sanger district of Fresno County is shipping out oranges which are well over the maturity test.

Orange pickers are busy in the Springfield district of Tulare County. Six to eight cents per box is being paid for the picking.

The Associated Peach Growers has shipped 2000 tons of peach pits to the government for making into charcoal for gas masks.

Olive growers are somewhat anxious over interpretation of the government ruling as to maturity, which makes no mention of color.

The California Associated Olive Growers has filed suit against a member for making sales outside of the association.

The Waterford irrigation district has made application to the state water commission for permission to appropriate 6000 miners inches from the Tuolumne River above Waterford.

Long Staple cotton grown this season in Kern County is reported of splendid texture. The outlook for the cotton industry in that county is regarded as promising.

The government notifies Geo. C. Roeding, who has charge of sending peach pits to government stations for use in making gas masks, that no more pits will be needed.

The effort of the California Prune Growers to secure an increase in prune prices has been fruitless. Permission was refused by the federal government.

"The Sunsweet Standard", the organ of California Prune and Apricot growers, is urging all growers to maintain standard of their product, selling damaged fruit on its merits only.

Henry Markarian, president of the Central California Fig Growers' Association, and successful fig grower of Fresno County for 30 years, has passed. He was a native of Armenia, coming to this country in 1882.

Commissioner Collins of Tulare County reports as to this season's work on citricola scale, which began July 17 and ended September 9. A total of 700 acres has been treated, liquid gas taking the place of the former cyanide and acid treatment.

Several olive growers of the Porterville district have announced their intention of refusing to deliver their fruit to association plants, with the declaration that under the form of contract signed by them they are no longer members of the association.

Southern California

Jam is being manufactured from wine grapes at Hemet.

Imperial Valley's winter lettuce crop is now well above ground .

Saticoy, Ventura County, is being pestered by walnut thieves.

Orange County sugar beet growers are now signing up contracts for 1919.

Liberty Fair will open at Los Angeles Exposition Grounds November 21. A big fair is promised.

Japanese cantaloupe growers in Imperial Valley report over 15,000 acres for 1919.

The beekeepers of Imperial County have begun an organized fight against foulbrood.

The government has just placed an order for 100,000 sacks of Pinto beans at seven cents.

The Los Angeles County farm bureau hopes to be able to hold its annual meeting in the very near future.

San Dimas is proud of the big new orange marmalade factory put up by the citrus growers.

Southern California's acreage of celery is only half that of last year; Orange County only having in 200 acres.

Prof. Hauser of the poultry department of the state university is now in Los Angeles County giving demonstrations in culling laying hens.

Preparations are being made for the ninth annual National Orange Show to be held at San Bernardino February 14-23.

It is estimated that Imperial Valley will ship out 40 carloads of turkeys during the Thanksgiving and Christmas season.

The annual meeting of the Imperial Valley Beekeepers' Association was held in El Centro Tuesday, November 12, with a large attendance.

Bean growers are being urged by the association to hold on to their beans. Stocks are moving rapidly from the state and prospects are for better prices.

The California Lima Bean Growers' Association has sent out $2,000,000 as partial payment to growers who delivered Limas during the month of October.

Farm Adviser Gordon of Riverside County has been transferred to Los Angeles County. Mr. Gordon will give particular attention to hogs, poultry, pet stock and truck crops.

Word has been received that the government price for cleaned castor beans has been raised from $3.15 per bushel to $4.50. The government is also anxious to buy wild beans.

The citrus experiment station at Riverside is making a chemical study of irrigating waters in Southern California and will for a short time make analyses without cost to irrigators.

A Redlands by-products plant has just finished a large pack of apple butter and is now ready to turn its attention to making of orange marmalade.

The Yucaipa Apple Growers Association has shipped out 80 carloads of apples this season. In addition large quantities have been placed in cold storage and preserved in cans.

It is estimated that there are now in warehouses in San Louis Obispo, Santa Barbara, Ventura and Los Angeles Counties over one million and a quarter bags of Lima beans.

The Coast and General

New York apple growers report brisk demand for their fruit.

The annual meeting of the National Grange was held at Syracuse, New York, November 13.

New York had 30,000 acres planted to cabbage this year; Wisconsin, 12,500.

The food administration has prescribed the use of standard fillers for egg cases.

Prune growers of Polk County, Oregon, report the biggest crop they have ever had and top prices.

The government has contracted for 9,000,000 pounds of evaporated apples in New York.

The Washington State Horticultural Society is planning to hold its annual convention at Spokane, December 10 to 13.

Seattle, Washington, reports sale last week of 60 carloads of Weinsaps from the Wenatchee Valley at $1.90-$2.00 car run.

Washington egg producers are getting bigger prices but are preparing themselves for a slump after Thanksgiving.

Quicker routing of carloads of dairy products to the East has been secured through the efforts of the National Poultry, Butter and Egg Association.

The latest federal estimate of the population of Arizona is 409,203, an increase of 161,904 over the estimate made July 1, 1916.

Potato buyers in the southeastern Washington potato district are offering only $20 f.o.b. Yakima, consequently growers are storing in the hope of getting $30 to $35.

The Wenatchee district of Washington expects to market about 6400 carloads of apples. Some 600 carloads of culls will be shipped to by-products factories.

The crop of Greek currants is proving to be very short this year, whereas a very large crop was anticipated. Turkeys have been bringing 30 cents a pound in Kansas City markets.

C. B. Green, superintendent of the government employment bureau at Hood River, Oregon, has furnished orchardists with 1549 harvest hands from Portland, mostly girls and women.

Cranberry growers are among those well pleased with the increased sugar allowance, as they say that the scarcity of sugar so far this season has had an alarming effect on the cranberry demand.

W. A. Acorn, a Washington creameryman, says the dairy industry in the Colville Valley is growing. Dairymen are improving their herds and weeding out the poor cows. Some pure bred cattle are being brought in, Holsteins and Jerseys.

Potato growers of the Yakima Valley are considering the formation of a potato sales agency. The movement is the outcome of the decision made by the potato growers' association to hold potatoes of first grade at $40 a ton.

Believing that the influenza situation will permit, officials of live stock shows have fixed the following dates: Northwest Live Stock Show, at Lewiston, Idaho, November 28 to December 4, inclusive. Pacific International Live Stock Show, at Portland, Oregon, December 9-14, inclusive.

Seasonable Work in Insect Control

By E. Ralph de Ong

HOW few gardeners or farmers plan their cropping systems with the idea of avoiding insect losses. The usual custom is to plant whatever will bring the highest price and for which their land seems adapted irrespective of any insect invasions. Timely work in the orchard through the fall and winter in the control of certain insects is the best insurance of a clean crop the following season. More loss will be avoided by many kinds of insects through good cultural practices in the field and garden and by proper rotation of crops and choosing of proper planting dates than by any spray program, no matter how elaborate. Not that we can give up the latter practice, nor control all insects by improved farm practice, but methods of fighting have their places and it is only by combining the two that the greatest success will be obtained. The following points have been noted to call attention at this time to seasonal work which should be done now.

FIELD CROPS

Cutworms

Cutworms cause heavy losses in beet, corn and tomato fields during the early spring and yet the insects are not as numerous as they are in a meadow where their presence is unnoticed. Why? Because in meadows and grain fields the stalks which are cut sprout up again or the plant in stooling covers up the loss. Besides the number of plants per square yard is very much greater in the meadow or grain land than in a beet or tomato field. Hence newly broken sod or any field where cutworms are apt to be abundant should be sown to grain for one year rather than planted to a cultivated crop. The usual habit of the cutworm is to feed on the tender stalk just at the surface of the ground, the greatest damage occurring in crops such as corn and beets where a large portion of the ground is bare, thus concentrating the attack on the young plants which are usually just close enough together to occupy the ground when mature. The cutworm works at night and retreats beneath the surface of the ground near the plant last fed upon during the day so that the only sign of loss is the wilting plant or simply the missing hill. These worms are the immature forms of large heavy-bodied moths, usually an inch or more in length and of a dusky gray color. Many of our species lay their eggs in the fall, commonly selecting grass or sod land. This will explain the greater damage often found in cultivated crops adjoining permanent grass land. The cutworms hatch from the eggs deposited in the grass, feed for a short time in the fall and are dormant in the winter, becoming active again in the spring.

To avoid injury from cutworms plant newly broken sod to grain rather than to beets, tomatoes or corn, or any crop which only partially occupies the ground during the early stage. Grain or hay crops will stand much heavier attacks without serious loss as stalks which are cut off will be replaced by stooling and besides, the attack is not concentrated on scattering hills or widely separated rows, but the plants are numerous just as they are in the natural feeding ground of this insect. If sod can be plowed late in the summer the field loses its attractiveness for moths and few eggs will be laid. After September or the middle of October in many places in the state the overwintering cutworms are present, deep fall plowing is then of some value, especially if followed by heavy rains and cold weather as the larvae would probably not find their way to the surface. Sod plowed in the spring will be loose and friable, allowing the worms to work to the surface and attack any planted crop. In this case it is well to delay planting as the heaviest attack usually comes after warm weather, the hibernating worms soon maturing and changing to moths.

Poisoned bait scattered over the ground just previous to planting will destroy many of the overwintering larvae.

Wireworms

Wireworms are similar to cutworms in their preference to sites for egg laying, they commonly choosing grass land, as their larvae are, to a large extent, root and tuber feeders. There is this difference between the cutworm and the wireworm, the latter usually requires two or three years for its development, while the cutworm matures in from two to six months. The adult of the wireworm is a long, slender, flattened beetle, commonly called a click beetle. The larva is reddish brown, with a dark, cylindrical body, the larger species being one inch or more in length. It feeds on tender roots and especially the fleshy stalk of many of our common vegetables and field crops, such as beans, beets, spinach, corn and potato. The latter is attacked freely, both in seed tubers and the growing plant, the larva burying itself in the tuber and when abundant may destroy the entire stand.

Our more common species lay their eggs in May and June, preference being shown for ground with heavy vegetation. During the first year of their life these larvae are quite small, attaining the size which we commonly know only in the second year of their life, the second winter is probably passed in the larva stage, feeding for a short time early in the spring and then they pupate and emerge shortly as adult beetles in May and June.

Wireworms feed in the moist upper layer of soil early in the spring, but with the coming of hot dry weather they migrate to the subsoil and feed at these lower levels, although irrigation may bring them nearer the surface for a short time. During the winter little damage is done by these insects in the colder part of the state, activity beginning in the early spring months.

Control of wireworms by means of chemicals or commercial fertilizers has not been successful on a large scale, dependence having to be placed on farm practice and careful choosing of crops and planting dates. Plowing is of some advantage in controlling insects which live in the ground, especially beetles, as when in the pupal stage (i. e., transformation from worm to beetle) they are very easily injured, and carefully plowing and harrowing at that time will destroy many of them. Since these beetles pupate rather late in the spring, fall or winter plowing has no effect, but rather it should be delayed until the last of March or April. The dates will vary in different parts of the state and with different species of beetles. For more exact information send specimens of insects to the University of California. Egg laying coming late in the spring there is no opportunity for the prevention of infestation of the soil by fall plowing of grass land as in the case of cutworms. Also a feeding period extending over almost two years makes them a much more serious pest than cutworms.

Low, moist grass land is especially subject to wireworm attack and when such ground is to be broken up and cropped it should, if practical, be plowed in the early spring and allowed to lie fallow for a few weeks. By this method many pupae will be killed and also the ground will be less attractive to the beetles for egg-laying. Grain should occupy the ground for a year after the spring plowing, that is, through the winter and the following spring. By this time most of the wireworms have matured, and cultivated crops, such as beans and potatoes can be grown with a greater degree of safety. In soils where these insects persist for many years the ground may be plowed early and left without harrowing so as to dry it out thoroughly, then plant as late as possible, preferably the first of July, using extra seed so that a stand will be secured in spite of some loss of plants. Leaving land in grass for only a short time gives the insects less opportunity to increase.

Ground Beetles

Ground beetles, Blapstinus and related species, besides the larvae of the root feeding weevils and white grubs, work somewhat similar to wireworms. The beetle Blapstinus being more of a stalk feeder, especially on tomatoes and beans. Their life history is somewhat alike, some living two or three years in the larval stage and others for a less time. But in all cases serious injury results from destroying the natural food of the insect and planting the ground to crops which only partially occupy it for the first few weeks. Avoid planting cultivated crops on land which has supported a heavy crop of vegetation for years just prior to the plowing. If practicable, sow grain for the first crop and preferably with an extra amount of seed.

Wheat Stalk Borer

Wheat stalk borer is an enemy of growing grain. The wingless females of the first generation appear about the first of February. These deposit eggs in the sheaths of the young wheat plant near the developing head. The larvae from these eggs develop in the stalk, soon killing the embryo head of the plant and emerge as winged adults about the first of March. This generation flies about seeking new wheat plants and deposits eggs inside the stalk. Here the larvae develop, usually near one of the joints, the only indication of their presence being a slight enlargement of the straw where they are hidden. The larvae change to pupae inside the stalk and there remain until late fall or January, sometimes remaining in the field in stubble or in the threshed straw.

The principal injury is from the larvae of the first generation as these actually kill the wheat plant outright or cause a heavy stooling which weakens the plant. The larvae of the second generation cause a reduction in the yield, the attacked stalk being somewhat weakened and the grain light in weight. Since the larvae of the second generation live over in the straw the burning of the latter or careful plowing under of the stubble will reduce the injury. The former practice is not to be commended unless it is definitely known that the insect is present in numbers sufficient to cause injury. Rotation of crops is an important factor in the control of this pest as the first generation of females are wingless and their distribution is necessarily limited. Wheat should not follow wheat when heavily attacked but some other grain should be grown.

False Chinch Bug

False chinch bug, a common pest of milo and other varieties of corn and also sugar beets, especially in the interior valleys and Southern California. This insect feeds on the growing stalks and leaves, sucking out the sap but not destroying the plant tissue. Corn fields are attacked by great swarms, which retards the growth materially and may kill the plant. These insects resemble the Eastern chinch bug but are smaller, the females being about one-sixth of an inch long and the males even smaller. In color the nymphs are very light gray, the older adults being much darker or even black. Transparent wings cover the body and project slightly beyond the tip of the body.

These insects increase very rapidly during the summer, a generation maturing in 20 to 30 days and by fall are very abundant. The adults hibernate through the winter in grass, leaves and among cornstalks, the number which survive the winter being dependent on available shelter. Since control of field insects by means of sprays is usually impractical, attention must be turned toward the one measure of protection we have, destruction of winter hiding places. Fields which have been attacked this summer should be plowed carefully this fall, covering all trash to a good depth and harrowing the ground so as to prevent the escape of any bugs. If the corn stalks cannot be disposed of in any other way they should be burned, shocked corn should not be left in the field until late in the winter as this forms an ideal hiding place for the bugs. Heavy growths of vegetation or bunch grass along ditches and fences should be cleaned off and all available hiding places in adjoining fields should be burned or plowed under.

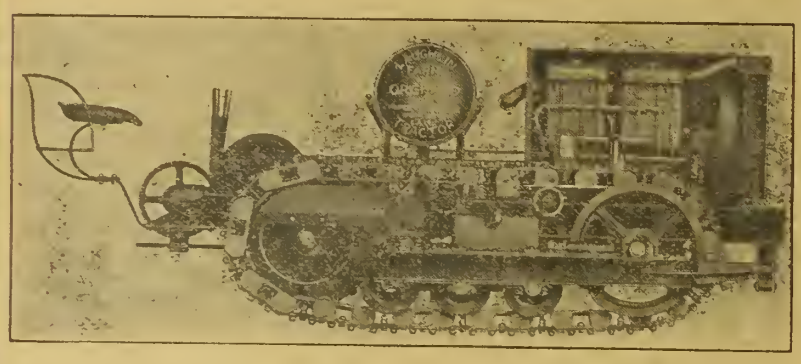
Thrips

A common species, the bean thrips, which attacks many of our vegetables, but especially beans, may cause serious injury, particularly if the host is suffering from drouth. These are minute, winged insects, feeding mostly on the under side of the leaf, causing the latter to pale and dry up. Spraying large areas for thrips is seldom practicable, but attention should rather be turned toward the destruction of the overwintering adults by plowing under dead vegetation and hardy, winter host plants such as radish, mullein, sow thistle and wire grass. These plants are the host during fall and early spring and in this way carry the insect over from one year to another. On fields which have been subject to thrips injury and where it is contemplated growing a crop subject to their attack, a special effort may be made to prevent carrying over large numbers of thrips even though it may interfere with the best farm practice. Infested crops should be kept in as thrifty a condition as possible by cultivation and abundant moisture so that the attack may be better withstood.

Continued next week.

ANNOUNCEMENT

Laughlin Tractor



This Tractor that created such favorable comment at the Los Angeles Tractor Demonstration in September, is now ready for delivery and orders are being booked by J. W. Leavitt & Co., the pioneer automobile dealers of the Pacific Coast, who have taken over the entire factory production.

Gum Disease in Citrus Groves

Written for California Cultivator By R. R. Snowden

IN ALL discussions of the causes and cure of plant diseases it would seem proper to discriminate sharply between primary or fundamental and secondary or exciting causes. With respect to citrus trees in California, notwithstanding the unquestioned discovery of several exciting causes of gum disease and their limited control, its fundamental cause is so patent to any persistent observer as to appear at least to the writer no longer a matter in dispute. It is the unvarying fact of the trees having been buried so that the root crown is from six to 18 inches beneath the surface of the ground.

Citrus trees will stand all kinds and almost any amount of abuse in California conditions without apparent suffering, but the limit at last is reached. While this particular abuse would in Florida be quickly followed by acute distress on the part of the tree, in California from 10 to 15 years will intervene before any alarming symptoms become visible. Yet it should surprise no one that sooner or later this flagrant departure from nature's universal plan is sure to be followed by dire consequences, for no one ever saw a tree of any kind growing in situ with its root crown below the normal ground level. This diabolical system is in vogue and excused because of the necessity of protecting the bud union from the burning sun; but better far bank up the earth around the base of the properly planted tree and later remove it when the latter's own foliage shall provide the needed protection.

Supporting my contention, go into any California citrus orchard of 15 years or older, and it will be found the invariable rule that the trees earliest and most seriously affected with the disease are those which are most deeply buried, and vice versa. This contrast is most marked in the older groves, the writer being familiar with a very old one in Ventura County where the trees in the lower portion have been long embanked with earth washed down from the higher levels, and here a number of the trees have been destroyed by the disease and many others are suffering with it; while in the higher portions where the root crowns have been long exposed by denudation not one case of the disease occurs.

In Spain there are orange groves which are believed to date back to the time of the Moors. At any rate they are centuries old, and the only trees affected with gum disease are those which have been allowed to become deeply embanked with earth; and the certain cure for the trouble is removal of the excess of earth and still more from beneath the crown so as to allow the free circulation of air to the roots at their junction with the trunk.

The need of air in the large roots is so peremptory that although aquatic trees are less dependent upon it than are dry land trees, yet even the former, in the case of the cypress of the Southern swamps, find it necessary to send up into the air from their submerged crown roots what are known as "knees," to supply this urgent need.

In its struggle to combat the evil effects of the abnormal condition forced upon it the tree tries to convert the buried portion of the trunk into root, sending out many adventitious rootlets therefrom in all directions; and so great are its needs for large roots near the surface that in time it will be found to have sent them straight upward from the old and outraged crown roots.

The tree thus weakened by unnatural conditions and its buried cortical armor now softened, instead of being like the true roots, enabled to resist ordinary attacks, becomes an easy prey to and hospitable habitat for its fungous enemies which find easy entrance here as though the bark had been bruised.

Although we have discovered a number of secondary causes of citrus troubles and have learned to combat them in a measure successfully, we should deliver our chief attack against the greater burdens the trees have to bear, which give to each of these minor causes the power to be the proverbial feather that breaks the camel's back. All the vegetative functions of the tree are so impaired by this crime in planting that even insect enemies find a more comfortable foothold upon it, and in one way and another it has cost and is costing the citrus growers of the state millions of dollars annually. Indeed, it should be made a technical crime since it is already an operative one.

It is the firm belief of the writer, based upon long study and observation of the subject, that were this serious handicap remedied and the soil kept properly balanced, the ordinary tillage operations of the California citrus grower would insure success so far as agricultural results are concerned.

The orange, like the lemon, is subject to two kinds of gum disease, the appearance of each of which is too familiar to everyone interested to need describing. Professor Fawcett of the California college of agriculture has discovered the exciting cause of all these excepting that of the scaly bark of the orange and has determined the specific fungus responsible in each case.

Scaly bark of the orange is also caused by a fungus, since this may be propagated under suitable conditions from the infected wood, for the trunk of the tree is permeated completely with its mycelium where the affection has been for some time visible on the surface. This disease the writer believes has up to the present been considered incurable; but a number of orange trees that were so badly affected as to be completely girdled with it and in some instances extending as high on the trunk as eight to sixteen inches, beginning at the ground, were treated two years ago with his prescription, and are now

pronounced by a former horticultural inspector cured. His own examination reveals a most satisfactory condition. The bark now appears green and healthy and upon removal exposes healthy cambium and wood, with the sap apparently flowing normally through the treated area. Neither has the infection spread in any direction, nor has it developed at any other point.

But the most remarkable feature of the results is the fact that all these disinfected trees have held and still carry three times as much fruit as those about them, showing that some circumstance aided them in resisting the universal June drop. It would seem that the same germicidal factor that destroyed the gum fungus also disposed of the alternaria, which Professors Coit and Hodgson identified with the dropping citrus fruits. If this is true, surely we may hope that all fruit and other trees may be medicated through applications to their—possibly prepared—trunks, and in this way we may control the several blights affecting so injuriously the peach, pear, walnut and other trees.

Treatment

The writer's treatment for gum disease embodies three basic elements, namely: (1) Removal of the diseased bark down to the clear wood; (2) after superficial drying the newly exposed surface should be disinfected (Bordeaux paste is good as far as it goes, but lacks the third essential); (3) the exposed and disinfected surface should be protected against drying out with an impervious coating over it. The necessity for this protection arises from the fact tnat to enable the new bark to cover and unite with the wood beneath there must be a flow of sap in both bark and wood at the zone of juncture between them, so that they can cooperate in the renewing of the cambium layer, which cannot be done at all if the wood is allowed to dry out and the cell activities suppressed. I find it best to combine the disinfectant and the protecting coat. The bark then rapidly encroaches upon the treated area, raising the coating so that the latter is found upon the outside of the new bark, until at last the natural covering is complete and the wound beautifully healed.

The preparation giving the results described above is this: Salicylic acid, half drachm; pine tar, half ounce; shellac varnish, one quart.

This was painted over the bark after the scales had been scraped off.

I recognize some advantages in using a plastic coating, and now recommend the following: Salicyclic acid, half drachm; castor oil, two ounces; pine tar, 10 ounces; denatured alcohol, 20 fluid ounces (1¼ pints).

Dissolve the acid in the alcohol before mixing all together.

This would make a good covering for all cut or bruised surfaces in fruit trees.

THE OLIVE OIL SITUATION

The situation as regards olive oil manufacture this season as reviewed by "The Fig and Olive Journal":

Some olive plants are preparing to manufacture olive oil on rather a large scale, the present war prices for this article providing encouragement for this venture. With approximately a million gallons of olive oil, or possibly a little more than this quantity still on hand in this country, according to government reports, there is a feeling that the present prices may be maintained, at least for the coming season. However, the imminence of peace and the probable readjustments in shipping and trade which may soon follow thereafter, give rise to some uncertainty in the olive oil business. Some factors declare that the need for fats in Europe after the war will take care of all supplies that exist in the Mediterranean countries now. On the other hand, it is known that there has been a tremendous accumulation of olive oil in Spain in the past two years and we know that permission has been given producers in that country to export a considerable quantity if they can find a market willing to receive it. If the War Trade Board in this country would suddenly allow the importation of this Spanish oil there is no doubt that the present prices would promptly reflect this new situation and would likely drop just enough to "nip" the speculating packer or dealer who is buying olives and oil at present inflated prices.

The LAUSON 15-25
DUST PROOF-ALL GEARS ENCLOSED

Full Jeweled Tractor

24 HYATT AND TIMKEN ROLLER BEARINGS REDUCE FRICTION TO THE MINIMUM

The Maximum One Man Tractor

Power, Stamina and Utility, Coupled with Low Up-keep Cost, High Efficiency and Moderate Price

FOR five years we watched the Lauson before taking it into the De Laval Line. We visited the factory, studied the Lauson methods and policy, compared the Lauson with other tractors; we tried it out ourselves and saw the Lauson Tractor prove itself 100 per cent right.

The Tractor Thoroughbred

Before making your selection *compare* some of the mechanical refinements of this tractor thoroughbred with the cheaply built "get the money" tractors:

In the first place, don't make the mistake of buying a tractor too small to be practicable or one too large for efficient general utility.

Why choose a tractor with a cheaply built, unreliable fuel-wasting motor instead of a Lauson with its efficient, accurately machined, perfectly balanced Lauson-Beaver motor?

Why select a tractor with driving gears or other heavy wearing parts exposed to dirt and grit instead of a Lauson in which every vital part, including the machine cut steel drive gears, is enclosed and constantly bathed in oil?

Do you prefer rough, exposed cast iron driving gears which absorb power and soon wear out to the machine cut steel driving gears of the Lauson?

Why purchase a cheaply constructed tractor with a necessarily inferior transmission rather than a high-class Lauson with its hardened chrome nickel steel transmission gears built 100 per cent over strength?

Select the Lauson, which has ample strength in every piece of its high quality materials to withstand the grinding demands of tractor service year after year.

De Laval Service

The De Laval Dairy Supply Company stands squarely behind every Lauson Tractor delivered to a purchaser. The same prompt attention and service given to the thousands of De Laval Separator owners on the Pacific Coast may be expected and will be received by all purchasers of Lauson Tractors.

IMMEDIATE DELIVERIES FROM SAN FRANCISCO, LOS ANGELES AND PORTLAND STOCKS AND VARIOUS AGENCY STOCKS THROUGHOUT THE COAST.

The Most Efficient Tractor in America

POWERFUL ON SOFT GROUND

The twin crawlers of the Bates Steel Mule form a firm runway on soft ground. Twenty-four cleats prevent slipping, and the ground pressure is less than 3½ pounds per square inch. So soft ground is no different from hard, as far as pull is concerned. And the non-slip feature saves fuel.

Unit construction; Timken roller bearings; hardened cut-steel gears running in oil, and heavy duty, valve-in-head kerosene motor also contribute to the Steel Mule's efficiency.

We are anxious to have you compare the Model "D" STEEL MULE with any other tractor built. Seeing is believing, so come and inspect the machine we have on exhibition—and convince yourself.

Bulk Storage

SAFE against fire, weather, vermin and thieves, metal grain storage bins which have been in use throughout the East and Pacific Northwestern states for a number of years have gained considerable favor in parts of the San Joaquin and Sacramento Valleys for storing wheat and barley.

The bulk handling of grain which is the common method of handling wheat in every part of the United States except California, is also coming very prominently to the fore on California wheat and barley ranches, with the high cost of bags and the exceptional scarcity of farm labor.

From an economical standpoint the bulking of grain in storage bins on the farm, in warehouses, transportation in bulk on freight cars and river boats and barges, and storage in bins at terminal points and mills, has proved a most efficient system, contrasted with the wasteful expensive sacking methods in vogue in California which is particularly important at present with the prevailing high costs of labor, sacks and the necessity for conserving every grain of wheat the land will produce.

In Australia and Argentina, which are the only other places in the world besides California where grain is handled in sacks, the transition to the bulk method of handling grain is rapidly taking place under government auspices.

Here in California the most notable instance of handling grain in bulk is found on the Moreing Brothers 25,200 acre wheat ranch on Districts 1000 and 1001 of the Natomas Consolidated Company's reclamation projects north of Sacramento.

Here for two years the Moreing Brothers have harvested their grain by the conventional combined harvester method, spouting the golden harvest from specially built hoppers on the harvesters to tank wagons which were driven along side of the harvester. This wagon load of grain was then hauled to a central warehouse where it was dumped into a hopper and conveyor machinery elevated and delivered it into bins of a specially built warehouse on the Sacramento River levee. From the warehouse it was delivered by a conveyor system of moving belts and augers into barges which were floated down the river to the Sperry elevator at Vallejo, or delivered directly to the Sperry mills at Stockton. Nowhere in the course of its whole history from seed to flour was the grain touched by human hands.

The cost of handling this grain in bulk from harvester to mill according to George N. McCloud, manager of the grain department of Sperry Flour Company at Stockton, did not exceed 45 cents per ton, contrasted with a charge of between $1.90 and $2.00 per ton to handle grain in sacks from harvester to mill or elevator. The $1.45 to $1.55 difference is all represented in excess labor charges and the cost of sacks.

In the bulk method of handling grain there is almost totally eliminated the tremendous waste of this vital human food, due to loss through leaking sacks, damage through exposure to weather and sun, the spoilage and consumption by rats, mice and other vermin and loss through fire as well as the undoubted losses due to theft.

In transferring 25,000 tons of grain from the Sperry Company's warehouse at Vallejo in sacks, Mr. McCloud reported a loss of 16 tons or .00625 per cent, more than 6-10 of one per cent, contrasted with a loss of only 1,000 pounds or less than 1-10 of one per cent in handling the same quantity of grain by bulk. It might be interesting to the reader of a mathematical turn to estimate the loss of each of the five handlings from thresher to elevator or mill by bulk and contrast them with the tremendous losses that occur by the sack method. It will be apparent that the amount saved of the valuable grain by handling in bulk in addition to the excess cost of labor and sacks is another big item worth while considering. The loss is twofold in that the wasted grain is utterly gone. The farmer loses and the supply for the consumer is reduced.

Metal grain bins of varying capacities from 600 to 5450 bushels eliminate these wasteful methods and excessive handling charges in Oregon, Washington and Idaho, as well as practically all of the Central Western, Southern and Eastern states. These bins are made of galvanized iron sheets, and are easily and quickly erected by unskilled labor. Farmers who have used them in California fill them by means of small steel elevators from the wagon dump, grain delivered into the metal bin. A door, with a sack filling arrangement, is provided, and arrangements also can be made for delivering the wheat by gravity from the grain bin into tank wagons, when the time comes for transferring it from farm storage to freight car or warehouse.

Watching the Bug

OUR state and county horticultural officers are accomplishing much in protecting our crops from insect and other predators.

Quarantines are sometimes levied so as to work hardship on some, and it is very probable that occasionally mistakes are made, but without them, or similar service, we would soon be entertaining a vast and expensive host.

In an interview with C. H. Vary, in charge of the Los Angeles office of the state horticultural commission, he gave the following statement:

"During the month of October, 1918, three very important insect pests were intercepted by the quarantine inspectors of the southern division and refused admittance into California as undesirable aliens.

"Early in the month a car of potatoes arrived in Los Angeles from a town in Idaho which carried a large number of the adult forms of the Colorado potato beetle, Leptinotarsa decemlineata, on the sacks and inside the car. This beetle has a reputation for being a most destructive pest to growing potato vines in the Eastern states and also in a few small areas in the West where it has become established.

"Later in the month two cars loaded with potatoes from another point in Idaho arrived in Los Angeles and upon inspection were found to contain numerous adult forms of the alfalfa weevil, Hypera postica, crawling on the sacks of potatoes. Alfalfa weevils have thus far confined their activities to portions of the states of Idaho, Utah, Wyoming and Colorado, and their introduction into California would be disastrous to the vast acreage of our most valuable forage crop.

"These three cars and their contents were refused admittance into California and ordered out of the state after being subjected to a thorough fumigation as a precautionary measure.

"The third pest referred to is the sweet potato weevil, Cylas formicarius, which was taken in a barrel of yams from a point in southern Texas. This is a weevil pest which attacks the tubers of sweet potatoes and yams and has caused great damage to these crops in many foreign countries and our insular neighbors as well as limited areas in the Southern and Gulf states of the United States. This barrel with its contents was refused admittance into California and was immediately burned at the city incinerator by the state inspector.

"The above instances are the first recorded where these pests have been taken on shipments entering Southern California and therefore warrant the drastic measures employed by the state quarantine officers."

"Care or Cash" is the slogan which every camper in the national forests of California must remember this year. Forest rangers have made 46 arrests and secured 43 convictions under the state fire law for the months of June and July, 1918. In addition to these arrests, which were for carelessness with camp fires, four federal indictments for wilfully or maliciously setting fire to timber or undergrowth have been secured by these federal officials.

Northern California Notes

Written for California Cultivator By W. S. Guilford

WEATHER has been fine for the rice harvest during the past two weeks (preceding November 12). The crop from some fields has been harvested and shipped; that from many others will be threshed in a few days; two to three weeks more good weather will be required for others.

The bulk of the crop is going direct to the mills. The grower gives the good administration power of attorney to handle his crop. The price of No. 1 rice has been set at $4.32 per hundred. The food administration samples the rice, orders it shipped, the mills remit to the grower, the sample is sent to committee selected by the food administration and this committee fixes the price. If it is No. 1, the price is $4.32 per hundred; if a lower grade, the amount is determined.

Some crops are making as high as 70 sacks per acre—which shows a big profit—in spite of the fact that the cost of producing the crop this year will be $75 to $100 per acre as against $35 to $45 in former years.

There is big demand for rice land for next year.

One man near Willows is reported to have leased 640 acres for $20,000 a year for the next two years, and this land has already produced two crops of rice.

Stockmen are complaining of feed shortage again—there has not been enough rain to make good grass and unless rains come soon the ground will be cold and the season so late that there will be no big growth before spring.

Barley and Wheat to Follow Rice

In a number of fields in the Sacramento Valley wheat or barley will be sown in the rice stubble as soon as the rice crop is harvested.

This is on land on which rice has been planted from one to four years but which is so badly infested with water grass as to make rice growing impractical for next year.

Some of this land will be prepared for the grain by shallow plowing, then disking and harrowing. In other fields the grain will simply be sown broadcast and disked in.

Most of this land is what would be classed as second class summer fallow grain land, or pasture land. It is not the kind of land on which grain growing is anything like a safe venture. Those who are planting grain on it now believe that the crop will be just as safe a "gamble" now as it would be, after the land had been summer fallowed. Safer, perhaps, because there is ample moisture in the ground now.

Drainage conditions are better on these lands than they were before they were prepared for rice growing, and it is possible that water could be secured for an irrigation in the spring if there was insufficient rain.

It will be interesting to note results on these fields.

Seed Corn

The best crop from every crop either Indian corn or the grain sorghums, should be saved for seed.

And after the seed ears or heads are gathered considerable attention should be given to caring for them through the winter. It is easy to put this seed to one side and forget all about it and when you come to look at it in the spring find it is either mouldy or that the mice have damaged it badly.

One good way to handle it is to string it on a wire and hang it up from a roof or ceiling, but even then it should be looked after.

More Bees

"The sugar regulations do not bother us any," said a friend recently. "We have a few bees and use honey for almost everything we once used sugar for, and beside that some of the bees made as much as $20 a stand, at the present price of honey. You would be surprised how many ways honey can be used in preserving fruits and cooking."

And almost any farmer could keep bees the way this man does—just a few stands in the garden.

Growing the Velvet Bean

By T. J. Walker, San Fernando Valley

SOME three years ago, realizing the necessity of growing cover crops in citrus groves for their value as green manures, on account of the rising prices of commercial fertilizers, the scarcity of manure and for the purpose of keeping down temperatures during the hot days of June and July, I imported some velvet beans; planted them on land newly cleaned of sage brush and cactus, very poor sandy soil, so poor, in fact, that it would not clothe itself with verdure, to any extent, during the rainy season.

My first year's experiment was, in a way, disappointing as the seed did not germinate very well and resulted in a very poor stand, and the growth of the plant itself did not come up to expectations.

The second year I took some of the same seed and planted it on better soil, first getting the soil into the best of condition and inoculating the seed before planting. The results were more than I had looked for.

In May of this year I took the seed saved from last year's crop, inoculated, and planted in a year old orange and lemon grove, using 20 pounds of seed to the acre, planting 14 inches apart in the rows and the rows three feet apart; four rows to each row of trees which was 20 by 20, leaving a space of about five feet between the beans and the trees. This space would have been completely covered by the 4th of July had I not put the vines towards the centers. Some of the plants made a growth of 42 feet from May 15 to October 20.

As a summer growing annual legume, as a soil-improving crop, both for new and old soils that have become somewhat exhausted, as a leguminous crop for adding at a minimum cost large quantities of vegetable matter to the soil, thus making it more porous, and more retentive to moisture, the nodules on the roots collect a large amount of nitrogen from the air, the value of the seed which yielded 21 bushels to the acre, the yield of dry hay being 2940 pounds to the acre, the green weight of the vines being 17,400 pounds to the acre, and as a crop for the purpose of smothering out Bermuda grass there is nothing better.

Quoting from Farmers Bulletin 962 of the United States department of agriculture, which says, "Velvet beans are the most vigorous growing annual legumes cultivated in the United States, the vines often reaching a length of more than 50 feet."

Velvet beans produce two distinct types of pods, one being covered with a dense black velvety pubescence and in other types the pubescence consists mostly of white or grayish hairs. The pods vary from three to five inches in length. The tap root is not very long but produces a lot of lateral or surface roots running as much as six feet in length, which are abundantly supplied with nodules. The plant matures in 150 days in the San Fernando Valley.

Land was irrigated and cultivated at the time of planting, again in 30, 60, and 90 days, after that time it was impossible to do any more cultivating between the plants on account of the rows being completely matted together and from two to three and one-half feet high.

What the bean has done for the South in the way of a soil builder, as a forage crop for hogs and cattle in connection with corn, is well established. I see no reason why it will not do for California as a summer cover crop for our citrus groves and be as freely planted as the clovers and vetches are for a winter cover crop, and, in addition, produce large quantities of feed for stock, as silage, hay and green manure.

"The BEAN is the Best"

Get Ready For Winter Spraying

Winter spraying cleans the trees of scale and moss — keeps the results at harvest-time next fall!

Winter spraying cleans the trees of scale and moss keeps the bark soft and healthy—and results in a bigger crop of better fruit. Every dollar you put into the work comes back and brings several dollars with it!

You Need a First-Class Sprayer

—A sprayer that will drive the material onto the trees at sufficient force to be effective.

—A sprayer that will stand up to hard grinding service day in and day out.

—A sprayer that is reliable—dependable—efficient—free from trouble.

That's the kind of a sprayer you get when you get a Bean.

Gardening in Clay

Written for California Cultivator by Ernest Braunton

A RANCHER in the south end of the state told me that in studying California while living in Illinois he had gained the impression that before the settlement of Southern California it was all a desert and therefore either sand or gravel or at least light soils largely of such composition. Now he owns 40 acres that contains, to let him tell it, "the heaviest soil in North America." He says no flower gardening is possible and nothing has yet drawn any of the "mucilage" out of the soil or in any wise modified its original state of stickiness.

This soil is adobe, which for the present we will consider merely as black clay, which it really is. I have seen a splendid crop of chrysanthemums grown on black adobe without any attempt at cultivation. The surface was covered with three inches of coarse stable manure and the watering was done by setting lawn sprinklers over the area. After the 'mums were gone it was found they had fed on the "mucilage" in the soil and thenceforth this part of the garden was never sticky or hard to till when either wet or dry. Of course 'mums require much water and care little for drainage, but all clay soils need to be drained for best results in general garden crops of either flowers, vegetables or fruits. Heavy, close soils are cold and wet in winter just at the season when we would garden most intensively.

Deep cultivation is one of the best remedies for close heavy soil. The weathering or exposure to the air and sun has a decidedly ameliorating influence on clay. But clay soils are not much benefited, permanently, unless soil stirring goes hand in hand with the introduction of material that will hold the soil particles apart or prevent its return to a doughy state. I have experimented with adobe and found best success to come from the incorporation of a mixture of equal parts of leaf mold and sharp sand, the two to be well mixed before digging into the soil. Its effect was decidedly better than equal parts of sand and good rich stable manure which was tried on the opposite end of the same strip of soil. Between these two plats one-half was given sand only and the other half manure only. A separate bed, close by, was given nothing but leaf mold, and this bed proved next best after the leaf mold and sand plat. Where sand only was applied it had settled, all of it, down to where soil stirring had stopped, and there it lay, every grain of it, at the end of three years. The soil had been only temporarily benefited by the sand passing through, "going down." Aside from the sand settling, by reason of greater weight, when the soil was stirred or wetted by rains, I believe that the vibration of the earth will allow the sharp edged heavy grains to cut their way down to earth so solid that further penetration is practically impossible. I have not tried green manure crops to loosen clay but am sure such crops would be of great benefit.

Nearly all bulbs do well in heavy soils. I have never seen such fine lily of the valley in any light soil as those grown in adobe. Daffodils are also fine in the same medium; especially were the poets or pheasant's eye large and of waxy texture. Peonies also thrive in heavy clay for it is generally cool in all kinds of weather. Hybrid perpetual roses are the only class that thrive in very heavy soil and even these should have holes dug for them not less than three feet deep and one foot of stable manure placed in the bottom of each hole.

Fighting Nature

One of the reasons why many lose interest in gardening after a brief and inglorious experience is that they expect too much and attempt too much. No garden will grow all sorts of plants successfully. Some plants require very light soil and superb drainage; a few thrive best in very heavy soil; others should have a rich soil very retentive of moisture and of a loose friable texture. Few gardens, even of acres in extent, have all these soils. He who fights nature will work hard and feed plants constantly and heavily. He who would garden cheaply must seek the lines of least resistance. Grow only those plants known to do well in soil such as yours and in your section of the state. It is far better to grow a fine lot of ordinary plants than a sickly lot of the rarest on earth. Health and vigor are of greatest importance in either plants or animals.

Amelioration of Soil Conditions

Very, very often I have asked myself this question: Will a single application of anything known to man work a permanent change in soil? From a chemical standpoint a change is possible but from a practical point of view no change can be permanent unless that which worked the change is constantly applied to the soil, or at least some agency that will contribute toward soil amelioration in the same direction. After having run one ton of soil through a quarter inch mesh sieve after it had been mixed with half the quantity of leaf mold and a far lesser amount of well decayed stable manure, every vestige and trace of the introduced matter was extracted in two years by palm oots and the soil was then harder and poorer than it had been for the 12 years that I had annually worked it. For years I have tried such experiments with many plants in various soils and though palm roots are the worst robbers encountered, almost any crop will quickly rob a soil of all humus and plant food. I am well aware that at Rothhamstead soils manured each year for twenty years, and then remaining unfertilized still produced a larger crop for fourteen years than they had borne before the manuring began thirty-four years previously. But the fact remains that in fourteen years the soil had returned to its original state of unproductiveness. This teaches us that constant feeding is the price of success, no matter what sort of vegetation we are growing. The exception is in the case of trees and shrubs planted on better soil than that wherein they naturally grow. But where crops are removed annually or biennially, constant feeding is most necessary.

Blame the Soil

Every year I get scores of letters stating: "Very few plants do well in my garden. The soil is —." Very few of these come from rural residents. More than nine-tenths come from garden owners in cities and towns. The fault lies, not in the soil, but in the owner thereof. We must learn that soil must be worked. Physical condition is of vastly greater importance than the food contents. Soil ever so rich may be in such poor physical condition that the food is unavailable to plants. And any ordinary soil, if in splendid condition, will produce good garden vegetation if proper irrigation and cultivation is given. Stir the soil deeply and pulverize finely and success will be yours.

Propagation by Slips or Cuttings

There is no mystery about the propagation of ordinary plants from cuttings. No sleight of hand is needed. I am a professional propagator. I have stood in a commercial propagating house for months, doing nothing but making cuttings and inserting them in the sand. While temperature is an important factor in house propagation, in multiplication of hardy plants by cuttings success lies in keeping an equable moisture. Never dry and never saturated is the normal sought for. Keep your sand or soil moist at all times but never allow water to flood or stagnate. This is the most important factor, not only in propagation but in growing also.

Christmas Berries

Recently I saw a mass of shrubbery composed of cotoneasters, crataegus, and pyracanthas, all in full bearing, laden with red or orange berries. I could not but notice how superior they were to our native Christmas berries or toyon. Some of the shrubs were so weighted down with the crop that the lower branches lay on the ground. I do not know of any species of holly or bearberry that fruits so heavily. Both holly berries and holly leaves are, of course, much finer, for what is there in all the world that can compare with the European holly? But all the shrubs named are very good both in foliage and fruit. The heaviest cropper of all, a splendid shrub, is cotoneaster pannosa.

Escallonias

I know a fence whereon the escallonias grow, an old picket fence seven hundred feet long. The shrubs are tied to the pickets and rear their heads eight feet in the air. As a mask for fences, low buildings, and other unsightly objects they are very good. Escallonias are clean, of good foliage and bloom, are hardy, vigorous and in all ways desirable as garden shrubs for general use. I never knew one to die, nor did I ever see a sick one. They are natives of South America.

NORWALK TIRES

Here's a tread that's "tougher than a pig's nose." The tread has from two to three times the tensile strength of ordinary casings and the mileage service has always kept at the highest pitch.

Nothing makes some men feel more important than their ability to answer the questions of a small boy.

Wanted, A Better Livestock Market

PICK out, at random, one hundred live stock producers in this state and ask them what, in their opinion, is the greatest live stock need and the chances are very good that 80 or 90 out of the hundred would say that the greatest need from the standpoint of the producer is a more satisfactory plan for marketing live stock.

That view on the part of the producer is so universal that we are led to ask the question; "What are you going to do about it?" We put it up to the producer for the reason that it will require concerted action on the part of the producers to hring ahout a change, and all the producers of this state working toward that end can have any kind of a market they want.

We suppose that the majority of live stock men, who have given the subject of markets any thought, hold the opinion that a stock yards at our large killing points would come nearer solving the prohlem than any other plan. On the other hand, there are many producers who hold that any possible advantage to be derived from the establishment of a stock yards would be more than offset by the many evils that such a system is known to develope.

The whole question of markets is so fundamental to the future development of the industry in this state that it would seem highly important that the producers should begin to give serious thought to the prohlem.

The weak points in our present system in this state are; first, lack of competition from buyers; second, the fact that Coast markets are not, except in a meager way, based on grades of quality and finish. The principal criticism of the stock yard plan of selling is the evident packer control.

There are four ways open to producers of this state. First, California producers can build and control their own yards; second, build and control their own yards, killing plant and distribution; third, permit the packing interests to build and operate their own yards under government or state regulation; fourth, retain our present system, which is unthinkahle.

The fact that by far the majority of the cattle, hogs and sheep that are slaughtered, reach the killer through the union stock yards of this country would seem to indicate that, in a basic way, that plan of marketing is the most satisfactory. On the other hand, the fact that investigations, and common knowledge, prove that the different yards are either owned or controlled by the packing interests, and that this control is surely used other than to the advantage of the killing interests, would lead to the conclusion that the kind of market the producers of this state should fight for would be one embracing the good points of the established system without the buying interests in control.

That such a market can be established goes without saying—but it will never become a fact until the men who are seeking a satisfactory market get together in a big way and work to that end.

Before any movement along this line will make headway it will be necessary to recognize a few definite principles.

It will be necessary to recognize the fact that the packer is a necessary "adjunct" to the business. That he operates along certain established business principles and unless conditions are such that he can make a profit through his plant he will not operate. This is suggested because certain producers will want to eliminate the packer or will expect that he operate under conditions that will place the Coast market on the same basis as Chicago. There are several very good reasons why California markets for live stock will probably never he quite the equal of Chicago. Chicago is the center of the live stock and meat industries, and the packing establishments located there are not only the largest, but, hecause of the volume of business handled, they operate with a lower overhead than is possihle in smaller plants. In other words, because of their efficient methods and low overhead they can hang up a carcass for less money and can therefore undersell the smaller plant. It has been suggested by some that Coast packers should pay Chicago prices plus the freight, arguing that if we had no markets here Coast buyers would have to pay the freight. The unfairness of that argument is obvious. Coast packers can not he expected to fill their coolers and cellars with meat laid in at a cost that hars them from competing on the open markets of the world—they must have an outlet, else they can not buy. On the other hand producers should demand that they receive every penny that is coming to them. There is no sentiment ahout the packer and there should be none exhibited by the producer.

If a producers-owned yard was established it would be necessary to have a working agreement with the packers that they would come to the yards to buy.

Those opposed to any kind of a yard selling system hold that even with a yard owned by the producers, competition among buyers does not necessarily follow; that the packers have an effective cluh to use in the establishment of prices; namely, a working understanding among themselves as to the scale of prices. That such practices exist is charged by practically every live stock organization in the country and by numerous investigating commissions.

But a point in favor of the producers of this state is, that as yet the big packing interests do not so completely dominate the business as is possible in the Middle West—there being several large independent concerns in the game.

The possibility of the producers establishing cooperatively owned and operated yards, killing plants and distrihuting organizations is an alluring plan, the realization of which appears to he rather distant, notwithstanding the fact that such a plan is in successful operation in certain parts of the world.

To blindly accept a packer owned yard, knowing the evils that exist in other markets operated under such ownership, would constitute an unconditional surrender and the absolute delivery of the live stock interests of this state into hands that give no quarter.

In this connection, it is possihle that out of the control of the packing interests and the stock yards maintained by the food administration during the war and continuing now, will he evolved a satisfactory plan for regulating the meat industry.

To retain our present crude, cumbersome and unsatisfactory system of marketing our live stock will continue to hold back the logical develoepement of the live stock industry of California.

Today, California is the only large producing section that does not have the advantage of even an apparent open market. At South San Francisco and Los Angeles, as well as several interior points, are located one or more killing branches of the large Eastern firms together with a number of local plants varying in capacity from only a few head to considerahle numbers. Each of these plants have their own yard and their plan of huying is ahout as follows: A producer or shipper having a carload or more of cattle or hogs, may or may not write or wire one or more of the killers as to prices. His car is billed direct to the killer offering him the best price. On arrival the shipment is unloaded, and without being given a "fill" is run over the packer's scales, who previously, may or may not have sorted or graded the shipment.

It was stated above that Coast prices may never equal Chicago quotations, but the producer is entitled to much narrower margins than he gets at present. On the face of quoted prices, it would appear that the margin is wide enough, but when it is remembered that the Eastern prices are for animals after they are fed and watered, thus affording the shipper an opportunity to recover part of the

The Farmer's Opportunity
Greatest Farm Auction Sale Ever Held in America
Tagus Ranch, Tulare, California December 10-11-12-13, 1918

90 Registered Holsteins

A first class herd in every respect, bred and unbred heifers, young cows, and young bulls. Headed by King Sadie Vale Rose, son of King Korndyke Sadie Vale, who will himself be sold.

Every animal positively guaranteed to be a breeder.

No animal tuberculin tested.

200 Registered Duroc Jersey Hogs

A herd second to none in the excellence of its blood lines, uniformity of its hreeding, and outstanding character of its chief individuals. Twenty proven brood sows headed by CALIFORNIA'S DEFENDER, Junior Champion boar at Panama-Pacific International Exposition. More than 150 of his young sons and daughters in this sale. A wonderful opportunity for buyers to start with registered Durocs and start RIGHT.

200 High Grade Polled Angus Cows

These are the pick from several hundred head. The entire Angus herd had a calving record last year of 85 per cent with not a single death from disease. These are our most profitable range cows and buyers can take them home with the assurance that they own something really good.

15 Registered Aberdeen Angus Bulls

Young, vigorous, proven breeders, representing the best tribes of the breed, and possessing high breed character. Buy one of these hulls and a car of females and start a high grade herd of the profitable sort of beef producers.

100 High Grade Shorthorn Cows

All reds and roans, the picked tops from several hundred head. Rangemen will find here a herd of young cows that are of proven worth in the range herd.

We Will Lease

in tracts of 20 acres and upward, on liberal and attractive terms to

every sack sealed
2½ more tons to the acre!
Germain's
HAIRY PERUVIAN ALFALFA
Germain's Proven Strain of Hairy Peruvian Alfalfa is hardier than other varieties. It will grow in altitudes where the temperature drops as low as 15 degrees below zero. It has longer producing season and gives from one to three extra cuttings per season, depending on locality. Its food value is higher than other varieties because it produces more leaves. It does well at altitudes up to 6000 feet or below sea level; maintains a good stand for a longer period without re-seeding; is less susceptible to disease; is easier to harvest, and recuperates more quickly after cutting than other varieties.

heavy shrink incident to shipping, and that Coast prices are, (unless the stuff was contracted at home-weights, and little stock is bought that way) for animals "unloaded off cars and without feed and water" the margin becomes even wider.

Speaking of "fills," the fact should not be lost sight of that the "fills" are made on feed furnished by the stock yard company, and that the prices charged for feed in most yards constitute the grossest kind of profiteering.

A few years ago the necessity for grading hogs, cattle and sheep on Coast markets was not especially important, for the reason that the quality of live stock reaching the markets was inferior and could handily drop into one or two grades at best. During the past few years there has been a marked improvement and the quality of stuff is improving rapidly — would doubtless improve faster, if the markets justified it.

The large operator is not so much concerned with our present marketing system for the reason that, because of the volume of his business, he can go to the packer and drive a satisfactory bargain or he can ship East. The small producer, especially the hog grower, is in no position to do either. With a view of helping the small producer, the farm adviser of Kern County worked out a plan under which the small producers could assemble their hogs or cattle at a central point, have them sorted and graded by a competent committee, and buyers representing the packers invited to bid on the offerings. The plan has proven very satisfactory and has been adopted in a number of counties. Under existing conditions such a plan probably affords the greatest help in marketing live stock, but it is hardly probable that such a plan can be extended to the marketing of all live stock.

Notwithstanding the fact that these hog auctions have usually resulted in the consignors receiving the top price for their stuff, the plan hides a gentleman of color, and on several occasions he has been discovered when the shipment was assembled and no buyers, or only one, put in an appearance.

Practically every plan for marketing is open to objections. The problem seems to be to work out a system that has the fewest "holes in it."

Now that peace looms near, and with the future "all ahead," isn't it about time all interests, producers and buyers, get together in an effort to work out a sane, constructive plan that will meet our conditions?

To imagine that the producers of this state will continue to register satisfaction over the existing plan for selling live stock is a folly beside which the wildest dreams of Don Quixote would be profound facts.

CAUSE OF DIFFICULT CHURNING

As soon as the cool weather arrives and pastures are supplemented with dry feed, complaints of difficulty in churning begin to arrive at the University of Missouri college of agriculture. C. H. Eckles of the dairy department says this trouble usually is experienced when only one to two cows are used and these are strippers. The slowness of churning results from a combination of the hard fat and the large amount of curd found in the milk of stripper cows. The trouble has no connection, contrary to what is often thought, with failure to supply salt nor is it the result of using any particular feed or combination of feeds. Sometimes the trouble comes from too thin cream or attempting to churn at a too low temperature.

The first thing is to make sure the temperature is right and the only way to be sure is to use a thermometer. During the winter season 65 to 70 degrees is generally about right for churning such cream and no advantage results from having it warmer. However, having the temperature and thickness of the cream right will not always remedy the trouble. In some bad cases there is no practical remedy, especially when the milk comes from one cow. A cow producing milk giving this trouble had best be dried up as soon as she has been in milk ten months or more. Adding cream from a fresh cow will generally cause the cream from both to churn if the temperature is right and the cream is not too thin.

Live Stock News Notes

Poland China Boar $5500

In the A. D. Severe Poland China sale, The Chancellor, a yearling son of Severe's Big Timm, was purchased by Yotter Brothers and J. A. Duncan, Oakville, Iowa, for $5500.

To Help Restock Belgium

A number of Eastern breeders of Belgian horses propose to assemble a collection of stallions and mares to be donated to the people of Belgium as an aid in restocking their devastated country.

1918 Wool Crop

The wool production estimate of the bureau of crop estimates makes the clip of 1918 amount to 257,921,000 pounds in the grease. Pulled wool is not included. The clip of 1917, revised estimate, was 241,892,000 pounds.

40 Shorthorns, $43,375

In the first sale of Shorthorns held by Jess C. Andrew, Westpoint, Indiana, 40 head sold for $43,375, an average of $1155. The bull, Lord Avondale, regarded by many as perhaps the greatest son of Avondale, was responsible for the keen demand accorded the offering.

Heavy Run of Hogs

One explanation as to why the food administration failed to stabilize the price of hogs in October was that receipts at the principal markets were so heavy that the killers could not handle the run.

A report just issued by the United States department of agriculture, bureau of markets, shows that during the month of October 44 markets received 3,190,927 hogs compared to 2,542,303 in October, 1917.

Gatton to Manage New Duroc Herd

Walter Gatton, superintendent of the swine department of the Liberty Fair, writes that he has accepted an offer from the Diamond Bar Ranch, Spadra, to take charge of their hog department.

Mr. Gatton states that the owners of the Diamond Bar Ranch propose to establish one of the leading herds of Duroc-Jersey hogs in the West. Their plans also include establishing herds of pure bred Shorthorn and Hereford cattle.

Harris Herefords for the Coast

Clifford B. Harris, Western representative of the noted Hereford breeding firm of O. Harris & Sons, Harris, Missouri, is now in the East for the purpose of selecting between 75 and 100 head of cows that are to be used in the establishment of a herd this firm will maintain near Hayward.

The Harris name is inseparably associated with superior Herefords and for a great many years the Gay Lads and Repeaters bearing the Harris colors in the leading show rings of this country have been responsible for many of the most brilliant pages of Hereford history.

Jeffries' Holsteins in 30 Pound Class

James J. Jeffries, Burbank, is the latest California Holstein breeder to break into the 30 pound class. Herdsman Ted Cameron recently had eight of the cows in the Jeffries herd on official test and has made some excellent records, including two above 30 pounds butter in seven days. The senior three year old Piebe Canary Belle De Kol made 30.61 pounds butter in seven days, 108.82 pounds in 30 days; Novelty Pauline 2nd, with a previous record of 29.57, came through this time with 30.94 pounds butter in seven days, and 128 pounds in 30 days from 2766 pounds milk. The balance made the following butter records in seven days: Queen Fanny Segis, 22.03; Gerben De Kol of Maple Lane 2nd, 20.96; Mabel of St. Lawrence 3d, 20.66; Esther Netherland Mercedes, 20.24; Segis Spring Farm Korndyke Lass, a junior four, 18.05; Maid Tuebie Segis, a junior four, 14.54. This is an unusually good showing for the first lot tested in a herd, and is further evidence of the excellent quality of foundation cattle purchased by Mr. Jeffries. All of these cows dropped calves by the great young Jeffries herd sire, King Segis Pontiac Jannek. It is to be regretted that Ted Cameron could not stay and continue his test work, but he has felt the urge of the times and has enlisted for military service, possibly has already gone by the time this item gets to print.

Humphrey Buys Grandson of Epochal

W. S. Guilford of the Butte City Ranch, Glenn County, informs us that A. B. Humphrey, Escalon, who developed the famous boar Grand Leader 2nd, grand champion at the P. P. I. E., has purchased from the above establishment a grandson of the celebrated English boar, Epochal. The Humphrey boar is out of the sow Escalon Fashion Princess, that topped the Berkshire Congress Sale at Davis in 1917.

How About It?

Bridgford Company, Knightsen, recently made an official record that is probably a state record at least. One of the daughters of their senior herd sire, King Segis Alcartra Abbekerk, was bred by accident at about eight months of age. She freshened at 17 months in thin condition, and was put on official test, as some other cows were being run at the time, and she made the surprising record of 16.12 pounds butter in seven days, milking as high as 48 pounds per day. If this record is an indication of what the daughters of this bull are going to do it promises well when the two year olds begin to freshen.

Carruthers Receives Eastern Offer

The Sacramento Bee states that W. M. Carruthers, Live Oak, has received an offer for his Shorthorn bull, Count Glory, from Carpenter & Ross, Mansfield, Ohio.

Carpenter & Ross own one of the great herds of Shorthorn cattle in America, and it was in their herd that Avondale, perhaps the greatest breeding son of the noted Whitehall Sultan, was developed.

After the death of Avondale, Peter Ross selected Maxwalton Revolution, a son of Avondale, to head their herd. This bull was shown successfully at many of the Eastern fairs, and his untimely death at the Virginia state fair, a few weeks ago, caused them to make Carruthers the reported offer.

Mr. Carruthers has refused all offers for Count Glory.

University Stock to Chicago

The whole live stock fraternity of the West will be interested in the fact that the University of California will again make an exhibit at the International Live Stock Show, Chicago, November 30-December 7.

Two years ago the exhibit made by the California institution swept the boards at the great Chicago show and hung up a record that they are still talking about back there. It will be recalled that university steers, California Favorite and California Jock were declared grand champion and reserve grand champion steers, respectively, and that the wethers also made an excellent showing.

This year the exhibit will be more extensive, and will consist of five or six steers; a pen of Poland-China, Berkshire and Duroc barrows, as well as a carload of Duroc barrows; and the usual showing of wethers—Southdowns, Shropshire, Hampshire and cross-breds.

It is never safe to prophecy what will happen, but it is not too much to expect that the live stock to be shown this year will be a credit to the state.

The senior yearling Shorthorn steer, California Marvel, is regarded as one of the rarest types of Shorthorns ever in an American show ring, and his stall mate, a blue-grey junior calf is conceded by competent judges to be one of the thickest, most attractive calves ever out.

Two years ago it was conclusively demonstrated that California could produce satisfactory cattle and sheep —this year it is confidently expected that the university showing will demonstrate the fact that this state can produce hogs quite the equal of the best corn fed products.

Cottrell & Packard, Tempe, Arizona

Members Pacific Coast Hereford Breeders Association

The Largest Herd of Herefords

Among the beef cattle attractions at the forthcoming Liberty fair, to open at Exposition Park, Los Angeles, Thursday, November 21, is the exhibit of Hereford cattle owned by the Hereford Corporation of Wyoming.

This firm owns the largest herd of registered Hereford cattle in the world and few herds have a longer or more interesting record.

Since the herd was established in the early eighties by select importations of English females, the influence that the herd has exerted on cattle throughout the West would be impossible to estimate.

The breeding herd has been increased to large proportions through a policy of retaining the choicest cows. And because no outside females have ever been added, the herd represents a uniformity of bloodlines that has made possible the early recognition of valuable bulls and the consequent wider use of such bulls. Only the strongest bred Anxiety bulls have been used and to recount them all would require more space than is available.

The show herd has been sent West to acquaint cattlemen of the Pacific Coast with the character of cattle produced in this herd and the representatives of the firm are anxious to meet the live stock men of this section.

DECEMBER HOG PRICES

The food administration announces that after consultation with the subcommittee, agricultural advisory board, and the special swine producers' representatives and with the packers it has been arranged that the November price basis for hogs shall continue through December. It is highly desirable that the lighter weight hogs be held back for the next thirty days. If withheld at this time the possibility of breaking down present price levels because of excessive receipts of the lighter hogs will be averted. All available hog products that can be spared will be required for foreign shipment in December and January and thereafter.

The November price referred to is $17.50 per cwt. at Chicago.

In view of the existing agreement between the Coast packers and the food administration for California whereby the Coast packers agree to pay not less than one cent under the food administration minimum effective on the Chicago market, the above announcement is of interest to California pork producers.

MORRIS HOLSTEINS AVERAGE $292

The sale of Holsteins held by A. W. Morris & Sons, at their farm near Woodland, November 12, resulted in an average of $292 for 97 head. Seventy-six cows averaged $315, and 21 bulls, mostly youngsters, averaged $201. The top price of the sale, $850, was paid for Miss Gelsche Walker Korndyke with a record of 23.17 pounds butter in seven days. She was purchased by Leeman and Kilgore of Sacramento, who also secured Pet Salambo of Riverside for $560. Other prominent sales were: Pauline Creamelle Mercedes, a 30 pound cow, to H. De Wolfe, Ripon, for $710; Leda Gerben Alcartra 2nd, with a record of 29.87 pounds butter, to Frank Helm, Fresno, for $550; Hartog Creamelle De Kol, with a record of 29.61 pounds butter, to Dr. E. J. Weldon, Sacramento, for $600.

Other buyers at the sale were as follows:

Kinkaad Livestock Company, Fallon, Nev.; A. Saalfield of Modesto, James McKindley of Acampo, S. J. Dado of Petaluma, Jones Brothers of Woodland, F. E. Knight of Vallejo, B. McGowan of San Francisco, Syl Lauson of Woodland, W. L. Hoges of El Centro, L. W. Archambeau of Sebastopol, D. L. Hoffman of Grand Island, G. A. Gabonini of Petaluma, A. Gaul of Stockton, Frank B. Anderson of Sacramento, W. L. Brown of Woodland, Linggi and Leinert of Clarksburg, Joe Rose of Gridley, F. A. Faisst of Franklin, A. R. Strother of Acampo, C. Robinson of Woodland, George P. Robinson of Woodland, Herbert Coil of Woodland and A. M. Robinson of Davis.

The sale was managed by C. L. Hughes of the California Sales and Pedigree Company. Cols. Ben A. Rhoades and Cy N. Clark officiated in the box.

The JERSEY

If you just want to "keep a cow" any cow will do. But if you want thrifty cows that will conserve feed; that will show real profit every day of the year, you must have Jerseys. They can advertise other breeds as they may, but they can't compare them to Jerseys on money making merit. Let us give you the facts, free, and then write to Breeders for prices and pedigrees.

STOCK YARDS VS. AUCTIONS

By Donald Graham

Off hand, many people would say that we need a union stock yard to handle the live stock marketed in this state. At one time this seemed the most satisfactory plan to me, as it would assemble the stock received at large centers, in one place where it would be on a competitive market. For me, it would be as satisfactory as any other means of marketing, I believe, though I would have to pay certain yardage charges. I feel that one should be able to put his live stock before a number of buyers, where the quality could be easily judged. The man who produces the good stock is going to profit by such marketing, for the reason that buyers will endeavor to take the best stock and will be willing to pay for it. The good feeder will benefit by receiving an advanced price, over what he receives today, when he writes or phones a packer that he has so many head of hogs or cattle or sheep, of such a weight, and such a quality. The packer may or may not put a price on his offering until he sees it. I find this very unsatisfactory.

Today, I would say that probably the better way of marketing live stock is the plan followed in Kern, Tulare and other counties, under which the producers market through the county farm bureau. In the above counties the small farmer is encouraged to keep live stock to fatten for market. The small producers, if there are enough of them, might easily produce and market more live stock each year than the large operators. These small producers can easily market through the county farm bureau auction sales, whereas they could not well compete on any of the open markets of, say, Los Angeles, for the reason that it would be difficult for them to get their stock to market.

I feel certain that the live stock auctions, as conducted in many of the counties of the state will prove the most good to the most producers.

COOPERATIVE SHIPPING STIMULATES HOG PRODUCTION IN UTAH

Hog production in Utah has received a big boost in recent months because the small farmers, especially those removed some distance from railroad facilities, have been able to get their hogs to market at greatly reduced expense through cooperative shipping. More than 100 farmers have shipped 18 carloads of hogs to the North Salt Lake stock yards during the past three months. The hogs consigned in these shipments came from sections 35 to 90 miles from a railroad shipping point, and in some instances were brought in wagons by the growers to a central point where auto trucks were used to transport them to the shipping point. Some were shipped by local freight to a central point where carloads were assembled. Each lot of hogs was marked by clipping the hair, and when they reached the destination each lot was yarded, fed and sold separately. The expense of shipping was pro-rated, and each owner received his individual check. The cooperative marketing plan has resulted in increased shipments and a marked improvement in the quality of the offerings.

GIVE HOGS RUN OF PLACE

Where a farm is fenced in such a way that hogs, and sometimes sheep and cattle, can be given the "run of the place," a big saving in feed can be made.

Volunteer grains, winter growing grasses, burr clover and many weeds furnish good feed, that is nutritious and valuable because of the variety afforded.

We plan to run between 250 and 300 head of pure bred hogs in our orchard all winter.

The hogs will be turned in just as soon as the intercrop of corn is harvested, and they will get all the waste fruit, the down-corn and grass.

The hogs never do so well as during the period when they have lots of exercise and a great variety of feed.

Shelters are provided, and some corn is fed every night, just to "keep them coming up" and to prevent them getting too wild. We find, however, that with quiet sows, that are used to being handled, the pigs grow up with no fear, and four or five months of range will not make them wild.

In fact, it is a matter of frequent comment by visitors that the hogs are "friendly." In walking through the orchard it is not an uncommon occurrence for a hog to come up—making the friendly grunt, that friendly hogs do—to be scratched. It is much easier to handle hogs when raised under such methods than when they are "snorty" and wild, and well repays the little extra time required to bring it about.—W. S. G.

CULL OUT THE UNNECESSARY HORSES

The maintenance of unnecessary horses on the farm is a costly practice at any time. It is doubly so now, because of the high prices of feeds. On the average farm, horses and mules work an average of less than five hours a day throughout the year. Any other income they can create will reduce the cost of operations. There are two main methods of increasing the revenue from horses and mules, says E. A. Trowbridge of the University of Missouri college of agriculture. First, brood mares raising colts besides farm work. If the mares are of the right kind they are a valuable asset. Second, much farm work can be done with young horses and mules that have not yet reached the age at which they are most valuable. Such animals as these can well be used for farm work.

Horses, other than brood mares which are producing colts, and horses and mules which are not increasing in value, should be considered seriously as property for sale. It is possible to overstock a farm with horses. The equipment should be studied carefully to see that this is not done. By no means, however, should farm horse stock be so depleted as to cripple farming operations. Good strong horses and mules are essential for maximum production.

Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Storing Sweet Potatoes

Cold storage, that is in warehouse where a low temperature is maintained by use of refrigerator, is best. The next best method is to place potatoes in thin layer on tray in a cool dry place allowing air to pass freely over them. Again some keep potatoes in dry sand. Another method is to dig potatoes, throw them in piles, cover with four to six inches of straw. After ten days the sweating will probably be completed and the straw removed and the potatoes allowed to dry. This should be done on a day when a dry wind is blowing. When the pile is dry thoroughly cover again with three or four inches of fresh dry straw and on top of this put three or four inches of soil, and in case they remain out during the winter a covering of shakes or similar material which would turn the water is required.

Pruning Blackberries

When is the best time to prune blackberries? — Subscriber, Waukena.

Use long pruning pole which has wire running from the cutting knife back to the handle. These may be used to cut up canes which bore fruit the past season. This long pole then answers as a hook to draw out prunings and saves tearing of hands and of clothes. This is the only pruning which is of value at this period of the year. In spring time when canes are growing very rank and reach the height of four or five feet they are sometimes pinched back so as to form lateral growth. This summer pruning is however, a matter which depends on conditions of growth and irrigation.

Fertilizer for Orange Trees

I have two Navel and one Valencia orange tree in my lawn, all young but bearing. I presume they should have some fertilizer. Please tell me what to use. Please don't say "use a complete fertilizer," or something similar, because such advice does not convey much meaning to a person totally unfamiliar with the subject. If possible to do so please give me the name of a preparation which will probably be best in my case.—Subscriber, Long Beach.

Notwithstanding the request of subscriber will suggest "complete fertilizer" is the best. It is simply a general trade name for fertilizer which is supposed to be balanced as to proportions of nutritive elements according to the needs of the plant. Every dealer in fertilizer handles this. However, we may say that for the inquirer stable manure, chicken manure or other forms of refuse make excellent application where one can spade them in. Again if the inquirer prefers he can buy the simples and apply bonemeal, nitrate of soda, or dried blood and potash as the complete or regular commercial fertilizer is used. One may apply from five to ten pounds per tree. In applying nitrate of soda make light application of not over two or three pounds, about the same amount of sulphate of potash and 10 or 11 pounds of bone meal.

Liver Disease—Worms

Plymouth Rock cockerel died after drooping for short time. Found his liver in very bad condition. It was about three times its natural size, covered with spots, and there was a sort of a blister covering almost the entire part of the two longer lobes. These blisters were filled with bloody water —about a half cupful in all—and the liver proper was covered with clotted blood. The liver was very soft. He had not lost weight. I know he had some worms. Do you think turpentine could have killed him? I used one teaspoon to a quart of water for one week in drinking water. Then I decided to try the tobacco treatment. None of my other chickens have been affected. We killed a Leghorn chicken last week for table use. I cut his intestines in pieces to see if he was worm infested. I found in his intestines something that I wonder if it was a tape worm. My poultry have always been very healthy until they got these round worms and I have lost so many since then. Do you think the tobacco treatment is injurious to laying hens? I was getting quite a few eggs when I began the treatment and the day I gave the last tobacco to them they all quit laying and I did not get any more eggs until yesterday I got one egg.—Subscriber, Redondo.

Your Plymouth Rock rooster evidently had enlargement of the liver. This probably affected both his crop and his bowels. All liver troubles are due to errors in feeding or to what often amounts to the same thing, lack of exercise, and many chickens are suffering nowadays from the lack of good wheat bran and of a sufficient variety of other mill feeds. Give all the green you can, a dose of Epsom salts occasionally, and as much range as possible, and make sure your mash is the best to be had. Mashes containing buttermilk are the most wholesome. It is better not to dose chickens very much. Turpentine and tobacco are powerful remedies and to be used with care. If you use tobacco exactly as directed by the state experiment station it ought not to check laying. The Leghorn rooster may have had tape worm. I cannot tell from the description given. The best thing to do with a worm infested flock is to move them, after treatment has been given, to clean soil. No matter how thoroughly the worms in the birds' intestines have been eradicated, the worms in the soil remain, and they are hard to get rid of.—J. A. K.

"They're *All* First Grade"

"And from new-bearing trees, too!—I can hardly believe that this lot has not been sorted. *That's* what comes of using my *head* as well as my muscles in planting and taking care of this new orchard."

"I thought when I sent to the Hercules Powder Co. for their book, 'Progressive Cultivation,' that all I could use dynamite for was to blast out the old, dead trees before I planted again, but I found out that *that* was only a starter.—

HERCULES DYNAMITE

can be used for all sorts of other things. Why—I blasted the holes for this whole orchard in a third of the time that the old, 'spade dug' method would have taken; and with only one helper instead of five. The young trees grew faster and looked better than any I've seen in this locality and are in bearing a full year ahead of their time."

"Then I used Hercules Dynamite to dig a mile of new ditches; that work took only about half the time I had reckoned on—and a lot less than half the back-ache. Now I'm using it to keep the earth loosened around the roots of my bearing trees and I figure that it'll make a difference of 20 per cent. in the yield this year."

"I'm advising all the men in this locality to send to the Hercules Powder Co. for their free book, 'Progressive Cultivation'—They're sending, too—for they can *see* how I am '*cashing in*' on the information that I got out of that book."

HERCULES POWDER CO.

Old Papers

Have large amount of old magazines and newspapers which the junk dealers refuse to take. What shall I do with them?—Subscriber, Long Beach.

Where this material is not salable application should be made to the Red Cross. That organization can dispose of all such matter.

Liver Trouble

My hens seem well and thrifty but every week or so one will droop around for several days and finally die. Will you give me a good remedy for liver trouble, as I think that is what ails them? A large rooster died recently. He sat around several days. Finally I gave him some castor oil, then the next day his comb got very dark. So then I gave him some nitre but he was dead next morning.—Subscriber, Jolon.

Your hens may be suffering from lack of bran in their mash. Good wheat bran is hard to procure, and much of what is sold for bran is something else. As soon as you can get bran that is bran, add some to your mash, no matter what the mash is. Better still, mix your own, using twice as much bran as you use of other mill feeds. Meantime, give all the green feed your hens will consume. If you can give them range, so much the better. Epsom salts mixed in the moist mash, about one-half teaspoon for each hen, will help to clean out their livers. Give once a week for three weeks. It is possible the beef scrap in your mash is at fault. You say nothing about the ration your hens have been getting. It is safer to mix your own mash, unless you know the composition of the one you are using. If you buy your beef scrap you can test it by pouring boiling water on a little, and find out whether it is fit for hens or only good for fertilizer.—J. A. K.

Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Boulevard, Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.
Unsigned communications receive no attention.

Skin Disease

What can be done for a six year old mule that has a rash on the neck, sides and front legs? He rubs the affected parts, especially the legs, until raw. A local horse trader calls it jack itch and says it can not be cured. The mule eats and works well. Advice that will bring a permanent cure will be appreciated.—Subscriber, Uplands.

Clip off all the hair and scrub the parts clean with soap and warm water. When dry rub in thoroughly a mixture of one part zenoleum and four parts light grade of engine oil. Let the mule stand in the sunshine to warm the oil in. Repeat this in one week. One week later it would be good to scrub the mule again with soap and water and if any places appear to be still irritated rub in the oil again.

Tape Worm in Dog

Will you kindly advise through the Cultivator proper treatment for getting rid of tape worm in a young Boston bull pup? I have tried several kinds of prepared tape worm medicine for dogs but none are effective. While the dog has passed several sections of the worm it seems impossible to rid of the head as the worm keeps growing and the dog is thin and will not eat except at long intervals.—Subscriber, Anaheim.

Every morning for one week give the dog a teacup of milk with half a teaspoon of powdered areca nut stirred in it. Feed him a little of anything you may have at night but do not feed very much until you have found the whole worm. Please let us know what results you get.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.
Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Riparian Rights

My boundary line is the center of a creek. Has my neighbor any right to build a dam across the creek and take all of the water? I could use half the water by pumping, but am not prepared to do so as yet. Would I lose my rights if I allow him to proceed without protest?—Subscriber, Cave Gulch.

As the relative rights of appropriators, such as your neighbor, and riparian owners, such as yourself, have not been entirely harmonized with respect to the comparatively recent act creating the board of water commissioners, it would be the opinion of the writer that the safest thing for you to do would be to enter a notice of contest with the commission and have the commission determine the rights of your neighbor and yourself thereto. You might otherwise lose valuable rights.

Note Outlawed

I hold a note executed January 1, 1912, due in one year, which is secured by a trust deed upon real estate. Is the note outlawed? Can the trustee sell the real estate and pay the note?—Subscriber, Riverside.

The note is outlawed so as to preclude you from taking any personal action thereon against the maker of the note for any deficiency which may remain after sale of the real estate. On the other hand it has been decided in this state that a trust deed conveys the title to the trustee for the purposes of the trust and that the title remains in the trustee unless the debt has been paid or a sale made of the premises; the fact that the debt secured has become outlawed does not affect the title of the trustee nor his power to act under his trust.

WHAT IS AN OPTIMIST?

An optimist is a man who sees a light in the darkness where there isn't any—and a pessimist is a man who comes along and blows it out.

The Magneto for Rugged Work

WHEN war rages, when life and liberty are at stake, proved efficiency is the only thing that counts.

Magneto ignition is the system used in every branch of war-work—in tanks, airplanes, ambulances, trucks, motorcycles. When the stake is too high to take chances, magneto ignition is what they depend upon. They are sure of it.

You, who are serving behind the lines in producing food for our boys, know that tractor service compares with war service for severity. Tractor service demands rugged strength. To be a good investment a tractor must stick to its job steadily. That is why so many far-sighted tractor-makers fit

BOSCH
MAGNETO IGNITION

Bosch costs them more than ordinary ignition systems, but they consider efficiency first.

If the tractor you select is not equipped with a Bosch Magneto with Impulse Starter, insist upon having Bosch installed. The Bosch Impulse Starter has won immediate success. This big, strong, simple device makes quick, easy starting a certainty.

Specify "Bosch Magneto Ignition" on your order or have Bosch installed on your present tractor by any Bosch service station.

FARM LANDS FOR SALE

For Sale—My 400 acre grain and stock ranch. Three miles from Pleasant Valley R.R. station, Mariposa County, California; 40 acres now planted to wheat, barley and oats; 100 acres more cleared and tillable, nearly all of the 400 acres could be farmed if cleared from large oaks and other trees; 3 and 6 room house, large barn, windmill and tank, and out buildings, blacksmith shop and tools, ranch fenced and cross fenced, part hog tight. Family orchard and garden irrigated from springs. Average rainfall 29.80 inches. Elevation 1500. The finest climate, summers cool and winters moderate, fine for fruit, no alkali or hard pan, one-half mile to school; $35.00 per acre, including 300 Angora goats, 30 head of dairy cattle, 5 head of horses, chickens and turkeys, and all farm implements and household goods. One-third cash, balance long time, 7 per cent, no trade. Albert F. Zurilgen (owner), Coulterville, Mariposa Co., California.

Absolutely Must be Sold and this price will sell it. A going dairy and alfalfa ranch, adjoining very prosperous San Joaquin Valley city, (160 acres) about half in alfalfa. Good two story eight room house, sanitary milk house, barns, shade and fruit trees, grapes, nuts and berries. Complete outfit of farming implements, wagon, etc. Irrigating water supplied by most dependable canal company in county. Good well, with engine and large tank, for stock and domestic purposes. This ranch can, with some expense be admirably subdivided. Price $24,000, half cash, balance in 3, 5, 7, and 9 years. A positive good buy. The People's Real Estate Co., Roberts Bldg., Los Angeles.

SNOHOMISH COUNTY, WASH. FARM LANDS. The greatest proposition on the market for the man who wants a farm; 12,000 acres to select from, 3½ miles salt water front, 20 miles of Beautiful Lake Shore, good towns, railways, steam boats, factories, mills, schools, churches, paved roads; where the largest profits are made, where the great variety of crops and wonderful productive climate make it the most productive farm section of America. Good lands in good localities as low as $25 to $35 per acre; 10 yearly payments; send for maps and literature to the BROWNELL LAND CO., 904 Third Ave., Seattle, Washington.

For Sale—10 acres of Valencia and Avocado orchard, 2½ miles west of Charter Oak. Box 56, Charter Oak, California.

For Sale or Exchange—Timber claim, 160 acres situated in Eastern Oregon. Yellow pine. "D," Cultivator.

Will Exchange beautiful home in Berkeley for good country realty. Address 5809 Ocean View Drive, Oakland, California.

SEEDS AND PLANTS

I Will Have One or Two Tons of Sorghum seed, especially selected for syrup making qualities for sale as long as it lasts. Send for list of different varieties, with description, prices and instructions for planting to get best results. Can send seed by parcel post. MARION GRABER, Hawthorne, California.

Seed Grain — We can make attractive prices on seed wheat and Winter or Gray oats and other field seeds. Have a full line of nursery stock. Supply of seed grain will be limited. Write now. 28 years in business. Carlton Nurseries, Carlton, Oregon.

R*O*S*E*S 50c per dozen. Fruit and Ornamental Trees, Plants, Vines, etc. Write for catalogue. KAVAN NURSERIES, San Bernardino, California.

Rhubarb Plants — Wagner's Giant Crimson Rhubarb plants, extra clean, 50 cents per dozen, $3.00 per hundred. Currier Bulb Co., Seabright, California.

New Hybrid Alfalfa—Spreading crown. Big crab-like roots, long lifed, etc. Write J. L. Lawson, San Jose.

Peruvian and Common Alfalfa Seed—Specialty. Write for prices and sample. Box 501, Fowler, California.

TREES

Budded Avocados — Fuerte, Sharpless, Lyon, Dickinson, Blakeman, Spinks, Taft, Linda, Rey, Queen, Knight and many others. A fine stock of field grown trees. $2.50 for one, $2.00 each by the 100. Better order now. Newberry-Sherlock, R. D. 2, Pasadena; Nursery, Rose and Palm, Altadena, California.

Grafted Walnut Trees—Placentia Perfection and Eureka on northern black roots. Citrus stock one year old from selected fruit bud wood. Also all the leading varieties of fruit and avocado trees. Order your trees early and get the first choice. Geo. M. Ketscher, 702 Orange Ave., Santa Ana. Phone Sunset 229W.

POULTRY

Baby Chicks! We want your business on this basis: Reasonable price,—Exceptional quality,—keeping of promises. . . . Big, (and oftimes false) claims of enormous egg yields, "the largest," "the finest" are not adjectives we use. Promises unfilled, Humbug, Bluff, are NOT our stock in trade. It takes common sense to succeed in poultry—use it in buying stock. We hatch and sell — R. I. Reds, Barred and White Rocks, Black Minorcas, White, Brown and Buff Leghorns, up to our capacity—12,000 chickens weekly, and would like you to send for our circular and get acquainted. No matter how small or large your needs, we will try to please you. Will you risk a card? The Mission Hatchery, Box 27, Campbell, California.

Eggs, Meat Going Higher! Great Shortage. Big profit for years sure on really heavy laying strains. Our 200-290 egg Leghorns, Anconas, Reds, Rocks, Minorcas, Wyandottes, Orpingtons, ducks, turkeys more profitable now than ever, clearing $5 yearly. Some best government trapnested hens, 280-283 eggs. Hundreds breeders; laying, younger pullets; thousands chicks weekly; reasonable. Few open dates winter, spring delivery. Last year's prices. James Beeson, Pasadena, California.

Baby Chicks for Sale—100,000 S. C. White Leghorn chicks from heaviest laying (Hoganized) stock for delivery every month in the year, at very reasonable prices. Safe delivery of all chicks guaranteed. Shipped safely anywhere West of the Rockies. No money in advance; pay on delivery. Finest hatchery in the world. Established 1898. Further information write Must Hatch Incubator Company, 438 Seventh St., Petaluma, California.

Heavy Laying S. C. Reds—Large vigorous cockerels and yearling males directly descended from New York, Boston, Los Angeles winners, $5.00 and $10.00. Satisfaction or money back. W. M. Marquam, Bishop, California.

White Leghorn Baby Chix from heavy laying (Hoganized) stock; $15.00 per 100. We guarantee safe arrival. The Pioneer Hatchery, 409 Sixth St., Petaluma, California.

Chix—Barred Rocks, R. I. Reds, Orpingtons, Anconas, Minorcas, Buff, White and Brown Leghorns. Breeding Cockerels. Enoch Crews, Seabright, California.

For Sale—Two 500 Petaluma Incubators $30 each; 25 pullets beginning to lay, Brown Leghorn, $1.00 each. Stamp for reply. Mrs. G. M. Guerard, R. 2, Box 26, Merced.

Blue Andalusian Cockerels—A fine well developed bunch from heavy laying strain. Get your order in early. Prices reasonable. J. R. Huddleston, 342 Edgeware Road, Los Angeles.

Wanted—1000 POULTRYMEN to try the New Perfection Automatic Poultry Fountain. None better. Free circular. John Imschweller, Inglewood, California.

"Eastman's Bred-to-Lay" Hoganized and trapnested Barred Plymouth Rocks. Cockerels, Eggs. Fairmead Poultry Farm, Fairmead, California.

Black Orpingtons Lay, Weigh and Pay—Prize winners at leading shows. Write for mating list. IVEYMOOR FARM, San Leandro, California.

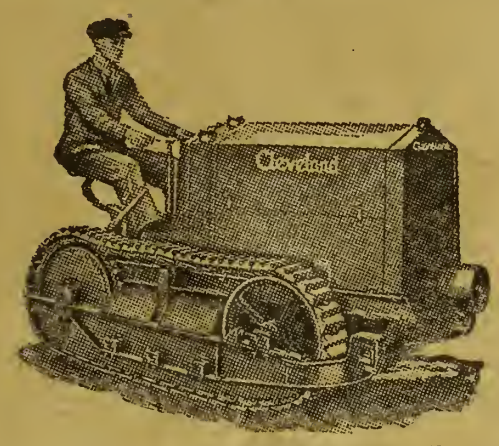
Are You a Farmer of Today or a Farmer of Yesterday?

Horses are Good but

The Cleveland Tractor

Is Better



All farmers are going to make money the next three years, but some are going to make more than others. The difference is between the horse and tractor. Write to us and we will show the difference and tell you how the tractor will make money for you.

—F. H. Stow

The wide range of uses to which the Cleveland Tractor is adapted is due to its many unique features. Among these are its great pulling power, its staunch, sturdy build, its ease of driving, ease of steering and to the fact that it lays its own tracks and makes a complete turn inside of twelve feet.

Protect Yourself—Order Now

Pulls a six horse load. Does the work of nine horses. **F. H. Stow Tractor Co.** Will work on all kinds of ground

Turkeys on the Farm

Written for California Cultivator By Jean A. Koethen

RAISING turkeys is an uncertain, often a discouraging business. This year they grow like weeds, and the happy farmer declares, "There's more money in turkeys than in anything else on the farm." Next year half the poults die, and we hear a dismal wail, "No money in turkeys. Can't raise them." It has been so for a good many years, and still each succeeding Thanksgiving finds the turkey crop apparently undiminished. From the days of the Pilgrim fathers we have always had turkey for the Thanksgiving dinner (provided we could pay for it) and doubtless we always shall. For every disgruntled turkey raiser that gets discouraged and quits at least one enthusiastic novice begins.

That this should be so is not strange, for the turkey is the most fascinating of birds. His stately carriage, his wonderful plumage, his friendly disposition, and best of all, his juicy breast, win him friends and friends of the lasting sort. Who that has once tasted roast turkey would not brave all sorts of trials for another taste? We are perhaps not quite so reckless as those Chinese Charles Lamb tells about, who burned their homes down for a taste of roast pig, but we are willing to take a good deal of trouble for a turkey dinner.

The difficulty with which turkeys are raised seems to be in inverse proportion to the amount of land available for their range. Blackhead, the disease which takes so many young birds, is called a "disease of domestication", and the very phrase suggests its remedy. Turkeys that are raised approximately as they would be in a wild state, that is, with a minimum of feed and a maximum of exercise, ought not to have blackhead. If they do, it is because of some other error in feeding or breeding. Given good range, the poult after the first week needs very little feed besides what its mother can find for it. Lacking suitable range, we try to make up the lack in our own way, and the poults suffer.

Every farm ought to have its flock of turkeys for it is on the farm that they are raised with the least trouble and the least loss. On the farm, if they are not so overfed that they prefer to loaf about the back step, they can wander, picking up stray bits of grain and green that would otherwise be wasted. If there are adjacent hillsides for them to roam over, so much the better.

The best breeders are birds not under two years of age, both male and female. Many persons do use yearling toms with two year old hens, and such a mating is fairly successful, but a two year old tom is to be preferred. The use of pullets as breeders is a waste of time. Fertility is very poor, and the poults that hatch are small and often weak. Strong, healthy offspring cannot be expected from hens under two years of age. One tom is sufficient for from six to eight hens.

Turkey hens begin to lay in February or March and most hens lay from 15 to 18 eggs before going broody. If a hen is promptly broken up she will soon begin laying her second clutch, which will probably not contain quite as many eggs as did the first. Some hens lay three clutches of eggs, some only two. It is customary to set the first and second clutches of eggs under chicken hens and let the turkey hatch the last herself.

Turkeys that are intended for the Thanksgiving market are kept on range until the last. Confinement is hard on birds that have never known anything else, though many are raised in confinement with a fair degree of success. Birds that have been on range through the summer, if confined for fattening, will lose rather than gain weight. The best grain for fattening is corn, and the best method of fattening is to begin gradually in October, giving first a little, then a larger ration of the corn till the birds are consuming all that can safely be given them.

Most of the birds marketed in California are marketed alive. When a turkey must be killed for market, the method called "sticking" is generally employed. Suspend the bird by the legs, head down, and with a narrow bladed killing knife, of the kind made especially for the purpose, make a diagonal cut inside the mouth at the base of the skull. This will sever the veins, and if the cut is properly made bleeding will begin at once. Next, force the knife down the mouth and into the brain at the back part of the skull. If you have pierced the brain the bird will give a peculiar squawk and the muscles will quiver. The piercing of the brain loosens the feathers, and picking should begin at once. Take the tail and large wing feathers first, then the body feathers. When the picking is done the turkey should be cooled by packing in ice cold water till the temperature has reached about 35 degrees. In dressing do not remove head, feet or entrails.

The most popular breed of turkey the country over is the Mammoth Bronze. White Holland and Bourbon Red apparently tie for second place. Both have excellent qualities, but for some reason neither has attained the popularity of the Bronze. The Bourbon Red is especially recommended as a farmer's turkey, since it is rather less inclined to roam than the Bronze.

Apart from the blackhead scourge, which kills most of the turkeys which die a natural death, the turkey is less liable to disease than the chicken. Cases of swellhead are rather common, but they ought not to occur in stock that has been accustomed to roosting out. When they do occur they are generally to be laid at the door of roupy breeding stock. We hear also of cases of rheumatism, but most of these are probably in young birds that have been allowed to run in the wet. The young turkey is very suceptible to dampness. The mature bird is very hardy, but infectious diseases, like chicken pox attack it as they do chickens.

160 Hens—1500 Eggs

Mrs. H. P. Patton, Waverly, Missouri, writes: "I fed two boxes of 'More Eggs' to my hens and broke the egg record. I got 1500 eggs from 160 hens in exactly 21 days." You can do as well. Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs," and you will be amazed and delighted with results. "More Eggs" will double this year's production of eggs, so if you wish to try this great profit maker, write E. J. Reefer, poultry expert, 4708 Reefer Bldg., Kansas City, Mo., for a $1 package of "More Eggs" Tonic. Or send $2.25 today and get three regular $1 packages on special fall discount of a season's supply. A million dollar bank guarantees if you are not absolutely satisfied, your money will be returned on request and the "More Eggs" cost you nothing. You take no risk. Write today. Pin a dollar bill to your letter or send $2.25 on special discount for three packages. Or ask Mr. Reefer to send you free his poultry book that tells the experience of a man who has made a fortune out of poultry.—Adv.

Whee! My Washing's All Done

Clothes All Clean and White and on the Line.

This Cocoa Naptha Soap is certainly a wonder.

I didn't believe it possible to wash clothes and get them clean and white without boiling—but now I know it is—if you use Cocoa Naptha. This water is so hard, too, but Cocoa Naptha didn't mind a bit—he just dissolved the dirt like the magician he is and it took almost no rubbing to finish the job.

Sisters! Try Cocoa Naptha, but be sure you get the genuine—in a red monkey wrapper—made by Los Angeles Soap Co. All good grocers sell it.

In baking apples leave enough of the core in one end to retain the sugar and spice put in for flavoring.

Household Department

'LONG ABOUT THANKSGIVING TIME

By S. E. Kiser

Ain't it splendid to be livin', 'long about this time o' year,
Just around about Thanksgivin', with the mornings crisp and clear;
With the children's cheeks a-glowin', with the future lookin' bright,
And the shops and mills a-goin' like red blazes, day and night!
Ain't it bracin', ain't it cheerin,' when the colts kick up their heels,
To approach the corn crib, hearin' turkeys gobblin' for their meals?
Don't it make a fellow kinda satisfied with life and glad,
When it's got so hard to find a thing that's goin' to the bad?
Ain't it fine to feel the nippin' of the brisk breeze at your nose
When the old dead leaves go zippin' down the lanes in scraggly rows,
When you've hay to feed the cattle, when you love your fellow men,
And you've money you can rattle in your trousers, now and then!
Ain't it fine to wake from dreamin' of the home your boyhood knew
And to find the glad sun beamin' just the way it used to do,
Long ago, about Thanksgivin', when you'd energy to spare,
When your pa and ma were livin' and the days were always fair!

TURKEY FOR TEN

"THANKSGIVING ain't different from any other day," snapped Mellicent, making the most of the creak in her rocker. "What's the use of having a turkey when you've got only a reed-bird appetite!"

"It ain't just the turkey itself," replied Mrs. Delia Wyatt, with a knowing shake of her head, "though it's surprising how plumb crazy the kiddies are after drumsticks. Land of love, if Mr. Burbank could only produce centipede gobblers! But it's what the turkey stands for, Mellicent."

There was a moment's silence, then the creak reasserted itself. "Maybe there is—when you've got sons and daughters and grandchildren to sit round the table and look for it," snapped Mellicent; "but I'd like to know what's backing up a Thanksgiving turkey when you ain't got any folks to reunite for a family dinner?"

Mrs. Wyatt put her knitting into her work bag, with a sigh. "I've got to stop in at Johnson's to buy some chestnuts for stuffing," she explained, in apology for her glance at the clock and abrupt leave-taking. "What did I do with my hat? Oh, here it is on the chair. Mellicent, do you remember Angelina Snow?"

Mellicent nodded, her mouth bristling with five hat pins, as she stood with Mrs. Wyatt's jacket held out in both hands toward the open fire.

"You made me think of something she told me once—my left sleeve's caught there, Mellicent. Angelina had the blues terrible bad one morning," continued Mrs. Wyatt, sticking in the hatpins one by one as she talked, "but 'stead of sitting down and making company of them she trotted them right out for a walk. And what do you suppose she did then? She went up and down Spring Street, looking and looking, and every time she passed a woman uglier than herself she counted her off on a finger. When her fingers gave out she went home—cured. Angelina wouldn't have taken a blue ribbon at a beauty show, either."

Mellicent Jancey's practical, active nature had no time for sentimentalizing, but the morning after Mrs. Wyatt's visit new, strange thoughts—with twinkling eyes and wistful smiles—kept peeping out at her from behind the routine of daily duties, and at noon she suddenly dropped broom and duster, dressed with trembling fingers, surprised Teddy Roosevelt Tortoiseshell with a bear hug, and darted from the house—bearing the exalted expressions of an archangel and wearing two gloves for the same hand.

In the gathering twilight of that Thanksgiving eve Miss Mellicent's doorbell tinkled excitedly, and the next moment Mrs. Wyatt flashed into the sitting room.

"I wanted you from the first, Mellicent," she panted without preface, "but it made thirteen at table, and it never occurred to me until an hour ago that I could count Jessie's twins as one just as well as not. You'll come, of course?"

"Im sorry, Delia, but I've a previous engagement—with a Thanksgiving turkey of my own."

"You bought one, after all? But, Mellicent, it will be so lonesome eating it without any of your own folks here."

"I'm to have some of my own folks—ten of them!"

"Why, Mellicent, only yesterday you told me that there wasn't a living soul related to you this side the Rockies, and—"

"That was before you taught me how to find them, Delia. There' don't be frightened. I've not lost my mind. You remember about Angelina Snow? I got to thinking about the uglier lives than mine, Delia. Of the two dear Misses Prescott worrying over money matters ever since they lost so much in that mining venture; of my little dressmaker, who was the petted darling in her home back East and has to work for her living among strangers out here, because her lungs are weak and she can't live anywhere else; of poor, fastidious Mrs. Adams, who can only afford a third class boarding house; of—I won't go on, but they're all invited, and they've all accepted."

She rose, and as she turned toward Mrs. Wyatt the firelight revealed a face radiant with happiness. "I can't talk things out the way you can, Delia," she concluded, with a gay little laugh, "but just you come into the kitchen with me and see my Thanksgiving turkey!"—May C. Ringwalt, in Los Angeles Times.

STUFFING FOR THE TURKEY

Two quarts of stuffing is generally needed for a good sized turkey. The foundation is stale bread finely crumbled; when the crusts are used they should be soaked in cold water until soft, then squeezed as dry as possible. To this may be added a high seasoning and at least half a cupful of melted butter or other shortening. Additions may be made at will of chopped celery, raw oysters drained and quartered, raw sausage meat,

The Cultivator Patterns

9065—Child's Dress. Cut in sizes 2, 4, 6 and 8 years. The little waist buttons at the back and the sleeves may be in long or short length.

9071 — Ladies' and Misses' Waist. Cut in sizes 34, 36, 38, 40 and 42 inches bust measure. The waist slips over the head and the shield opens at the side.

9078—Ladies' and Misses' Set. Cut in one size. The set gives three widely different styles of neckware.

9050—Ladies' One Piece Apron. Cut in sizes 36, 38, 40, 44 and 48 inches bust measure. The apron is all in one piece, with short kimona sleeves.

9058—Ladies' Dress. Cut in sizes 34, 36, 38, 40, 42, 44 and 46 inches bust measure. The waist is gathered at the shoulders and the two-piece skirt is gathered all around at the slightly raised waistline.

8703—Girls' Dress. Cut in sizes 6, 8, 10, 12 and 14 years. A wide buckle holds the fulness of the drapery at the front and another one is used at the back.

9080—Ladies' and Misses' Two Piece Skirt. Cut in sizes 16, 18 years, and 26, 28, 30, 32 and 34 inches waist measure. The front and back panels are separate and they are cut in one with the belt ends which fasten at the sides.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

boiled chestnuts chopped or rubbed through a sieve, chopped hard boiled eggs.

How to Truss—It goes without saying that the turkey flavor absorbed by the stuffing is a direct loss in the flavoring of the bird itself, so that many prefer no stuffing. Where it is used a little is placed in the neck to give fullness to the breast; the body cavity is then filled lightly, as packing results in soggy stuffing. With a long trussing needle and about a yard of strong thin twine take a few stitches to close the body cavity; push the legs forward and close to the body. Insert the needle at the thick part of the thigh under the bone and push it entirely through the body. In returning pass it over the bone, pull the ends tight and tie down. Turn the neck flap over the back, turn the wing tips underneath so that they lie over the flap and fasten with a stitch; then run the needle back and forth through the body, going under the main wing bone and returning over it. Take a third stitch through the end of each leg, and in returning run the needle through the "pope's nose." When the roasting is finished the stitches can be cut on the side opposite the knots and the twine pulled out by the knotted ends.

Roasting — For a turkey weighing from eight to ten pounds fully three hours cooking in a hot oven will be necessary; for a bird weighing from twelve to fifteen pounds, another hour should be added.

SQUASH PIE

One cupful of cooked squash, two cupfuls of milk, two eggs, two-thirds cupful of sugar, one teaspoonful of ginger, one teaspoonful of cinnamon, one-fourth of cloves, one saltspoonful of salt. The squash should be thoroughly mashed and the two eggs whipped up in it. Mix together the sugar and spices and salt, and then add to the squash and egg. When thoroughly mixed add the milk and stir well. This should be baked with one crust and in a very moderate oven.

SCALLOPED OYSTERS

Scalloped oysters "as my mother used to make them" were the best things ever. They always accompanied the turkey at Thanksgiving and the goose at Christmas. Oysters never went into the dressing at our house—but everybody to his own taste.

They were always made in a great big galvanized milk pan—no baking dish was big enough to hold that generous scallop. Two loaves of stal bread were sliced and each slice buttered thickly. A layer of slices was placed in the bottom of the pan; the big juicy oysters were laid on—not here and there, but overlapping, salted and peppered. Then came another layer of buttered bread and oysters, then the top layer was of buttered bread. Now over the whole was poured all the fresh whole milk the pan would hold and it was slid into a medium hot oven. As the milk cooked into the bread more was added.

Such tantalizing odors as floated out from the kitchen during the process of cooking ,which took from three quarters to one hour when the pan came forth, crusty, buttery, golden brown on top, fluffy, and delectable within.

Above everything else, have your heart so full of the Thanksgiving spirit that it will overflow, creating an atmosphere of love and contentment about you, and it will take possession of the hearts of your family and guests.

TO CLEAN AN OILED MOP

These mops lose their efficiency when they become too dirty and caked with dust. They may be washed in strong hot suds, but this can be done much better if the mop is first washed in gasoline to cut the oil. Gasoline which has been used for oleaning should be saved for this purpose. After the mop is well washed in gasoline let it dry, then wash in suds. Then when thoroughly dry, oil it again and it is as good as ever. The best way to apply the oil is to pour a little in the tin box the mop comes in, and put the mop with the strings down into the can and let it remain for a few days to evenly absorb the oil.—Nellie M. Kilgore.

CAUSE OF THANKS

"I met a real optimist the other day," said the war hospital surgeon, "a fellow to whom I certainly doff my hat. He had lost a leg, and when they picked him up the first thing he said was: 'Thank God, it was the leg with the rheumatism!'" — Detroit Free Press.

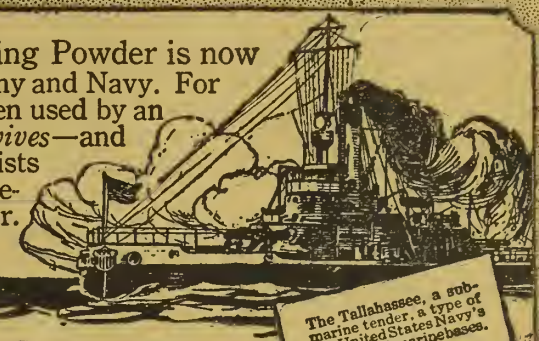
QUALIFIES WHERE QUALITY STANDARDS ARE STRICTEST

Calumet Baking Powder is now used in the Army and Navy. For years it has been used by an army of *housewives*—and that army enlists thousands of recruits every year.



The Tallahassee, a submarine tender, a type of the United States Navy's floating submarine bases.

Housewives use Calumet because it produces best results. They judge it by results entirely. Government experts selected Calumet for this same reason—and other *reasons*, too. They looked *back* of the results. They demanded purity in Baking Powder, and purity in bakings, as well as surety of results.

They selected Calumet because they could secure these desirable qualities—and were *certain* of getting them. The strongest guarantee you could ask for Calumet's thorough *goodness*. Try it.

SULPHUR

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

Try our new brand of VENTILATED Sublimed Sulphur, 100 per cent pure, for making Paste — (Atomic Sulphur) — and for dusting.

For Lime Sulphur Solution, use our DIAMOND S BRAND refined Flour Sulphur. We can furnish you this sulphur at such a low price that it will pay you to mix your own solution.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre of our Diamond "S" Brand Powdered Sulphur. Write direct to

PRUNING DECIDUOUS FRUIT TREES

Continued from Page 523

that five or six may be left in a vase or goblet form as far as possible, shortened to about one-half, and the remainder of the shoots cut off. The small laterals and spurs must be left, the long ones being shortened annually, and thinned out if too dense.

Three years after planting, repeat as in above paragraph, leaving eight to ten branches, maintaining the same general shape.

If there is a prevailing summer wind,—usually from the northwest—endeavor always to prune so that growth towards the wind is encouraged. As you approach the tree, you will notice a preponderance of growth on the opposite side, and the first thing to do is to remove much of it, to balance the head.

After this, which is really essential with all deciduous fruit trees, let the pruner, if he is a thinking, careful man, use his own judgment, but do not let him run to any extremes, being governed by his own common sense under existing conditions. Personally, I would continue the same method indefinitely.

Use only the best hand pruning shears and pruning saw,—never, under any circumstances use the two-handed shears, as they mutilate, and do not cut clean. Any cut surfaces of an inch or more in diameter should be covered with asphaltum, or Oronite roof paint. The latter is not suitable for large cuts. Make a smooth, clean, sloping cut, and, when removing a limb, please, as you value your tree, do not leave stubs, snags or hat pegs.

Do not forget that a fruit tree will respond to good treatment as much as will your dairy cow, and that it will live and be profitable as long as you give it proper care.

THE OLIVE OIL SITUATION

Continued from Page 527

Prices

Prices offered for olives, pickle and oil sizes, are higher than ever known in the business before. Orchard run buying has been resorted to by a number of the ripe olive packers and prices on this basis range from $150 to $185 a ton. For oil sizes, bought on grades under 10/16ths in size, it is reported that as high as $110 a ton has been offered. In all probability, though, the purchaser in this case wanted but a limited quantity of fruit at this figure. Buyers of olives to be used in the Greek and Italian styles are paying all the way from $135 to $200 a ton for fruit, orchard run basis, though by far the larger quantity has been bought for less than $150 a ton. Where ripe olive packers have been buying on grade the prices have ranged from $100 to as high as $350 a ton.

RAISIN EMBARGO LIFTED

The food administration announced on November 18 the lifting of the embargo on raisin shipping from California. The embargo was lifted as the result of an agreement between the war trade board and the food administration.

It takes a live fish to swim up stream; any lobster can float down.

A poet has been known to make dollars out of lines that ordinary mortals could not make sense out of.

Save the old burlap bags that gradually accumulate on the farm. They may serve the place of new and expensive packing material on many future occasions.

Carelessness is one extreme and morbidness is the other extreme. While seeking the middle of the road, do not give morbidness the benefit of the doubt.

Mary had a little lamb,
She fed it gasoline;
It hung around the fire one night,
And hasn't since Benzine.

An interesting side light on Italy's entrance into the war is given by a young Italian lieutenant—ex-business man. He says:

"Our people were not prepared to go to war. We had no arms, no trained men. I, knowing nothing of soldiery, was put with a book of instructions to drill 60 men. Two nights later we were ordered to attack the Austrians with Alpenstocks—yes, a German name, but a good weapon."

LIVESTOCK

The Los Angeles market is feeling the effect of government export orders and the demand for good steers, showing about a three-quarters finish, is strong, and prices are improving. A few choice steers sold last week for $13.85. Good steers are worth about a dollar more than last week.

The demand for good cows is very firm, due to the fact that the better steers are used to fill government orders and consequently much of the trade that formerly depended on steer carcasses is finding it necessary to use cow meat.

Los Angeles had an over supply of hogs last week and prices were shaded accordingly, however, the accumulation has been used up and the prices paid the first two days of this week were stronger. There is a feeling that the market is bound to improve.

Lambs are reaching this market in plentiful supply and prices are fully steady. The local market is glutted with mutton.

Report of live stock conditions on the Los Angeles market as compiled by the United States Department of Agriculture, Bureau of Markets, through the local office:

NUTS

The Almond Growers' Association has established opening prices as follows per pound:

Nonp.	27½
I.X.L.	25½
Ne Plus	24½
Drake	20

Outside dealers have named prices above these quotations and it is understood association stock is practically closed out and prices withdrawn.

Walnuts: Net prices have been named by the California Walnut Growers Association:

No. 1 Softshell	28
No. 2 Softshell	25
Jumbo	30
Fancy Budded	31½
Golden Gate Budded	29

Franquettes, Eurekas and other fancy varieties sold on sample. No. 1 Softshell guaranteed 88 per cent good; Fancy Budded, 90 per cent. In case of worms or damage by ants not more than five per cent.

RICE

Prices which rice millers of this state have voluntarily agreed with the food administration for California to pay to growers for paddy rice are as follows:

No. 1 and No. 2 Japan, in sacks, $4.32 per 100 pounds.

No. 3 and No. 4 Japan, in sacks, $4.16 per 100 pounds.

Prices for other grades will be paid for on a basic value proportionate, and no higher prices than those quoted above for any grades whatever will be paid.

The millers agree further to sell cleaned rice and by-products for prices not to exceed the following:

Fancy Japan, 1½c per pound.
Choice Japan, 7⅝c per pound.
Fancy second heads, 6⅞c per pound.
Screenings, 5⅝c per pound.
Brewers', 5¼c per pound.
Rice polish, $50 per ton, carlots.
Rice bran, $36 per ton, carlots.

GRAIN

Wheat—Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles terminals:

Hard Wheat—	Per. Bushel	Per Cental
No. 1	$2.20	$3.62 2-3
No. 2	2.17	3.61 2-3
No. 3	2.13	3.55
Soft White—		
No. 1	$2.18	$3.63 1-3
No. 2	2.15	3.58 1-3
No. 3	2.11	3.51 2-3
Club and Sonora—		
No. 1	$2.16	$3.60
No. 2	2.13	3.55
No. 3	2.00	3.48 ½

For sacked grain add 9 cents per bushel of 60 pounds to above price. Deduction of three-fourths of a pound is made for weight of standard grain bags. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to merit.

Barley—Feed, 2.10@2.17½ per cental for choice spot; shipping, 2.20@2.25; milling, 2.25@2.30.

Oats—Red feed, 2.55@2.70 per cental; seed, do, 2.95@3.05, with recleaned at 3.15 @3.30; black, 2.55@2.65 for feed and 3.00 @3.15 for seed.

HAY

Under date of November 16, Scott, Magner & Miller says:

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling expenses must be added according to conditions.

Fancy Wheat Hay (light 5 wire bales)	28.00@30.00
No. 1 Wheat or Wheat and Oat Hay	25.00@27.00
No. 2 Wheat or Wheat and Oat Hay	20.00@24.00
Choice Tame Oat Hay	25.00@27.50
Other Tame Oat Hay	20.00@23.00
Wild Oat Hay	20.00@22.00
Barley Hay	20.00@22.00
Alfalfa	18.00@22.00
Stock Hay (in order)	18.00@21.00
No. 1 Barley Straw, bale	50@80

Damaged Hay (all kinds), according to condition.

Other Tame Oat Hay	22.00@24.00
Wild Oat Hay	22.00@24.00
Barley Hay	22.00@24.00
Alfalfa	22.00@25.00
Stock Hay	18.00@21.00
No. 1 Barley Straw, bale	50@80
Damaged Hay (all kinds)	Nominal

ANOTHER FINE CATALOGUE

The Leonard Coates Nursery of Morgan Hill is sending out its 1919 catalogue. The cover is a view of the nurseries from the hill on which the office is located, somewhat conventionalized and printed in colors. It is most attractive, and text and illustrations give a fund of information regarding fruit trees and ornamentals. The first half dozen pages have a large number of valuable hints to fruit growers.

How to Sell Your Crop

A DISAPPOINTED buyer just naturally becomes a knocker and hinders many sales," says a writer in "Sunsweet Standard," the organ of the California Prune and Apricot Growers, and follows up his text with an exposition of how to meet the situation which now confronts the prune men. It is packed so full of common sense help that we give almost entire for the benefit of Cultivator readers:

There are more damaged prunes, caused by excessive rain, than ever before since prunes were grown in this state. Almost all first quality prunes are ordered by the government for the use of soldiers. So that whatever prunes are in the general market must come largely from those damaged by rain, and grade in quality from slightly inferior to such as are unfit for food. The ethics of selling inferior food products which in appearance may easily be mistaken for first quality is a big problem of commercial morals.

But another problem is the effect it will have on our market to have most of the prune eaters for this season gain the impression that prunes are very poor food. Every candid discriminating person will be sure that no one eating these poor quality prunes will praise them. And in many cases disapproval will reach the degree of severest condemnation. Just think of it. Every dish of damaged prunes eaten for the next year will provoke mild disapproval or bitter condemnation. Honestly now, what effect will such general mental attitude have on the future purchase of prunes? Because of the rapid increase of our production we need to multiply friends of our fruit, but instead will we not have blocked our market by this adverse opinion which ranges from apathy to positive disgust?

Of course, most of those who try to justify the putting of this damaged fruit on the market say candidly that it ought to be correctly labeled and sold for just what it is. But the probabilities are all against such good intentions being carried out to the final selling. The plain ordinary business self interest of the retailer will tempt him to forget (?) the label of their damaged condition. Most of them will he sold as California prunes with no explanations. Even should one buy them as second class fruit, the memory of their taste will be like the memory of taking medicine. I think a big majority of the hundreds of growers who have spoken to me are more or less positive that it would be financial wisdom to keep out of the market all prunes which are seriously rain damaged.

And if such a majority are willing to sacrifice their present gain for a better and friendly market for all prunes, have they a right to insist that their market shall not be hurt by those who are influenced more by present gain than future profit? The same principle is involved in protecting our orchards. General approval has sanctioned law which forbids one, for his gain, to buy and plant nursery stock infected with disease which will endanger all orchards. Growers would protest justly and effectively against any such action seriously hurtful to their production. Then why have they not an equal right and duty to protest against any individual doing, for his gain, that which must seriously harm the market upon which our industry depends to the same extent as on successful production? Thousands of orange trees have been legally destroyed, at the owner's loss, because their infested state endangered all orange groves. That which endangers our market is as much a menace to our industry as to endanger the life of our trees. Then have those who think their industry threatened, a right to invoke existing law or authority to hinder the sale of fruit so damaged by mold and ferment that it will seriously demoralize the market of our product?

The case is not too simple to admit discussion. One may say justly that poor fruit may still be fit for food; that all fruit may be divided into grades by varying quality; and that it is not wrong to sell second or fourth quality—if it is sold honestly for what it is. And the answer lies under that big little "if". There is no way to secure or insure its sale "honestly for what it is." The probabilities are all against such frankness.

The further and more important fact remains that most of this defective fruit is affected more or less by mold or ferment, which makes it liable to condemnation by the pure food authorities. One man told me frankly that he counted it unfit for market, that he intended to sell it to a certain packer, and hoped the authorities would seize and condemn it before the packer could get it into market. Another protested with spirit and some heat that no one had the right or privilege to hinder his selling fruit that he counted suitable for food. If that liberty were granted generally the pure food authorities would have nothing to do.

It seems to me the case can be put clearly and fairly like this. If the sale of these prunes seriously damaged by rain, mold, or ferment, under conditions and methods likely to prevail, will greatly impair the market for prunes, according to prevailing judgment, then all who are vitally interested in the preservation and improvement of such market have a right and duty to exercise all lawful and just influence to interfere with any individual action which threatens our common industry. It is the function of the pure food authorities to protect consumers against every form of deception or improper supply. It is the privilege and function of the growers to cooperate to protect their industry from all harmful actions of individuals for personal gain.

GOVERNMENT MAY DRY FRUITS AND VEGETABLES

Establishment of an industry within the United States to dry fruits and vegetables as a means of conserving the food supply of the nation is one of the important projects started by the department of agriculture under authority conferred in the regular agricultural appropriation act recently passed.

An appropriation of $250,000 is included in that act to enable the secretary of agriculture to determine the best means and processes of dehydration and to disseminate information as to the value and suitability of dried products for food. Authority is given to establish and operate plants for drying fruits, vegetables and other edible products for supplying food for the army and navy, if such action is deemed necessary by the president. Cooperation with commercial drying concerns is also provided.

The secretary of agriculture has designated an advisory board to administer this appropriation and outline the work to be done under it. The advisory board is to consist of representatives of the bureaus within the department of agriculture which are concerned with food production, regulation, and conservation, and of one representative each of the food administration and of the sanitary corps of the army.

SAVING IN TONNAGE SPACE BY DRIED FRUIT SHIPMENTS

The war department authorizes the following:

Another saving in tonnage space has been effected by the quartermaster corps in the shipment of dried fruits for the use of the American Expeditionary Forces. Fruits will be shipped thoroughly dried instead of in the semidried condition in which they are found in commercial markets.

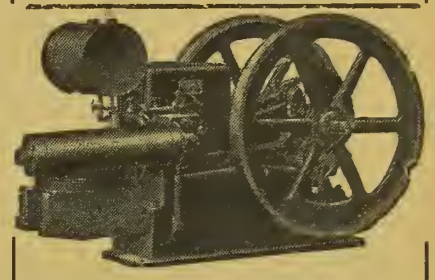
Considerable tonnage will be saved, as prunes, dried apples, and dried peaches are largely consumed by our troops overseas. The new practice of shipping the fruits thoroughly dried will also act as a preventive against spoilage and worms.

DESTROYING STUMPS

The removal of stumps without use of dynamite is a laborious matter. The following method, however, is said to be effective in destroying stumps without digging or pulling them.

Bore a one or one and one-half inch hole into the top of the stump to a depth of 18 inches. Put into this hole about two ounces of saltpeter, fill the hole with water, and plug tightly. The best time to do this is in autumn. In spring, remove the plug, fill the hole with kerosene and ignite, using a small piece of cloth as a wick to start the fire. If the work is properly performed, the stump should burn slowly and completely without further attention. — B. O. Longyear, Colorado Agricultural College.

Witte Irrigating Engines



Kerosene - Distillate 2 to 30 H. P.

Pump your water with a WITTE. All you need is a centrifugal and my Special Model Kerosene-Distillate Engine. I can lay your engine down at least cost. Save the middleman's profit—Get your engine NOW, while prices are favorable. Have reliable power for all your work. Made in standard sizes—2, 3, 4, 6, 8, 12, 16, 22 and 30 H. P. Battery or magneto equipment. I am in a position to offer you the best prices and make Quick Shipment. 90-Day Trial—5-Year Signed Guarantee. Largest exclusive engine factory in the world selling direct to user. Terms Cash or Payments as arranged for. Don't make a deal until you have investigated my offer.—Ed. H. Witte, President.

Western Honey Bee

A Bee Journal for the Pacific Coast

Organ of Beekeepers' Exchange. Live and up-to-date. Just what every beekeeper wants. Sixth year.

One dollar a year; monthly; 3 months 25c.

Address COVINA, CAL.

You Can Make a Handsome Income by Trapping

Raw furs are extremely high now and the demand was never greater. Just think, even Skunks have sold this fall for over $9.75 each, and we know trappers who caught 19 Skunks in one night.

Wonderful Chance for Boys and Middle Aged Men

There's a splendid chance for you to make money by trapping; it's pleasant work. Don't worry if you've had no previous experience. Our beautiful 36-page book, "Trapping for Profit," tells all about trapping and handling of furs, so that even the beginner can have wonderful success trapping and get the highest market price for his catch.

The Book and price list are yours for a post card; they're absolutely free.

"I bought 5 boxes"

of Eureka Stumping Powder and now I want to sell a lot of other powder that I have," writes Rudolph Stadeli, Silverton, Ore. "The other powder makes me terribly sick when I try to use it, but Eureka does not give me the least headache."

Eureka Stumping Powder is one of the two

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

Eureka goes further and costs less for all agricultural blasting than ordinary powder or dynamite.

Eureka and Giant Farm Powders are made especially to meet western farm conditions. They are made by a Pacific Coast Company, with more than a half a century of experience—the company that originated all "giant powders." Your dealer can supply you. If he does not, write us and we will see that you get the genuine, which has the Giant brand on every box.

Save money on farm work. Send this coupon for our big free book, "Better Farming." It tells you how to do scores of farm jobs cheaper and better.

Money In Stump Land

UNCLE SAM says the "K" Hand Power Stump Puller is O. K. Uncle Sam also says turn your stump land into valuable land and produce more. Stump land can be turned into profitable land at a small expense which means more money to you. You are paying taxes on stump land. WHY?

Now is your opportunity

One man or woman singled handed with a "K" Stump Puller can pull from 50 to 150 stumps per day at a cost less than ½ the cost of a horse power machine and about ¼ the cost of dynamite.

NO STUMP TOO BIG FOR THE
K HAND POWER Stump Puller

Simple as rowing a boat. No up-keep. Works on hillsides or marshes where horses cannot work. Weighs 171 pounds—easily moved from place to place. Absolutely guaranteed against breakage. Endorsed by the United States Government.

IMPORTANT—To one man in each locality I will make a special money saving offer. Write for it today.

FREE BOOKLET—Simply send your name and address for my free booklet on Land Clearing. It tells many things you should know.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

A detachment of the Boy's Work Reserve of Arizona is shown busily engaged in cleaning weeds from the banks of canals of the Salt River Valley Water Users' Association. On page 3 Mr. Bemis tells of the part these boys have taken in the "produce more" campaign.

LOWER THE FREIGHT

An orange grower of Upland—and many another — wants lower freight on fertilizer, especially sheep manure. He says Nevada, Idaho and Montana produce vast quantities. California orchards need it, but present rates are prohibitive.

When Mr. McAdoo gets a spare moment he may see possibilities of increased production in wider distribution of manures.

Manure spreaders have made millions of extra bushels of products and the railroads, Mr. McAdoo, will make fine "spreaders."

AGAIN, THE FAIR

The Liberty Fair was to open at Exposition Park, Los Angeles, Thursday, November 21. Action by the board of health caused the opening to be changed to Saturday, November 23 — then to November 25. Just now it appears that the opening is highly indefinite.

Practically all the live stock and other exhibits are being held intact and the gates can be opened on very short notice.

The management is determined that the California Liberty Fair will become a fact—just as soon as possible. R. P. R.

W. D. HOARD

In the death of W. D. Hoard, editor and founder of Hoards Dairyman, who died Friday, November 22, agriculture in general, and dairy husbandry in particular, lost one of the strongest forces and sanest minds that has ever been attracted to agriculture.

Hoard believed in agriculture as a basis of national wellfare, and he believed that live stock husbandry was fundamental to better agriculture, and because he held to these facts, so sincerely, he could always be found at the front of any movement that promised to be a factor in establishing a better system of farming.

Few men have rendered equal service to the cause of better farming.

KILLING 'EM YOUNG!

The first auction sale of fat hogs attempted in Napa County was a failure owing to the fact that no buyers were present. It will be recalled that in the November 23 issue of the Cultivator it was suggested that such a contingency constituted the "nigger in the woodpile."

According to our information, the packers were notified and cannot plead that they had no knowledge of the event. We suppose that they will offer as an explanation the fact that they were short of labor and long on hogs. But, such being the case, there was no reason why they could not notify the management of the sale in time to prevent a failure. We would be inclined to overlook the packers' failure to put in an appearance, if this was the first time that such a situation developed, but it is not the first time, and it has every ear mark of a deliberate attempt to discourage the producers in their efforts to sell to better advantage.

The average producer is disposed to be fair and is entitled to fair treatment. He has been told by the packers that they could pay a better price if they could buy more uniform lots, and these auction sales served in a fairly satisfactory way to provide an opportunity for buying graded stuff. Now, if the packers are not willing to meet the producers half way—well, sooner or later the question of live stock markets is going to be settled—and settled to the complete satisfaction of the producer—the packers to the contrary notwithstanding.—R. P. R.

THIS WAY OUT

Last week we commented on the fact that barley growers were feeling somewhat uneasy as to their future market. This week we note that citrus growers are interested in obtaining lower freight rates on manure.

The solution of either problem is not difficult, and in the end they will be solved by assigning live stock a larger place in the farming practices of this state.

There are two ways open to the producers of California. They can give early recognition to the established fact that no satisfactory or permanent system of agriculture can be maintained without the use of live stock, or they can bide their time and continue their present plan of farming until the fertility of their soils becomes so depleted that they will be forced to turn to a system of live stock farming.

The keen interest that is being manifested toward all kinds of live stock would seem to indicate that, generally speaking, we are headed in the right direction.—R. P. R.

FARM BOOKKEEPING

Correct accounts are as necessary to the farmer as to any other business man and if the best results are to be obtained he must know what lines of his business are bringing profits and which are causing loss. The small farmer who is doing at least part of his own work is the most remiss in this line. He can tell at the end of the year whether he has as much property as he had at the beginning, but is not able to tell whether another line of effort would have been more profitable. The common excuse is that he is tired at the end of his day's labor and neglected to make the entries. This is too often the fact, but if a few minutes less time were devoted to farm work each day and some short notations made the profits would in many cases be much more. The technical knowledge necessary for farm bookkeeping is often largely overestimated as complex methods are not needed and are not the most successful.

In beginning, an inventory of the present value of land, live stock, farm implements, feed, seed, unsold parts of crops which have been gathered, cash on hand and any other items which may be used in the particular line should be made. This need not be entered in the day book in common use but can be kept in another book for the private information of the owner.

The accounts can be kept as a memorandum and then posted to the proper ledger page or, if the transactions are few, can be entered directly in their proper accounts. It is best not to attempt a complicated system at the beginning but make the accounts complete enough to show the cost of production in the various undertakings, whether the growing of grain, the feeding of hogs and cattle or the growing of oranges. Labor of men and teams or tractors is one of the principal items of cost in farming but is seldom taken into account when the farmer's own time is given. By the plan of entering the transaction directly in the account the proper distribution of labor cost can be made with little trouble.

By keeping cost accounts the farmer can tell whether crops which would have paid a profit if sold at time of harvest have been turned into a loss by being fed to unprofitable live stock. He can also tell whether more or less irrigation water paid a profit and whether extra cultivation was profit or loss and in this way avoid future unprofitable work.

Many other accounts will suggest themselves after the habit of making daily entries is acquired and the satisfaction of knowing instead of guessing as to profits will be such that the guessing will never again be adopted. Red ink rulings and clean writing look well but are not so necessary for profit as the knowledge of the cost of production.

Begin the new year by keeping a memorandum of the cost of production of one or two crops and see how much satisfaction it will give.—J. B. N.

CAR WINDOW NOTES

Wonderful how much of Painted Desert, Pictured Rocks, plains scenery and cinders can come through one car window—the same one looked out of last week.

A railway car is in "good form" now. Only a few days since a modest little gentleman, commander of the world's mightiest armies, sat in his railway car without staff and almost without attendants and heard delegates of a nation, which had thrown honor to the winds hoping to conquer the world, beg for—not justice, but mercy.

So a railway car may now take place alongside a certain apple tree at Appomattox.

'Scuse me for rambling but honest to goodness you can't help but think of a lot of things of which a car window reminds.

Now, I've never seen the City of Washington. But the first thing next Wednesday morning when I get there, I want to hunt up the man who called it the City of Magnificent Distances. "Magnificent Distances" is simply outdistanced by these Staked Plains. "Llano Estacado," mused another passenger this morning while I was shaving. I looked—three looks and still I couldn't see the horizon. The firmament furnished the only boundaries of Llano Estacado.

The shadows are now lengthening at the other end of the day. The train has been measuring off magnificent distance after magnificent distance; Llano Estacado in the Pan Handle of Texas is still coming in the car window. I want the coiner of "Magnificent Distances" to come and see.

Level as the floor, no tree, no bush, hardly a weed, occasionally a windmill, live stock here and there, a little town, or at least siding with stock corrals.

There is Texico and Texline on line between Texas and New Mexico. Texhoma up next Oklahoma. Then Bovina, Hereford and other beefy sounding names. Staked Plains have become steaked plains.

When I was a little kid (oh, it was some few years ago when they called me Bub instead of the modern kid) at the Little Red School House one of the class of big girls was accomplished in "speakin' a piece." The Deacon said she was "right peart." Her favorite was "Llano Estacado." I don't remember the idea of the "piece," but the dramatic, even tragic, way she hung onto that ca-ahdo still lingers. But this car window has her skinned a block—even a magnificent distance.

Look! There's a "Keep Off the Grass" sign. First of the day. Just grays and browns, excepting that one patch of green.

Perhaps that's what makes this great strip up and down the continent so distressing—just grays and browns.

Dark through Oklahoma but Kansas winter wheat fields greeted us in the morning. Look fine and some is high enough to pasture off before covering with snow.

Wonderfully black soil along Kaw bottoms.

Kansas City—American Royal Live Stock Show. Two hours between trains. Breakfast—taxi—20 minutes at show—wire to Cultivator—on to St. Louis, just across Missouri.

Farmers short of help for many corn fields still have the shocks of corn standing while the ground has been disked, wheat drilled as close to the shocks as possible. Too bad, but they are doing their best—till the boys come home.

"There's a chain pump! "What's a chain pump?" Ask Dad, who used to take the teakettle and thaw out the pump on a cold morning when he lived "back in the states." Also ask him to make a sound like it did on a hot summer day when after pulling up a cool drink the water went gurgling back down the wooden pipe around the chain—something like ch-ug, ugh, ug-h. "How dear to my heart is the chain pump of childhood."

Riddle: It floated in the window from the orange groves of San Bernardino, even from a little station within sight of Death Valley, from Northern Arizona and from a coal shoveler a Gallup. A cowboy of the Staked Plains gave it to me. Stock men going to the Royal and khaki boys had it. No, honest, the answer isn't "Spanish Flu." And tonight at the station dining room at St. Louis my petite waitress whose wavy black hair and snappy eyes indicated blood of Southern Europe gave my plate of hash and poached-on an extra whirl on the marble slab as she softly whistled—"Beautoful K—K—K—Katy."—C. B. M.

The Food Outlook at Home and Abroad

Just before Herbert Hoover sailed for Europe he called a conference of all state food administrators. At this meeting Mr. Hoover reviewed the world food conditions and indicated the necessary and probable policies resulting from the new order of things. Believing that the address will be of high interest to our readers, we publish the following extracts.—Editor.

WE HAVE now to consider a new world situation in food. We have to frankly survey Europe, a Europe of which a large part is either in ruins or in social conflagration; a Europe with degenerated soils and depleted herds; a Europe with the whole of its population on rations or varying degrees of privation and large numbers who have been under the German heel actually starving. The group of gamblers in human life who have done this thing are now in cowardly flight, leaving anarchy and famine to millions of helpless people. We have also to survey the situation in the exporting nations of the world, to see what can be done to redeem this mass of humanity back to health and to social order. Up to the collapse of the Germans the world that is allied against Germany has depended upon the North American continent for the margins of food that maintain their strength against the common enemy. The loss of shipping and the increased demands for transportation of our ever growing army have isolated the stores of food in the southern hemisphere and the Far East. Within 30 or 60 days the world should begin to release cargo ships from military duty and to send them farther afield for food, and before the next harvest arrives the entire world's food supply should be accessible. On the other hand, the cessation of hostilities will create an enormously increased demand for food, and we must be deeply concerned that the starving millions who have been liberated from the German yoke shall have such supplies as will enable them to return to health and prosperity. The war has been brought to an end in no small measure by starvation itself, and it cannot be our business to maintain starvation after peace.

All these considerations must change our domestic food policies, and this opens to us, as a nation, an obligation and an opportunity of service.

We must now take an account of the whole food resources of the world and we must take an account of the total demands. We must consider carefully how this situation reacts upon our people. We must consider our national duty in the matter and we must make such changes in our policies as are fitting to the new situation. We have thus a new orientation of the whole food problem and it is an orientation that affects every one of the great groups of commodities in a different manner.

It has been part of the duty of the food administration to keep informed as to the situation in world supplies. The matter of prime interest to us is how much of each commodity the exporting countries can furnish between now and next harvest and how much is necessary to the importing countries in which we have a vital interest, in order to maintain health and public order in the world.

World's Food Balance Sheet

We have computed the export countries' supplies on the basis of the avoidance of waste and we have assumed for the importing countries stringent war consumptions with additions such as we consider will preserve health and order. In these circumstances we make the world's balance sheet in the different great groups of commodities approximately as follows until next harvest:

Wheat and rye, sufficient supplies with economy in consumption; high protein feeds (for dairy animals), a shortage of about 3,000,000 tons; other feeds, sufficient supplies with economy in consumption; beans, peas and rice, sufficient supplies with economy in consumption; pork products, dairy products, vegetable oils, a shortage of about three billion pounds; beef, sufficient supplies to load all refrigerating ships' capacity; sugar, sufficient supplies for our normal consumption if other nations retain their present short rations, a shortage if they increase their rations; coffee, a surplus.

Of all these foods, except possibly protein feeds, we have a sufficiency for our own people and in many of them large surpluses. Of the world total to produce the above results, we are estimating North America will furnish rather more than 60 per cent and that the United States, including the West Indies, will be in position to furnish a total of about 20,000,000 tons of food of all kinds for export against our pre-European war exports of say 6,000,000 tons.

Calculations of this order are vitally necessary if we are to intelligently guide the policies in the United States. On the other hand, all such calculations are based upon assumptions as to transportaion, production and consumption which may be subject to great disturbance and distortion during the reconstruction period. For the present we can accept and rightly guide ourselves by these conclusions, and we may examine in more detail the position of each group.

In the matter of wheat and rye, the large supplies that have accumulated in the Argentine, Australia and other inaccessible markets appear to us to supplement the stores of clear wheat bread for the world. It will, however, require a continued high percentage of milling with continuous economy in consumption and the elimination of waste. Here directly arises a change in our policies, for we are able from now on to abandon the use of substitutes in our wheat loaf. The world's supply of wheat at this juncture is a priceless blessing, for, while bread comprises but 25 per cent of our national diet, the food of Europe is from 50 to 60 per cent sheer bread. The large harvest that we have here this year is to a large degree the result of the guaranteed price and we may rightly be proud that our production and conservation policies have provided the necessary margins to the world, of its daily bread.

Shortage of High Protein Feeds

We can export, together with other surplus countries, an apparent sufficiency of the coarse grains for feeding purposes, that is, of oats, barley and corn. On the other hand, there is a world shortage of high protein feeds, that is the wheat feeds, the seed and bean meals, upon which the dairy production of the world, and particularly of Europe, so considerably depend. This shortage extends to the United States and, in our case, is due largely to the necessary diversion of cottonseed meal to use as fertilizers and, to some degree, to our shortage in wheat millfeeds, due to our hitherto reduced use of wheat flour. This latter will be somewhat corrected by the elimination of substitutes in our bread. Thus the change in world conditons should somewhat ameliorate our dairy feed situation.

Not Enough Fats

The shortage in protein feeds directly contributes to the world's shortage in the supply of fats. If we examine the position of the dairy products and the vegetable oils, we find that in every item there is a shortage in the needed supplies for the whole world, although we are estimating with economy the export possibilities of the United States in all these products at over four billion pounds, of which from three to three and one-half billion comprise pork products. This world fat shortage is due primarily to the fact that Europe has been steadily underfeeding its dairy herds, has made steady inroads into its herds of hogs during the war and to the fact that there has been a great degeneration in the production of vegetable oils in certain regions, owing to the inability to secure shipping.

Of our export possibilities in fats, the largest item is pork products. Here again we have a right to congratulate ourselves as to the policies pursued in the administration of food

How the Boys Helped in the Salt River Valley

Written for California Cultivator by M. E. Bemis

READERS of the Cultivator will remember that the boys of the Salt River Valley were organized into a Boys' Work Reserve for farm work last year. It will be remembered that most of the work done was in hoeing cotton. Movable camps were used, and 129 boys, many of whom had never worked on farms before, were enrolled and did good work, earning a total of $7670.45.

This year the plan was changed somewhat, not that last year's work was not successful, but in order to enable many of the boys to work at home and other boys to work on farms where it would have been impossible to establish camps, and at the same time enable credits to be obtained for work done. Accordingly 123 of the boys enrolled this season and did prescribed work on farms. This work was under the general direction of Linn B. Orme, state director of the Boys' Work Reserve, and under the supervision of Professor F. C. Johnson, county director and instructor in agriculture in the Phoenix Union high school.

Most of the boys were high school boys, some from each of the four high schools of the county. Doing the prescribed work in a satisfactory manner enabled them to earn credits in agricultural studies. This plan was considered highly successful. The supervision of the agricultural instructor furnished just the stimulus needed to keep up the enthusiasm of the boys, whether working on their own home farm or as hired hands. A careful account was kept of each boy's work, and at the end of the vacation period it was found that the 123 boys had earned $18,188.

Besides these boys, who did regular farm work of various kinds, there were some that for one reason and another perferred camp life. Accordingly arrangements were made with the Salt River Valley Water Users' Association to take over a certain portion of the canals and laterals. A permanent camp was established a few miles from Mesa, and a total of 135 miles of canals and laterals was cleared of the vegetation that grows so rapidly along the irrigation canals.

There were 30 boys in the camp at all times, a total of 50 different boys being employed in such a way as to enable all to have short vacations and at the same time maintaining the full camp capacity at all times. This camp was maintained continuously from June 3 to August 31, a period of 13 weeks.

Cleaning up after the weeds have been cut.

Semi-military instruction was given daily, certain evenings were given over regularly to games, swimming, military drill or a trip to town to a moving picture show once a week.

An automobile was converted into a truck so that all the boys could be transported from their work to the camp or for the occasional trips to town.

This camp life with good wholesome food, regular work, not beyond their ability, just the right amount of amusement and recreation, combined with military drills and regular hours, together with the incentive of $1.70 clear for each boy every day he worked and the knowledge that each was helping to his utmost in replacing the much needed man power of the country, combined to make the work of the Boys' Work Reserve for 1918 highly successful.

Agricultural News Notes of the Pacific Coast

Northern California

Colusa County's rice crop is nearly harvested.

Salmon are now runing heavily in the Feather River.

Olive packers at Oroville report fruit running to large sizes.

A big crop of celery is being shipped from Staten Island near Rio Vista.

An experimental planting of broom corn near Yuba City brought a good crop.

The Butte County Citrus Association is now making carload shipments of oranges.

The Yuba County farm bureau is interesting itself in plans for irrigation extension.

The cow testing department of the Sacramento County farm bureau is testing 900 cows.

Lassen County reports its first heavy snowfall. The roads were blocked over the mountains.

The quarterly meeting of the Hayward Poultry Producers Association, scheduled for this month, has been called off.

Shipments of late cling peaches from Pleasant Valley, Nevada County, have brought $3.00 per box on the Chicago market.

Drying plants at Wheatland, Yuba County, have decided to continue work throughout the winter. This will give employment to 300 people.

Tuolumne County is fighting San Francisco power companies who propose to develop storage reservoirs along the Stanislaus River.

The potato committee of the El Dorado County farm bureau has adopted standardization rules and formulated buying and selling agreements.

A number of rice growers at Chico, Butte County, have gotten together for the purpose of erecting a rice warehouse to hold 200,000 sacks.

Rice growers who have been piling sacks of rice along the state highway have been warned by the state highway commission to remove them.

Celery shippers at Antioch, Contra Costa County, are getting good prices, several of them reporting 50 cents a dozen, double the ordinary price.

The postponed annual meeting of the Sacramento County farm bureau is now planned for early in December at the University farm at Davis.

The early rains have brought up such a heavy growth of grass that many grain farmers in Shasta County report difficulty in turning it under.

The California International Live Stock Show has moved its date ahead until February 23. This because of the uncertainty of influenza quarantine.

Twelve hundred acres of cotton at Chico is now being harvested. Fifteen varieties are planted in this one tract to find what would be best suited for future growing.

A. L. Cowell, secretary of the Irrigation District of Association of California, has issued an urgent call for a conference of the districts to be held November 30 at Colusa or Willows. The district will ask modification of the federal house bill which includes irrigation taxes as non-deductible income. It is claimed that new bonds will be reluctantly voted if collections for their payment are made subject to federal taxes.

Central California

Bakersfield expects to have a new cotton seed oil mill.

The highway from Tipton to Tulare is now open for travel.

Tulare County orauge growers have had considerable difficulty in securing enough pickers.

The Kern County farm bureau is planning to hold open air meetings at its local centers.

The government has sent out notice that no more peach pits will be needed for making charcoal for gas masks.

The Santa Cruz County farm bureau has postponed its annual meeting until after the influenza situation is cleared up.

Orange growers of Porterville expect to avail themselves of the work of school children during the picking season.

The raisin growers request to the food administration for a raise in price for Thompson Seedless raisins has been denied.

Farm bureau auction sales are scheduled for December 3 at Kearney Ranch, Fresno; 4, Hanford; 5, Tulare; 11, Visalia; 18, Hanford; 19, Tulare; 20, Corcoran; 26, Visalia.

The marketing department of the Kern County farm bureau will hold two farm bureau auction sales of fat hogs and miscellaneous goods during December, at Wasco on the 7th and at McFarland on the 14th.

A meeting of the farmers' organizations of the county was held at San Jose last Tuesday to discuss the labor situation. Report was made of the work of the employment bureau conducted for the organizations last season.

Temporary injunctions have been granted to the California Associated Olive Growers' Association to compel delivery of fruit by members to association packing houses. High prices have caused some defections from the association ranks.

Local meetings of the San Joaquin County farm bureau are announced at Lafayette, December 2; Farmington, 4; Lavella, 6; Lockeford, 9; Linden, 11; Douglass, 12; Tracy, 13; Escalon, 16; Ripon, at San Joaquin school, 19; Manteca, 20; Live Oak, 23.

The sugar factory at Spreckels, Monterey County, announces its sugar beet price next season will be $10 per ton for beets averaging 15 per cent; 60 cents per ton for each one per cent increase; also reduction of 60 cents for each one per cent below 15. This is a material increase over last year's prices.

The Lindsay Gazette says: "From the orange testing station here at Lindsay, in charge of the county, and as well from the producers and packing houses, comes the good word that the oranges are the best ever this year. In fact it is said to be a phenomenal year, eclipsing anything ever known in this valley."

The Coastal Inter-Counties Good Roads Association, comprising the counties of San Luis Obispo, Ventura, Santa Barbara and Monterey, was launched at San Luis Obispo September 5 at a meeting of delegates from all of the counties, arranged by the San Luis Obispo Chamber of Commerce. Temporary officers selected were: George Wight, of Santa Barbara Chamber of Commerce, chairman; and Avon Brown of Ventura.

Southern California

Early cauliflower in Southern California is maturing slowly.

Orange County sugar beet farmers are signing up 1919 contracts.

Hemet estimates 120 tons of walnuts as her output this season.

Imperial Valley will have 10,000 acres of cantaloupes this season.

Yucaipa Valley's apple yield this season has amounted to 125,000 boxes.

First shipments of Imperial Valley cauliflower have been made to Los Angeles.

The Hemet-San Jacinto Olive Growers' Association has packed 12 carloads of olives.

Casaba melons will be shipped out from Los Angeles County until the middle of January.

Riverside County has established a home garden bureau with Horticultural Commissioner Sharp as chairman.

Orange County high school boys took advantage of the influenza vacation and aided in the harvesting of sugar beets and castor beans.

Indio's date packing house is now receiving dates in lug boxes and ripening the fruit in "hot box." The heat is generated by electricity.

The Sierra Vista Packing Company at Riverside has shipped out 100 carloads of fruit and it expects to send out about 200 more this season.

Several hundred acres of cabbage have already been planted in Imperial Valley. The crop will mature in time for the late winter and early spring trade.

The annual meeting of Los Angeles County farm bureau is now announced for December 19. This meeting has been twice postponed because of the influenza epidemic.

The federal food administration has released for sale to the general trade standard packed tomatoes held for government use at many canneries in Southern California.

Cantaloupe growers in the Imperial Valley have asked for an increase in the guarantee of $1 a crate from the distributors. This is a jump from 80 cents a crate last year.

Los Angeles is one of the best casaba markets in the country. It is quite a common thing during the height of the shipping season for Los Angeles consumers to eat from three to five carloads a day.

Bruce Drummond, in charge of the government date gardens at Indio, has been experimenting with dehydrating certain soft and syrupy dates which have proven poor keepers when shipped to market. They are being tested by shipment to the army in France.

The office of the county home demonstration agent at Riverside has been made headquarters for the women of Riverside County. They are invited to hold meetings and keep appointments in this place. This office is a part of the farm bureau office and is on Ninth Street.

The Brawley News is calling attention to San Francisco prices on milo and other sorghum grains and to the fact that the freight rate from the Imperial Valley is $9.10 per ton and appeals to the growers to secure full values from buyers who are allowed a profit of only $2.00 per ton.

The Coast and General

Colorado Pinto beans are bringing $6.00 to growers.

Hood River apple growers are getting $12 a ton for canning apples.

The federal government has removed all restrictions on building operations.

Spokane and Yakima apple districts report slow sales, and those are of fancy fruit.

The Medford irrigation district of Oregon has voted a million and a half for extension work.

The almond crop of Greece this year will amount to about three and a half million pounds.

Oregon growers of Tokay grapes are this season for the first time, making commercial shipments.

American buyers have secured one hundred thousand dollars worth of Canary Island onion seed.

Colorado and New Mexico have nearly doubled their Pinto bean crop over last year's production.

Apples are being shipped out from the Hood River section of Oregon at the rate of 15 carloads a day.

The "more cottage cheese" campaign is to be taken up by the United States dairy bureau in Arizona.

The food administration has announced that it will make no contracts for the 1918 crop of Pinto beans.

The Southwest Washington Improvement Conference will be held at Chehalis, Washington, November 9-13.

The United States burns about 3,800,000 tons of limestone each year. California's production is only 80,000 tons.

Market gardeners of Colorado are organizing an association which may affiliate with the Vegetable Growers Association of America.

Water users of the Okanogan government irrigation project are contemplating organizing an irrigation district under the state law.

The National Association of County Agricultural Agents of the United States has called a national conference at Chicago in December.

A reduction of 25 per cent on freight rates has been made for shipment of cattle from drouth stricken areas of the Southwest to Eastern points.

Reconstruction problems are to be considered at a conference called at Atlantic City, December 3-6, by the United States Chamber of Commerce.

The Northwest Livestock Show is being held at Lewiston, Idaho, November 28 to December 4. The Pacific International will be held at Portland, Oregon, December 9-14.

Investigation in Lincoln County, Washington, found average wheat yields running from 6.43 bushels to 14.44 bushels per acre. The Early Baart and Marquis proved highest bearers.

The annual meeting of the Colorado State Dairymen's Association will be held at Fort Collins, December 10 and 11. At the same time the Colorado Farmers and Farm Women's Congress will hold sessions.

Money loaned by federal government to Kansas wheat growers has resulted in the planting of over a half million acres to wheat; 3200 applications were made for these seed wheat loans. The total loaned aggregated $860,000.

Home Pickling of Olives

By W. V. Cruess

MANY of us have an olive tree or two in the back yard or we live near an olive producing section. In either case we can readily obtain enough olives to make it worth while to pickle them for home use or for sale to the neighbors. If we have such olives available we should pickle them, not only because they make a most excellent relish but because they have much food value, and saving food is probably one of the most patriotic duties that we can perform during the next year. The war is over, but we still have Mr. Hoover's administration with us, and very properly so.

Principles of Olive Pickling

We can put up the olives in several ways. The most popular way is as the California ripe olive. We can also pickle them as green olives or as Greek olives. We shall consider the ripe olive method first.

The olive, as many a newcomer to California learns, is intensely bitter as it comes from the tree. Most of the processes of pickling have to do with the removal of the bitterness. The bitter principle is destroyed by the action of lye. The lye treatment, therefore, is the first step in the process. However, if we use the lye long enough to completely remove the bitterness in one treatment we shall remove practically all of the color and a white or yellow olive results. The lye seems to dissolve color as well as bitterness.

But if we use the lye a short time only and then expose the treated olives to the air for several days the color will return, and when it has returned in this way it is permanent, and no matter how much lye treatment we then give the olives, the color remains.

After exposure to the air there will still be a small amount of bitterness. This is removed by a second lye treatment. Ordinarily the second lye is somewhat weaker than the first solution.

After the second lye treatment the olives will have no bitterness, but will be saturated with the lye solution, which will make them inedible unless removed. The lye is very soluble in water. Therefore the next process consists in washing out the lye with water. This must be done carefully to avoid loss of the olives through softening. The softening is caused by bacteria, but is very easily avoided if the water is changed often during washing.

The final step in the process is sterilization. Olives will keep only a few weeks unless they are heavily salted or are sterilized in hermetically sealed jars or cans by heat. The sterilization method is almost exclusively used instead of salting. Olives are more difficult to sterilize than other fruits but not nearly so difficult as string beans or peas. Sterilization can be carried out in a wash boiler just as effectively as in the most expensive patent sterilizer.

The practical application of the above principles is given in the following recipe.

Recipe for Ripe Olive Pickling

Choose olives that are black, red, or have at least begun to show some pinkish or light red color. Overripe olives will be soft; underripe olives will be tough and tasteless. Pick them carefully, avoiding bruising. Shallow boxes are better than deep ones.

The olives should be pickled within two or three days after picking. If they are to be held for a week place them in a barrel or large pot and cover with cold water. Change the water daily. If they are to be kept longer than a week, make a brine of six ounces of salt per gallon of water and store the olives in this until they are to be pickled. They will keep several weeks in such a solution.

First Lye

Place the olives in stoneware jars or in wooden open barrels, agate ware pots or in a wooden tub. Under no circumstances should a galvanized or tin container be used; poisoning might result from the solution of tin or zinc

To make the lye solution first obtain a pound or two of Babbitt's Lye or Greenbank's Lye or Red Seal Lye or any other reliable brand from the grocer. For each gallon of lye solution to be made weigh out three ounces of lye. This corresponds to one pound of lye per five gallons of water. The writer has found it more convenient to make up this quantity rather than to try to weigh out three ounces of lye on the kitchen scale. Three ounces of lye is roughly five level tablespoons of the dry granular lye. Use level tablespoon in measuring by this method.

When the lye is well dissolved and well mixed, pour it over the olives, covering them completely. Stir them every half hour in order that the lye may act evenly.

Leave them in the lye until the lye has penetrated about 1/16 of an inch into the flesh or until it has "cut" through the skins of all the olives. About once each half hour remove several olives and cut one or two with a sharp knife. The flesh will be turned yellowish or discolored to the depth to which the lye has penetrated. Under ordinary conditions three hours will be sufficient time; but the time will be shorter than this if the weather is hot or the solution is warm; and longer if the solution is cold. The lye should not be allowed to penetrate more than one-half the distance from the skin to the pit; one-fourth the way to the pit is the usual distance. Too deep penetration results in loss of color.

Exposure to Air

When the lye has penetrated as above, pour off the lye solution. The lye may be saved and used for the second treatment. Leave the olives exposed in the air until they have assumed a good black color. Stir them at least twice each day. This can be done by pouring them from one jar or pot to another. Unless they are stirred frequently the color will be spotted. Usually three days will be sufficient time to permit coloring; some olives require less time; others may require four or five days.

Second Lye

When the olives have acquired the desired amount of color, prepare a lye solution of one and a half ounces of lye per gallon, that is one-half pound of lye per five gallons of water. Color the olives with this solution. If one wishes to be economical with the lye, the lye used for the first treatment of the olives may be returned to them.

Allow the lye to remain upon the olives until the lye has reached the pits of the olives. This can be determined by removing a sample occasionally and cutting it to the pit. The progress of the lye will be evidenced by discoloring of the flesh. It will require about eight hours under ordinary conditions for the lye to reach the pit of the olives. If the lye does not reach the pits the olives will remain bitter; little harm will be done if the lye is left upon the olives several hours after it has reached the pits.

Removal of Lye

When the lye has reached the pits of the olives remove it and cover the olives with cold water. Stir the olives once every two or three hours during the day. Change the water at least twice each day; for example night and morning. Three changes per day will give better results. Continue this process until all of the lye has been removed. This will usually require about six or seven days. By tasting the olives once each day the final disappearance of the lye is easily determined.

Sterilizing

When all of the lye has been removed by the wash water the olives are ready for canning or putting up in jars.

Prepare a brine of five ounces of salt per gallon of water or of one pound of salt per three gallons of water.

Pack the olives into glass jars or wax top cans. Prepare the wash boiler sterilizer by placing a false wooden or wire screen bottom in it, adding three or four inches of water, and heating the water to nearly boiling.

Heat the brine to boiling and fill the jars or cans of olives with the boiling hot brine. Place the jars or cans in the boiler at once and cover them with scalded rubbers and caps. If wax top cans are used, simply place the tin caps on the cans but do not add wax. Heat the water in the boiler to boiling and then continue the boiling for one hour with the lid placed tightly on the boiler.

After one hour at the boiling point, remove the jars or cans and seal them at once. If cans are used seal the caps with sealing wax as soon as they are removed from the sterilizer. The lids of Mason and glass top jars are tightened and the jars turned upside down to cool. Economy jars are left in an upright position, the only precaution necessary being to ascertain whether the lids are resting evenly upon the tops.

Storage. Store the olives in a dark closet or wrap the jars in several thicknesses of paper if they are stored in a light room. Light causes the color to fade.

The olives will keep indefinitely and can be used at any time. Apparently canned olives are a safe food because there are no cases on record of "ptomaine poisoning" from them.

Pickling Green Olives

Picking: Olives of the Sevillano (Queen) variety, because of their large size are preferred for green pickling. However, any variety can be used. The olives should be full size but still hard and green. Avoid bruising in picking.

Lye Treatment: Only one lye treatment is necessary for green olives. Prepare a lye solution of three ounces of lye per gallon of water. Place the olives in any sort of container at hand except one made of galvanized iron or of tin. Wooden containers or stoneware crocks are best.

Leave the lye upon the olives until it has reached the pits. This will usually require about 12 hours' treatment; for example, treatment overnight. Cut several olives to be sure that the lye has penetrated to the pits. It will discolor the flesh of the olive to the depth penetrated.

Washing: When the lye has reached the pits place the olives in cold water and discard the lye. Change the water at least twice daily until all of the lye perceptible to the taste has been removed.

One week's washing in this way will usually be sufficient to remove the last trace of lye.

Brining and Fermentation: Prepare a brine consisting of nine ounces of salt per gallon of water. Place the olives in a wooden keg or if this is not on hand place them in glass top fruit jars. Fill the keg or jars with the brine and seal them. The containers should be filled to overflowing before sealing; air is detrimental to the color. In making green pickles we aim to keep the olives green in color; should we have air present or should we expose them to the air they will become gray or brown in color. The changes that give green olives their desirable flavor can only take place in the absence of air. Therefore there are two good reasons for excluding the air.

Store the olives for about two months before use. They will during that time develop a mild acid flavor characteristic of the green olive of commerce. No sterilization is necessary.

If a keg is used the olives should be transferred to bottles or jars after they have reached the proper flavor. Glass top and not Mason jars should be used because the brine and acid will act upon the zinc tops of Mason jars and cause the olives to absorb dangerous amounts of zinc.

Greek Olives

Natives of the Mediterranean region prefer olives that have been cured by the Greek or salt process. No lye is used. The bitterness is partially removed by the action of salt and enough of the moisture is extracted by the salt to cause them to keep well.

Salting: Use only very ripe fruit. For each pound of olives weigh out one-third pound of table or fine dairy salt. Take a box with tight sides and bore several holes in the bottom of it. Place it where brine drippings will not cause any damage to floors. Place a layer of salt about one inch deep in the bottom of the box. Mix the olives and salt thoroughly in the ratio of one pound of salt to three pounds of olives; that is one-third pound of salt per pound of olives. Then place them in the box and cover them with about one inch of salt.

Leave them until most of the bitterness has disappeared. About three weeks' treatment, or in some cases four weeks, will be required. During this time the olives are not disturbed.

Storing: When most of the moisture and bitterness have been extracted from the olives remove them from the salt and separate the salt from them as completely as possible. This can be done by shaking them upon a screen or by placing them upon a screen and brushing them with a coarse brush.

When most of the salt has been removed dip the olives in olive oil and allow them to drain. Pack them in pasteboard boxes or loosely covered jars.

Olives of this type will have a slightly bitter flavor and more of the natural olive flavor than will olives pickled according to other processes described above. Most native born Americans find it necessary to develop a taste for them, but once the taste is developed they will usually be preferred to olives pickled in the usual California way. They contain considerably more food value than olives pickled in the usual way. One would expect them to be very salty, but such is not the case, because the salt seems to extract the water rather than to penetrate the fruit.

Development of Neighbors' Cooperative Group in Citrus Industry

Written for California Cultivator By J. Claude Wilson

"NO MAN can live unto himself" may seem a kind of gospel flight into the air at an altitude too high for the ordinary ten-acre citrus grower to apply to his own economic condition. Even some of the smaller men with only five or six acres have been rather puffed up with the thought that they were able to make a living without any of these new fangled cooperative ideas that the universities and impractical theorists were preaching at us. They like to be "independent" —which means that they prefer to live in a fool's paradise of ingratitude to their benefactors—dead and living—who had freely given to the industry the fruits of their years of sacrifice and study and experience.

Economic pressure is a very unpoetic missionary, but he carries the goods, and he has a very forcible style of argument. It is this missionary that will have to convert many of our hard headed, myopic growers who boast of their dearth of sentiment. This economic pressure rather forcibly suggested the idea of cooperation to the older growers when the returns on their groves were reduced to the vanishing point by one-sided conditions of the sale of their oranges and lemons at this end and by unorganized markets at the other end. They swallowed their independence and joined up with their neighbors to form the California Fruit Growers Exchange, making savings all along the line and incidentally stabilizing the value of citrus land in California.

Economic pressure in the shape of high price of feed has now been the prosaic missionary suggesting that it is wasteful and stupid to own and feed a team for the five or ten acre owner when, by a little mutual arrangement and foresight one team could keep twenty to forty acres in "a good state of cultivation." This, however, will only be a temporary unit of acreage.

Economic pressure again is using his logic to show that the scarcity and high wages of labor combined with the increased acreage coming into the market, make it advisable for him to sell his team and combine with his neighbors in the purchase of a community tractor. By a little figuring a group could determine how much acreage would be the best economic unit, and mutually arrange for the group purchase of a tractor and implements. At present the writer lives in a community where we have several groups with cooperative teams. The cooperative tractor should be an easy evolution.

The citrus industry is more highly organized than most agricultural pursuits. It lends itself to specialization, being specialized in itself. Thus we employ specialists for pruning, for irrigation, for fumigation, etc. As a result orange or lemon growing can be conducted by the man with less native experience who has enough capital and some business intelligence. The returns are more stable than in many other crops and more directly under his own special supervision. With the growth of the cooperative spirit the existing channels of information should be more accessible and reach more easily the smaller grower. With increased membership in our local farm bureaus, we would be better organized to get increased benefit from the various specialists connected with the universities. There is no difficulty or problem connected with the citrus industry that has not its specialist and investigator.

Thus the small grower is in as good a position as the richest corporation to command the services of the best brains in the industry. This, of course, is the result of cooperation on the largest scale. But to get the maximum of benefit from this happy state of things it is advisable to encourage any and all local organizations that tend to bring the growers together.

The next development of cooperation in the citrus industry seems to me the community or neighbors' unit—a group of growers conveniently situated in relation to each other mutually combining for convenience and economy to work their groves as a whole, with a secretary and treasurer amongst themselves, and all the members forming a committee of management. Thus their groves could be worked by one tractor and one set of implements, their purchase of fertilizers and supplies could be made more economically; the general standard of their groves could be raised; borrowing for any group purpose (e. g., the initial one of a tractor) could be facilitated; and it would still leave the individual tastes and idiosyncrasies of each grower free to "do what he likes with his grove."

Preventing Spread of Walnut Worm

By G. H. Hecke, State Horticultural Commissioner

The walnut growers this year are somewhat concerned over the increased infestation of the walnut worm in some sections. This matter is now under investigation by the state commissioner of horticulture and while this investigation is not yet completed it has progressed sufficiently to justify the statement that any measures to prevent further spread of the insect must receive the hearty support of growers, packers and dealers. The worm emerges from the nuts about harvest time and a favorite spot for making the cocoon appears to be in sacks. It therefore seems probable that the first step toward restricting the spread of the walnut worm is to restrict the movement of walnut sacks. The present scarcity of sacks makes it desirable that any restrictions placed upon their movement be as lenient as is consistent with the safety of the industry. The answer to this problem of course is found in applying some disinfectant to walnut sacks which will be so effective, so simple of application and so cheap as to promote its general use.

Such a disinfectant is believed to be obtained by the use of heat. Many walnut packing houses in or near to infested districts are now equipped to apply heat to all walnut sacks before they are permitted to leave the premises. Dry heat by means of ovens is being used. Superheated steam makes an economical, quick and sure disinfectant and is practically a dry heat as it does not seriously moisten the sacks. Disinfection by dipping the sacks in boiling water is equally effective but has the disadvantage of requiring that the sacks be dried after treatment.

Every walnut packing house whether in an infested district or not should be equipped to disinfect walnut sacks before returning them to the growers. Such disinfection should be applied immediately before the actual delivery of the sacks to the grower to prevent their becoming reinfested.

NO MEXICAN FRUIT PESTS WANTED

The federal horticultural board recently published a warning to travelers from Mexico coming into the United States, explaining the heavy penalties against the unauthorized movement into this country of oranges and other fruits and certain vegetables. This regulation is intended to prevent the introduction of the Mexican fruit fly and the avocado weevil, both of which exist in Mexico and which could be inadvertently brought into the United States in fruit, etc., carried by travelers.

This same careful inspection and scrutiny to safeguard against the introduction of noxious pests in the personal effects of travelers has long been in vogue with the inspection quarantine service of the state horticultural commission at San Francisco. One might ask why anyone should desire to break the law, or why should anyone seek to endanger the horticultural interests of his native land. Nevertheless it is done, and it is done often, but the inspection and quarantine service long ago adopted the trite expression lately made famous by a French general, and we in California know "They shall not pass."

TENT CATERPILLAR CAUSES DEATH OF HOGS

Hogs have been killed by feeding on tent caterpillars in the Russian River Valley. Their stomachs, on dissection, were found to be completely filled with the silky material of the "tents" which had been formed into dense balls. The tenacity of these webs will be appreciated when it is understood that in colder sections the web or "tent" is capable of protecting the pest by excluding rain, dew and frost. Tent caterpillars have been especially destructive to prune orchards in this part of the state.

GMC TRACTORS

SAMSON SIEVE-GRIP TRACTOR

GMC TRACTORS

MODEL S-25

Simplicity, dominant feature of the GMC SAMSON SIEVE-GRIP TRACTOR, goes hand in hand with efficiency. Correct design and few and accessible working parts assure low up-keep and long life to the GMC SAMSON SIEVE-GRIP TRACTOR.

Thousands of owners testify that where the GMC SAMSON SIEVE-GRIP TRACTOR goes the farmer's trouble ceases. This is its record for nearly two decades of trying service here and in far corners of the earth.

Mere youths are successful operators of the GMC SAMSON SIEVE-GRIP TRACTOR, and in the emergency, even women have proved equal to the task.

The GMC SAMSON SIEVE-GRIP TRACTOR performs tasks requiring the power of ten horses and does the work better, faster and cheaper than any other power. It is also adapted for many farm labors for which horses are unsuited.

The GMC SAMSON SIEVE-GRIP TRACTOR is simplicity itself.

Further information is furnished by our illustrated booklet, Better Farming.

THE FOOD OUTLOOK

Continued from Page 547

supplies in the United States by the department of agriculture and the food administration. If you consider that we have reasonable promise of ability through increased production and conservation to export seven times as much products as our pre-war average, and if you consider the vital importance of this extra contribution in fats in this new war against famine, we are justified today in our every act in the stimulation of production of this commodity. While we cannot supply the world's full deficiency, we have ameliorated it enormously.

As you will recollect, eighteen months ago, when we had to define our food policies, we stated that the only hope of a sufficient production of fats and meat for the world either in peace or war, lay in the stimulation of production of the American hog. In that direction we could obtain results in twelve months, whereas, in any other direction, years would be required for expansion of fat production. The American farmer has responded to a remarkable degree. In order to assure this change in agricultural courses we promised the farmer a fair return on his hogs, so far as our control of export orders gave us the power. It is our duty to make this undertaking good.

Yet, with all our supplies, the world will be far deficient in its normal supply of fats for two or three years at least. Our internal policy with regard to this group of commodities must therefore be one towards intensest economy in consumption if we are to carry out our high purpose of furnishing food to a famine stricken world.

Policies of conservation require great care and guidance. For instance, for the next 30 or 60 days there is barely enough shipping at our shores to take care of our current production of pork products, and our storage is deficient. Later on when ships are available, we will need call upon our people for great sacrifice. On the other hand, the shortage in our supply of dairy products is today so acute that we are compelled to now limit the export of this product. Dairy products are so vital to the protection of child life throughout the world that we should immediately reduce our unnecessarily large consumption of butter and condensed milk.

In the matter of beef, the world's supplies are limited to the capacity of the available refrigerating ships. The supplies of beef in Australia, the Argentine and the United States are sufficient to load these ships. There will be a shortage in the importing countries, but we cannot hope to expand exports materially for the next few months, in view of the bottle neck in transportation.

It is very difficult to forecast with any degree of accuracy the position in sugar. If Europe raises its ration very considerably, there will be a shortage.

Another prime necessity in the United States is that of coffee. Our computation of the world's coffee supply indicates to us that there is more than a sufficiency.

New Policies Outlined

This being the new world situation in food, created by the collapse of the war, the prime changes in our policies on today's outlook can be summarized:

That we may now advantageously abandon the use of substitutes in our wheat bread; that we will still require economy and elimination of waste in its consumption; that for the present we need conservation in butter and condensed milk; that ultimately we must extend this to all the fats. We can contemplate, at the most, maintaining fully three pounds per month of sugar per person of household sugar.

These are special features of changes in policy, but the shifting of conservation from one commodity to another is not the whole policy. There is one policy which cannot change, and that is the vital necessity to simple living; to economy in all consumption for commodities more or less substitutes for each other. We must realize that the spectre of famine abroad now haunts the abundance of our table at home.

Europe on Verge of Famine

There are conditions of famine in Europe that will be beyond our power to remedy. There are 40,000,000 people in North Russia to whom I fear but little access with food can be obtained this winter. Their transportation is demoralized in complete anarchy and shortly many of their ports will be frozen even if internal transport could be realized. I expect the most dreadful results of starvation beyond all human power to allay.

I am also leaving for Europe for a conference over another situation equally enlarged. From our findings there must arise details in organization to meet a much wider situation. There must be a feeding of the people who have been liberated from the German yoke. That feeding must be organized, and in order that we may get effective and prompt action from the United States the war department has now undertaken, at our suggestion, to largely divert their military tonnage to the transportation of food and the enlargement of the quartermaster's stores in Europe that we may have them immediately available.

At this moment Germany has not alone sucked the food and animals from all those masses of people she has dominated and left them starving, but she has left behind her a total wreckage of social institutions and this mass of people is now confronted with engulfment in absolute anarchy. If we value our own safety and the social organization of the world, if we value the preservation of civilization itself, we cannot sit idly by and see the growth of this cancer in the world's vitals. Famine is the mother of anarchy. From the inability of governments to secure food for their people, grows revolution and chaos. From an ability to supply their people grows stability of government and the defeat of anarchy. Did we put it on no higher plane than our interests in the protection of our institutions, we must bestir ourselves in solution of this problem. There are millions of people now liberated from the German yoke for whose interests we have fought and bled for the last eighteen months. We dare not neglect any measure which enables them to return to health, to self support and to their national life. This is the broad outlook of some kind of food administration during the next twelve months. As to what the detailed structure of our organization may be, to effect these ends, or even its actual name, can be developed from time to time to suit necessity, It will be months until formal peace, and in the meantime the organization must remain intact if we are to serve the high purposes that I have outlined. And after that we can decide our courses upon the basis of our national duty.

A NEW PEST MENACES GULF CITRUS GROWERS

The department of agriculture has established a research station in the Panama Canal Zone, owing to the known occurrence there and in Cuba of the black fly of citrus, which might inadvertently be introduced into gulf citrus groves.

LIGHTLESS NIGHT ORDER MODIFIED

New regulations partially removing present restrictions on the use of light to become effective Monday, November 18, and superseding all previous orders on the subject, were issued by Albert E. Schwabacher, federal fuel administrator for California. The new order prohibits the wasteful or extravagant use of light in streets, parks or other public places in any city, village or town.

The order permits the use of light every night in the week for illuminating advertisements, announcements or signs, for the external ornamentation of any building and for displaying shop windows or for other commercial or advertising uses. It also permits the use of light in show windows between sunrise and sunset.

Mr. Schabacher advises that the partial raising of lighting restrictions in this state is due to the improvement in the supply of water power in the mountains and a lessened demand by war industries for supplies of fuel.

What ho, Bernhardi! And how now?
Do you believe that warfare must
Give biologically just
Decision?

Not until shell torn battlefields are turned into wheat fields will Europe ceased to look to us for food.

In California
the John Deere Tractor Plow fully meets working conditions. Gets right down to thorough work, runs steady at uniform depth and stands up under severe strains. Specially adapted for orchards and vineyards. Front furrow and land wheel set to permit close work in throwing to or from rows. Levers down out of the way of limbs. You can get this plow in two, three or four bottom sizes. Drop us a post card today for descriptive folder and our free book, "Better Farm Implements and How to Use Them". Ask for package PT42.

JOHN DEERE
TRACTOR PLOW

Seasonable Work in Insect Control

Written for California Cultivator by E. Ralph de Ong

Concluded

Grasshoppers

Grasshoppers have been discussed a great deal during the past season but it may be well to call attention to the possibility of checking their increase by deep fall or winter plowing of the ground when eggs have been deposited in large numbers. Poisoned baits should be distributed at these places as soon as the eggs have hatched in the spring and before the grasshoppers attain wings and scatter about. Early control work is cheaper than that late in the season and also avoids the loss to crops resulting from their feeding.

Bean and Pea Weevils

Bean and pea weevils live through the winter in the dry bean or pea, escaping in the early spring, usually April or May, to lay their eggs in the blooming plant or the green pods. Late plantings are much less subject to attack for the beetles are mostly dead before the host plant has bloomed. Infested stocks should never be stored near a field in which this crop is to be grown the following season for plants grown adjoining a house, where infested material is stored, and blooming at a time when the beetles are active, will often show 100 per cent infestation, while half a mile away scarcely a trace of the infestation will be found. In regions subject to weevil injury planting should be delayed until after the first of June, and in no case should weevily seed be used unless it has been fumigated.

In the overflow regions of the state where all beans are removed in the fall there is less danger than on higher land such as Modesto and Turlock.

The broad or horse bean is also subject to attack by a weevil but a species different from that feeding on the small varieties. Attacks by this weevil can also be lessened by late planting, but in the interior the hot weather checks development of late maturing plants, while on the coast the delayed crop is more subject to aphis injury. Hence it seems wiser to place dependence on thorough fumigation of all stocks and cleaning up the scattered beans with hogs. This weevil does not increase through the winter, therefore the killing of those present at threshing time is sufficient.

Red Spider

Red spider, Tetranychus telarius, causes serious injury to orchard and bean crops in the warmer regious of the state, the attack being similar to the work of thrips, but more severe. On beans and squash the attacked leaves turn pale and dry up, and may result in the death of the plant. This species of red spider lives through the winter in a dormant condition, hiding in leaves or on underground stems during the coolest weather. In open winters it may be found on the under side of morning glory, malva, sow thistle and wild blackberry. These plants should be kept down through the winter and early spring in fields where crops are to be grown through the summer which are subject to attack by this pest.

Tuber Moth

Tuber moth is our most serious potato pest in many parts of the state. The larva of this moth attacks the potato, tomato and egg plant, first as a leaf miner and later feeds on the tuber or fleshy stalk. These larvae remain in the tuber throughout the winter, so that infested stocks should be fumigated in the fall and especially before planting. Injured and small potatoes left in the field should be cleaned up by sheep or hogs. Our native plant, nightshade, is also a host of this insect and should not be allowed to grow through the winter as it serves to carry the insect over from one crop to the next. Tomatoes and egg plant should not follow potatoes where the moth has been abundant as both of these crops are attacked more or less when the insect is abundant.

Flea Beetle

Flea beetles feed on the potato foliage in the adult stage and the larvae on the tuber, causing a pimply appearance on the latter. The insect sometimes becomes very abundant in gardens or truck land where potatoes are grown continuously. The tiny brown beetles are often very abundant on the foliage but are so small as to attract little attention unless it be from the irregular holes eaten in the leaves. When disturbed they jump or fly in a very active way, hence their name. The flea beetle commonly attacking potatoes, feeds on almost every other vegetable grown, so that infested land should be planted to onions or grain for one or two season until the beetles have decreased.

ORCHARD AND VINEYARD

Our orchardists are usually quite careful to keep up their winter control, but occasionally someone neglects the application of lime-sulphur or a crude oil spray to control the scale and twig borers. Oil sprays are also of some value in killing the winter egg of the red spider, Bryobia pratensis, leaf rollers and tent caterpillars. The crude oil spray is applied most safely after the buds are slightly swollen in the spring.

Canker Work

Canker work should be checked either by fall banding of the trees or an early application of lead arsenate, the latter should not be used in showery weather as danger to the foliage may result.

Borers

Both the crown and the flatheaded ones should be removed during the fall and winter as well as any weakened or dead wood that has been attacked by shothole borers.

Aphids

Aphids or plant lice on apple, cherry and plum should receive an early application of nicotine sulphate and soap or incorporate the nicotine into the scab spray of lime-sulphur.

Leaf Hoppers

Leaf hoppers may be found overwintering in the grass, weeds and trash, hence the cleaner a vineyard is kept the less adults will be present the following spring, so that it is a choice between plowing or "sheeping off" the ground in the fall or having a large number of leaf hoppers in the spring.

GARDEN

Squash Bugs

Squash bugs are the bane of the gardener and truck grower. They come in swarms in the late summer and fall, attacking every variety of squash, pumpkin, and even melon vines, and once they are established in a field they are extremely difficult to control. No spray is very effective against them, unless used so strong it will injure the plants. Our hope is in destroying as many overwintering adults as possible, for there is usually but one brood a year with a possible second late in the fall; those which we find in early summer have lived since the previous year.

The fields when the squash bugs have been abundant should be plowed in the fall, turning under all trash and destroying all trash piles or rubbish where they might hibernate. Hand picking may be resorted to when the first individuals appear, the bugs being dropped into a bottle of water with a film of oil on the surface. The dark brown eggs, found on the under sides of the leaves, should also be destroyed. Kerosene emulsion sprayed on the young bugs will kill many of them but this is dangerous to the vine. Trap crops of squash may be planted in the melon field and when attacked sprayed with pure kerosene.

Harlequin Cabbage Bug

This is found throughout the state except in the north end. They attack cabbage, cauliflower, brussels sprouts and a few other plants. Unlike the squash bug, they breed throughout the summer. This insect is also very difficult to control and sprays are largely ineffective. The adults overwinter on kale, mustard and other crucifera, hence all volunteer plants and old stalks should be destroyed in the fall. Kale may be used as a trap crop

TREES
THE SILVA-BERGTHOLDT CO. NEWCASTLE, CALIF.
—with roots such as these
are grown only on our foothill soil and location. Hardy-of selected parentage-well-grown-absolutely reliable-and free from root-knot and diseases common to other localities.

FRESNO, CALIF.

to protect cabbage and cauliflower, as the former seems more attractive than the latter. After the bugs congregate on the kale it is sprinkled with kerosene which of course kills the plant as well as the bugs.

Aphis

Aphis or plant lice usually live through the winter on volunteer plants such as mustard, vetch, wild radish and old vegetable stalks in the garden. Consult your county horticultural officers as to what plants may be alternate hosts for aphids attacking your garden and then destroy all such plants which may be in the garden. The cabbage and cauliflower aphid commonly winters on mustard and radish, if no garden crop is available, hence this should always be destroyed.

Cabbage worms may be found throughout the winter except in the colder parts of the state. Cabbage and cauliflower planted early in the fall are very liable to attack as they have the benefit of the summer's increase in the number of butterflies and worms. Young plants may be sprayed with lead arsenate and soap, old cabbage stalks should be destroyed as pupae will often be found attached to them.

Getting Rid of Bermuda Grass

THE best way to eradicate a plant is to take advantage of its natural weaknesses.

The most vulnerable characteristics of Bermuda grass are that the root stocks are unable to withstand exposure either to intense cold or to severe drying and that the plant can not endure prolonged shading.

Combining Shade and Intertilled Crops

Bermuda grass does not thrive except in open places and can not resist the effect of prolonged shade. This makes it relatively easy to bring the weed under control by smothering it with heavy growing or shade crops alternating with intertilled crops.

Many of the root stocks may be removed after shallow plowing by harrowing or raking. This process entails additional labor but assists materially in subduing the weed.

The summer shade crops best suited for the eradication of Bermuda grass are velvet beans and cowpeas, although any other shade producing plants, such as soy beans, sorghum, and millet, may be used. On poor soils velvet beans are the most efficient. Shade crops should be heavily seeded. The following crop should be winter oats or rye, either with or without vetch. After the removal of the oat or rye crop an intertilled crop, usually corn or cotton, should be planted. When the intertilled crop is removed the Bermuda grass will have been eradicated, provided the tillage was thorough. If the weed has not been eradicated, the entire process may readily be repeated, since by so doing there is no loss of the use of the land. An additional advantage of this combination method is that no organic matter is lost to the land.

In case the land is in Bermuda grass sod, it may be plowed either in the fall or in the spring. If plowed in the spring, plant the summer shade crop and continue as previously suggested. If the land is plowed in the fall, plant the winter crop, follow by a summer shade crop, then another winter crop, after which the land should be practically free of the weed and ready for the intertilled crop.

The success of the method combining shade and intertilled crops depends on having the crops follow each other in such close succession that there will be no intervals during which the Bermuda grass will have a chance to spread, as it will quickly reestablish itself under favorable conditions.

Winter Killing

Bermuda grass can not withstand severe cold. This weakness may be counted on to secure its eradication in any locality where prolonged periods of cold are experienced. The thick, matted root stocks should be plowed shallow in the fall, thereby exposing them to winter freezing. A single severe freeze will often almost completely destroy the grass in a field so treated.

Another method of securing winter killing is repeated disking, cross disking and harrowing during the winter season. The winter killing method conserves the organic matter contained in the weed growth.

Fallowing

A plan practiced successfully in this state is to pasture the infested land closely during the spring and plow very shallow in early summer or as soon as the ground has dried out. The land is then thoroughly disked, immediately after which the spring-tooth harrow is used in order to drag out the pieces of grass and bring them to the surface. This harrow is used every other week until fall, when the land is plowed deep and planted to a winter crop. An intertilled clean up crop is grown the following spring in order to destroy any Bermuda grass plants which have survived.

Grazing With Hogs

On light sandy soils hogs are sometimes used to dig up the root stocks, which they eat greedily. Plowing will greatly aid the animals to get the root stocks. The hogs, of course, should not have their snouts ringed.

For Small Areas

On small areas the following method is effective: Plow shallow to a depth of about three inches during a midsummer period of dry weather, turning the matted root stocks to the sun as much as practicable. They should remain exposed until the entire surface is well dried out, a process which will be aided greatly by stirring the mass of plowed-up root stocks every few days with a spading fork, rake or spring-tooth harrow.

When the mass is thoroughly dry it may be raked into piles and burned or else removed to waste places. This method is laborious and has the disadvantage of wasting the organic matter contained in the grass.

In such limited areas as gardens the root stocks can be gathered up with a rake or fork and burned. Another method which has been successfully used for small patches is to cover the infested spots in summer with tarred or other heavy paper in such a manner that the light is entirely excluded. The edges of the paper should be overlapped and covered with soil and the entire area of the paper well weighted down with soil or stones. In about two months it will be found that the Bermuda grass is entirely killed.

RESTRICTIONS ON ROAD WORK REMOVED

Work on state highways will be resumed without federal restrictions. We are in receipt of notification from Washington that:

"The United States highways council announces that no further applications need be made to it for approval of highway projects, that previous disapprovals are revoked, and that pending applications require no further action. Procedure in securing materials and transportation should follow normal practices, officials of the council said. The removal of restrictions does not affect highway bond issues, which are under control of the capital issues committee. State highway departments will not be asked to submit programs for next year's work."

CASTOR BEAN PRICE RAISED

Word has been received that the government price for cleaned castor beans has been raised from $3.15 to $4.50 a bushel. The government is also anxious to buy all wild or volunteer beans of mixed varieties as delivered by boy scouts or others, and offers 3½ cents a pound for unhulled, and six cents a pound for hulled beans. Los Angeles has been designated as a receiving station.

SULPHUR FOR TREATING SEED WHEAT

It has come to our notice that some prominent wheat growers made the experiment last year of using sulphur instead of formaldehyde for treating the wheat seed before planting. It is claimed that about 10 pounds sulphur to 90 pounds wheat seed drilled into the soil when planting not only increased the crop of wheat, but prevented smut.

Flexible Power

POWER that takes hold with a steady, irresistible pull, that never jerks your machinery, and that flows smoothly from engine to load

—power that makes plows dig deep and turn over the toughest sun-baked soil hour after hour

—and power that can be throttled down to a mere creeping gait. That's the

Heider

The Real All-Purpose Tractor

12-20 and 9-16 H.P.

Here's the power **you** want for all around farm work. Power that always fits the load, and that means longer life for your engine, with the utmost economy of fuel.

Let Heider owners tell you about it. R. E. Taylor of Dysart, Iowa, says: "My Heider is as good as ever. Haven't had one cent of expense. I used it for putting in my crops last spring. Cut my grain and for everything that needs motor power. It is the only machine to trust with hired men, as it is so simple."

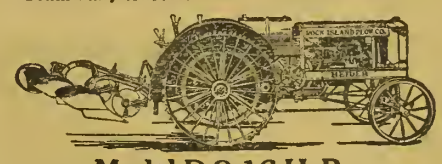
Another owner, Wm. Korrect of Bird Island, Minn., says: "I bought a Heider in 1911 (seven years ago) and it is in good working order today, shelling corn at present. I used it for hauling feed, hauling grain, hauling manure, unloading hay, hauling hay from the field, pulling hay loader and binder, and for plowing, discing, sawing wood, grinding feed, shelling corn, grading roads, running grain elevator and other jobs around the farm. **It has the only reliable control,** barring none."

Seven Speeds forward or reverse with one lever, and without changing gears for either traction or belt. The Heider is backed by 11 years of successful field service in the hands of owners. It has made good in all farm work.

Manufactured by **Rock Island Plow Co.,** Rock Island, Illinois
Established 1855

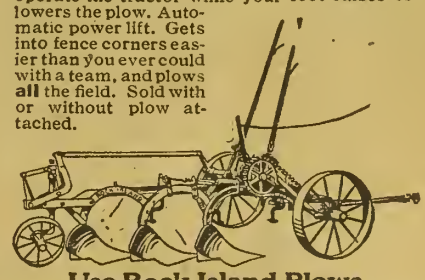
Rock Island No. 38 One-Man Tractor Disc Harrow

Heavy steel construction especially adapted to tractor work. Close-up levers permit one man to operate tractor and disc. Extremely flexible. Note the unusual clearance. This disc can't get clogged. Two sizes, 8 and 10 feet. Can be nsed behind any tractor.



Model D 9-16 H.P.

with Rock Island No. 9 plow attached. The time and work saver in plowing. Your hands operate the tractor while your foot raises or lowers the plow. Automatic power lift. Gets into fence corners easier than you ever could with a team, and plows **all** the field. Sold with or without plow attached.



Use Rock Island Plows

and get the best results behind your tractor. The famous Rock Island "CTX" Bottoms turn the furrow slices clear over—prevent air spaces from stopping the moisture. *Front furrow wheel lift.* 2, 3 or 4 "CTX" Bottoms.

by every right of inheritance should transmit great production and high class type. His sons and daughters have already proven his ability to transmit type of the first rank—daughters with the big, deep bodies and the ample, fine textured udders that go with large dairy production. As for his sons, one of them sold for $6500.00 at public sale, going to head W. J. Higdon's fine herd at Tulare.

Two daughters of King Korndyke Pontiac recently freshened in our herd and made very satisfactory records. King Korndyke Pontiac Charlotte, under official test made 22.92 pounds butter in seven days as a junior three year old. Natoma Superba Pontiac, freshening at two years four months, made 19.25 pounds butter in seven days. We have several other of King's daughters to freshen this winter and they look especially promising.

You need one of his young sons in your herd. Come and see what we have on hand or write for pedigrees and prices. We make liberal terms if desired.

How a Hog Auction Failed

Written for California Cultivator By H. J. Baade

THE fat hog auction sale conducted by the Napa County farm bureau at St. Helena Saturday, November 16, was a failure. The farmers lost money on the undertaking. It appears that several reasons can be given for sucb an unfortunate outcome. First, the packers failed to send buyers. Second, the market is on the decline. Third, the wrong day of the week had been selected for the sale.

The first condition was the one most feared by the committee in charge. In order that the packers might be notified in ample time, the packing concerns operating in the San Francisco Bay region were notified by the auction sale committee November 4. They were told that 200 or more grain fed hogs would be offered for sale on November 16 at St. Helena, and each firm was invited to send a buyer. On Wednesday, November 13, a member of the live stock committee of the food administration was called by telephone, and was told that the committee felt uneasy as to the buyers appearing at the sale. He agreed to take the matter in hand and notify the packers to attend the sale. Both letters and personal solicitation failed to bring the buyers.

The declining market is a condition for which no one is to be blamed. We are all glad to enjoy the sunbeams of a world peace and the return of normal conditions with normal prices.

As to the selection of Saturday for the day for this sale: Saturday has been the day of many of the successful sales in the state. It is convenient for the farmer and a satisfactory day for a sale providing buyers are present. If, however, buyers are absent and it becomes necessary to ship them, Saturday is a bad day to select. The farm bureau had faith in the good will of the packers and expected them to send buyers, although a local buyer stated that he knew beforehand the sale would prove a failure. How he knew, the farm bureau has not yet discovered. Had the hogs not been sold it would have been necessary to ship. They would then have arrived on the market late Saturday night. To hold them till Monday's market would have meant an additional expense, and then what was to be gained by such a procedure? What assurance was there that the market would not have dropped a cent or two by that time? Had the hogs been assembled on any day but Saturday the farmers would have taken a chance at shipping, instead of selling at the price they did.

We find that some farmers who had previously been offered 16 cents were obliged to take 13. In fact the one buyer who, by chance, attended the sale and bougbt most of tbe hogs did not care to take some animals at any price.

These results will no doubt mean no more fat hog auction sales in Napa County. Tbe object of this sale was to group and grade hogs so as to enable the farmer to sell, in quantity, a superior product.

The result is that packers, with the monopoly of buying in their hands, refused to cooperate. The farmers acted in good faitb, tbe packers ignored them. . The farmers had fed expensive grain at the instance of the government's request for more and better pork. Could the farmers sell direct to the government all would be well. Why this present system, whereby the producer is absolutely dependent on the packer to dispose of his live stock? The packer always takes his toll regardless of conditions, but what about the producer?

The federal trade commission has made certain recommendations regarding the control of the situation. To counteract these recommendations the various packers are spending enormous sums of money in advertising and printing to accomplish what may be called "educating the public." Hardly a day passes but brings some of their printed material to my desk. All of it is skillfully prepared, but what will it profit them if, after their "educational program," they treat the farmers as they did at the St. Helena sale?

Cooperation in California did not get a setback at this sale. We hope that the day may not be far distant when on the list of California's marketing associations will be found an association for the live stock producers, one sufficiently strong to make the packer come to terms or eliminate him.

The Napa Failure and Suggestions

Written for California Cultivator By W. W. Everett

I AM NOT deeply interested, personally, in the prevailing markets, owing to the fact that I am raising only pure bred Duroc Jersey hogs at River Bend Farm. But the hog market conditions are important to the pure bred breeder because his sales generally are to those who want fine foundation stock to raise market hogs, and their purchases are mainly regulated upon what they will eventually receive for their market hogs coming from pure bred stock.

Looking at the hog market in San Francisco, I can readily recognize the fact that the big packers there have been greatly handicapped by the lack of labor. In one instance, I know that, at this writing, some 3000 market hogs are in the yards waiting for labor to kill and dress them. Sucb a condition naturally reacts upon the market prices and the hog raisers suffer accordingly. For this condition there is no one to blame, owing to the abnormal labor shortage due to the war demands. Now tbat peace seems near at hand, it will not be long before we get back to a satisfactory supply of labor.

I have watched witb much interest the community sales of properly grained market hogs. This is a vital step, in the right direction, from the standpoint of producer and the packer, but there is much to be bettered in the manner in which these are conducted.

Last Saturday, here in St. Helena, a number of farmers sent in prime, grain finished hogs to be auctioned off under the auspices of the Napa County farm bureau live stock committee. A great effort had been made by the latter to conduct the affair in the best possible manner and much praise should be given the members for the labor which they donated, but the auction was not a success from the farmers' viewpoint.

The buyers were not present in satisfying numbers to bid upon the 250 hogs consigned to this sale. Local county stock speculators got in their deadly work, and the farmers suffered a loss in the aggregate of over $2500. This, of course, they could not afford, and the next public sale will, many of us fear, suffer from lack of consignments.

What sbould be done under the circumstances to overcome such expensive fiascos? Of course, my opinion counts for little, but if I were to consign hogs to such an auction, I would want tbe sale to be conducted by those who are familiar with the correct manner of running such public auctions. The local committee did not care to pay the auctioneer's fee and used a local farmer on the block. They saved a possible $125 by so doing, but they lost nearly $2500. Economy doesn't pay at all times. Those who conduct such sales should pay for tbe right officials to bring the buyers and the sellers together, and tbus be certain that satisfactory bids prevail. Suitable advertising and proper management would have saved the hog men a pile of money in this instance, and tbe farmers and stock raisers might just as well, now as any time, realize that the selling end of the business is just as important as the proper conditioning of their product.

To my way of thinking, I would like to see the farmers in each and every county create and maintain a buying and selling corporation to dispose of the farm products raised in the several counties. The farmers and stock raisers should be members of this cor-

Breaking all Records

Right now—when milk prices are breaking all records—is the time to make new high records in milk production. It is surprising how effectively this can be accomplished by raising the health standard of your dairy cows.

The most prevalent cow ailments —Abortion, Retained Afterbirth, Bunches, Lost Appetite, Scours, etc. —arise from an impaired condition of the genital and digestive organs. Kow-Kure has remarkable medicinal properties that act directly on these organs, producing regular, healthy action. The cow thrives on Nature's food, and a full milk flow naturally follows.

An occasional use of Kow-Kure will prevent disease and pay for its cost a hundredfold. The best dairymen keep it on hand constantly. Feed dealers and druggists sell Kow-Kure, in 60c. and $1.20 packages.

The New York Farmer says the work of the Women's Land Army has been universally satisfactory.

poration and should agree to sell to it every product of importance raised on the farms, ranches and ranges, and to sell only to that corporation. No business of any moment can be conducted on less than a 15 per cent leeway, but, should the corporation be able to conduct its business and overcome its overhead and other operating expenses on a less percentage, then the stockholders could annually divide the unspent increment.

A competent sales manager should be employed at a good salary, because satisfactory operators are not cheap in these, or normal, days. This manager should cooperate with the executive board of the corporation. With the selling end so cared for, the producer would not be subject to the jockeying tactics of the wise buyers who play upon the unbusinesslike farmer or live stock man and, in the end, the latter would find that his best business interests would be better cared for by the corporation than through his own individual selling efforts.

The producer many times needs cash and needs it badly at certain times. He is liable to sacrifice his best interests to get his money at just the time he wants it. With a corporation, having established a line of credit at its county bank, the member could be protected and furnished the necessary operating funds while the interests of his fellow producers would be protected at the same time through the prevention of sales of farm commodities at too low prices. Every other branch of industry has its safeguards, but the poor farmer and equally poor stock raiser gets the short end of the game when he tries to play a lone hand. If they cooperate in a wisely managed and soundly financed corporation, the producers could laugh their way through life instead of having to use props to support the pessimistic droop at the corners of their mouths.

FED STEERS IN SOUTHERN CALIFORNIA

F. P. Allen, local representative, United States bureau of markets, Los Angeles, believes that the recent government orders for export beef, which are new being filled by a number of Coast packers, presage much for the future development of the cattle business in this state. In commenting on the possible effect of this new outlet Mr. Allen says:

"It has long been the custom for most of the cattle feeders in Southern California to ship their finished product to San Francisco or the Kansas City market because there has been practically no market in this city for fed steers. A recent order for export beef that some of the local packers are now filling, has created a new outlet for this grade of beef. Among the several car loads of choice steers received during the past week were some Herefords and Shorthorns from the lower San Joaquin Valley that had been fed cotton seed meal, alfalfa and barley and showed a dressing percentage of 58.4 for one lot and averaged 57.75 per cent for all lots of them on the warm test sheets.

"The knowledge of this new outlet for fed cattle offers an inducement to other feeders to follow the example set by these San Joaquin Valley feeders. The high prices obtained for these steers has proven that it is a profitable investment from the feeder's standpoint, and he is also doing a service in helping to supply the great demand for beef abroad."

Great care and thoroughness should be exercised in cleaning and disinfecting barns and stable yards in which animals with contagious disease have been kept," says W. H. Feldman of the Colorado Agricultural College. "Such diseases as glanders, anthrax, rabies and, to a lesser degree, tuberculosis, are highly dangerous to man as well as to other animals and no laxity should be tolerated in cleaning up premises where these and other communicable diseases have been known to exist. The expense of a thorough disinfection is not large and the equipment needed is simple. The following is a list of the most efficacious disinfectants: Chlorid of lime, bichlorid of mercury, formalin, carbolic acid, crude carbolic acid, compound solution of cresol. A pail and the ordinary spraying pump is usually satisfactory for applying any of the above solutions."

WAR CREATES THIS IS AMERICA'S GREATEST TAGUS RANCH DECEMBER 10

750 High Class Breeding Animals At Your Own Price

Including the famous producers and prize winners in the herds. Animals that money could not buy from us in anything but a dispersal sale.

Tuesday, December 10th

We Will Sell

90 Registered Holsteins

For several years we have subjected our Holstein herd to the most severe culling, throwing out every single animal that did not measure up to our standard. As a result the herd that will greet you on sale day is one of which we may feel justly proud. The milking cows will show for themselves, through their many splendid official records, and the splendid families represented in their breeding.

Of our heifer herd, from calves up to bred heifers, we can conscientiously say that we believe no breeding farm with a herd of equal size can show better. Buyers wanting heifers from two-year-olds down should, in justice to themselves, make it a point to be at this sale.

Among the many splendid individuals to be sold are:

TWO 26 POUND THREE-YEAR-OLDS and five of their offspring.

34 COWS AND HEIFERS bred to King Sadie Vale Rose, son of King Korndyke Sadie Vale.

FOUR DAUGHTERS of King Segis Pontiac Jannek, two of them out of a 27.96 pound senior three-year-old.

12 DAUGHTERS of King Sadie Vale Rose.

12 GRANDDAUGHTERS of Korndyke Queen De Kol's Prince, 91 A. R. O. daughters with records up to over 35 lbs. butter in 7 days and over 1000 lbs. in one year.

8 DAUGHTERS of Sir Holland Gamp, sire of the 25-lb. two-year-old, El Dorado Winifred.

2 DAUGHTERS of King Segis Pontiac Zella.

FIFTEEN OTHER COWS AND HEIFERS with records up to over 25 pounds butter in seven days.

King Sadie Vale Rose

will himself be sold, and his breeding and individuality entitle him to a place at the head of a high-class breeding herd. He is by King Korndyke Sadie Vale and out of a 27.98 pound daughter of a 32.41 pound cow, and has an average of 33.82 pounds butter in seven days for his three nearest dams.

A SPLENDID SELECTION OF YOUNG BULLS will include sons of "King" out of dams up to over 26 pounds.

EVERY ANIMAL POSITIVELY GUARANTEED TO BE A BREEDER

We Will Lease

At office on ranch, or write P. O. Box D, Tulare, Cal.

Wednesday, December 11th

We Will Sell

200 REGISTERED DUROC-JERSEY HOGS.
200 HIGH GRADE POLLED ANGUS COWS.
100 HIGH GRADE SHORTHORN COWS.
15 REGISTERED ABERDEEN ANGUS BULLS.
3 SHORTHORN BULLS.

THE DUROCS offer a splendid selection of breeding and show animals of most highly approved blood lines, noteworthy for the great uniformity of breeding throughout the herd.

Twenty proven brood sows will be sold, every one of which we can recommend as the sort of sow that regularly farrows large litters of strong, uniform pigs, and every one of them will be a big money maker in the hands of the man fortunate enough to buy.

CALIFORNIA'S DEFENDER, the senior herd sire, is in the sale. As all Duroc breeders know, this famous boar was Junior Champion at Panama-Pacific International Exposition, and his worth as a breeding boar is fully up to his show ring performance. He is vigorous, a sure breeder, and a boar that any man might own with pride and profit.

More than 150 daughters and sons of California's Defender will be in this sale, making a wonderful opportunity for the securing of liberal drafts of this great blood. Those wishing to establish high-class breeding herds will find here the animals fit for the purpose.

THE POLLED ANGUS

The 200 cows in this sale represent the tops from several hundred head of our range breeding cows, those that we thought below the standard for this great sale now being on their way to the block. We feel safe in asserting that California stockmen have never before had such a grand opportunity to found range herds of these hardy and profitable cattle. The entire Angus breeding herd had an 85 per cent calving record last year, with not a single death from disease.

The 15 registered bulls are from the best Aberdeen Angus tribes, rugged, typey individuals, young but have already seen range service, and they are the pick of a larger number until recently in service.

THE SHORTHORN COWS

The 100 head of grade Shorthorns are mostly reds and roans, all young cows, and the pick from a very large number, the balance going to the fattening yards.

FOR THE BUYER OF A FEW HEAD

While most of these cows will be sold in car lots, we have made especial provision for the buyer who wants only a few head and will sell a substantial number of the cows individually.

OPPORTUNITY YOURS!

FARM AUCTION SALE

TULARE CALIFORNIA

11-12-13, 1918

$50,000 Worth of the Highest Class Farm Equipment and Implements for Every Kind of Crop

In first-class condition, some of them not now obtainable new at any price.

Thursday, December 12th
We Will Sell

17 REGISTERED PERCHERON AND BELGIAN MARES.
16 REGISTERED PERCHERON & BELGIAN STALLIONS.
100 HIGH GRADE BROOD MARES, WORK HORSES, AND MULES.

We shall part with nothing more reluctantly than with our good horses, for they have been an especial pride with us. Our registered stallions and mares have been frequent and consistent winners on the show circuit wherever shown, and their breeding is of the highest excellence.

We confidently believe that we have both stallions and mares that are not excelled anywhere on the Pacific Coast, for our foundation stud was chosen only after thousands of miles of travel and inspection of a very large number of animals.

Our grade brood mares and work stock are high class, practical farmer's animals, that have proven their worth right on this ranch in our every-day operations.

We feel sure that this sale comes at a time when it will be particularly appreciated by those who wish to buy horses. Beyond the possibility of a doubt the draft horse business in the United States has now entered upon one of its most prosperous eras, but it is up to every raiser of horses to breed the sort that will meet the most desirable market demands. Buyers will find the right sort in this sale in wide selection.

Announcement

For ten years the 6000-acre Tagus Ranch has been devoted to intensive agriculture and breeding of pure bred livestock, producing only the best.

To the accomplishment of that end no expense or endeavor has been spared, and as a result the **TAGUS RANCH** occupies a position of undisputable primacy with respect to its **PURE BRED DAIRY CATTLE, BEEF BULLS, SWINE, STALLIONS** and **BROOD MARES**, and **MODERN FARM MACHINERY** and **EQUIPMENT.**

This development has reached its culmination under the direction of Mr. Hulett C. Merritt's son, Hulett C. Merritt, Jr., who, at the moment when the fulfillment of their ideals was being realized, answered the call of our country and is now en route over seas.

No one could be found to take his place, and Mr. Merritt was therefore confronted with two alternatives, and only two. He could try to keep matters in their present style until his son should return to take up his work again, or he could dispose of the stock and equipment which they had accumulated through their careful development.

Many reasons made it impossible for Mr. Merritt to give to the Ranch the careful and constant attention which its high standards required. To this problem Mr. Merritt could make but one answer.

At this time, when waste in any form increases the difficulties of accomplishing the common task, Mr. Merritt could not permit so much essential material to lie idle. Therefore he authorized me to conduct a complete dispersion sale.

In all my extended experience I have never known a sale which presented so many opportunities, which live stock breeders and farmers may turn to their own advantage, and made possible by careful, intelligent breeding and by unstinted expenditure.

C. L. HUGHES,
Sales Manager.

Friday, December 13th, WE WILL SELL

$50,000 WORTH OF HIGH CLASS FARM EQUIPMENT AND FARM IMPLEMENTS FOR EVERY KIND OF CROP.

Only the most modern equipment and implements of the best manufacture have ever found a place on Tagus Ranch, and our extensive and intensive farming operations have called for a very broad variety of implements.

All of the equipment and implements in this sale are of comparatively recent purchase, and they are in first-class condition. Many of the most useful items are still in the original crates and cases in which they came from the jobbers and manufacturers, so suddenly did we halt our farming operations when the decision was made to hold this sale.

The space of this announcement is entirely inadequate to give a complete list of the equipment and implements to be sold, but a few of the items are as follows:

30 Bain and Studebaker Wagons, most of them absolutely as good as new, and many of them, particularly the heavier Bains, not to be had new except from the very largest jobbing centers. **24 Plows, 3, 4, and 5-gang Plows, Disk Plows, Engine Plows, Road Plows, Special Purpose Plows,** all of the very best makes.

Beet Implements, including Drills and Beet Pullers.

Hay Mowers, Bunch and Buck Rakes, Tedders, Loaders, Stackers.

Potato Cultivators, Diggers, and other special machinery.

A long list of cultivators, seed drills, gasoline engines, and other items.

5 15-35 h.p. Sandusky Tractors, in first-class condition, and ready to go right ahead the day you get them home. Also 2 Bull Tractors.

TAGUS RANCH is five miles north of the city of Tulare, Tulare County, California, on main cement State Highway. Tagus Switch, a shipping point, on the main line of the Southern Pacific, is right on the Ranch. HOTEL ACCOMMODATIONS may be had at Hotel St. Maxon, Tulare; Hotel Johnson, Visalia; Hotel Kings, Hanford, all of which are within convenient distance by auto. Motor busses will leave Hotel St. Maxon and Hotel Johnson on days of sale.

Live Stock News Notes

Miller & Lux Buy Herefords

E. K. Brown, representing the Santa Rita Ranch, Dos Palos, recently visited the Carl Miller herd at Belvue, Kansas, and contracted for a carload of yearling heifers. These heifers, along with a carload of yearling bulls from the Mortimer herds of Nebraska and several other purchases made of Kansas, Nebraska and Colorado breeders, amounting to around 400 head, were shipped to Bloomfield Farm, Gilroy.

Miller & Lux are planning to establish a herd of Herefords that will eventually be the largest herd west of the Rocky Mountains.

The Kindly Hun

Without regard to the numerous other reasons why every live stock man wanted to see them beaten to the earth, the Huns' treatment of farm animals alone is sufficient. In Everybody's Magazine Brand Whitlock, former American minister to Belgium, relates this instance of Hun wantonness: The Germans visited a stock farm, one of the most famous in Belgium, took six or seven stallions, and turned them into a paddock to see them fight; afterward some of the officers hamstrung them with their sabers.

25 Jerseys to Red Cross

Even though the war is ended a vast amount of money is still pouring into the Red Cross to finish up its work of comforting the sick and wounded "Over There." One of the most recent contributions came through the sale of 25 head of Jerseys which were sold at auction for $4383, an average of $195.32. W. A. Brewerton of Thornbury Farm, Libertyville, Illinois, was the donor of these animals.

Live Stock Killed in Los Angeles

During the month of October the eight leading packing houses, together with several smaller firms, slaughtered 14,057 beef animals, 3445 calves, 16,125 hogs, 22,670 sheep and lambs, 365 goats.

An interesting fact disclosed by the killing sheet is the percentage of cows and steers slaughtered.

Not so many years ago the bulk of the kill was steers, but now the proportions have changed and last month 8543 head of cows were killed as compared to 5160 steers.

There is considerable food for thought in these figures.

Swine Breeders Active

There is great activity in the California Swine Breeders' Association. Director Frank B. Anderson, Berkshire breeder of Sacramento, is looking after the publicity for the association. Hog raisers all over the state are being made acquainted with the aims of the organization.

It is hoped to stabilize prices of pork and feed products, and to increase production of pork by working in close harmony with the food administration.—W. S. G.

Buy Bull on Cooperative Plan

The State Land Colony Live Stock Association has made arrangements for the purchase of a son of the world famous Morris cow, Tillie Alcartra. The membership of this association consists of settlers on the state land colony at Durham. It is the plan of the colony that only Holstein cattle will be used by the settlers, and thus develop a strictly Holstein community.

The bull is to be purchased through the issuance of $5 debiture certificates. The service of the bull will be available to all the association members for a fee of $10, which it is calculated will pay for the keep of the bull and eventually return the cost to the association.

Brush Berkshires to Sonoma Farmers

The Berkshire herd of Frank A. Brush has been dispersed at private sale by J. Francis O'Connor of Santa Rosa, in a way that will be of great benefit to the Berkshire breed in general and to the live stock interests of Sonoma County.

Mr. O'Connor advertised that he would sell the famous prize winning hogs at farmers' prices, and in a very short time they had all been taken by farmers living close by at prices that breeders generally can afford to take for the average run of their herds. Sows sold from $100 to $125, gilts $50 to $60, and pigs from $25 to $30.

Sometimes farmers get the idea that stock produced by pure bred breeders is "out of their reach," and they never ask the price. There should be some way to get breeders and their neighbors closer together.

With all the good herds that will be established because of this Brush dispersion, Sonoma County is sure to be one of the leading Berkshires breeding centers on the Pacific Coast.—W. S. G.

$225 Worth of Pork

Pure bred Poland-China barrows, bred and fed by M. Bassett, Hanford, and sold to the Western Meat Company for $20.00 per cwt. These barrows were farrowed in September, 1917 and when sold, early in November, averaged 375 pounds. Good blood, barley and alfalfa was the combination.

Mirrors for Handling Sheep!

Every man who has "lost his religion" when loading or cutting out sheep will welcome this bit of news in the National Wool Grower:

An Australian grower has reported the use of a mirror to get sheep to pass into pens where they are wanted. He places a mirror three feet square opposite the opening through which the sheep are to be driven. The sheep sees its outline in the mirror and thinking it is another sheep, passes through at once. It is reported that a mirror properly placed in the cutting out chute eliminates all delay in getting the sheep through. This device has only been tried by one Australian, but he reports great success from its use.

What Are Holsteins Worth?

The Holstein-Friesian Register reports that during the first six months of 1918, 8635 head of Holstein cattle were sold for $2,563,889, an average of $296.92.

Included in the list are the reports of four California sales in which 257 head sold for an average price of $330.44.

Butte City Ranch Sales

W. S. Guilford of the Butte City Ranch, Butte City, reports the sale of a Shorthorn bull by Victor Stamford,

Range Men Buy Better Bulls

Dell Grieve of the Davis Horse and Cattle Co., Davis, writes that he has just returned from the East with shipment of five carloads of Shorthorn and Hereford bulls.

The Davis Horse and Cattle Co. has built up an extensive business in range bulls, handling several hundred a year.

Mr. Grieve states that there has been a noticeable increase in the demand for bulls of the better sort.

Miller & Lux Buy Hereford Bull

Miller & Lux, San Francisco, have purchased the Hereford bull, Rialto 2d, from Robt. H. Hazlett, Eldorado, Kansas. Rialto 2d was sired by Caddo 2nd, a bull that has rendered excellent service in the Hazlett herd.

New Cattle Pens at North Portland

A new block consisting of sixteen cattle pens has been added to the North Portland yards. Some of the pens are double, and the increased capacity will amount to about 500 head of cattle. All floors and water troughs are of concrete and overhead runways are provided.

One Shipment of Hogs, $105,166.95

What is said to have been the largest shipment of hogs ever marketed was received at Chicago October 9 from Darlington, Indiana. The consignment, sent by three shippers, was the largest ever received from the country, both in numbers and value. The entire lot of 34 cars was bought by Armour & Co. for $105,166.95. The hogs averaged 256 pounds and brought $18.50 straight, a record price for large shipments.

POLLED HEREFORDS TO COAST

Polled Herefords are going to invade a new territory next April when an offering of 25 to 30 head, selected from the leading herds of the Cornbelt, will be sold at the California agricultural college, Davis, California. The arrangements for the assembling, shipment and sale of these cattle are in the hands of B. O. Gammon, secretary of the Polled Hereford Association.

This will be one of a series of sales of cattle that will be held at Davis during the annual meeting of farmers and stockmen at the agricultural college. The sale will be widely advertised. The cattle will be assembled at some central point, such as Des Moines, Omaha or Kansas City. They will be sent forward in charge of a competent attendant who will care for them en route. The cars will be decorated with appropriate advertising matter and circulars exploiting polled Herefords will be distributed wherever the shipment stops on the way.

For this sale Mr. Gammon wants only polled Herefords of quality, animals that will be a real advertisement for the breed. He plans to make up the consignment of about one-third bulls and two-thirds females, ranging in age from 12 to 20 months. Consignors will be required to deliver their consignments, freight paid, at the central shipping point. The freight, feed and selling charges will be pro rated among the consignors.—American Hereford Journal.

CHEAP FRESH MEAT

It is possible to have a cheap supply of fresh meat throughout the winter in many communities where it has not been thought of.

One neighbor has a fat lamb, another a fat calf or yearling, another a pig or fat cow. If an arrangement is made by which one is killed a week, and the meat divided among all who are in the club, the winter's supply of fresh meat can be secured easily and cheaply. This has been done in many Eastern localities for years. It could be easily arranged here.—W. S. G.

CAREFUL management in feeding brooding sows and pigs is the wise hog grower's road to profit. Sanitary troughs are essential to prevent disease.

Calco Sanitary Hog Troughs have smooth metal sides, round bottoms—food conserving—and are made of Armco rust-resisting iron. They are durable, strong and economical.

Calco Troughs are made in many sizes which include:

Size	Depth	Length	Price
10¼ inch	5 5-16 inch	40 inch	.....$3.70
10¼ inch	5 5-16 inch	60 inch	..... 4.50
14 inch	7 3-16 inch	24 inch	..... 4.55
14 inch	7 3-16 inch	60 inch	..... 6.55

Other models from 24 to 120 inches in length, from $2.95 up. Order today.

SULPHUR

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

Try our new brand of VENTILATED Sublimed Sulphur, 100 per cent pure, for making Paste — (Atomic Sulphur) — and for dusting.

For Lime Sulphur Solution, use our DIAMOND "S" BRAND refined Flour Sulphur. We can furnish you this sulphur at such a low price that it will pay you to mix your own solution.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre of our Diamond "S" Brand Powdered Sulphur. Write direct to

San Francisco Sulphur Co.
624 California Street, San Francisco, Cal.

We are equipped to make immediate shipment. Send for illustrated booklet; price list and samples, and please state for what purpose you use the sulphur, quantity needed, and date of shipment prefered. Tel. Kearny 871.

Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Peanuts

What is the best variety of peanuts for light sandy soil? When should they be planted and bow are they cultivated?—Subscriber, Turlock.

The Virginia peanut is considered the best all around variety. Sandy soils are required for the best growth of peanuts. They are a tender plant and should be planted after all danger of frost is over; generally from the middle of April to the middle of June. Plant in rows three to three and a half feet apart and one foot apart in the row, two to three kernels to tbe hill. Keep soil loose and irrigate only in the centers of the rows so that the ground around the plant does not become packed.—D. F. R.

White Fig on Black

Would it be possible to bud white figs into a black fig tree? If so, when can it be done, and how? I have room for only one tree, which is the black variety, but would like to have some white also, if budding can be done.—Subscriber.

This question was referred to Leonard Coates and he answers:

Yes. The bark grafting method is best. Budding would not be a success. Bark grafting is done in the spring when sap flows so that bark will slip. Saw off the limb and cut the bark down for about two inches in one or more places, depending on size of limb; usually two or three grafts are used. Make a long wedge cut on scion of your wbite fig, on which should be two or three buds; slip this down the vertical cut in bark, so that it lies on the wood; tie very securely and cover with grafting wax.

Quince Budded on Apple

Can quince buds be made to grow in an apple tree? I have tried it twice witbout success.—Subscriber.

This query was referred to Leonard Coates, who answers:

Quince buds on apple would not be successful. Most varieties of pear unite witb the quince.

Abscess on Rabbit's Shoulder

One of my doe rabbits has a hard movable lump on her shoulder, about the size of a walnut, quite tender when touched. What is cause and treatment if any?—Subscriber.

The writer would say your doe bad an abscess. When it is soft, clip away fur across tbe face of it and with sharp knife or razor make an incision across it. Remove inside pus, which should be found in a bag, cleanse wound with solution of peroxide of hydrogen and water, three-fourths water and one-fourth peroxide of hydrogen. Put any good salve on to prevent infection. If opening is large draw it togetber with piece of adhesive plaster. Keep animal in warm dry place for a time.—W. D. W.

Cabbage Aphis

Am sending cabbage leaf with bugs on. Will you please give me formula of some kind for a dip that is not expensive that I can dip the plants in before they are set out as they are ready for transplanting now?—Subscriber, Puente.

This specimen of cabbage leaf was badly infested with aphis. Treatment for this trouble is spraying with tobacco extract.

Pickling Ripe and Green Olives

I wish you would send me the recipe for pickling ripe and green olives. —Subscriber, Modesto.

See article by W. V. Cruess in this week's Cultivator.

Whitewash for Fig Tree

Do you consider it a benefit to fig trees to whitewasb the body or stump of the trees? If so, please give tbe formula.—Subscriber, Fresno.

E. W. Horton of Fancher Creek Nurseries answers:

We consider it a very good plan to whitewasb tbe body of fig trees. It protects them from insects and is a benefit to the health of the bearing tree. The formula we recommend is as follows: Tbirty gallons water, 40 pounds lime, one-half gallon salt. This makes a very good paste of whitewasb.

Rolling Tractor School

Where can I get definite information regarding tractor school dates, Unit No. 1, to be held at Santa Ana, Ontario or Van Nuys? What are the requirements and expenses in connection?—Subscriber, Fallbrook.

We have word from J. C. Beswick, Director Vocational War Work, State Board of Education, Sacramento, that the influenza quarantines have closed training centers already opened. Unit No. 1 began work at Madera on October 7, but tbis was discontinued. The course in each center is planned to last four weeks. Tbe first two weeks are devoted to gas engine instruction, the last two to tractor operation and repair and actual work in tbe fields. Dates of opening will be given in the Cultivator as soon as received from Mr. Beswick, also requirements of entry. Presumably tbe influenza situation will be cleared up in a very few days. Here's boping.

Care of Gladiolus

I would be greatly pleased if you could publish an article on the care of gladiolus and other bulbs. I am in the vicinity of Los Angeles. I always look through your paper for hints on flowers. Some of them have been of great belp to me.—Subscriber, Gardena.

We are sending this subscriber—and would refer others interested to—an extended article on "Gladiolus Growing in Southern California" in the Cultivator of July 20, 1918. This describes operations as carried out on a large scale for commercial raising of gladiolus, but the metbods of successful garden growing are the same.

"Those Troublesome Stumps"

Would some of our readers of the Cultivator kindly give me their experience in regard to the destruction of stumps? I know tbere are several ways to get them out, viz., lifting them out with dynamite, using a stump puller, and digging them out. The dynamite process I can't use for the stumps are close to residences; stump puller I have none, and it would not pay to buy one for tbe few stumps I have to destroy, and digging them out would take too mucb time and labor. I've eitber been told, or read about it, that by boring holes in the stump and filling them up with saltpetre and water, and plugging them up, the stumps can be burned out in a few months. I have the holes bored, and intended to charge them with the saltpetre but unfortunately I can't buy the saltpetre as I am told the government controls the supply. What other process can be recommended? The stumps are pine, Monterey cypress and eucalyptus.—G. W. R., Marin County.

Can our Cultivator readers help this inquirer with tbeir experience?

Walnuts Blighting

I have blight on walnut trees. Leaves turn brown early, usually south side of tree first, then new growth starts in the fall. Trees bear very light crops and look sickly. Some of tbe walnut trees tbat had large fine nuts last year have small ones this year about the size of filberts. Can you tell me the remedy?—Subscriber, Santa Ana.

The indications are "insufficient water supply." Not having the history of the orcbard it is not possible to give the exact cause, but walnut trees which have water sufficient to make a good growth in the spring will do as described if the water supply is insufficient during the summer and a supply is received from some source late in the season.

To get the best results the soil must be kept moist all the time whether it requires one or two, or five irrigations

in the dry months, and the water must go deep in the ground. If the water has been applied a little time before needed the trees will keep in good condition and the fruit wood will be fully developed for the next year by the time the frost may come, but if the trees were allowed to go partially dormant for want of water in July and August and then water should be applied in September and October a new growth will start which will not mature, and consequently the setting of nuts will be very light. If these trees are from 12 to 20 years old it is quite likely the growth is very brushy, in which case they need considerable thinning out to start a stronger growth of wood which will produce larger walnuts.—J. B. N.

Breeding Turkeys

I wish to keep five of my turkey hens for breeding next spring. Will one tom serve this many, or must I have a tom for every three hens? What is the average weight of Mammoth Bronze gobblers for market trade, and also the hens? My six months old gobblers average 16 pounds now. Is this good or not?—Subscriber, Tulare.

One tom is ample for five hens. Sixteen pounds is about the average weight of Bronze toms at six months of age. Hens weigh from nine to eleven pounds.—J. A. K.

Hatching Eggs

In mating a Rhode Island Red rooster with 12 hens, are the eggs fit for hatching right away or must I wait a few days before selling a setting?—Subscriber, Tulare.

Eggs should not be sold for hatching until the rooster and hens have been together two weeks. The eggs are probably fertile sooner than this, but it is best not to take chances. A rooster will not serve as many hens in fall as in spring, nor a Rhode Island Red as many hens as a Leghorn. If you want good fertility this fall, better cut down your hens to eight.—J. A. K.

Beans for Paso Robles

Please give me information about Henderson Bush Limas and Garbanzos. This is a hot, dry country not well adapted to beans. I have tried Blackeyes, Teparies, Pintos and Pinks. Also have seen Mex. Reds grown here. Of all these the Blackeyes are surest with the Teparies next. They are both low priced beans and the Blackeyes are hard to thresh without splitting and do not ripen evenly. I have been told that Henderson Bush beans do well in hot dry climate, and I saw some in Fernando Valley in September that had made a good crop; but they were irrigated while I must dry farm. The Henderson Bush and Garbanzos bring a good price. I can find no one near here who has raised them, and wish to know if they can be grown here successfully.—Subscriber, Paso Robles.

There are many different conditions to consider in the Paso Robles district. We have seen the best of bean crops grow on the hills while down in the warmer valleys they have not done so well. We are not altogether acquainted with your particular location but as a general thing would not recommend Henderson Bush or Garbanzos for your locality. We believe you will have to content yourselves with either Blackeyes or Pinks as Teparys seem to have lost out on this market.—D. F. R.

RULES FOR MEASURING HAY

In the measurement of hay there are two points to be considered. These are the number of cubic feet required to make one ton and the method of determining the number of cubic feet in a stack.

The following table gives the number of cubic feet required to make one ton of alfalfa at various seasons of setting, these figures being accepted as fair amounts to allow for a ton:

Number of days in stack.	Number of cubic feet per ton.
30	560
60	540
90	512
120	485
Late winter	450

Native hay packs more closely, the usual figure being 422 cubic feet for one ton in a well settled stack.

There are three general methods of arriving at the number of cubic feet in the stack. All three methods will require the width, length and over-measurement. The latter is the distance from the ground on one side, straight over the top to the ground on the other side. Where stacks are irregular, it is best to secure a number of measurements for width and length and the over-measurement, and use the average.

Rule I. One-fourth of the "over" multiplied by the width, then multiplied by the length and divided by the required number of cubic feet to make one ton. This rule gives accurate figures on small, squat stacks when the width is from one-third to one-half of the "over."

Last fall the experiment station bought 98.55 tons by the use of this rule, and when weighed out it weighed 98.18 tons.

Government Rule — Width plus "over," divided by four and squared; then multiplied by length and divided by the number of cubic feet required to make one ton. This rule is satisfactory for large tall stacks of 25 to 45 tons, and favors the seller with ordinary small squat stacks. T. E. Leiper, Colorado Agricultural College.

Book Review

FIRST LESSONS IN BEEKEEPING

"First Lessons in Beekeeping," by C. P. Dadant, editor of the American Bee Journal, and published by American Bee Journal, Hamilton, Illinois.

"This book is especially intended for colleges and schools giving short courses in bee culture. A few years ago such courses were not thought of. But they are annually becoming more numerous. Blind beekeeping is still less profitable than blind farming. The hive has long been a sealed book. It should be opened to the prospective apiarist before he attempts to keep bees. The bee owner who depends upon luck is an obstruction to the success of others, for disease and degeneracy of his bees are sure to follow from his lack of knowledge and method."

The above is from the preface and gives a general view of the scope of book. It touches upon natural history, establishing an apiary, hives, swarming and queen-rearing, improvement in honey bees, comb foundation and its uses, production of choice honey, wintering and feeding, pasturage, observation hives, enemies, disease, marketing honey.

AUSTRIA ADVERTISES FOOD NEEDS

There is food propaganda that is super-propaganda; no missionaries are needed to spread it. The American assurance to the Allies of a bigger and better loaf traveled like light and warmed like sunshine. Headlines and billboards were unnecessary, for it was super-propaganda.

There is super-propaganda, too, that chills like November rain; and in spite of German skill in the art of concealment this kind of propaganda is traveling through the enemy country. Here are some want ads from a Trieste newspaper which tell a story that will not down:

"Iron bed, pair of black trousers, and coat offered in exchange for foodstuffs."

"New novels, large collection, offered in exchange for five pounds of food."

"Finest stockings, lady's colored, in exchange for sugar or fats."

"Linen sheet wanted to make into a dress, for cash or maize meal."

"Yellow canary in exchange for a rabbit, Japanese vases for fats or beans."

"A business suit offered in exchange for one pound of fat."

FINE COTTON

One of the Cultivator field men has sent in a specimen of long staple cotton from Mr. Sanders' ranch south of Chowchilla, which has appearance, to the eyes of the layman, of remarkably fine fiber. It is estimated that the cotton from the particular place where this was grown will run half a bale to the acre. At present prices this will mean a remarkably profitable crop.

ACRE YIELD OF POTATOES INCREASES

In 20 years the productivity of the average potato acre in this country increased 36 per cent. This increase is due to various causes, among which are greater specialization of production, more intensive treatment, and higher fertility of the soil. The ten-year average yield of 97 bushels per acre in 1905-1914 was followed by 96.3 bushels in 1915, 80.5 bushels in the very low year 1916, and 100.8 bushels in 1917.

Compared with population, the yield of potatoes per acre declined from 1866-1874 to 1905-1914. The gain of production per capita in recent years has been more because of increased acreage than because of increased production per acre.

TEAGUE QUALITY

CITRUS TREES

AWARDED THE GOLD MEDAL AT FOUR INTERNATIONAL EXPOSITIONS.

For Productive values, fine quality of fruit and vigorous growth Teague's bud-selected, (pedigreed) properly trained and carefully handled orange and lemon, pomelo and lime trees are the trees to plant. An experience covering a third of a century warrants the assertion that Teague Quality Citrus Trees possess these qualifications in a superlative degree. All the standard commercial sorts, and garden and ornamental varieties; the largest assortment of citrus trees in America, . . . We invite correspondence from intending planters. . . . Consultations on citrus planting by appointment. 1918 Price list just out; send for a copy.

FARM LANDS FOR SALE

For Sale—My 400 acre grain and stock ranch. Three miles from Pleasant Valley R.R. station, Mariposa County, California; 40 acres now planted to wheat, barley and oats; 100 acres more cleared and tillable, nearly all of the 400 acres could be farmed if cleared from large oaks and other trees; 3 and 6 room house, large barn, windmill and tank, and out buildings, blacksmith shop and tools, ranch fenced and cross fenced, part hog tight. Family orchard and garden irrigated from springs. Average rainfall 29.80 inches. Elevation 1500. The finest climate, summers cool and winters moderate, fine for fruit, no alkali or hard pan, one-half mile to school; $35.00 per acre, including 300 Angora goats, 30 head of dairy cattle, 5 head of horses, chickens and turkeys, and all farm implements and household goods. One-third cash, balance long time, 7 per cent, no trade. Albert F. Zurilgen (owner), Coulterville, Mariposa Co., California.

SNOHOMISH COUNTY, WASH. FARM LANDS. The greatest proposition on the market for the man who wants a farm; 12,000 acres to select from, 3½ miles salt water front, 20 miles of Beautiful Lake Shore, good towns, railways, steam boats, factories, mills, schools, churches, paved roads; where the largest profits are made, where the great variety of crops and wonderful productive climate make it the most productive farm section of America. Good lands in good localities as low as $25 to $35 per acre; 10 yearly payments; send for maps and literature to the BROWNELL LAND CO., 904 Third Ave., Seattle, Washington.

For Sale — One of the Big Producing Ranches of California, income from $20,000 to $25,000 per year. Will sell land, crop, work stock, cows and farming implements for $60,000. Small cash payment to apply on personal property, balance about one-half of the value of crop. Might accept clear Los Angeles residence or income, apartment house or small grove as first payment. Address W. B. Ames, Jonathan Club, Los Angeles, California.

For Sale—10 acres, 626 Valencia oranges, $4000.00 to $8000.00 fruit on; 385 Avocados, mostly Fuerte; 25 miles from Los Angeles on Valley Boulevard. Curbed, cement porches, tennis court, driveway; 11 room house, gas, electricity, domestic water, barn, garages, concreted floors. Irrigating water piped. Going to Arizona for son's asthma. Cash. Box 56, Charter Oak, California.

Ranch, 120 Acres—60 acres under ditch. Good improvements, all farming tools go with the place, also 50 tons of hay. Price $3000. Walter Hufford, Whitmore, California.

Will Exchange beautiful home in Berkeley for good country realty. Address 5809 Ocean View Drive, Oakland, California.

SEEDS AND PLANTS

Try Your Luck growing valuable drug herbs. We have a few thousand Atropa Belladonna plants for sale, one year old roots, dormant, $1.00 dozen, $8.00 a hundred, $50 thousand. First come first served. Money must accompany order. Reference, Pajaro Valley National Bank. Herbert-Vistica Co., R. F. D. 3, Box 107, Watsonville, California.

I Will Have One or Two Tons of Sorghum seed, especially selected for syrup making qualities for sale as long as it lasts. Send for list of different varieties, with description, prices and instructions for planting to get best results. Can send seed by parcel post. MARION GRABER, Hawthorne, California.

Seed Grain — We can make attractive prices on seed wheat and Winter or Gray oats and other field seeds. Have a full line of nursery stock. Supply of seed grain will be limited. Write now. 28 years in business. Carlton Nurseries, Carlton, Oregon.

A Few Sacks Rhodes Grass—Honey sorghum and Sudan seed. Order now all will be scarce and high later. Kelley's Seed House, El Centro, California.

R*O*S*E*S 50c per dozen. Fruit and Ornamental Trees, Plants, Vines, etc. Write for catalogue. KAVAN NURSERIES, San Bernardino, California.

Rhubarb Plants — Wagner's Giant Crimson Rhubarb plants, extra clean, 50 cents per dozen. $3.00 per hundred. Currier Bulb Co., Seabright, California.

New Hybrid Alfalfa—Spreading crown. Big crab-like roots, long lifed, etc. Write J. L. Lawson, San Jose.

Peruvian and Common Alfalfa Seed—Specialty. Write for prices and sample. Box 501 Fowler, California.

Roup, colds, bowel troubles, sore head, limber neck, etc. At dealers or postpaid 75 cts. with 5 book Poultry Library. GEO. H. LEE CO., Dept. 418 OMAHA, NEB.

THE 200-EGG HEN

Written for California Cultivator
By Jean A. Koethen

IF THERE were ever any doubt of the existence of the 200-egg hen it has long ago been dispersed by the performance of hens in the various laying contests that have been held the past five years or so. Some authority has said that the only egg records that can be relied on are those of these contests, where those who keep the records are entirely disinterested and where every record is certified. How true this may be I do not know. It is very easy to make mistakes in keeping an egg record, especially when the keeper has a thousand other things to do, and those kept in a contest where the attendants give their undivided attention to this very thing should certainly be more dependable.

According to the report of the Second All Northwest Egg Laying Contest, which was held at Pullman, Washington, during the 11 months ending October 1, 136 birds out of the approximately 600 entered laid over 200 eggs each. This is regarded by the new contest director, Professor Mitchell, as a remarkable performance. If 25 per cent of all the hens in our henneries and farm flocks did as well the poultry industry would be on a firmer footing than it is at present. Sixty-seven per cent of all the hens in the contest laid 150 eggs or over in the 11 months, and yet we are told that the 150-egg hen is comparatively rare in farm flocks.

These hens in the contest are, of course, the picked birds of the Coast, most of them being from Oregon and Washington. There were five California entries, one of them being a pen of Blue Andalusians owned by J. R. Huddleston of Los Angeles. Idaho and British Columbia were also represented. Obviously, no one would think of sending a pen to such a contest unless he were satisfied himself with the work of his hens, but if one person can bring his hens up to such a satisfactory production, others can do the same thing. There will be more 200-egg hens in the flocks of the whole Pacific Coast because of what the hens at this contest have done.

It is a pity that this contest cannot be held for 12 months instead of closing at the end of the 11th, but on account of the limited accommodations at their disposal, those in charge find it necessary, if they are to begin a new contest November 1, to close the preceding one October 1. This gives a month in which to get the old birds out and the new ones in. However, if a month must be omitted, October can best be spared, for the hens are in full molt by this time, and their year's record nearly completed.

The figures which interest us most in this report are those showing what hens laid the highest number of eggs, and the value of the eggs. The best hen, we are not surprised to learn, was a White Leghorn from Salem, Oregon, that made the remarkable record of 287 eggs. Who knows but in another month she might have rounded out a full 300? The second hen was a R. I. White with 264 eggs to her credit. Then come three more Leghorns, followed by a Barred Rock that laid 254 eggs; two more Leghorns, then a R. I. Red with a score of 248. There were 22 hens with an average of 237 eggs or over, and 14 of these were White Leghonrs. Of the remainder, three were R. I. Whites, three R. I. Reds, and two Barred Rocks. The value of the eggs laid by White Leghorn No. 251, the highest scoring hen, was $10.76, and the lowest on the honor roll of 22 hens brought in $8.84. Looking at these figures, our first question is, what is the net profit to be expected from such a producer? This final report gives no figures as to feed cost but a careful feed and egg summary for the month of July showed that the feed cost per dozen eggs for White Leghorns was 17.8 cents, and the return above feed cost for the average White Leghorn 40 cents. According to these figures, which would doubtless be approximately correct for the whole year, the cost of feeding the 287-egg hen was $4.27, and the value of her eggs above feed cost over $6.00 while the 237-egg hen netted $5.34.

We shall probably get a better idea of the actual cost of feeding these birds if we take the figures for the cost of feed per bird regardless of production. We find that in July it cost 29.59 cents to feed a Leghorn for the whole month, 33.144 cents to feed a R. I. Red and 37.28 to feed a Barred Rock; this higher cost of feeding heavy birds must always be considered, for it takes just so much from the net profit. To be sure the carcass of the Rock is worth more when she is through laying, but it ought to be.

One sentence in this report of Director Mitchell is especially significant: "In order for birds to make high records during the year, it is necessary for them to get the laying habit early in life and to stay close by it." White Leghorn No. 251 laid 29 eggs in November, 27 in December, 28 in January, and not less than 24 eggs any month in the year. R. I. White 23 started in with 23 eggs in November but reached a maximum of 27 in January. White Leghorn 81, the third on the honor roll, made a less conspicuous start, for she laid but 15 eggs in November, but from this time on she kept above 20. Truly, the "laying habit" is important and the hen that lags at the beginning of the race is liable to prove a laggard all the way through.

BEE KEEPING SHORT COURSE

A full course in bee keeping will be given at Visalia, December 4-14. This is under the auspices of the Tulare County farm bureau, which announces:

Some of the best posted people on bee keeping in the United States will take part in this school. Dr. E. F. Phillips, head of the division of apiculture of the United States department of agriculture, will be the principal speaker. Dr. Phillips is sufficiently well known to most bee keepers to warrant a good attendance. Professor Coleman, Professor Clark, George S. Demuth and E. R. Root will also be on the staff.

The government is still calling on us to produce more food, and to save sugar. The production of honey will help solve the sugar problem.

A good live program has been prepared and it is expected that about 200 people will be in attendance at these meetings.

Why Haven't You Called for Your Lactein,
Mr. Chicken and Hog Producer, Large or Small?

My What, do you say?
Why, your LACTEIN (Condensed Buttermilk)

LACTEIN—"Makes Hens Lay—Makes Hogs Pay!"

LACTEIN—The greatest of all Chicken and Hog Feeds and Tonics.

QUESTION 1—Suppose your chicks were bothered with worms, or that they had the dreaded Coccidiosis, White Diarrhoea, or that their feathers were turned up topsy-turvey, and you knew for a certainty of a combined feed and tonic which would overcome this,

QUESTION 2—Suppose that the hens' combs were white, or that the chicks were constantly picking at the toes and tail feathers of their mates, and you knew of some product (namely "LACTEIN") that would correct this,

QUESTION 3—Suppose that the young chick had no vitality, was sleepy looking, needed more red blood, and that it was in your power to have a quick and positive remedy for this,

QUESTION 4—Suppose that the hens you expected to do so well, were moulting, that their wattles were white, their legs white, and that they were producing about one egg to every three hens, notwithstanding the fact that you were feeding them plenty of high priced materials which produced yolks, but lacked material to make albumen for the whites,

QUESTION 5—Suppose that there was no question but that you could increase your production from fifteen to forty per cent in from fifteen to twenty days, by using a product which would cause the food to assimilate, and build up their system at the same time,

QUESTION 6—Suppose that you were depending on your hogs to pay off the mortgage, or to buy your new car, and you found, when the mortgage came due, or the agent for the car came to see you, that your hogs had not gained in weight, due to indigestion, worms, or cholera, or poor assimilation, and you knew there was a product on the market which was both a food and tonic that would insure that needed gain, purifying their blood, and assimilate their food,

WHAT WOULD YOU DO?

BUY LACTEIN.

WHY, OF COURSE YOU WOULD.

BUY IT NOW, from the representatives of the Lactein Food Company. Feed dealers all over California, Washington, Nevada, Utah, Idaho, Texas, Arizona, Oregon, and Hawaiian Islands stock this product. If your local dealer does not carry it, write to the Home Office, Modesto, California, Box 593.

A New Way to Buy War Savings Stamps

"Everybody's Doing It," You Say, "But How Can I?"

Why, the easiest thing in the world. All you have to do is to use Cocoa Naptha Soap for all laundry purposes—and you'll save, save, save!

This wonderful cleanser does away with all boiling, requires less rubbing, and can be used in cold water or hot. This means a saving in fuel, saving clothes, and saving labor.

Instead of heating gallons and gallons of water, and toiling over the wash board all day, you'll have plenty of time to knit and sew and do other things. Ask your dealer for Cocoa Naptha (made in Los Angeles, by Los Angeles Soap Co.) and follow the directions that appear on each wrapper. It contains pure cocoanut oil and works just dandy in hard water as well as in soft.

Household Department

A FREE LANCE O' TH' SOD

I hain't hed no heap o' learnin',
I'm not counted much fer looks,
I'm not swift et money burnin',
I hain't read them flowery books;
But I got my own small garden,
An' a hen roost, an' a cow,
An' them pigs ye see a rootin'
'Ith thet fine ol' Berkshire sow.
An' thet barn, thar, in th' distance,
'Ith th' wood lot jest beyond,
An' thet meadow, thar, fer instance,
An' them ducks out on th' pond;
An' thet stack o' garnered barley,
An 'th other one o' oats,
An' them hosses—say, now, really,
Hain't they got th' shiny coats?
Them's all mine. An' so's them acres
Green an' golden in th' sun,
An' they hain't no mortgage papers
Laid ag'in' a single one.
An' off yander in thet cabin
I've a wife an' kids as well,
Thet is jest as loved an' lovin'
As though I was a swell.
An' when I'm hum et evenin',
Mebby feelin' somewhat tired,
I know no Boss hain't comin'
Round t' say t' me "Yer fired!"
Fer I hain't no fear o' masters,
'Ceptin' o' th' Master, God,
'Cause I'm browsin' midst th' Pastures,
A Free Lance o' th' Sod.

—Edwin F. Van Vechten.

HOW SHE PROPOSED

"WIMMEN are a queer lot," said the old fishermen. "They remind me most of a crab. If you expect a woman to move for'ard she goes back; if you expect her to go back she goes for'ard. And if you don't know which way she's goin' she moves sideways.

"Anyway, the only gal I was ever stuck on went that sort of a gait as long as I knew her as a gal. She was the daughter of a man who owned one of the best farms ten miles back of the coast and with a lot o' money in bank. Phoebe was the only child of her parents, and it was ginerally suspicioned that when the old man died she'd git it all.

"I was a husky young feller in those days and was in my element when in my boat. She was a single sticker with a jib, and I reckon I knew how to sail her.

"I was fishin' in those days, but in midsummer we was shut off from takin' lobsters and the mackerel are hard to get. Now and then I got a chance to take out sailin' parties. When Phoebe came down she always had money her dad had given her for spendin', and she used to invite sailin' parties to go out with her. My boat seemed to be her favorite, though my reputation for sailin' in a fog or at night might have had somethin' to do with it. At any rate, Phoebe always took my boat when she could get it.

"She was mighty fond o' the water, Phoebe was, and when she had nothin' else to do would come down to the dock and just loaf around. One mornin' she came down when I was startin' out to place my nets.

"'If you'd like to go with me to the fishin' grounds,' I said, 'you're welcome. I'm comin' back after placin' the nets, and I'll bring you right here.'

"She looked doubtful, but mighty sudden she jumps down on to the deck. I loosed the painter and pushed off. There was a good breeze and we sailed along in the sunlight.

"Maybe I wasn't a happy younker! Talk about work, it warn't work at all, although it was makin' a livin'. Phoebe was gay and pert as a little red squirrel. I took her out to the fishin' grounds to the lee of Black Island and brought her back in time for noon dinner, and she seemed to have enjoyed herself better'n when we had sailin' parties aboard.

"After that Phoebe used to go out with me a good deal. The bay was always full o' boats, and she often hailed friends o' hers. Sometimes they tried to persuade her to leave me and go with them, but she wouldn't. She told me she liked it better to have the whole run of the boat than sittin' bolt upright in a crowd ranged around the gunwale.

"When we went out in the mornin' the bay was usually quiet, but if we came back in the afternoon there was apt to be a stiff wind that kicked a sea which made a small boat uncomfortable. One morning Phoebe came down to the dock with a lunch box and asked if I was goin' to the fishin' grounds. I knew by the box that she calculated to make a day of it, so I said I was goin' and wouldn't come back till afternoon. That suited her. She got aboard and we sailed away.

"That afternoon the wind came on to blow fiercer than I had ever known it except in a regular storm. In order to make a straight course for home we had to take the wind and sea on the for-ard quarter, which wasn't comfortable, seein' that the boat soon was half full o' water and we was both wet as drowneded rats. But this wasn't the wust of it. It blowed harder and harder, and after awhile I almost wondered if so small a boat would live in such a gale.

"Phoebe sat down, backed by the cabin, watchin' me. There's somep'n for a woman to look at in a husky man fightin' wind and waves, and I could see admiration in Phoebe's face. She didn't seem a bit afrald, so long as I was at the tiller.

"When I luffed up to the pier and saw Phoebe jump up on to it I felt a big relief. She stood up there smilin' at me, and she says:

"'That's a sail as is a sail. Not one of your little pleasure excursions for wimmin and children.'

"'Just so,' says I, hopin' I'd never git caught ag'in in such a blow with a gal aboard, especially that gal.

"By this time I was desprit in love with Phoebe, and I was miserable, for it warn't to be expected that I would ever speak the word to a rich farmer's daugbter, I bein' nothin' but a fisherman, makin' little or nothin'.

"September was comin' on. Phoebe tole me to come up to the house, where she was, and she would settle some accounts tbere was between us. I went, and she had it all figured out that she owed me $1.37.

"She went upstairs to git tbe money, and she stayed so long tbat at last I looked around for somep'n to interest me. I got up and walked about the room. There was a partly finished letter layin' on the desk. Witbout thinkin' what I was doin' I read a few lines, and they was the most important lines to me I ever read. They just made my heart thump like a hammer splittin' logs.

"When Phoebe came in with the money she owed me I caught her in my arms.

"What I want to know is why she couldn't have let me know she wanted me in a plain, straightforward way, without writin' to a friend and puttin' it where I'd see it?"—F. A .Mitchell in Exchange.

CHAYOTES GOOD TO EAT NOW

Written for California Cultivator

Chayotes are providing good eating these fall days. The quickest and easiest, and many think the best way of cooking them, is to halve, peel, remove the seed, slice thin or dice and drop in a kettle in which is a little hot fat (a tablespoon is sufficient for four chayotes). Put on cover and cook on moderate fire for five minutes or longer, shaking once or twice to assure that the vegetable will not stick. When you think it is getting near the "sticking point" add a little boiling water, just enough at a time to keep from sticking. Add salt to taste and a little black pepper. Cooked in this way the chayote is mealy, sweet and delicious. Ten minutes is long enough to cook perfectly.

Roasted With Meat

Halve, peel and seed chayotes; place about roast meat as you would potatoes. If roasting pan is covered so that tbe chayotes steam as well as roast they will cook in a half hour or less.

Chayote Fritters

These are made on the same principle as corn "oysters." Put one large chayote through food grinder—this will make about one cup,—grind a cup of bread crumbs. Add salt and pepper and cover with two cups of sour milk. Let stand for a few minutes to soak into the dry crumbs. Stir in a cup of flour, a large teaspoon of baking powder and just a tiny bit of soda, enough to take away the sour taste of the milk. One or two eggs added is delicious, and a little sweetening also is an addition, though the chayotes are sweet themselves and add enough sugar to make the fritters "lickin" good. Bake on moderate griddle in small spoonfuls.

Tomato Gravy

By the way, here is something that,

The Cultivator Patterns

9064—Girls' Dress. Cut in sizes 8, 10, 12 and 14 years. The dress buttons from neck to hem.

9049—Ladies' and Misses' Shirtwaist. Cut in sizes 34, 36, 38, 40, 42, 44 and 46 inches bust measure. The sleeves may be made either long or short.

8688—Ladies' Waist. Cut in sizes 36, 38, 40 and 42 inches bust measure. The shoulder edges of the back extend over and the fronts are gathered.

9067—Misses' or Small Women's Dress. Cut in sizes 14, 16, 18 and 20 years. The neck is cut in U-shape and the dress fastens at the left shoulder and underarm seam.

9051—Ladies' One Piece Apron. Cut in sizes 36, 40, 44 and 48 inches bust measure. The round neck is bound with contrasting material.

8695—Girls' Dress. Cut in sizes 6, 8, 10, 12 and 14 years. The dress has a removable chemisette with collar, and sleeves may be made long or short.

9083—Ladies' One Piece Plaited Skirt. Cut in sizes 26, 28, 30 and 32 inches waist measure. The skirt is plaited at each side of the front to give the effect of a wide panel.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

added to the chayote cakes, or fritters, makes a particularly good Sunday breakfast, or supper any day.

Cut four strips of bacon in tiny cross slices, cook rather slowly, turning several times with cake turner to get an even golden brown — some cooks can even spoil bacon. Take out bacon and leave on pan in warming oven. Make gravy in the hot bacon grease by adding one heaping tablespoon of flour, smoothing quickly to get out all lumps. Add boiling water and milk to make of gravy consistency. Add cooked tomatoes—four medium sized ones make about the right quantity—season with salt and pepper, add the frizzled bacon and serve with the chayote cakes.

RAGBAGS

Written for California Cultivator
By Linda W. McNeil

HAVE you looked over the possibilities of your ragbag? Perhaps you might be as surprised at the result as I was.

In looking through the contents of an old trunk, which is used as a container for odds and ends, in search of a piece of cloth to mend a garment, several discoveries were made.

First an old white French lawn dress, discarded several years ago because its lace trimming was badly torn, caught my attention. I looked it over. The cloth was good, and in these days of soaring prices the cost of it would be something to remember. It was made in the generously full style of ten years ago, so there was material to work with. "Just the thing for the new waist you need and do not know where the price is coming from."

Two tablecloths were next brought to light; both were badly worn and had been tucked away to make into everyday napkins "sometime." A blue gingham house dress, the waist beyond repair, was the next find. Then a white voile waist with the sleeves torn at the seams, because they had been too tight, was found, and then the looked-for piece for mending was found and the search ended there—for the time.

From the French lawn I made a waist full and plain with a large lace trimmed collor. The house dress was made into an efficient kitchen apron. The voile waist was rejuvenated with a pair of full half sleeves of old India linon, one of the table cloths, carefully patched and darned, adorns the dining table, the other shall do likewise in the future.

Do you know how beautifully a tablecloth can be mended by putting a piece of bobbinet under the thin place, or even holes if they are not very large, and then darned carefully with fine thread? Even a real big patch if well ironed does not look too bad on the table in these times of strict economy, when we are all putting our money into the various branches of war work and so are short for some of our own needs.

If we will take it to heart and learn it, there is a valuable lesson for us free spending American women in all this conservation. Shall we learn it, I wonder? Shall we continue to live as plainly and simply after the need for economy has gone by, or shall we go back to the old extravagant ways?

One thing I am quite decided upon. I shall guard my ragbag, that usable garments may not find their way there and be kept from giving their full share of service to me or some other person.

RESULTS COUNT

The American: "What happened to you?"

The Tommy: "To tell you the truth, I ain't quite certain. About ten minutes ago Iwas 'avin' a tete-a-tete with a German sapper. He was a nice-lookin' boy—'ad a face like a murderer. We was crawlin' on our stummicks, when we come face to face. He says somethin' to me in German, an' I answered him in just as bad language."

"What happened then?"

"Well, I 'ates to brag; but I'm 'ere an' 'e hain't!"—Exchange.

Are there castors on your work table? Often it is a real convenience and saver of steps to roll the work table near the sink or stove.

CORNMEAL ONCE A DAY

Cornmeal is a good food because it is a cheap source of energy. The nutrients are so closely bound with the fiber, or roughage, that long cooking is required to soften the fiber and make them available.

More liquid should be used, and more fat may be used, with the very fine cornmeal made by the new milling process, than with the coarser meal made by the old process or ground at home. The home grinding of cornmeal saves the germ and certain other nutrients that are lost by the new milling process, but, on the other hand, the meal thus ground does not keep so well as the finer milled product.

Cornmeal Mush

One cup cornmeal, one teaspoon salt, three and one-half to five cups boiling water, or scalded milk, or milk and water.

Slowly sift the cornmeal into the hot liquid, or mix it with sufficient cold water to give it the consistency of a pour batter and add it to the remaining hot liquid in the upper part of a double boiler. Cook the mixture over direct heat, stirring it constantly until it thickens; then cook it over hot water for about four hours. Or use a fireless cooker container instead of a double boiler, and as soon as the mush has thickened place it in the fireless cooker for five or six hours or overnight. One cup or less of raisins, chopped dates, or figs may be added just before the mush is served.

Left-over cornmeal mush may be poured into a pan wet with cold water. When it is cold it may be sliced, rolled in dry meal, browned in a small amount of fat, and served with syrup. Another way of using it is to cut it in cubes, fry them in deep fat, and serve them with syrup or tomato sauce.

If the mush is to be fried it should be made stiff by using the smaller proportion of water. For a breakfast cereal more water may be used, the amount depending on the consistency desired.

Scalloped Cornmeal and Cheese

Into a buttered baking dish pour thick cornmeal mush and cheese sauce in alternate layers, using about one cup of sauce to two cups of mush. Cover the top with buttered crumbs, and bake the mixture for 39 minutes in a moderate oven.

Cheese Sauce

Three tablespoons butter, three tablespoons flour, one cup milk, salt, paprika, one cup cheese, grated.

Melt the fat, remove the pan from the heat, add the flour, and stir the mixture until it is smooth. Add the milk, return the pan to the heat, and cook the sauce until it thickens, stirring it constantly. Place the pan over hot water, add the cheese, and allow it to melt.

Southern Spoon Bread

Two cups scalded milk, one and one-half cups cornmeal, one teaspoon salt, two tablespoons fat, one or two eggs.

Sift the meal and the salt into the scalded milk. Cook the mixture for five minutes in a double boiler, and add the fat. Allow it to cool. Add the yolks of the eggs, and fold in the well-beaten whites. Turn the mixture into a well greased baking dish, and bake it in a moderate oven for 30 minutes. Serve it hot in the baking dish.

Peanut Scrapple

One cup fine cornmeal, one cup hominy grits, two teaspoons salt, two quarts boiling water, or milk and water, one cup ground peanuts.

Sift the cornmeal and the grits into the boiling salted water, stirring it constantly. Cook it for at least one hour, stirring it occasionally. Five minutes before removing it from the fire, add the peanuts. Pack the mush in a deep pan, and store it in a cool place. When ready to use it, cut it in one-half inch slices, and brown it in a small amount of hot fat.

Grated cheese may be substituted for the peanuts. When ready to use the scrapple, cut it in cubes, roll them in grated cheese, and pile them on a greased tin. Bake them in the oven until the cheese is toasted.

Bathe in comfort
Perfection Oil Heater chases chills in a jiffy.
Lights at the touch of a match—gives instant, cozy warmth. No smoke or odor. Portable. Economical.

My Name .....

Post Office .....

State ..... Street Number or R. F. D. .....

The prosperity of an agricultural district is measured by the intelligence of its seedsmen.

A progressive Seed House is a great asset to any agricultural community. The

Aggeler & Musser Seed Company

is such a seed house. It is

The Seed House of and for the Great Southwest

Thls Seed House has never slept since its incorporation in 1896. What it has done for the development of the Great Southwest ranks equally or probably more than any other of the many enormous industries.

Southern California is famous the world over for its fine vegetables.

Because the Aggeler & Musser Seed Company brought to the growers the seeds of these fine vegetables and educated the growers when and how to grow them.

Aggeler & Musser Seed Company have pursued the theory that there is some line of vegetation suited to each and every condition of soil and climate, and systematically went about to discover that vegetation and systematically educated the grower how to plant, when to plant and where to plant each particular vegetable to attain success.

Their latest enterprise is the introduction of Grasses and Forage Plants for the now unproductive.

At their booth in the Agricultural Building, Liberty Fair, Exhibition Grounds, you may see samples of grasses, sorghums and millets suitable for every condition of soil and climate.

Do not fail to see it. It may open some valuable suggestion to you.

Always on the alert for something better, some aid to agriculture, Aggeler & Musser Seed Company endeavored to grow potato seed perfectly free from disease, with only partial success; therefore, to make success complete, they have installed a large vat for the purpose of dipping all potato seed into a solution of Corrosive Sublimate, which will destroy the disease of scab and Rhizoctonia, making clean seed, which will produce more and better potatoes. This innovation is a great boon to growers in Southern California, where it is so much needed.

The growth of the Aggeler & Musser Seed Company has necessitated larger quarters. They are now installed in their new store in the Meredith Building, 620 South Spring Street. The retail department on the first floor, the offices on the second floor and the mail order department on the second and third floors. Their mill and warehouse is at Sixth and Alameda.

Be sure to write for their catalog, and remember the new address.

LIVESTOCK

The demand for good fed steers is increasing and premiums are being paid, over former prices, for good cattle in order to fill the existing export and domestic demands.

On account of the keen demand for the better grades there is widening in the spread between the top and bottom levels.

Receipts of range stuff are, naturally slackening. The supply of cows is adequate to meet demands, but fewer are arriving than during the last two or three weeks.

Hogs of desirable weights and quality are bringing top prices quoted. Quite a lot now reaching the Los Angeles market lack finish, and, in some cases, are too light. This market likes a handy weight hog, say, 175 pounds to 200 pounds.

The lamb market is firm on all grades. The wether market is strong, with good wethers scarce. Ewes are weak; the demand light, and the market dull and draggy.

Report of live stock conditions on the Los Angeles market as compiled by the United States Department of Agriculture, Bureau of Markets, through the local office:

Good Steers .....12.50@13.50
Medium Steers .....11.00@12.00
Common .....9.50@10.00
Good Cows .....8.00@9.50
Medium Cows .....7.00@7.50
Common and canners .....5.00@5.50

Prices quoted below are for carload shipments. Driven-in, or truck hogs sell for ½ cent less:

To California Fruit Growers

You are careful about the bank with which you deposit your money. You carefully investigate the tractor or other farm implement before buying. You want to know all about the automobile you buy. These are all important.

You should investigate and understand the quality of the tree spray you use. There's one way to be sure, and that is the brand. It is a well known name. Have you tried it before? Have your neighbors tried it? Has it proved successful? Altogether successful?

We maintain a bureau of information concerning orchard operations, especially spraying. Bulletins giving the best available information concerning the treatment of insects and tree diseases will be sent you on request.

Our entomologist, Mr. S. W. Foster, was for many years with the United States Bureau of Entomology, in close relation with the fruit growers of the Pacific Coast.

Your trees and your next year's crop depends largely upon the quality of the sprays you use this winter. It is too serious a matter to leave to chance. Use the recognized quality for the sake of security. Here is one place where looks don't count. The brand is the whole thing. Know the brand.

ORCHARD BRAND tree sprays are sold all over America. They are the acme of fruit tree sprays.

ORCHARD BRAND Lime Sulphur Solution

ORCHARD BRAND and Prepared Bordeaux Mixture

for spraying peach trees and almond trees to control blight and shot-hole fungus are the standard tree sprays of the nation.

UNIVERSAL brand oil sprays, for spraying deciduous fruit trees during the winter season, are highly concentrated, and the only quality you would buy if you knew all the facts.

Let us repeat: it doesn't pay to take chances with tree sprays. Nothing is so important as to be sure about the effect, before you use them. Afterward, regrets won't save the crop.

Write us about your orchard, all about it. Tell us your troubles. Our orchard service is at your command.

General Chemical Company

NUTS

The Almond Growers' Association has established opening prices as follows per pound:

Nonp. 27½
I.X.L. 25½
Ne Plus 24½
Drake 20

Outside dealers have named prices above these quotations and it is understood association stock is practically closed out and prices withdrawn.

Walnuts: Net prices have been named by the California Walnut Growers Association:

No. 1 Softshell 28
No. 2 Softshell 25
Jumbo 30
Fancy Budded 31½
Golden Gate Budded 29

Franquettes, Eurekas and other fancy varieties sold on sample. No. 1 Softshell guaranteed 88 per cent good; Fancy Budded, 90 per cent. In case of worms or damage by ants not more than five per cent.

RICE

Prices which rice millers of this state have voluntarily agreed with the food administration for California to pay to growers for paddy rice are as follows:

No. 1 and No. 2 Japan, in sacks, $4.32 per 100 pounds.

No. 3 and No. 4 Japan, in sacks, $4.16 per 100 pounds.

Prices for other grades will be paid for on a basic value proportionate, and no higher prices than those quoted above for any grades whatever will be paid.

The millers agree further to sell cleaned rice and by-products for prices not to exceed the following:

Fancy Japan, 1½c per pound.
Choice Japan, 7⅜c per pound.
Fancy second heads, 6⅞c per pound.
Screenings, 5⅝c per pound.
Brewers', 5¼c per pound.
Rice polish, $50 per ton, carlots.
Rice bran, $36 per ton, carlots.

GRAIN

Wheat—Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles terminals:

Hard Wheat—	Per Bushel	Per Cental
No. 1	$2.20	$3.62 2-3
No. 2	2.17	3.61 2-3
No. 3	2.13	3.55
Soft White—		
No. 1	$2.18	$3.63 1-3
No. 2	2.15	3.58 1-3
No. 3	2.11	3.51 2-3
Club and Sonora—		
No. 1	$2.16	$3.60
No. 2	2.13	3.55
No. 3	2.00	3.48 ½

For sacked grain add 9 cents per bushel of 60 pounds to above price. Deduction of three-fourths of a pound is made for weight of standard grain bags. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to merit.

Barley—Feed, 2.10@2.17½ per cental for choice spot; shipping, 2.20@2.25; milling, 2.25@2.30.

Oats—Red feed, 2.55@2.70 per cental; seed, do, 2.95@3.05, with recleaned at 3.15 @3.30; black, 2.55@2.65 for feed and 3.00 @3.15 for seed.

HAY

Under date of November 23, Scott, Magner & Miller says:

Receipts past week 731 tons. These receipts are very small indeed for this time of the year and under usual conditions would have a tendency to make a very strong market, but such is not the case as trade is extremely dull and arrivals have been large enough to supply all demands. During the week there have been quite general rains throughout the state which have been of great benefit to the green feed as well as to start crops that were already sown and to place other land in good shape for plowing. The purchase by the government of several thousand tons of hay in this market has been of considerable benefit to holders of hay in the interior districts.

The state bureau of weights and measures has indicated intention of going thoroughly into the matter of excessive quantities of dirt sold in baled hay. It is to be hoped that some laws will be passed covering this subject so that the blame of excessive quantities of dirt in hay will be placed where it belongs and farmers will be more careful in putting up their hay if they know that they will have to make reductions for the dirt therein.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling expenses must be added according to conditions.

Fancy Wheat Hay (light 5 wire bales) .....28.00@30.00
No. 1 Wheat or Wheat and Oat Hay .....26.00@28.00
No. 2 Wheat or Wheat and Oat Hay .....20.00@24.00
Choice Tame Oat Hay .....25.00@27.50
Other Tame Oat Hay .....20.00@23.00
Wild Oat Hay .....20.00@22.00
Barley Hay .....20.00@22.00
Alfalfa .....18.00@22.00
Stock Hay (in order) .....18.00@21.00
No. 1 Barley Straw, bale .....50@80

Damaged hay (all kinds), according to condition.

Citrus Fruit Market

Los Angeles, Cal., Nov. 26, 1918.

The last of the Valencias are bringing good prices, sales being made in New York on Monday as high as $11.65. The first car of new crop Navels was sold in New York, November 21 at $4.05-$5.40.

There is an enormous demand for lemons, Monday's sales on the New York market being the heaviest on California lemons in any market in the history of California citrus industry. Prices ranged on this market from $2.95 to $3.85. Other auction centers about the same.

Shipments

Shipments of citrus fruit from Southern California to date since November 1, 1918: Oranges, 32 carloads, lemons 512. To same date last season; oranges 1563, lemons 222. From Central California this season; oranges 565, lemons 103. To same date last season; oranges 162, lemons 25. From Northern California to date; oranges 22, last year same date, 3.

World Doings

Secretary McAdoo has resigned as secretary of the treasury and director general of the railroads of the United States. His successor, or successors, has not been announced. It is asserted by the Providence Journal that his resignation is in protest to the plan for retaining government ownership of the railroads.

A German correspondent to the Morning Post (London) writes from Kiel: "We are better off for food this year than in 1917. There is plenty of grain and potatoes; so there will be no shortage." The Post comments: "This only confirms the belief here that the conditions of scarcity advertised in Germany's daily whine about the armistice conditions do not exist. In this connection it is interesting to note the story of the finding of a great hoard of foodstuffs cached by his late Imperial Highness of Germany, told by a socialist, Wilhelm Carle, in the Frankfort Volks Stimme. The story is under the heading: "How Wilhelm Held Out."

APPLETON Sheller

Most efficient shelling principle

Coiled springs instead of ordinary flat springs give greater flexibility to the fingers that hold the ears up against the shelling discs. Smallest ears are held firmly until shelled *clean*. Largest ears go through without mashing or choking.

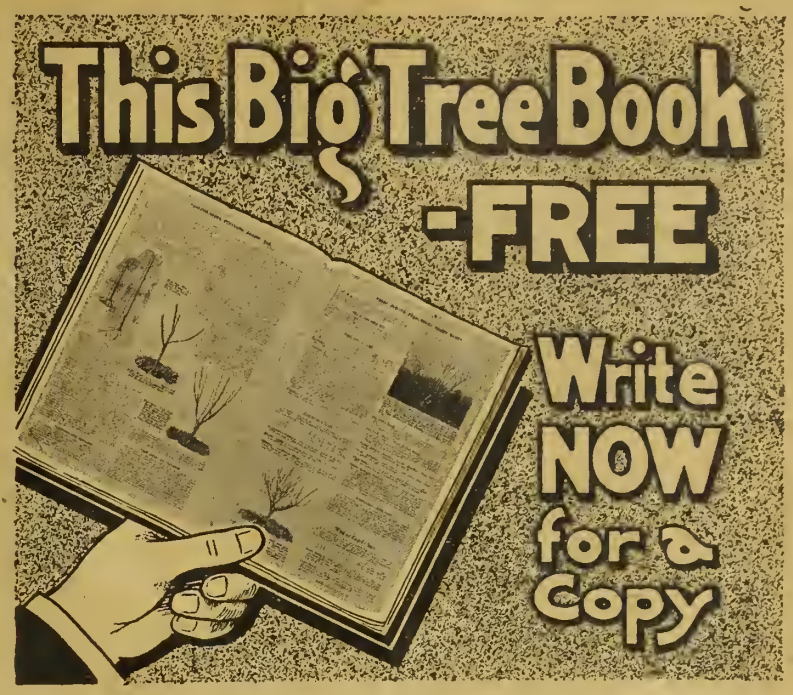
Cleaner Shelling and Cleaner Corn.

Shells clean wet or dry. No springs breaking in zero weather. The Appleton does not attempt the impossible, to fan out trash after it has passed through the screen, but prevents it from going through.

Free Booklet

describes three sizes, three styles, mounted on wheels or unmounted, with or without cob stacker, sacker, wagon elevator and extension feeder. You can't afford to put it off—write for it *today*.

H. C. SHAW CO.,
Dept. B, Stockton, Cal.



THIS practical planters' guide lists and describes the best proven varieties of all fruit-bearing trees, vines, ornamentals and roses.

It gives a lot of other information which, if followed, will keep you from making unnecessary and costly mistakes.

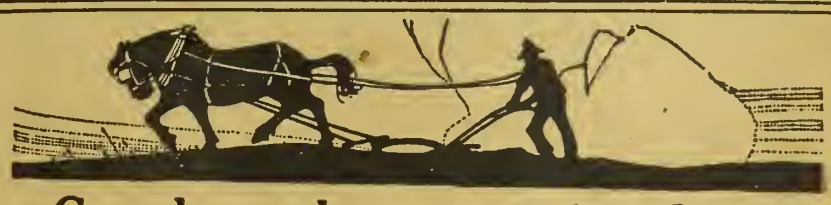
When you buy trees you want them to grow; you want them to bear; you want them true to name.

Fancher Creek trees are grown from selected buds and properly cared for. Trees are very vigorous and well rooted.

Fancher Creek Nurseries

204 Holland Building

Fresno, Calif.



Guard your harness against decay

When the natural oils in your harness dry out, decay sets in. Dust, sweat and moisture attack the leather fiber and cause rot. Eureka Harness Oil takes the place of the natural oil and preserves the leather. Keeps harness strong, flexible and jet black. No animal oil in "Eureka"; rats, mice and other rodents dislike it and won't gnaw harness dressed with

EUREKA HARNESS OIL

MADE BY STANDARD OIL COMPANY (CALIFORNIA)

Ornamentals and Fruit Trees

CALIFORNIA NURSERY COMPANY VERIFIED VARIETIES Niles, Cal.

Catalog Sent FREE

We are offering this season a magnificent stock of fruit and ornamental trees, climbing plants, shrubs, vines and roses.

We have the largest experimental orchard of verified and tried varieties of fruit trees true to name of any privately owned orchard in the country and it is from this reliable source that we secure our buds and thus can vouch for the pedigree of our trees.

Write to us about planting plans, giving list of varieties wanted. We will furnish you with an estimate of the cost, together with valuable suggestions.

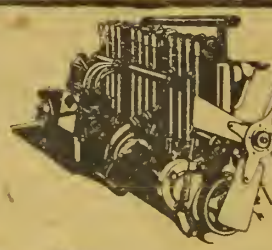
—"REX" SPRAYS — The Standard for 20 years

The Valve-in-head-type engine illustrated here, like all *internal combustion engines*, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. Zerolene fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*



ZEROLENE
The Standard Oil for Motor Cars

It Keeps the Engine Young!

Zerolene keeps the engine young—full-powered, smooth-running, and economical in fuel and oil consumption—because it is correctly refined from selected California asphalt-base crude. Gives better lubrication with less carbon. Made in several consistencies. Get our Correct Lubrication Chart covering your car.

At dealers everywhere and Standard Oil Service Stations.

STANDARD OIL COMPANY

We Manufacture Levelers for Any Power From 6 Horses to a 75 H. P. Tractor

A Schmeiser Leveler
of the "Giant" Type
WILL WORK WONDERS ON YOUR FARM

Moving immense amounts of dirt daily, and working on ground too tough for horses and Fresnos to tackle, SCHMEISER POWER LAND LEVELERS are now being used with utmost success by a great many ranchers, large and small—also by contractors—saving their owners time, labor and money.

WE SEND THEM ON THREE DAYS' TRIAL

So extremely simple, a child could operate one, as a simple twist of the wrist raises and lowers the bucket or holds it stationary, as the case may require.

YOU SHOULD
send for our LATEST catalog J-600 which is full of interesting information on LABOR SAVING DEVICES and machines for moving the earth.

Schmeiser Manufacturing Company
22 Mechanic St. Davis, Cal.

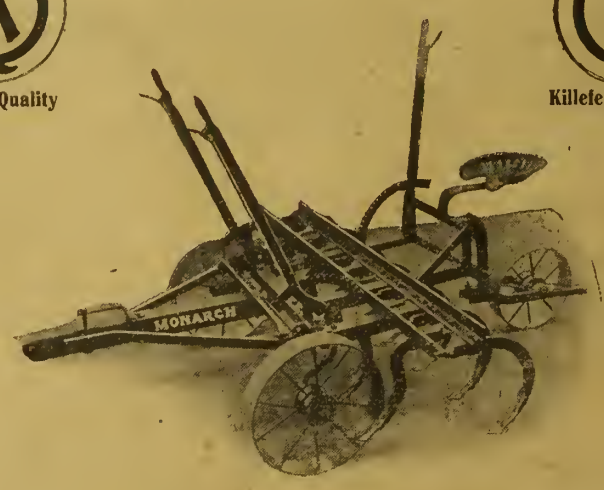
Manufacturers of

Sure Pop Almond Hullers and Separators, 3 sizes; McGarvin Fruit and Olive Graders, any size; Schandoney & Harrington Equalizing Hitches, any size; Diamond Special Harrows, Baker Clips, Clevises, and Schmeiser Portable Automatic Hay Derrick. We sell the Martin Ditcher and Grader.

Monarch Cultivator

Killefer Quality

Killefer Efficiency



The Killefer Monarch Cultivator has more varied uses on the ranch than any other tool we manufacture. As a Beet and Bean Chisel it has no equal. As an Orchard Cultivator, where deep cultivation is desired, it gives perfect satisfaction.

As an Alfalfa Cultivator, when fitted with our Special Alfalfa Tooth, it does excellent work, loosening the ground to a depth of from six to eight inches without injuring the stand. This deep cultivation enables the water to percolate to a greater depth than any cultivator on the market. Made in 5, 6 and 8 ft. size.

Order a Monarch and make us prove our statements.

The Killefer Manufacturing Company
2209-21 Santa Fe Ave. Los Angeles, Cal.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

A grove of Satsuma oranges in Butte County is shown on this week's cover. In "Citrus in the Sacramento Valley" on Page 573 Mr. Hodgson recommends more extended planting of this variety in suitable sections. In the Cultivator of November 16 he gave particular attention to the Satsuma.

DRY LAND CROPS

There are large areas being farmed on dry lands which yield some profit in years of average rainfall but which show a loss in the dry years. Much, if not all, of this loss could be eliminated in the dry years and a better profit made in the good years if better methods and more careful farming were done, and this without materially increasing the expense. The plowing is almost always too shallow, the object being to get over the acres without regard to quality of work, cheap seed is sowed with a broadcast seeder and the crop left to whatever may happen.

In the beginning only as much land should be farmed as can be well done. The seed bed should be deep and well pulverized so it will hold moisture. The best plump seed should be sowed as it will have the vitality to withstand adverse conditions that may come before the plant is well established. The planting should be done with a drill to get all the seed at the proper depth to secure full germination and the use of all the moisture of the early rains or of light later rains. Sow as early as possible and do not use as much seed on dry land as on those that are naturally damp. It is much better to have one well filled head than several stems that do not head at all because all the moisture was used before the heads were made. If dashing rains come before the grain shows above ground go over it with a harrow having the teeth slanted well backwards, or with a roller. Harrow the field after every rain to prevent the formation of a crust and the loss of moisture which may be needed so badly later in the season. Keep up the harrowing every two weeks until the grain stalks begin to make joints.—J. B. N.

ONE IN TEN, AND OTHERS

Reading the daily press and magazines one catches the idea that every state in the Union is planning a vast program for taking care of the returned soldiers — and that each state hopes to attract the majority. The motive actuating the various states is to be commended but it strikes us that it might be well to inquire into the experience of other countries. Secretary Houston, in his address at the conference of agricultural editors, states that Canada has found that only about ten per cent of the returned soldiers need or want government assistance and that the other 90 per cent did not wish to be bothered.

The secretary raised the question as to whether or not it was fair to expect that the boys who came from farms would return to them. We think so. We also believe that most of those who gave up professional careers will begin where they left off. There is little doubt, however, but that a goodly number from other occupations will turn to agriculture, but we find little basis for expecting a general exodus to the land.

So it would seem that there is little justification for many of the vast schemes proposed, but rather that considerable energy should be directed along lines calculated to make agricultural operations in general more attractive and profitable.

A broad plan embracing better markets, better highways, and better rural schools would go far toward attracting to agriculture those of our soldiers who evidence a desire to farm, and would, at the same time, be a splendid and fitting recognition to those soldiers of the land who, though seriously handicapped through lack of labor, and without the consideration accorded most lines of industry, produced the grains and fats that won the war.

BACK TO THE FARMS

We recently commented on the appeal of a Fresno mother for the speedy return of the boys from France. All other mothers, and all of us, are still asking: "When will the boys come home?" The war is over, at least our hopes are strong it must be. "Will our boys come home tomorrow?"

The war department is answering this question by thousands of discharges already granted. The trains are filled with boys coming, and each day sees new orders which mean the return of more boys to the farm.

But there are many more who will not receive these discharges for months.

The close of the Civil War found somewhat more than 1,000,000 Union men under arms. Demobilization was not completed for 17 months.

The United States now has in France, England, Russia and Italy nearly two and a quarter millions. Almost as many more are in cantonments and training schools here in the United States. Shiploads of those in England are already on the way home, as are many Canadians and Australians. While most of the American boys have been in Europe but a few months, the boys of these other countries have been in the trenches four years. They may not be given precedence over American troops but certainly their needs must be considered and shipping handled accordingly.

Without wise arrangement — or even observing common humane procedure—the Germans have turned Allied prisoners loose to find their way home, if starvation and disease do not prevent. Austrian troops in wild scramble to get home from the Italian front have been brushed from sides and tops of cars to which they were clinging when they passed through tunnels. That American boys will be discharged as rapidly as possible is shown by every movement of the war department, but there will be no hysteria.

Thousands in American cantonments have already been given choice of the three R's — Resignation, Reserves or Regulars. The great majority are accepting the first and taking their discharge. One's doubts on this point are quickly dispelled by the effort to purchase sleeper berths.

The choice of Reserves gives privilege to the soldiers to finish training then return to private life with a possible 15 day field training yearly.

Then there is that other factor of effect of changing from occupations of war to those of peace, the effect on financial and economic conditions generally. Every angle is to be considered, is being considered, and we believe with greatest wisdom.

CALIFORNIA WINS AGAIN!

Just as we close our last forms a telegram from Chicago announces the winnings of the University of California at the great International Live Stock Exposition now being held at Chicago.

The senior yearling Shorthorn steer, California Marvel, was first in class and champion Shorthorn steer; a senior Angus calf was first in class and reserve champion Angus steer; the junior cross-bred calf, California Grizzly, was second in class. California also had the champion grade Shropshire wether; reserve champion pen of Poland-China barrows; first for best five steers, wethers and barrows. A total of five firsts, six seconds and special prizes was awarded the university.

California should be proud of the showing made by the animal husbandry department and the live stock interests of this state will be greatly benefited through the efforts of Professor True and his associates to demonstrate the possibilities of this state in the production of the best in live stock. More details will be given next week.

THE LIBERTY FAIR A FACT

After passing through the epidemic of influenza which necessitated repeated postponements of the opening date, The Liberty Fair became an established fact, Wednesday, December 4.

The Liberty Fair has suffered little on account of the delay—as a matter of fact, the management has taken advantage of the situation and many improvements have been made and the exhibits have been strengthened and made more complete.

The unusually strong show of live stock, particularly beef cattle and swine, is perhaps the outstanding feature. What is easily the best show of fat steers in carload lots that has ever been made in the state is in the pens at Exposition Park.

But no branch of agricultural activity has been overlooked, and the Liberty Fair which will continue to December 14 deserves the unstinted support of everyone.

It's a big show, a real show, a clean show and a beautiful show and represents in the strongest terms a lesson that can be taken home with profit by all fair visitors.

WINTER IRRIGATION

The evaporation of water from the soil is not nearly so rapid in the cooler weather but care must be taken that growing crops, such as alfalfa, the green manure crops and the orchards do not feel the need of moisture. Alfalfa will go through a dry winter without water but if there should be long continued dry weather water should be applied.

This will serve the double purpose of killing the gophers and of keeping the alfalfa in condition to begin growing with the first warm weather. We want tonnage when we plant green manure crops, and to get this must have the ground in the best possible condition for growth when the warm days come in winter, so must not neglect the water. Deciduous orchard trees do not need more than a damp soil until the buds begin to open, but citrus orchard soil should be kept moist at all times. If there is a check in growth at any time the fruit will never attain its normal size.

If water is cheap and plentiful the soil may be filled to a depth of five or six feet, but do not pour on water because it does not cost much. The soil is like a sponge which can be filled, but pouring on water after the soil is full only washes out the soluble fertilizer and does not add to the amount of water in the soil.—J. B. N.

CAR WINDOW NOTES

I note in Southern Indiana that all water tanks have in addition to the regular supporting frame an immense column or box-like additional support under center of tank. Finally it "soaked through" that this was simply the weather protection to pipes to prevent freezing and bursting. Why live in such a country when other side of Rockies lies California?

There's a boy poking brush and wood under a big iron kettle of steaming water. Nearby is an old time sled for platform against which leans a barrel, at 50 or 60 degree angle. I can not distinguish any butcher knives at this distance but assume a man will soon appear with them and the porker over the fence will be refused an armistice. He should have gone to California for there they don't put up, or down, so much winter pork. That's the penalty for staying in Ohio and making a hog of himself.

Little family cemetery on hill, four graves, each surrounded by moss-grown picket fence. Not a bad idea to have the long rest on the old farm where they use to get so tired working out the forest primeval and making food sun-up to sun-down.

Winding stream, maple trees, leaves drifting before late autumn breezes, up the opposite bank of the stream wild strawberries, with red and brown leaves, wishing the snow would come and cover them from the biting wind.

Nearing Eastern Ohio and Pennsylvania coal fields. Chimneys everywhere belching out black smoke. I've been more used to seeing a bunch of keen-eyed farmers about tractor or implement display or at farm bureau meeting Asking, then home and Doing those things which have made possible the winning of the war. The farmer's job has little of the spectacular. But he has stayed and worked in his drab setting, hardly taking time to observe the richer color of sunrise skies under which he has worked and without the thrill which comes from those myriads of smokestacks and pounding of triphammers which make the train tremble as we pass. Also without the thrill which comes from "Dollar an hour and double time for overtime."

Evening: Flame two or three feet high in farmer's yard lighting the front of home. "That's just the farmer's use of natural gas to light up his farm both day and night."

Pennsylvania: Stone houses, strongly built, immense stone or frame barns. Sometimes dairy cows in when winter comes and not out till spring. Stone houses, no projection of roof at gable end and practically no eaves. Brick houses, green blinds, white sashes and window frames. Not one such but thousands.

Maryland: Every house two story, some "ell with wing"; more only the stiff, upright two story box covered with steep "Gothic" roof. Oh, for a look at a homey, cozy California bungalow.

Wooded hills, oaks, maples, birches, scrub pines, elms. Lazy streams. Nature has done her part.

There is a great river, a city, a dome, a tall granite shaft—

Washington!

From War to Peace

By C. B. Messenger

WILL America change from a war to a peace basis with as little jar, with as little general disturbance to productive, manufacturing, financial and other conditions as she did from a peace to a war basis?

All are asking—none is wise enough to answer. Some are guessing one way, an equal number guessing the other way.

As editor of the Cultivator I have been discussing a little and listening more to other agricultural editors from nearly every state in the Union in conference with Secretary of Agriculture David F. Houston and others at Washington. And instead of using the editorial we and being formal, I'm going to write a commonplace letter to Cultivator folks.

I'll not answer the question asked above, but I'm going to be frank and say that if I were it would require three letters for my answer.

* * *

I left the coast of the Pacific Friday, November 15, and traveling continuously until Wednesday, November 20, I smelled the salt air of the Chesapeake, and on this trip I saw:

Orange and lemon trees of California loaded for another year while the fruits and field products of the past year are yet going to market in great quantities. I saw the ranges of Arizona, New Mexico and Texas covered with cattle, coal mines yielding thousands of tons of coal, wheat fields of Oklahoma, Kansas and Missouri green and the grain so high as to need pasturing off. I saw the yards of Packing Town in Kansas City filled with sleek cattle, the mills of St. Louis pouring out the black smoke in haste to complete contracts, cornfields of Illinois, Indiana and Ohio with thousands of acres of corn still unhusked and other acres which have been husked piled like heaps of gold over the field.

I saw in Southeastern Ohio amongst the hills of coal and iron every mill and shop running full handed. At Steubenville—a second Pittsburgh—the banks of the Ohio River were lined on both the Ohio and the West Virginia sides with great steel and iron mills filled with men "stripped to the waist and with sleeves rolled up." An hour later at Pittsburgh—I'll never forget the sight. It was dark. The glow from the furnaces and the many lights made the river like one of fire. But the word Pittsburgh means more to Cultivator readers than I can write, excepting that this is war-time Pittsburgh.

A night through Pennsylvania. Next morning while yet dark the mills and foundries of Harrisburg sent a glow through my sleeper window and gave an almost equal firelight effect to the Susquehanna.

Then in Washington I learned that all the great steel and munition plants are still filling contracts. Cannon are being cast today and great shells still are turned out by thousands while square miles of warehouses in France are filled with others, not one of which will ever be fired, for the war is over. Peace is not yet declared, but the war is over and for a thousand years. Therein is the compensation for the awfulness of this war.

The awfulness is not fully appreciated as far away as the Pacific Coast, not even here in Washington, though the intense activities here bring it nearer home. But today while in the dining room, Dean Hunt of U. C. came and sat down at my table. He is just back with an agricultural commission from shell torn fields. He has seen the boys brought in from the field and laid in rows on the floor while waiting for the operating table. He saw—but that is another story.

I said it is over for a thousand years, "then why the casting more guns?"

A war of magnitude calls for contracts of magnitude and I doubt not a war contract is as binding as any other. However, contracts not yet under way are being recalled. Those uncompleted are being filled and here is one reason—outside the binding nature of contracts—why it is done: Bread of many thousands is now depending on this class of work established by the war. Immediate termination of war work before adaptation of the mills and shops to other lines would force these people into pauperism or at least would cause great suffering.

The government policy plainly is to give all possible aid to all interests and maintain the present stable conditions. Because of the need for months to come of troops in France and Germany, also the limitations of transportation, it will be a year and perhaps two before all American troops will return. This gradual return will in addition prevent serious upsetting of labor conditions.

But about agriculture. There's the rub and therein is shown great interest by official Washington. Food, especially more meats, is the call. Europe's animal industry is greatly reduced. But on every hand, more even than in war, the farmer must produce more. He has produced more during the past two years with less help than ever before; he will continue—providing it pays.

The one dominant thought of the conference has been, stop "farming the farmer," stop advising, stop fixing and give a fighting chance, in fact a chance to make money, and the food supply will care for itself.

The great injustice of wheat grading rules called for a roast from every large wheat state. "The rules of the grain corporation have cost the farmers millions" was asserted and the "millers have made those millions" was almost as emphatically charged. The department has promised thorough investigation.

Other features needing attention and recommended are: A department of economics; the department of agriculture should cooperate with federal reserve banks (not the farm loan banks) in securing the handling of cattlemen's paper, or, more to be desired, aid rural credit cooperative effort by which farmers' short time paper can be handled; extension of greater educational opportunities through rural schools to boys and girls; increase of appropriation for provisions of Smith-Lever bill; improvement of farm community social conditions: don't push county farm agent work faster than thoroughly good agents can be secured; continue after war some features — especially those which may control profiteering and speculating in foods of the food control; not more crops but better prices; tenancy—and a thousand, or at least many, others. But as noted, "the second half of agriculture," economics, had large place in the discussions.

To come back to my first question: It is not answered. But there is a wonderful possibility confronting America and the wisdom which has in such large measure prevailed for the past four years appears to be available for the coming years. But honestly I never saw so many question marks in my life as have bobbed up in these two days' conferences.

Secretary Houston is a man of large vision and he has put the department on a higher plane than it has ever been on before. He confided as to changes which will give still greater efficiency.

Washington, D. C., Nov. 21.

* * *

Farm paper editors are peculiar things and in fact somewhat interesting. They often go to the farm bureau or a convention and from a back seat size up the farmer and his methods and pass on from such observations some hint to other farmers. It is good for one or rather several such observers, whose whole success depends on some others' doings and sayings having enough of value that they may pass them on as purely original gray matter, to gather themselves together for a bit of introspection.

Introspection however, was far from the real object of the gathering recently held with Secretary Houston in Washington. Notwithstanding, I believe every agricultural editor present realized the opportunity of the present moment and need of best endeavor.

It was a most informal gathering of men without organization, without definite plan, with only one inquiry—"how may we best serve?" Hence there was little time given to introspection or inspection of others; the immediate inquiry of the secretary of agriculture was as to how service may best be rendered at this moment.

There were editors representing more than half the states of the Union present. They were: H. N. Owen, Farm Stock and Home, Minneapolis, Minnesota; Carl Williams, Oklahoma Farmer-Stockman, Oklahoma City, Oklahoma; E. T. Meredith, Successful Farming, Des Moines, Iowa; E. E. Fraville, Western Farmer, Portland, Oergon; Ben F. Biliter, Indiana Farmers' Guide, Huntington, Indiana; S. R. McKelvie, The Nebraska Farmer, Lincoln, Nebraska; Edwin A. Smith, Washington Farmer, Spokane, Washington; Meade Ferguson, Southern Planter, Richmond, Virginia; C. B. Messenger, California Cultivator, Los Angeles, California; Charles Dillon, Capper Farm Papers, Topeka, Kansas; A. G. Kittell, Nebraska Farm Journal, Omaha, Nebraska; A. J. Anderson, Pennsylvania Farmer, Philadelphia, Pennsylvania; J. R. Waterbury, Michigan Farmer, Detroit, Michigan; John F. Cunningham, Ohio Farmer, Cleveland, Ohio; Fred W. Merrill, Kimball's Dairy Farmer, Waterloo, Iowa; John D. Douglas, The Maryland Farmer, Baltimore, Maryland; Paul C. Burchard, Hoard's Dairyman, Fort Atkinson, Wisconsin; H. Gaylord, Missouri and Kansas Farmer, Kansas City, Missouri; C. V. Gregory, Prairie Farmer, Chicago, Illinois; John J. Dillon, Rural New Yorker, New York, New York; DeWitt McMurray, The Semi-Weekly Farm News, Dallas, Texas; W. C. Deming, Wyoming Stockman-Farmer, Cheyenne, Wyoming; John Fields, Oklahoma Farmer, Oklahoma City, Oklahoma; Chester C. Davis, The Montana Farmer, Great Falls, Montana; Frederick L. Chapman, Better Farming, Chicago, Illinois; George Martin, Farm and Fireside, New York City, New York; Ben B. Lowhe, The Dakota Farmer, Aberdeen, South Dakota; E. S. Bayard, National Stockman and Farmer, Pittsburg, Pennsylvania.

Houston is a democrat — I mean democratic. We were all as one family gathered about his big mahogany desk in easy chairs, listening, interrupting, commenting, or questioning.

The secretary reviewed, in a few short moments, the war, America's entry, her wonderful record of preparation and of participation in its ending. America has done what she started to do.

Now, will America be as successful in changing from a war to a peace basis as she was in changing from a peace to a war basis? The secretary and all in the conference had but one answer.

In the fulfillment however, there is called for the best in thought and endeavor of every American. Hence official Washington wants the best from every one of the fifty million farm paper readers. The best from that fifty million will come with quicker and more enthusiastic response than from the other half or two-thirds of the country, many of whom do not know the true meaning of a Republic or Democracy. It is no time for force; it is a time for education and cooperation.

The first appeal to the American farmer is Food. The most dangerous man in the world is the man with an empty stomach, listening to the hunger cries of his own little ones. Eastern Europe is filled with hungry millions. Can those people be fed before anarchy takes entire possession? Europe must answer this question in large part, but the American farmer by his own fireside these long evenings has in his planning of coming crops a large part in the answer.

Must this answer be made by the farmer only from a humane or philanthropic standpoint? No, for while the humane appeal will be strong with every producer, economic conditions must be maintained in which the farmer's own family shall not go hungry. The farmer must be as exacting as to his bank balance as is any other business man.

The coming year's peace food program of the department of agriculture is in the making and within a few days will be given out. It will be no less strenuous than that of the last war year. The strong appeal will be along live stock or meat production lines. Live stock resources will be slowest of increase in the reconstruction of Europe.

The secretary believes that in most states of the Union rural tenancy is decreasing and ownership increasing. It is "unfortunate psychology" to call attention at this moment to the "small farm" idea.

Rural finance is one long question. The federal reserve banks have made it possible to finance this world war with less strain than events of far lesser magnitude have before put upon the country. Rural finance still needs correction. The federal farm loan is one long step. There must still be other institutions or methods which will enable the farmer, especially the live stock man, through personal credit to secure money on short time paper and, in part at least, on moral risk. No great industry is financed at such high costs as that of

Continued on Page 583

Agricultural News Notes of the Pacific Coast

Northern California

Rice growers are still sufferlng serious damage from wild ducks.

Green peas are being put on the market from the Hayward section.

The Suisun district shipped out a carload of tomatoes to Chicago last week.

Several express shipments of navels have been made from Lincoln, Shasta County.

No shipments of deciduous fruits are now being made East except of grapes.

A Colusa County farmer has just brought in a big bunch of feeders from Arizona.

Happy Valley, Shasta County, has had a big crop of olives this year and of fine quality.

The Tyler Island district of Sacramento County is making heavy shipments of celery to Eastern markets.

Butte County orange growers are still insisting that the eight to one maturity test for oranges is impracticable.

The property of the old Cloverdale Citrus Fair Association has been sold at public auction, bringing something over $4000.

The San Francisco Dalry Exchange now fixes prices on eggs but once a week, as it has been doing for some time with butter.

Inspection of the cattle ranges of the Tahoe national forest has been made by Supervlsor Bigelow and C. E. Rachford, grazing expert.

The Sonoma County farm bureau is taking up a good roads campaign. A committee has been appointed to thoroughly study conditions.

Prune growers in Tehama and Shasta Counties have been having considerable difficulty in getting their fruit dried owing to weather conditions.

The farm bureau at Live Oak, Sutter County, has asked the supervisors to pass an ordinance imposing a license of $2.00 on each dog in the county.

Oroville is now shipping its seven or eight carloads of oranges a day. The crop is only about one-fourth normal but those who have fruit expect good prices.

The annual meeting of the Nevada County farm bureau which was to have been held in November on account of influenza epidemic was postponed to some time in January.

O. W. Jarvis has been appointed farm adviser of Sacramento County to serve in place of Carl Williams, who has been granted two years' leave of absence on account of sickness.

The engineering department of the state is preparing to measure the snow fields of the Sierra this winter in order to gauge the water possibilities that may be counted on for irrigation.

Capay Valley's rice crop is practically harvested. The quality of the grain is good. It is believed that with the settling of the irrigation problem a much larger acreage will be planted in that district next year.

The Placer County farm bureau announces meetings for December as follows: Mt. Pleasant, December 9; Weimar, 11; Allen, 13; directors at Auburn, 14; Penryn, 16; Bowman, 18; Long Valley, 21; Gold Hill, 23; Mt. Vernon, 28.

Central California

Lindsay will ship over 2000 tons of olives.

There has been some damage to cotton during the recent rains.

A Lindsay olive grower reports sale of Sevillano olives at $450 a ton.

A second flood control district for Bear Creek in Merced County is now being agitated.

A short course in beekeeping is now being given at Visalia. Sessions will close December 14.

Stanislaus County farm bureau held its annual meeting and election Saturday, November 23.

Lindsay's shipment of oranges thls season has been far ahead of last year's to same date.

Woodlake, Tulare County, has shipped out a quantity of navels for the Thanksgiving market in New York.

Packing plants of the Prune and Apricot Growers' Association are now ready to receive second quality fruit.

Milk condensaries are now allowed their full normal requirements of sugar, and new condensaries may be opened.

Under the new sugar beet contracts now being circulated in the Visalia district a minimum-guarantee of $7.50 a ton is made.

Seventy-five thousand acres of wheat, lt is estimated, will be planted in the northern part of Tulare Lake Basin on the south side of the Kings River.

Warehouses and elevators in eastern Merced County report holding 23,500,000 pounds of barley in storage, having a value of $470,000, figuring on a basis of $2.00 per 100 pounds, the price belng paid for the few small lots sold.

The Stanislaus County farm bureau announces the following meetings for December: Denair, December 9; Mitchell, 10; Thalheim, 11; Tegner, 13; Wood Colony, 16; Hickman, 18; Fairview, 20; Orange Blossom, 21; Claus, 23; Ceres, 26; Patterson, 27.

The Monthly of the Kern County farm bureau publishes tentative dates for meetings of the local farm centers: Weed Patch, December 2; Kern Delta, 4; McFarland, 6; Delano, 9; Wasco, 11; Rio Bravo, 12; Edison-Fairfax, 13; Pond, 18; Rosedale, 20; Shafter, 23; Arvin, 27.

The government is taking all solid packed canned tomatoes and a large quantity of extra standards and those packed in puree from whole tomatoes, according to H. Clay Miner, purchasing agent for the food administration. All canned tomatoes packed with puree from tomato trimmings have been released for civilian use.

Vine pruning demonstrations will be held by Prof. F. Flossfeder in Fresno County at Biola and Kerman December 12; Reedley and Parlier, 13; Carruthers and Raisin, 16; Easton, Oleander and Kingsburg, 17; Temperance Colony and Clovis, 18; Del Rey and Sanger, 19, Fowler and Selma, 20; Bowles and Monmouth, 23.

Canned vegetables and dried fruits may be licensed for export to all countries except the United Kingdom. Italy, France and Belgium under an order just issued by the war trade board. Licenses will not be granted to the western Europe allied countries as the purchase for those countries is being made by the allied export commission.

Southern California

Redlands has begun shlpplng navels.

Victorville wants a fruit packing house and by-products plant.

The walnut house at Goleta, Santa Barbara County, has already sent out 40 carloads.

The Riverslde Heights Cltrus Association reports sales in the New York market of Valencias at $13.80.

It is proposed to establish a new cannery in West Riverslde. The cannery will handle largely vegetables.

The Hemet Orange Growers' Association shipped out several carloads of fruit for the Eastern Holiday trade.

The American Beet Sugar Company has a large force engaged in planting sugar beets on lts ranch near Arlington.

Lima bean growers of the district in Santa Barbara County between Carpinteria and Naples estimates a $600,000 crop.

Orange County Lima bean growers have received $350,000 from the Lima Bean Growers Association in first payment for beans delivered during October.

The Imperial Valley Long Staple Cotton Growers' Association has decided to open classes in the classing and valuing of cotton, for the benefit of the cotton growers who will meet every Tuesday afternoon.

The bean growers expect the coming of peace to open up an immediate market for their product both because of opening up European countries and allowing canners sufficient tin to handle a big pack.

Imperial County has resumed the holding of farm bureau meetings which were suspended by the lnfluenza quarantine. The regular schedule will be followed, with no attempt to "make up" lost meetings.

Horticultural Commissioner Sharp of Riverside County estimates the value of farm products of Hemet Valley at a million and a half. This does not include dairy products, honey, or miscellaneous small crops.

Olive growers of Fallbrook plan to keep their new olive factory busy, processing other products throughout the the year. So far the plant has handled tomatoes from 150 acres. It is now ready to work on olives.

H. J. Ryan, the new horticultural commissioner of Los Angeles County, assumed the duties of his office December 1. Mr. Ryan was formerly with the United States department of agriculture and stationed at Alhambra.

Bean packers throughout the country will be allowed to operate at normal capacity for three months, beginning November 1. The food administration announces that it is assured of sufficient tin plate to permit the packing of beans in normal quantities.

Inspection of cattle shipped from Riverside County points began on November 25, according to the announcement madc by the cattle protective board, which has appointed the following men inspectors: Emmet Singletary for Riverside, Highgrove, Arlington, Corona, Perris and adjacent territory; J. O. Freeman, of Temecula, for Elsinore and Temecula; Albert Pico for the San Jacinto country; Ben Barton de Crevecour for Banning.

The Coast and General

Florlda is now shlpping out about 600 carloads of oranges and 400 carloads of grapes per week.

Florida is now making large shipments of winter truck crops, beans at present belng the heaviest shlppers.

The Colorado State Potato Growers' Associatlon will hold its annual meeting at Fort Collins, December 10 to 12.

In the Salt River Valley, Arizona, the long staple cotton crop grown this year on 75,000 acres is estimated at approximately 35,000 bales.

The Fruit Growers Conference will be held at Spokane, Washington, December 10-13. Federal box apple grades will be the main subect of discussion.

The $10 a day trackage charge on perishable shipments, which went into effect November 1, has been temporarily set aside by the railroad administration.

The port of Santa Rosalia in Lower California is developing into a good market for rice, beans and other California food supplies. It is a large mining center.

Since 1916, largely by the use of tractors, Great Britaln has plowed up 2,400,000 acres of grass land. Most of this tremendous acreage has been sowed to wheat.

Prof. David Ernest Lantz, assistant biologist, United States bureau of biological survey, died of pneumonia at hls home in Washlngton, D. C., on October 7, 1918. His most actlve and beneficial work had to do with the suppression of rodent pests.

The 1918 sugar crop of Hawaii totaled 561,000 tons, as compared with 636,000 tons in 1917. Practically all of the output has already been shipped to continental United States. The grinding season for the 1919 crop, estimated at 600,000 tons, has commenced.

The grocery bulletin board, showing prices which the grocer pays for his goods and prices which he asks from the purchaser, has made a hit with the grocer as well as with the public. The food administration announces many letters of thanks for the idea as clearing up many misapprehensions.

California dried fruits have become very popular in England since the war shut off supplies of Turkish frult, and it is believed that when the direct steamship line between Bristol and Pacific Coast ports, using the Panama Canal, is again restored to its pre-war basis, this trade will meet with a very satisfactory increase.

The sawmill operators throughout Jackson County, Oregon, who have been hampered all season with a labor shortage, have nearly all signified their intention of operating all winter, hoping to secure additional crews from the northern California and Klamath County camps, which will suspend shortly for the winter.

The salmon pack on the Pacific Coast of the United States for the season has been estimated at 8,300,000 cases. British Columbia will probably produce 1,000,000 cases, bringing the total up to 9,300,000 cases, as compared with 10,124,894 in 1917. The government has commandeered 60 per cent of the Chum, 65 per cent of the Pink, 80 per cent of the Alaska-Red, and 100 per cent of the Sockeye varieties.

Citrus in the Sacramento Valley

By Robert W. Hodgson

TO THE average Southern California citrus orchardist it is a matter of considerable astonishment to learn that commercial citrus culture is being engaged in 500 miles north of Los Angeles in the Sacramento Valley. Indeed to call it astonishment is putting it rather mildly, many expressing an incredulity that is dangerously near disbelief. And yet it is a fact that there are orange orchards in California in the same latitude with New York City and Lincoln, Nebraska. This is, of course, made possible by the peculiar topography of California, whereby so far as temperature is concerned a few feet in elevation is of much more consequence than several hundred miles in a north or south direction. The great inland valley formed by the basins of the Sacramento and San Joaquin is very effectively protected from eastern storms by the Sierra Nevada and from cool ocean breezes by the Coast Range, with the exception of the San Francisco Bay region, which serves as a draw to this huge valley. The valley floor is, generally speaking, subject to frost, but at an elevation of from 500 to 1500 feet along both sides of the valley lies a thermal belt where on account of adequate air drainage frosts seldom occur. It is in this belt that the citrus orchards in question are located, and there is much good land comparatively free from frosts still available for the growing of citrus fruits. Moreover, although it is recognized that there are certain drawbacks incident to raising citrus fruits in this part of the state, some of our best citrus men feel that the advantages more than offset the disadvantages and that the future expansion of the citrus industry in California will largely take place in the thermal belts of the Sacramento Valley.

A Profitable Orchard In the Oroville Section

Orange trees were first planted in Northern California in the early sixties. The first planting of which we have any record was at Bidwell Bar in Butte County in 1859, and the famous Bidwell Bar tree is still standing, healthy and thrifty and bearing large crops every year. In a great many cases these early plantings proved successful, and it was soon apparent that areas of greater or less extent, suitable for the growth of citrus fruits, existed in many parts of the Sacramento Valley from Fair Oaks in the South to Red Bluff in the north.

One of the early commercial developments occurred in Butte County in the Oroville section, where several thousand acres were set out to oranges at Palermo and Thermalito in the eighties. At about the same time plantings were made in the neighborhood of Orland and Corning and somewhat later in the vicinity of Fair Oaks in Sacramento County. During the eighties and early nineties great enthusiasm was manifested over the possibilities for citrus culture in Northern California, the newspapers and agricultural journals of that period devoting considerable space to the subject. A number of very successful citrus fairs were held, which custom was revived some four or five years ago in the annual orange show held at Oroville.

But in the frenzy of early planting many serious mistakes were made, mistakes that took years to become evident. Almost anything that belonged to the genus citrus was planted in the expectation that it would prove profitable. As a result practically everything in the way of citrus was to be found in the orchards a few years later, including a liberal sprinkling of the Australian Navel. Seedling varieties included the Parson Brown, Jaffa, Joppa, St. Michael, Ruby Blood, Mediterranean Sweet, and various Japanese sorts. The trees grew very well indeed and fruited heavily, but the fruit could not be disposed of profitably on account of inadequate selling facilities.

The "hard times" of the nineties hit the young industry just as they affected citrus growing in the south. Many of the orchards were abandoned. Some, however, were kept alive although carried at a loss. After the organization of the exchange and the stabilization of marketing conditions, it became evident that the navel variety was the only profitable orange for Northern California, and with this realization dates the beginning of profitable orange growing in the Sacramento Valley. The success of the few navel orchards which had come through the hard times in good physical condition and of those which had been early worked over to this variety, has in recent years stimulated more extensive planting, and at the present time there is quite a respectable acreage of young navel orchards scattered through the valleys. Among the largest developments are those of the Mills Orchard Company of approximately 800 acres near Maxwell and some thousand acres at Hamilton City. At the former place much of the planting consists of lemons, which are now just coming into bearing.

The advantages of the Sacramento Valley as a citrus growing section may be summed up in cheap land, abundance of cheap water, absence of scale and insect pests and high quality and earliness in maturity of the fruit. The main disadvantage at present lies in the relatively light yields occasioned by the June drop. Recent investigations have indicated the possibility of overcoming this drawback, however.

The Sacramento Valley agriculturally speaking is a relatively new country. Less development has taken place in this part of the state than in practically any other important agricultural area. Moreover, climate has not yet been capitalized in the Sacramento Valley. The result is that good agricultural land in many parts of the valley is still comparatively cheap.

The most important limiting factor to the extension of the citrus industry in Southern California is the scarcity of irrigation water. Development has already reached the point in many southern sections where at the present time the cost of water is as high as can be paid and still a profit made. This means that water for irrigating citrus orchards is much too expensive for alfalfa growing, dairying or stock raising where the annual returns per acre cannot begin to approximate those received from a good orange or lemon grove. And yet diversified farming where animals are kept is the only kind of agriculture tending toward maintenance of the fertility of the land.

Citrus orchards must be fertilized. Young groves can be cover cropped. This cannot be done with many of the older groves where the trees crowd. When manure can hardly be had for love or money, which is virtually the condition at the present time, and cover crops cannot be grown on account of the size of the trees, and water and land are too expensive to grow alfalfa either to haul on to the orchards as fertilizer or feed to dairy cows, what can one do? Here is a problem facing the citrus grower in Southern California and as yet no thoroughly satisfactory solution is in sight.

This situation will never face the Sacramento Valley citrus grower. Water is so plentiful that it will always be cheap. And it is cheap enough to use for diversified agriculture, which provides an adequate means for the maintenance of the fertility of the soil. Most of the newer Sacramento Valley citrus plantings constitute but a side line in a larger diversified agricultural development. The Maxwell division of the Mills Orchard Company, in addition to a thousand acre citrus planting when complete, is in the business of raising alfalfa and hogs on an extensive scale. A large flock of sheep is also maintained. This system of farming in which citrus growing is but one of a line of industries is made possible only by cheap land and an abundance of water. And it provides indefinitely for the maintenance of soil fertility. Moreover, abundance of water makes possible intensive intercropping of the younger orchards which furnishes a considerable revenue to the grower before his trees reach bearing age.

Much of the freedom from scale and insect pests in Sacramento Valley citrus orchards is simply due to the fact that they have not been introduced as yet. Climatic conditions, however, are so hot and dry during a great part of the year that many pests, even if introduced, would hardly be of serious consequence. The black scale has been introduced a number of times, but is rarely found to spread to any degree, nor does it become serious. The yellow and soft brown scales may be found occasionally but are not considered as doing much damage. The gray scale seems likely to be the most serious scale pest, if it once becomes widespread, since this scale seems to stand the interior valley conditions much better than the others.

The only disease of any importance is the new citrus blast which has spread widely during the last two or three years. Fortunately it only works during certain favorable combinations of growth and weather conditions which ordinarily do not occur oftener than once in three or four years.

Mottled leaf is practically unknown in Sacramento Valley orange orchards, the color of the foliage usually being exceptionally dark and green, indicating a very healthy condition.

On account of the high summation of heat units during the long growing season the fruit is of a markedly superior quality and matures much earlier than is the case south of the Tehachepi. It is not uncommon for the fruit to test up as early as the latter part of October, the Oroville section vying with the Lindsay-Porterville district in getting the first car of oranges to the Eastern market. This is a decided advantage as early navels usually command very satisfactory prices.

Navel Oranges Interset with Apricots
Notice the intercropping with sweet sorghum.

To one who is familiar with the citrus industry in Southern and Central California, it seems strange to find the Valencia not grown to any extent in the Sacramento Valley. This variety has proven itself considerably more heat resistant than the navel in the San Joaquin Valley. In many sections Northern California seedling oranges come through the winter without frost injury. In these sections it would seem that on account of its heavier yields and summer prices the Valencia would be more profitable than the navel. At least its trial would seem worth while.

There is a vast acreage in the Sacramento Valley just below the foothill thermal belt where the Satsuma orange would grow to perfection Why this variety has not been more extensively planted is a mystery to the writer.

Walnuts

Written for California Cultivator By J. B. Neff

THE present season has been, or at least should have been, the most successful season for the walnut growers of the state. Prices have been the highest known and while not relatively as high as some other products should have been very profitable where proper care had been given the orchards. It is also very probale that prices will be good for several years and that they will always be higher than those which ruled five to ten years ago. It is also likely the expense of growing walnuts will be more than in years gone by, so the walnut grower who is a good business man will be considering better methods by which he can increase production and quality without unreasonably increasing the cost.

The time of year has arrived when the pruning of walnut trees for the next year should be done, as it is always best to do the heavy pruning while the trees are dormant, and thorough pruning will do as much toward increase of production and quality as any other one thing. In fact, good cultivation and plenty of water may be given but without the necessary pruning the walnuts may be small and the crop light.

It should be borne in mind that a very small apparent increase of size of walnuts makes a large increase in the total crop and that the large walnuts command a higher price than those that are small, hence anything that will increase the size materially increases the net proceeds. Also do not forget that walnuts which are one and one-eighth inch in diameter are almost one and one-half times as large in bulk and weight as those measuring one inch in diameter. Likewise a walnut measuring one and one-quarter inch in diameter is nearly twice the size of the one-inch walnut These increases of size can be produced by careful management, in pruning, fertilization, cultivation and irrigation.

(Next week Mr. Neff will give an article on Walnut Pruning with illustration showing properly pruned tree. —Edit.)

Soil Improvement

Written for California Cultivator By H. Culbertson

MUCH attention has been given to citrus orchard soils. Only a small part of the tillable area, however, is adapted to citrus culture. Either the extreme temperatures are not good or the lack of irrigation compels large areas to be used for other crops. The grain and hay areas are in great need of soil improvement. As a rule the leguminous cover crops are not a success on such soils. They have been so depleted of all vegetable matter that they will not grow. There is no irrigation available to start them early; to depend on rainfall, even if they would grow, makes them too late to plow under before the soil is too dry in the spring. Stable manure is out of the question except for very small areas. It is becoming apparent that barley as a cover crop is about the best on the list of plants that may be used. It will start with the first rains, grow in cooler weather and grow more tonnage to the acre on the soils under consideration. The writer tried the experiment first about eight years ago as follows: Sowed barley for two years in succession. The second crop would have easily made two tons of dry hay to the acre. The following winter being a wet one it grew an immense crop of burr clover two feet high. These crops were all plowed under at maturity. Since that time that ground has been producing satisfactory crops of sweet potatoes, melons and tomatoes.

The practice of seeding land to barley early that is to lie summer fallowed and then plowing it under as late as it is safe makes a gradual improvement in soil conditions.

It should be borne in mind that the great soil difficulty is its physical condition fully as much as a lack of available plant food. Soil with a good supply of vegetable matter remains in a granular condition.

Soils in need of the above treatment break down into a fine paste with heavy rains, run together into a compact mass that dies out quickly, getting as hard as a traveled road. Soils in good condition are more or less open, permitting some air circulation that is very essential to good crops. In the above turning under of a crop of barley, the actual amount of vegetable matter turned under is small compared to a good application of stable manure. Yet it furnishes material for the soil bacteria to live and increase in number. They in turn do the work of improving soil conditions.

A soil with plenty of bacteria will not be unproductive. The farmer must supply them with food to get results. A few years ago the writer sent two samples of soil to the state university. They were both from the same field and had been in grain for 40 years at least, and no return made to the soil. One of the samples was taken from a locality where the hay crop was about 200 or 300 pounds per acre. That was tested for bacterial content by filtering through it a solution containing nitrogen. The result was practically no change in the contents of the solution. Had it been a good soil for crop production the nitrogen in the solution would have been changed to the nitrate form. This is a very necessary thing and the work is done in the soil by a class of bacteria. That particular locality had become so short of vegetable matter in the soil that these essential organisms were practically all dead. Good soils have many millions of them in every cubic inch. If we feed them with plenty of vegetable matter they will produce the soil conditions necessary for good crops.

RIPE OLIVE RULING

THE present ruling by the bureau of chemistry says nothing about the color of the olives when harvested, but confines its definition of "ripe" olives to a consideration of the oil content in the flesh of the olive. Here is the ruling

"The bureau has received numerous

Cleveland Tractor

Serviceable the year 'round

The Cleveland Tractor is serviceable *every season of the year.*

It is an all-purpose machine.

When winter weather or crop conditions make the Cleveland unnecessary in the field *its usefulness in other lines of work begins.*

It is tractor and stationary engine in one. It will saw wood, pump, drag logs, haul grading or road-making machinery and do practically everything formerly done during the winter months with horses and stationary engines.

The Cleveland lays down its own tracks, travels on them and picks them up again like the famous battle "tanks." It will go practically anywhere—over rough uneven ground, on the side hill or over soft plowed fields.

A traction surface of 600 square inches with a weight of less than 3200 pounds *effectively prevents the Cleveland from packing the soil.*

You can house the Cleveland in less space than is required for one horse. But in spite of its small size it develops 12 horsepower at the drawbar and 20 at the pulley for stationary work.

Under medium soil conditions the Cleveland Tractor plows 3½ miles an hour with two fourteen inch bottoms. This is eight to ten acres a day—equal to the work of three good three-horse teams and three men.

It burns either kerosene or gasoline.

Don't wait till spring to get your Cleveland Tractor. Order it *now* and get the full advantage of its all-purpose, all-season ability *this winter*—and be prepared for the first field work of early spring.

Write for descriptive matter and name of the nearest Cleveland dealer.

complaints that certain olive packers were packing immature, unripe olives under a labeling which would indicate that the product was a mature, ripe olive, and that these packers so manipulated these immature olives during the process of packing as to give them the characteristic appearance of a ripe olive when packed. Such immature olives, mislabeled as ripe olives, would be regarded as in violation of the federal food and drugs act if brought under the jurisdiction of the act. An extensive investigation of the changes that occur in the composition of olives during ripening has been made. The results obtained indicate that the index for maturity for olives is the oil content of the flesh.

"As a tentative standard of maturity for Mission olives and other common varieties except Manzanillo, Ascolano, and Sevillano, an oil content of 17 per cent in the flesh is regarded as a minimum. The Manzanillo olive should contain a minimum of 15 per cent of oil in the flesh to be regarded as ripe or mature. Olives containing less than the percentage of oil in the flesh specified above would not be regarded as ripe or mature, and, when brought within the jurisdiction of the food and drugs act, would be regarded as in violation thereof. For the large fruited varieties, such as Ascolano and Sevillano, no standard of maturity is proposed, since these varieties are, of necessity, gathered when immature. Such olives can not properly be designated as 'Ripe.'

"These minima for the oil content of ripe olives are to be regarded as tentative. The bureau will welcome such suggestions and representations in regard to them as the trade may desire to make. Should it be determined at a later date that the minima above given should be changed in any way, due notice will be issued by means of a service and regulatory announcement.

ORNAMENTAL GARDEN CALENDAR FOR DECEMBER IN NORTHERN CALIFORNIA

Written for California Cultivator
By Albert R. Gould

THE fallen leaves may either be stacked up in a big heap to form valuable leaf soil or they may be dug in the ground to form humus. Complete the work of clearing the perennial border, and where possible many of the larger roots may be divided and replanted, such as in the case of the Shasta daisy, Michaelmas daisy, tritoma, chrysanthemum, etc. During the wet weather there will be an opportunity to clean the seeds which were collected from favorite subjects.

Dahlias

These are frequently left in the ground through the winter, and they very often come through "smiling" again early the next season. However, wherever it is possible to dig them, providing they can be stored away in a dry place, it is advisable to do so, as they can then be taken care of and the larger roots divided for planting the next season. Furthermore, the plot can be well manured and cultivated for future use. See that the choice varieties are kept labeled.

Bulbs

In this department for October we gave cultural hints, and those who desire to secure choice varieties would do well to order at once from their seedsman, whose bulb catalogue is now obtainable. With regard to the selection some prefer one shade of tulip, some another, but as there is such a wide range, especially among the long stemmed or Darwin types, there will be no difficulty and one can secure his favorite. Of course those of more recent introduction are higher in price, but they are really choice. Among them we might mention Bronze Queen and Inglescombe Yellow. Others worthy of a place in the garden are Harry Veitch, Clara Butt and Pride of Harlem.

The daffodills or narcissus are also very popular, flowering as they do very early, especially the Polyanthus and Poeticus types.

Among the hyacinths are to be found some perfect flowers with their waxy form and fragrance. They may be had large or small from the early white Roman and Dutch types to the very large named varieties in solid colors rich and beautiful.

The iris family is a very large one and comprises many different types, some having roots formed by rhizomes or underground stems enlarged, and others having bulbs. Among the latter are the Spanish, Peacock and English, and some beautiful colors are to be secured. The Spanish flower somewhat earlier than the English. For planting near the water the Japanese iris are ideal, and for shady places the large flag types are excellent.

Freesias are very early flowering bulbs and most fragrant, in colors white and yellow and there are also some hybrids recently developed.

And last but not least we have the brodiea and calochortus, both very interesting wild flowers which well repay cultivation.

Hedges

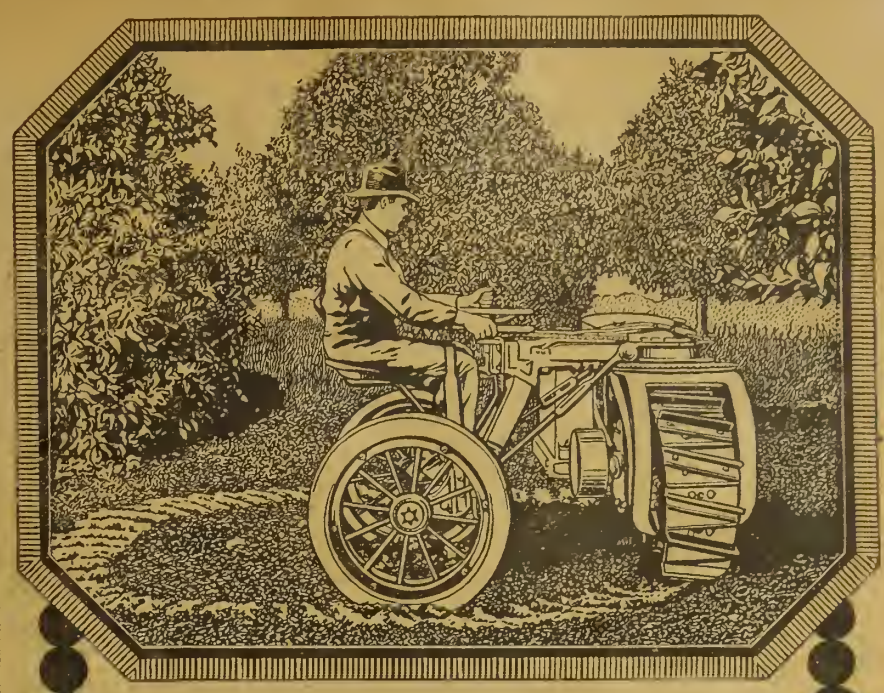
This month work on the hedges will be in order whether it be cutting, planting or spraying, and as the scale insect is just now prevalent on the pittosporum and wild cherry it will be desirable to spray with a kerosene soap mixture or a solution of nicotine and soap. The Monterey cypress hedge should also be sprayed several times a year.

Spring Flowers

These are looked forward to with joy after the dull winter, and it will be necessary to see that well established plants of Arabis, forget-me-not, alyssum, saxatile, aubretia, violas, wallflowers and pansies are planted out without delay, and it will not be too early to plant the foxglove or digitalis. A group of this under the trees will be a sight to behold, and the hollyhock may be used to the same effect.

Foliage Effects

Just now the foliage effect of spiraea prunifolia flowering shrub is wonderful and the ampelopsis or Virginia creeper is a picture also.



Special 6 H. P. Tractor for Orchards and Vineyards

—Send for Free Book About It

Hundreds of growers have saved thousands of dollars through the careful purchase of this small tractor especially designed to do special *orchard and vineyard work.* You can do the same.

Send the coupon below for the "TrackPULL Book" which explains these special needs in detail and tells how the Improved 1919 Model Bean TrackPULL Tractor meets them.

Don't buy any tractor built for *general use on farms,* no matter how well known the maker is, until you are sure it meets *your* special *orchard* or *vineyard* needs.

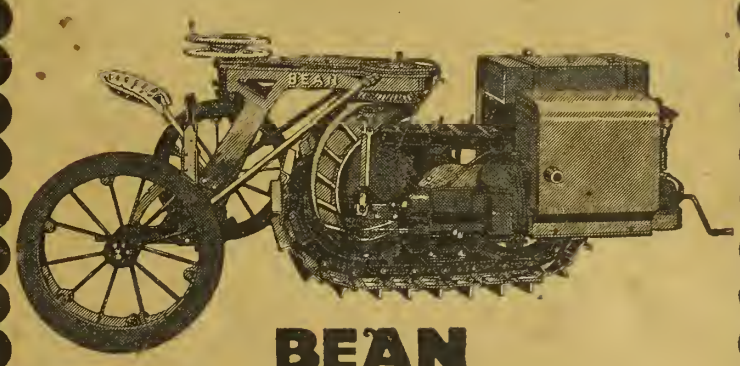
The Bean TrackPULL is built by men who have studied these needs for 34 years and have built machines to meet them.

These Vital Requirements

Your small tractor should turn all the way around inside a ten-foot circle with the tools deep in the soil with full power, the same as on the straight-away.

It should pull easily and steer easily no matter how far *off center* you may hitch the tools. It should "gee," "haw" and turn just like a team, but with more accuracy and efficiency than a team.

These are things that the Bean TrackPULL Tractor does. And 12-year-old boys handle it with perfect ease. Let your boys handle a machine like this and they'll be glad to stay on the place.



BEAN TrackPULL Tractor

Mail Coupon Now

Cut out and mail the coupon below and learn all about this special tractor. The book we send describes the patented single track feature which is responsible for the Bean's unusual action.

This patent does away with pivoting and turning which over-strains one side of a tractor. It permits *full power* on all turns and straight and easy driving when the tools are hitched far *off center.*

When men have spent 34 years studying orchard and vineyard machinery needs, they can build the best tractor for such needs. Don't buy any tractor until you know in detail the kind of tractor these men have made.

Send the coupon now before you forget it, and get this *free book* by next mail.

Special Bean TrackPULL Improvements for 1919 made in Motor, Track Rollers, Drive Sprocket, Bearings and Rear Wheels. They add great reliability to the other features of the Bean

"As Good as an Irrigating Plant"

"If I had to do without most of my farm tools," writes Geo. E. Koplin, Winter Haven, Fla., "I would hang on to the "Acme" Pulverizing Harrow to the last, as I deem it the most serviceable tool that I own. It is as good as an irrigating plant in dry weather." An

"Acme" Pulverizing Harrow

is the ideal tillage tool for the orchard. "The Coulters Do the Work." They overturn the weeds and leave a protective mulch. By using an extension model, you can work right under the branches and close up to the trunks. "Acme" Pulverizing Harrows are in constant use at leading nurseries and by successful orchardists. The Hun has wantonly destroyed the orchards of France and Belgium. American orchards must produce more to make up the loss. An "Acme" will help you do your share.

Ask your dealer to show you "Acme" Harrows—any size from 1-horse to 4-horse. He should have a stock on hand. But you need our latest catalog, which tells how to make perfect seed beds. Send for it today; also ask for special circular on the "Acme" ***Disc*** Harrow.

The Vegetable Garden for December

Northern California

Written for California Cultivator By Albert R. Gould

CONDITIONS on the whole this season have been very favorable for vegetable culture. The early rains, although not heavy, helped out and encouraged an early start, and up to the time of writing the absence of any severe frosts have enabled us to have late corn and tomatoes and also green peas, and had we taken a chance we could have enjoyed string beans rather late. Throughout last month we pulled several hundred cobs of Golden Bantam corn, sown late of course, and picked a quantity of Little Marvel and Laxton peas. We planted the rows of these about three feet apart and two weeks ago made another sowing in between. These are now well up and after picking over the earlier crop once more these will be removed, leaving the last sown to occupy the plot for an early supply. We should like to mention that these are planted on a warm slope practically due south. Green and black aphis have been in evidence during the past month, but should we get hard rains, which is probable during the next few months, they will lose their hold. Weather conditions may prevent much outside work this month, but every opportunity should be taken to have as much land as possible prepared for use the coming season.

Although peace is at hand the need for food production is as great as ever. Europe is just now a hungry place and California will be called upon to still supply a large share. It is necessary, however, for one and all to carefully consider just how much they can cultivate, as it is never wise to try to handle too much. Make your plans according to the time you can devote to the work and measure your plot accordingly. It takes time to plant and more time to keep a garden watered and cultivated after it is once planted, and it will stand no neglect. Wherever possible, use the plow; it will save much time and labor in preparation, and don't be afraid to plow in the manure if you want results. Plants must be fed or they will not feed you. Study soil needs.

Peas

Lose no time now in sowing the first of the main crop varieties such as Stratagem, Senator and others mentioned last month, and select the warmest and most sheltered spot in the garden if you wish to have early peas. Successional sowings of Little Marvel and Alaska, the extra early varieties, may also be made. Frequent cultivation should be given those sown early which are now well through the ground.

Lettuce

Where severe frosts are experienced and the plants are heading in well a covering with straw will protect these and hold them for winter use. The Romaine or White Paris Cos, if forming heads, should be tied in to blanch the center, which is thus made white and crisp.

Tomatoes

As we predicted in these columns the early rains prolonged the season. All late fruits should now be collected and taken into the house to ripen; the vines should be cleared off and the plots prepared for another crop. See that no diseased fruits are left on the plot. As this crop robs the soil of considerable plant food the soil should be liberally manured.

Onions

Those who availed themselves of the rains would no doubt by now have sown the early varieties of this crop. Towards the end of this month the main crop varieties may be sown, and for general use we recommend Ailsa Craig, Morse Brown Globe, Prizetaker and Australian Brown. If a white onion is required sow White Portugal. Have this plot richly manured as onions are gross feeders. Sow the seed in rows 15 inches apart. Onion sets or small onion bulbs may also be secured now and planted in rows.

Rhubarb

Strong roots of this excellent crop may still be planted as per directions given last month for general culture.

Raspberries

New "canes" or plants may be secured from your nurseryman and planted this month in rows at least three to four feet apart in richly manured soil. Good varieties are Superlative, Cuthbert and St. Regis, the last named being of very recent introduction. A good golden yellow is Four Seasons.

Strawberries

Complete the planting of these and keep the ground well cultivated between the rows of the more established plants set earlier in the season.

Storage Crops and Seeds

Continue to place any surplus root crops in storage and remove any decayed. Look over your stock of seeds and carefully list your requirements for the coming season. It will soon be time to order.

Southern California

Written for California Cultivator By D. F. Reichard

DECEMBER is what we might call a preparation month. As a planting month the weather in general is too cool for proper germination and growth of young seedlings so that it is a good plan to be getting the ground in shape for planting seeds next month.

Fix up or build a hot bed or cold frame for starting the more tender plants such as tomatoes, peppers, egg plant. For early plants the seed of these should be planted during this month as they require about two months to get strong enough to set outside.

A hot bed is made by digging a pit about two feet deep and four feet wide and as long as necessary. Fill in a foot or 18 inches with fresh manure and straw, which cover with about eight inches of well prepared light loam soil. Build a solid board frame around the bed, giving it a south exposure by having front or south side a foot high and the back 18 to 24 inches high. Cover with glass or muslin which raise during the heat of the day to permit free circulation of air. Be sure to put the top down early enough in the afternoon to allow the bed to warm up for the night. One to two hours of sun will do it. A cold frame is built the same as a hot bed without the manure for heat.

If not already done have your ground thoroughly worked up ten or more inches deep and well pulverized. If this is done have it deeply cultivated after each rain storm until planting time. This keeps the land clean and puts it in fine shape as well as helping it to hold the moisture.

For those who have ground in warm sections or with warm exposures plantings of the hardier vegetable seeds and plants are quite in order. Under these conditions, Early Egyptian beets, carrots, endive, kohl rabi, Swiss chard, New York or Los Angeles Market lettuce, early radish, early peas, Giant Amsterdam spinach, collards, kale, mustard, cabbage and cauliflower can be planted.

Prepare beds for the plauting of hardy and dormant plants. It is a good plan to get them established now for early growth. Set out Giant Crimson Winter rhubarb, Bohemian horse radish, asparagus roots, strawberry and artichoke plants, also kale, cabbage and cauliflower plants.

Arrange your ground so as to allow for planting what permanent small fruit bushes nd trees you want for the house orchard. January and Febru-

THE SOY BEAN

Written for California Cultivator
By T. J. Walker

THE growing of the Soy bean in California has not been carried on to the extent that its merits, as an agricultural plant would justify. The growing of the plant in the San Fernando Valley in a small way for the past three years has convinced me of its wonderful possibilities as a money maker, in the use of the plant as a forage crop or as an article of human food.

Getting a good stand has been one of the greatest obstacles to success, due to poorly prepared seed bed or planting too deep. It is a crop that requires better treatment of the soil than the average farmer is in the habit of giving to his farm crops.

The soil should be well pulverized, with plenty of moisture, and of a warm temperature conducive to quick germination. Do not be tempted to plant by a few warm days in March or even before April 15 unless you have a warm sandy loam soil.

The seed should be planted from one to one and one-half inches deep. Artificial inoculation of the seed should be resorted to. This is very important, as my experiments show that the crop shows an increase of from 30 to 40 per cent from inoculated fields over those not inoculated.

Out of 14 varieties experimented with I have discarded all but three. They are medium yelow in color and medium in size. These varieties are preferred for food and the production of oil and meal. The mammoth all show low percentages in germination. The black and brown seeded varieties are most suitable for forage. The yield of seed to the acre varies from 750 to 1400 pounds to the acre.

The hay is relished by stock of all kinds and is palatable and nutritious as alfalfa.

In growing the seed plant in rows 30 to 36 inches apart so that the plants will not lap in the row. Have a plant every eight to ten inches in row. They can be planted and harvested the same as beans. It is well, however, in harvesting to make the piles larger, for the reason that they shatter more than the ordinary bean. Especially during such weather as prevailed during the harvesting weather this fall, i. e., rain, fogs and then extreme dry weather. Plant about twenty pounds to the acre.

Time for seed to come to maturity is from 95 to 110 days. They should be allowed to grow until they lose about one-third of their leaves. If cut for hay then harvest in about 90 days. The tonnage of cured hay at this time will run from 3000 to 5000 pounds to the acre.

No insects or pests of any kind have bothered the plants during my three years' experiment, although Lima beans next to them this year were badly affected by the corn worm.

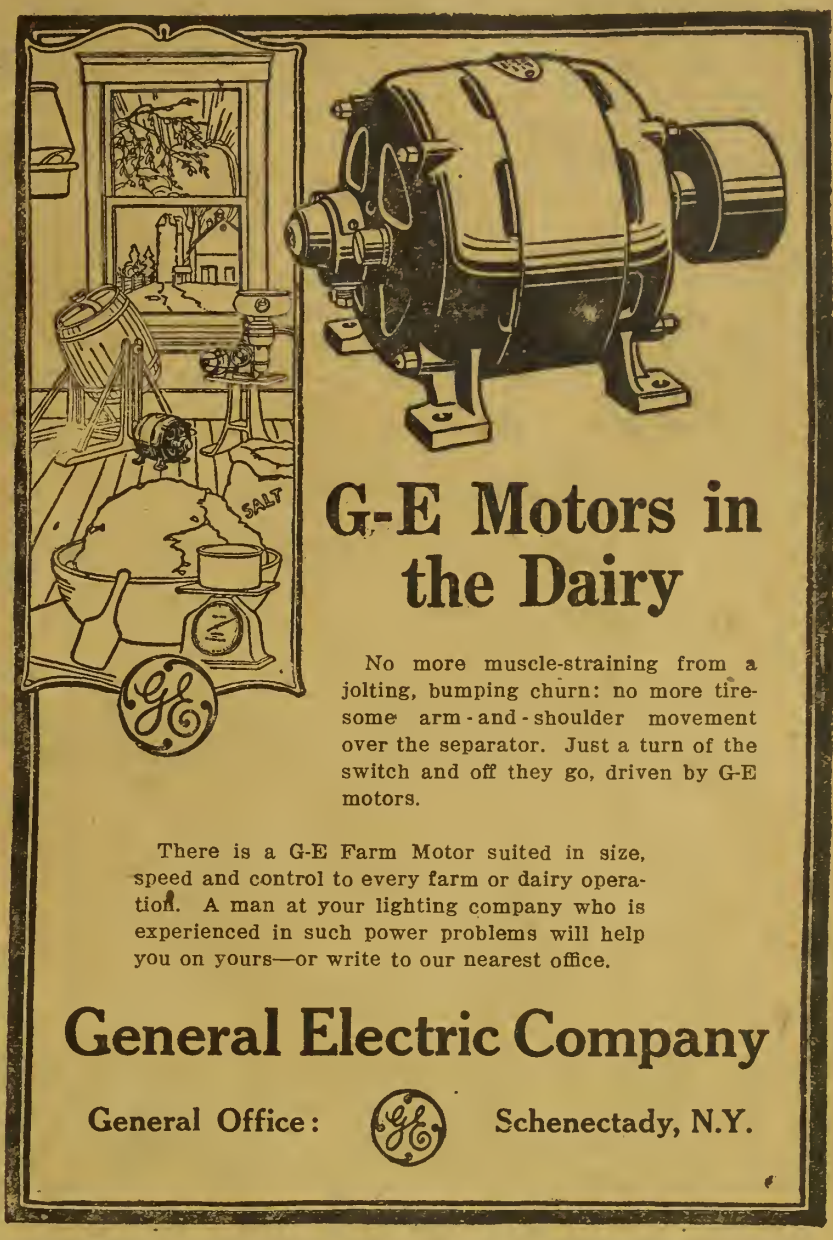
Cultivate every two weeks for the first two months, irrigating three times about three weeks between irrigations.

The soy bean has about the same range of climatic adaptation as corn and can be grown on nearly all types of soil.

In Asiatic countries, especially China, the bean is second only to rice in importance as a food crop. As a summer crop in citrus groves it deserves especial consideration. Its root system is very strong and its nitrogen gathering bacteria are unusually heavy and I believe it will prove to be one of the favored soil builders in the near future.

It has been learned that sweet potato seed and slips from Texas districts infested with weevil have been shipped to California. This information was forwarded by a Texas entomologist who says that Texas has no quarantine laws to prevent such shipments. The weevil, he says, is creating havoc in the sweet potato industry of some of the Southern states.

Corona shipped 375 carloads of citrus fruit last year, netting the growers approximately $700,000.



G-E Motors in the Dairy

No more muscle-straining from a jolting, bumping churn: no more tiresome arm-and-shoulder movement over the separator. Just a turn of the switch and off they go, driven by G-E motors.

There is a G-E Farm Motor suited in size, speed and control to every farm or dairy operation. A man at your lighting company who is experienced in such power problems will help you on yours—or write to our nearest office.

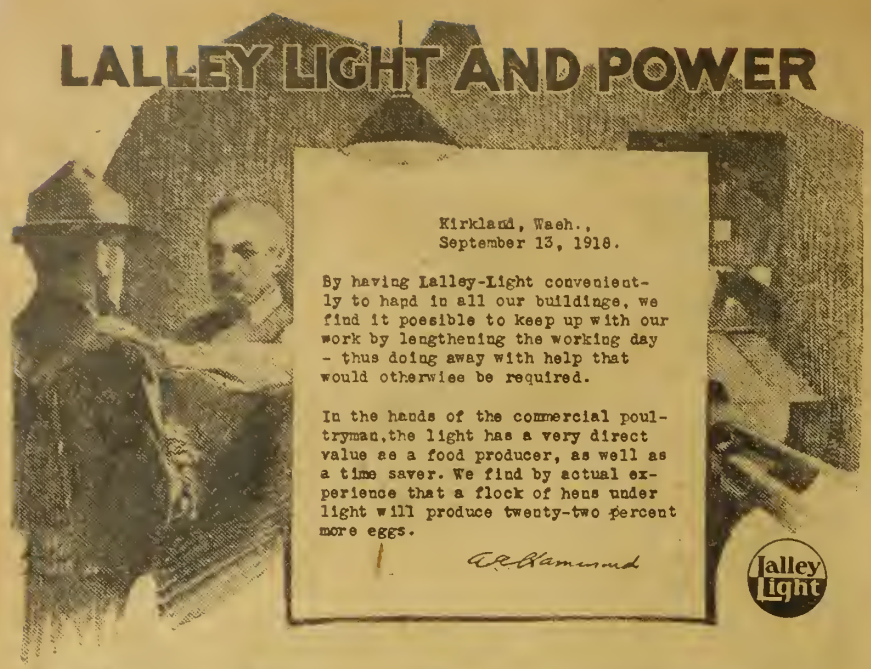
LALLEY LIGHT AND POWER



Kirkland, Wash.,
September 13, 1918.
By having Lalley-Light conveniently to hand in all our buildings, we find it possible to keep up with our work by lengthening the working day - thus doing away with help that would otherwise be required.
In the hands of the commercial poultryman, the light has a very direct value as a food producer, as well as a time saver. We find by actual experience that a flock of hens under light will produce twenty-two percent more eggs.
Lalley Light

Helping to Make Up The Farm's Man-Power

War is teaching thousands of farmers that Lalley-Light is a labor-saving necessity of utmost value; and that after the war the need for it will be even greater than now.

Men are leaving the farms to fight. Yet the world looks to American farmers to feed it while it battles; and must look to us for food long after peace has come again.

Inexhaustible Lalley electric light and power are taking the place of those who go—saving the work of farm hands — saving women's work —lengthening days that are all too short, and helping men do more.

Lalley-Light actually pays for itself in the first year or so—as shown by eight years of every-day farm experience.

Right now is the best time to see the nearest Lalley-Light dealer; or write us today for literature.

State Aid for Horse Breeders

The question of an adequate horse supply, for the future, is giving no little concern to those who are in close touch with the horse industry. There are unmistakable signs pointing to an actual shortage of desirable horses in the comparatively near future. A number of plans for stimulating breeding operations have been suggested from time to time. Now comes Wayne Dinsmore, secretary of the Percheron Society of America, with a plan for extending state aid to stallion owners. The idea is not new. Indeed, nearly every European country has been subsidizing the horse breeding industry for years, and this aid has been largely responsible for the high development attained in France and Belgium.

It is quite possible that the question will be placed before a number of legislatures this winter.

In referring to the proposed plan, Mr. Dinsmore says:

The maintenance of an adequate horse supply is one of our fundamental needs, both from the standpoint of food production and national defense.

How this may be carried out is our problem. High priced grain, hogs and cattle, have created profound disturbances in our usual agricultural practices. Our supply of horses, such as it was, was sufficient for our needs for the past four years, and the great curtailment in horse breeding which all experienced men know has taken place has not yet affected our agricultural effectiveness. It is admitted, however, that it will do so if effective measures to encourage the breeding of good horses be not taken.

The key to the situation lies in the use of good sires. These cost too much for individual farmers to own. Eight mares is the average owned on a good 200 acre farm. One stallion, worthy of service, should have 100 mares per season. To keep a stallion for use on the mares on a single farm is wasteful, as he can and should be available for the use of 12 or 15 farms. Farmers themselves can not take time from their own operations to travel a sire, and as it is not profitable to a man to own and travel one sire for public service, particularly if he is a good one, we are rapidly reaching a point where men who have good mares have no good sires available.

The same situation has arisen in other countries. France met it by granting government subsidies to sires of approved stamp, thereby designating them as suitable for reproductive purposes, and adding enough to the earnings of a sire to justify men in owning 15 or 20 stallions, which were maintained and traveled in localities desiring their services. This system has been in use in France for more than 100 years and has given admirable results. Belgium has had a somewhat similar plan in force for 50 years, with the added proviso that the amount of the government subsidy increased each year if the horse was kept in use in one locality for three years or more. This gave to little Belgium a race of horses famous throughout the world—which the greatest horsethief the world has ever known took to Germany to build up his own horse stocks.

Great Britain has had similar measures in force for some years, and Canada with a similar plan in use for two years past, finds it very successful.

State aid is needed to maintain an adequate supply of horses. It must come in the form of a state subsidy to approved sires. It can be administered through our stallion boards and it will bring back to the state $100 for every dollar expended. It must be state, rather than federal aid, for there are only about 20 states that produce a surplus of horses. These supply other states and foreign countries. As they benefit directly through the added wealth coming within their borders, which goes to the farmers, and through them to the business men in every other walk of life, it is strictly a state limited enterprise. The details of it will be worked out along lines already found successful in other countries. In substance, however, it will provide for an expenditure of about $50,000 per year, which shall be used to pay 20 per cent of the service fee of approved sires.

The essential point I make is that we have now reached a point, long since reached in older countries, when we must have state aid to maintain an adequate horse supply, and that such aid is justified by precedent, experience, and financial returns accruing to the states granting such assistance.

AMERICAN ROYAL CHAMPIONS

At the American Royal Live Stock Show held at Kansas City, November 16-23, the following championships were awarded:

Shorthorn: Senior and grand champion bull—Villager's Coronet, owned by Uppermill Farm, Wapello, Iowa; junior champion bull—Anoka Omega, owned by Anoka Farms, Waukesha, Wisconsin. Senior champion cow—Pleasant Princess, owned by H. C. Lookabaugh, Watonga, Oklahoma; junior and grand champion cow—Clover Leaf Gloster, owned by W. C. Rosenberger & Sons, Tiffin, Ohio.

Herefords: Senior and grand champion bull—Repeater Junior, owned by O. Harris & Sons, Harris, Missouri; junior champion bull—Repeater 129th, owned by O. Harris & sons.

Aberdeen-Angus: Senior and grand champion bull—Enlate, owned by Escher & Ryan, Irwin, Iowa; junior champion bull—Bar Marshall, owned by Escher & Ryan. Senior and grand champion cow—Erica McHenry 39th, owned by Escher & Ryan; junior champion cow—Eritus, owned by C. D. & E. F. Caldwell, Burlington Junction, Missouri.

VALUE OF COTTONSEED HULLS FOR STOCK FEEDING

Written for California Cultivator
By F. W. Woll

Several inquiries have been received with regard to the value of cottonseed hulls for feeding farm stock. This by-product is used extensively in Southern cotton states as a cheap substitute for hay in feeding steers, dairy cows and sheep, especially fattening cattle, and is also fed in the Imperial Valley, at or in the vicinity of the cotton mills. The hulls are generally fed mixed with cottonseed meal, in the proportion of four or five parts of hulls to one of meal, these two feeds making up the entire rations for the stock. The hulls are a rather unpromising feed, being dry, hard, and covered with a fuzzy lint. They contain, on the average, about four per cent protein, two per cent fat, 45 per cent fiber, and 35 per cent nitrogen-free extract (starch-like

compounds), and three per cent ash. Only six per cent of the protein, 34 per cent of the nitrogen-free extract and 47 per cent of the fiber is digestible, so that practically the only nutrients they furnish are digestible carbohydrates, which amount to about 34 per cent.

The hulls resemble more closely cereal straw in chemical composition, digestibility and nutritive effect, than hay or other coarse feeds. Straw likewise supplies carbohydrate nutrients only, practically speaking; viz., on the average around 40 per cent. The coarsest of the cereal straws rarely contain over 40 per cent of fiber, however, against 45 per cent in the hulls, which means that more of the digestible matter is expended in masticating and digesting the hulls than in the case of straw, and less net energy is therefore left for the uses of the animal, for repair or new building of tissues, or for manufacture of animal products. The latest data on this point shows that hulls have a net energy value of about ten, against 35 for oat or barley straw. They may possess some additional value when fed with heavy feeds, like cottonseed meal, in the way of making a lighter mixture that is more readily acted upon by the digestive juices than the meal itself, but it is evident that they cannot be considered worth more than good cereal straw at best, and that a price of $20 a ton, as asked, is entirely excessive, even at present day feed prices.

CALIFORNIA EDUCATIONAL BUTTER AND CHEESE SCORING CONTEST

The third scoring of the 1918 California Educational Butter and Cheese Scoring Contest was held at the University Farm at the close of the practical butter makers short course. In connection with the scoring the California Butter, Cheese and Ice Cream Makers Association held their second annual meeting and judging contest.

Fifteen cubes of butter and three cheeses were entered for scoring. T. J. Harris, L. M. Davis of San Francisco and S. L. Denning of Davis did the judging. N. Nyborg of the Modesto creamery and H. Dons of the University Farm creamery tied for first place in butter with an average score of 96¼. O. R. Lynch of the University Farm creamery entered the highest scoring cheddar cheese, which scored 94½. A. F. Boies of Patterson was given a complimentary score of 93 on his jack cheese.

FIRST TULARE SALE A SUCCESS

The initial consignment sale of Holsteins, held at Tulare, November 20-21, served to distribute an excellent class of cattle at prices that were generally satisfactory, but that in many cases represented real bargains. The sale totaled $26,950. Mature cows averaged $303 and the bulls averaged $333.

Rose De Kol Conde, consigned by Bridgford Company, Knightsen, a young cow with a record of 24.42 pounds butter at 26 months of age, topped the sale at $1000 and fell to the bid of W. J. Hidgon, Tulare.

The bull division was headed by King Ignaro Mead, a son of King Mead of Riverside. This youngster was consigned by Charles Yocum, Tulare, and sold to Frank Helm, Fresno, for $675.

A remarkable feature of the auction was the unusual local support accorded the event. Business institutions declared a half holiday and practically the whole community turned out, thus furnishing splendid recognition of the importance of the dairy industry to the prosperity of Tulare County.

The sale was under the efficient management of C. L. Hughes of the California Breeders Sales and Pedigree Company. Col. Ben A. Rhoades wielded the hammer.

SHEEP AND DOGS

There is a nation-wide movement for greater protection of sheep from dogs.

Around every little town there are a lot of curs that are no good for any purpose and on any number of ranches there are from one to half a dozen of the same kind.

It seems as though there should be some way to eliminate the dog menace, but in the absence of any positive relief, high taxation and the killing, by some specially appointed officer, of all dogs not tagged would be a big help.—W. S. G.

America's Greatest Farm Auction Sale

Will Be Held, Rain or Shine, Under Cover, on

Tagus Ranch, Tulare, California December 10-11-12-13, 1918

90 Registered Holsteins

Representing some of the most famous producing families of the breed; two 26 pound three year olds, one of which made over 24 pounds butter in seven days as a two year old; 15 other cows and heifers with records up to over 25 pounds butter in seven days; 34 cows and heifers bred to KING SADIE VALE ROSE, son of King Korndyke Sadie Vale and a 27.98 pound daughter of a 32 pound cow; KING SADIE VALE ROSE will himself be sold, and he is a first class young herd sire, with an average of 33.82 pounds butter in seven days for his three nearest dams. YOUNG BULLS — There will be a choice selection of young bulls in this sale, out of dams with records up to over 26 pounds butter in seven days, and they are high class individuals. Holsteins will be sold Tuesday, December 10.

200 Registered Duroc Jersey Hogs

Among them 20 splendid proven brood sows of first class breeding They are headed by CALIFORNIA'S DEFENDER, Junior Champion at Panama-Pacific International Exposition, and more than 150 of his get from these sows will appear in this sale. This great boar will himself be sold, and he is not only a proven show boar but a proven breeding boar as well. His get in this sale tell the story. The junior herd sire, ORION'S GOLDEN COL., will also be sold and he is first class in every respect, brought into this herd especially to breed to the daughters of California's Defender. The Durocs will be sold Wednesday, December 11.

200 High Grade Polled Angus Cows

The pick of several hundred head, with the view of offering buyers some top breeding cows of this excellent breed in this sale. Our entire herd of Angus cows had an 85 per cent record last year with not a single death from disease in the herd. All the beef cattle will be sold Wednesday, December 11.

100 High Grade Shorthorn Cows

Reds and roans of frame and substance, also the pick from several hundred head.

Live Stock News Notes

Hog Expense Mostly Feed

Figures compiled by the department of farm management of the University of Illinois indicates that from 85 to 90 per cent of the total expense of producing pork under farm conditions is for feed, as shown under three items, (1) feed purchased, (2) feed grown on farm, and (3) rent of land used for pasture. The figures were obtained by records kept on 20 farms during 1917 and 30 farms during 1916.

Imperial Banks to Furnish Market Reports to Customers

Several Banks in the Imperial Valley have made arrangements whereby they will furnish their customers with a daily telegraph market report covering the live stock and produce markets of the principal Eastern and Coast cities.

The reports are furnished through the United States department of agriculture, bureau of markets, 701 International Bank Building, Los Angeles, and constitutes a service that may be obtained free by making application to the above address.

Freeman After Yearly Records

E. E. Freeman, Modesto, recently started several of his registered Holsteins on test. The senior four year old, Una Estrella De Kol 2nd made an official record of 19.61 pounds butter in seven days, and the five year old Vina Pietertje Hengerveld De Kol made 21.92 pounds butter in seven days. Mr. Freeman is not so much concerned about short time records and is planning to dovote most of his effort to yearly work, following the trend of Holstein progress. His herd sire is Segis Pontiac De Kol Burke Dutch, whose three nearest dams each made over 1000 pounds butter in one year, so he is amply prepared in the sire half of his herd for good yearly records.

Lewis Company Building High Class Herd

The Lewis Company, San Jose, picked up a rare bargain in the Second Modesto Sale, in the beautiful 27.89 pound cow, Potoki Johanna 2nd, sold by J. M. Campbell, Escalon. She will be added to the high class herd which the company has already established at Hollister.

A Promising Holstein Herd

H. A. De Wolf, Ripon, now has 20 registered Holstein cows milking and has laid the foundation for a very good herd. He has been especially fortunate in securing heifer calves from the bred cows he has bought and as a result has several fine young daughters of Sir Veeman Korndyke Pontiac, 30 pound son of Sir Veeman Hengerveld; two daughters of King Mead of Riverside; and the latest arrival is a beautiful daughter of the Gibson Company herd sire, Prince Alcartra Korndyke, son of Tilly Alcartra. The dam of this calf is a daughter of Prince Gelsche Walker that made 577 pounds butter in one year as a junior two year old. Mr. De Wolf purchased this good heifer in the Second Modesto Sale for the very modest sum of $410.

A Successful Holstein Sire

W. F. Mitchell, Visalia, is getting an unusually attractive lot of calves from his herd sire, Prince Hiske Walker, son of Prince Gelsche Walker and Hiske of Riverside, and therefore full brother to the 34 pound four year old Lady Hiske Walker. Many of the sons and daughters of this bull are of real show quality, including some that H. E. Cornwell, Modesto, has in his herd.

More Herefords to California

Will Henn of Kansas City, Missouri, who is holding his show string of Hereford and Shorthorn bulls at Los Angeles, awaiting the opening of the Liberty Fair, has recently sold five head of senior yearlings and two year olds to the Diamond Bar Ranch, Spadra.

Included in the lot were two grandsons of Perfection Fairfax, and the good two year old Beau Banner 5th by Beau Perfection 9th—a full brother to the noted Woodford.

Live Stock Receipts Show Big Increase

During the first 10 months of the current year 61 markets received 20,431,594 cattle; 34,579,735 hogs; and 17,675,200 sheep. During the same period last year the receipts were as follows: 18,539,919 cattle; 30, 284,680 hogs; 16,329,576 sheep.

Large Area Released from Tick Quarantine

On December 1, 79,217 square miles in nine Southern states will be released from the federal quarantine against the cattle fever tick. This year's release represents the greatest area freed in any one year since the campaign was begun against the parasite.

Lift Embargo on Breeding Animals

The embargo on express shipments of live stock and poultry for breeding purposes from December 10 to 31 is to be lifted, according to word received from the railroad administration by the United States department of agriculture. The department pointed out to the railroad and express officials that its food production campaign would be retarded materially if an embargo were placed on the shipment by express of live stock for breeding purposes. This embargo included all territory east of the Missouri River, including Minnesota.

Conejo Ranch Sales

H. H. Braly states that Conejo Ranch is experiencing a keen demand for Hampshires and that recently several of the best sows in the herd have been sold.

C. J. Gilbert, who is establishing a high class herd near Lancaster, secured Mary Pickford, firtst in the aged class at Sacramento, 1918; Leading Wave 3rd, third in the same class; and Wavelet, second prize senior yearling sow.

J. C. McGill, owner of the Indianapolis baseball team, purchased Leading Wave 2nd, second in the aged class at the last state fair. The price paid for this sow was $500.

May Echo Sylvia to Bell Farm

The Holstein cow, May Echo Sylvia, dam of the $106,000 bull, has been sent by Avondale Farm, Brockville, Ontario, to the Bell Farm. Coraopolis, Pennsylvania, to be bred to King Valdessa Pontiac.

State Record for Higdon

W. J. Higdon, Tulare, has been notified by the Holstein-Friesian Association that the junior two year old heifer, Madrigal Mookie 2nd, now holds the California record for her age for a half year's production, having to her credit 13,107.8 pounds milk and 498.98 pounds butter.

New Hereford Officers

At the annual meeting of the American Hereford Cattle Breeders' Association, held at Kansas City, Missouri, during the week of the American Royal Live Stock Show, H. A. Moxley of Shelbyville, Kentucky, was elected president; A. B. Cook of Townsend, Montana, vice president; and R. J. Kinzer secretary.

Langwater Guernsey Makes Notable Record

Langwater Heroine 49483, owned by F. L. Ames, North Easton, Massachusetts, recently completed a record of 16,221.1 pounds of milk and 805.64 pounds of butter fat, at the age of three and one-half years. This record has been exceeded by only two Guernseys in this division, Azucena's Pride 2d 24957 and Governor's Pauline 30472, and places Langwater Heroine 49483 in third place in Class D.

Langwater Heroine 49483 has a previous record made in Class G of 12,363.9 pounds of milk and 612.34 pounds of butter fat. She finished her first record on April 13, 1917, and calved again on July 12, 1917.

She is one of the last daughters of Imp. King of the May 9001.

LIVE STOCK QUERIES

Ox Warbles

I have a Holstein heifer that has worms under the skin, along the back. How can I remove them and what are they called?—P. J., Fresno.

I notice matter oozing from small eruptions along the back of my cow.—Subscriber, Lindsay.

Both the above animals have warbles, which are very common at this time of year.

R. W. Wells, who recently spent six months in Arizona holding demonstration meetings with stockmen, makes the following suggestions on the control of ox warbles:

"The white grubs found in the backs of cattle should be squeezed out. If permitted to come out by themselves they drop to the ground and transform in about three weeks to the adult fly. The adult fly is the one which causes the cattle to twist their tails and make for the brush or for a mudhole. The fly does not feed and it does not sting. It lives only four or five days, just long enough to lay its eggs for the new generation. The fly tries to lay her eggs on the hair around the feet, usually not far from the hoof. The eggs are stuck in a row on the hair. They hatch in about four days and the young maggots burrow through the skin around the feet and beneath the skin, make their way to the body of the animal."

These grubs injure cattle in several ways. They reduce the milk flow of dairy stock; they reduce the price of the hide of a beef several cents a pound, and cause "jelly beef" along the back. The adult fly causes the cattle to crowd into mudholes where they often become mired down.

Every grub squeezed out is a fly killed. If the dairy herd is gone over twice a week, practically every one of the grubs may be caught.—R. P. R.

Grain Ration for Dairy Cows

Kindly suggest through the Cultivator, a grain ration for cows. My cows will average 900 to 1000 pounds in weight, and, on alfalfa alone, are milking an average of four and one-half gallons a day. I would like to feed a grain ration with the hay.—Subscriber, Orland.

With grain high and mill feeds hard to get the question of supplying a satisfactory ration in one that is giving dairymen considerable concern. Silage and alfalfa hay has proven a "life saver" to many dairymen. With cows that are producing as well as yours on alfalfa it is probable that you can afford to feed grain. I say probable, because only an actual trial will tell.

Any of the following rations, fed as supplements to alfalfa hay, will be satisfactory and you will be governed in your choice by the local cost and available supply.

Rolled barley alone, does fairly well, but ordinarily a ration is improved when made up from a variety of feeds; equal parts of ground or rolled barley, bran and oats; beet pulp 50 per cent, cocoanut meal 25 per cent, bran 15 per cent, barley five per cent, cottonseed meal five per cent; barley four parts, bran two parts, oil meal one part; dried beet pulp five parts, barley four parts, cottonseed meal one part.

A fairly safe rule to follow is to feed one pound of grain for each three or four pounds of milk produced.

Feeding Value of Acorns

How does the feeding value of acorns compare with barley?—S. C. H., Gorman.

In 100 pounds of barley there are 79.4 pounds of digestible nutrients; in 100 pounds of acorns there are 47.1 pounds of nutrients. Barley contains nine per cent protein; acorns 2.3 per cent protein.

SUGAR AVAILABLE FOR HOME MEAT CURING

Those who wish either brown or white sugar for curing home-butchered meat can secure it by applying to their county or state food administration official.

A movement is on foot to organize the Imperial Valley Sheep and Wool Growers' Association.

Do *you* think there is no competition?

If anyone thinks there is no competition amongst the big packers he ought to go through a day's work with Swift & Company.

Let him begin at the pens when the live stock comes in; let him try to buy a nice bunch of fat steers quietly and at his own price, without somebody's bidding against him.

Let him realize the scrupulous care taken at the plant that not one thing is lost or wasted in order that costs may be held to a minimum.

Let him go up into the office where market reports are coming in — and reports of what other concerns are doing.

Let him watch the director of the Swift refrigerator fleet, maneuvering it over the face of the country like a fleet of battleships at sea.

Let him take a trip with a Swift & Company salesman and try to sell a few orders of meat.

Let him stay at a branch house for an hour or two and see the retail meat dealers drive their bargains to the last penny as they shop around among the packers' branch houses, the wholesale dealers, and the local packing plants.

And then, when the day is over, let him have half an hour in the accounting department, where he can see for himself on what small profits the business is done. (Less than 4 cents on each dollar of sales.)

If he still thinks there is no competition in the meat business it will be because he wants to think so.

Swift & Company, U. S. A.

The Most Efficient Tractor in America

Both Drivers Level When Plowing

The twin crawlers run on the unplowed ground and one front wheel follows the furrow for self-steering. So the Bates Steel Mule runs upright without the side thrust on bearings that comes where a tractor leans over because of a driver running in the furrow.

Perfect flexibility; unit construction; hardened cut steel gears; Timken bearings; heavy duty valve-in-head kerosene motor; and long life crawlers that double the usefulness of the tractor—are some of the added features of superiority.

Follow the crowds. Come and look over the many features of the Model "D" STEEL MULE we have on exhibition.

The only Crawler Tractor adapted to Beet Cultivation without making changes

F. T. Briles, So. California Distributor

214-216 No. Los Angeles St. Los Angeles, Cal.

ROLLING TRACTOR SCHOOL

We have from J. C. Beswick, director of vocational war work, the following schedule of dates for opening sessions of tractor training centers:

Unit No. 1. — Madera, October 7; Reedley, October 21; Lemoore, November 4; Tulare, November 18; Delano, December 2; Brawley, December 16; El Centro, December 30; Hemet, January 13; Ontario, January 27; Santa Ana, February 10; Van Nuys, February 24.

Unit No. 2.—Merced, November 18; Oakdale, December 2; Patterson, December 16; Elk Grove, December 30; Lincoln, January 13; Gridley, January 27; Chico, February 10; Corning, February 24; Willows, March 10; Williams, March 24.

Owing to influenza quarantine Unit No. 3 has not yet been opened. This was to have opened sessions at Ventura, passing up the Coast to Santa Maria, King City, Salinas, Hollister, Santa Clara, Livermore, Concord, Napa, and Santa Rosa.

Entry Requirements

Classes are open to men engaged in agricultural work on farms, boys over 16 years of age now living on farms, men or boys over 16 years of age who are securing the training in order to engage in farm work of this character, men subject to draft who desire the training for army service, a limited number of women physically qualified for tractor operation.

It has also been suggested that, in order that those who really need the work most have an opportunity to join the class, a good faith deposit be required of all persons enrolling therein. This deposit should be made as a part of an agreement entered into by the student to the effect that he will conscientiously attend the class and will be responsible for any damage or breakage to equipment that may occur through carelessness on his part. Said deposit should be required with the understanding that should the student fail in any of the aboveo bligations it should become forfeit to the local high school district.

Mr. Beswick writes: "A greater responsibility than ever rests on the farmers, and as from five to twenty times more land can be cultivated by the use of tractors than by the old methods, this training is very important. In the centers where the training has already been given the farmers have been more than pleased with the course."

HOLSTEIN PRODUCTION SINCE 1894

In the November 16 issue of the Holstein-Friesian World appears a table of all the world seven-day milk records that have been made in the different classes since 1894.

In 1894 the full age record was held by Rosa Bonheur 5th, who produced 726.25 pounds; the present record for that class is held by May Echo Sylvia, who produced 1005.8 pounds—an increase of 38.48 per cent.

The senior four year old class record for 1894, was held by Inka 4th's, Pietertje Rose, whose production was 509.38 pounds as compared with the present record, held by Mildred Pietertje Abbeberk, of 856.9 pounds, which is an increase of 68.22 per cent.

Belle Sarcastic stood at the head of the four year old class in 1894, with a record of 548.5 pounds. The present class leader is Zarilda Clothilde 3rd De Kol, whose record of 817.4 is 49 per cent greater than the first record for that class.

Wietske's Papoose was the 1894 senior three year old record holder. Her production was 353.38 pounds milk. Jewel Pontiac Segis now heads that class with 768.8 pounds milk to her credit, which is an increase of 117.8 per cent.

The junior three year old record in 1894 was held by Mutual Friend 3rd with a record of 409.4 pounds. Nena Newman Cornucopia, whose record of 778.2 pounds has raised the standard 90 per cent, is the most recent title holder.

Since 1894 the senior two year old milk production record has been increased from 312 pounds, made by Agnes De Kol's Ellen, to 679.8 pounds, produced by De Kol Cornucopia, a total increase of 117.8 per cent.

The junior two year old record has likewise more than doubled—113.5 per cent—since Sadie Vale Concordia produced 317.6 pounds milk in 1894. The present record made in 1915 by Aaggie Nena Cornucopia is 677.6 pounds.

SANTA ANITA RANCHO
Anoakia Breeding Farm

Arabian-Thoroughbreds

Out of our choicest thoroughbred mares and sired by our famous imported stallion Ibn Mahruss we are offering some splendid two year olds. Also some especially desirable young saddle stock sired by Ibn Mahruss, world renowned Arabian desert stallion, and Don Castano, five galted saddle stallion, winner in many prominent shows.

Mammoth Jacks

We have for sale a number of two and three year old jacks, big, growthy fellows of exceptional breeding and quality.

Poland China and Berkshire Boars

Sired by the World's Fair winners, BANKER'S BOY and KINTYRE LAIRD, and by others of our herd boars of equal breeding.

Raise Your Calves Without Milk

MILK is money! Don't feed it to your calves. SELL it! Raise them on the original and only COMPLETE MILK SUBSTITUTE—

Blatchford's CALF MEAL

You want fine, healthy calves with fat sleek bodies—feed BLATCHFORD'S CALF MEAL. Prevents scours. Costs ¼ of what you can get for your milk.

Write for Pamphlet Shows you how to make two profits instead of one. We'll give you name of your nearest dealer.

Blatchford Calf Meal Co.—Dept. 4709—Waukegan, Ill.

Holsteins Are Rugged

The Holstein-Friesian Cow is large, strong and vigorous, full of energy and abounding vitality. It is able to turn to best advantage the roughage of the farm, converting it into large quantities of excellent milk for all purposes. She perpetuates herself through strong, healthy calves, and when useless in the dairy fattens readily and makes excellent beef.

farming. Further, no other business is conducted with so little use of credit. More than two-thirds of business transactions are made possible because of the use of credit.

The banding together of producers of a community to guarantee credit of the community "can't be done"—but is being done as certified to by editors from Massachusetts, Texas and other states.

"Free congressional seed!" Oh, forget it! Plainly the secretary does not endorse it. Not a single delegate present did either. That seed costs $200,000 annually.

Rural social life, sanitation, better homes and greater conveniences which farmers are demanding are worthy heartiest encouragement. In the one question of sanitation the farmer is not as advanced as the urbanite. The city is as a rule a more healthful place than the farm. It's a bit shocking to admit it but statistics prove it.

The postal zone law called for hot shot. Unfortunately we were not favored with the attendance of the postmaster general and the congressmen responsible for the passage of the postal zone law. But the injustice forced upon all publications, and especially upon the farm press, was passed up to another arm of the government. Congressman Kitchin's ears may not have burned but he was generally and nicely "burned up." E. T. Meredith, president of the Agricultural Publishers' Association, and a prominent Iowa democrat, was quoted by C. V. Gregory, publisher of the Prairie Farmer of Chicago, as saying that the democrats were planning to repeal the measure, because they were quite sure the republicans would do it anyhow when they obtained control.

This remark caused some merriment in which the secretary joined.

A half hundred busy minds evolved many ideas—many more were not expressed, but in merest outline other problems before the United States department of agriculture and the American farmer:

Bureau in the department having to do with agricultural economics or bureau of farm management; more perfect cooperative methods; farmers use credit more, be prompter in all payments and bankers extend accommodations; school teachers more and better qualified along agricultural lines; better county farm agents and far more of them; increased appropriations so that that after the war the present war basis may be maintained and farm bureaus increased; county agents should keep more complete and permanent records of their work; maintain our democracy, government agency should still be dominated by people, the people be dominated by the government; let the bureau of markets stop bull and bear raids; the income tax has been an educator in farm bookkeeping; single tax (tread lightly); secure averages in costs of farm products; continue national food administration—and on until a cabinet meeting called the secretary away.

He—David F. Houston, secretary of agriculture—is a big man and a lot of him is above his collar.—C. B. M.

RED CROSS AIDS AGRICULTURE IN JERUSALEM

A plan to increase at once the diminishing food supply of this region by placing plowing oxen at the disposal of native farmers unable to own them, has been launched here by the American Red Cross. The organization plans to buy large numbers of oxen, to be rented out by the day at nominal rates, or resold at cost to farmers. There are at present in this district but 65 plowing animals against 418 before the war; and food production is at a menacing level.

Jerusalem is to have its winter war garden, in regular American style except that winter is their gardening season. With the district faced with a serious food shortage, the American Red Cross here has launched a campaign for a war garden on every vacant lot within and about the city. At the same time, through this activity, the Red Cross is finding employment for scores of destitute native women in preparing the gardens. The planting season here follows the early December rains.

A. H. Cook of Yolo County has a novel way of harvesting this year. He is pulling his machine with a 45-horsepower tractor; but the hills on the land which he farms are too steep for the tractor, so he has six mules hitched between the engine and the machine, and now he moves right along over any of the hills.

The man who is behind the times has a view that should be stimulating.

Now's the Time

to get in your dormant or winter spraying. If done properly—this will prevent the accumulation of certain insect and fungus enemies; will clean your trees and soften the bark; and will keep the trees in better health, vigor and fruitfulness. For this purpose there is nothing so effective as

Crude Oil Emulsion

Remember—Universal Orchard Sprays are made by us from the finest materials, under expert supervision. They are quick and sure. And—*they penetrate.*

"The BEAN is the Best"

Clean Trees Bring in the Money

Messy, scaley trees have no vitality. The mess and scale sap the very life from the trees—the crops are small—and the fruit inferior.

But trees that are clean—and healthy—produce BIG! It costs less to spray—than to suffer the loss that results from not spraying.

Do the Work Right!

You must have a sprayer that will drive the material onto the trees under heavy pressure, so that the job is thoroughly done.

You must have a sprayer, too, that will work right along day in and day out without trouble. That's why you should get a Bean.

BEAN POWER SPRAYERS

Check the coupon. Write your name and address clearly, and send for our new catalog of Hand and Power Sprayers.

Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Rolling Tractor School

In further answer to question of Subscriber, Falibrook, in last week's Cultivator:

Unit No. 1 will open four-week sessions at Ontario January 27, Santa Ana February 10, Van Nuys February 24. For dates of other schools and entrance requirements see Page 582.

Sorehead in Turkeys

What is the best remedy for sorehead in turkeys?—Subscriber, Brawley.

Sorehead in turkeys is treated just like sorehead in chickens. No better internal remedy has been found than flour of sulphur in the mash for a week or so. About five per cent of the mash can be made sulphur for a limited time. For turkeys that have been accustomed to a hard grain ration this treatment may be a little difficult, but in many cases the birds might be induced to take their medicine in bran or possibly mixed in curd or chopped green. Some experts advise removing the scab from each sore and painting with creolin, but this seems a very painful treatment. A dose of Epsom salts (one-half teaspoon to each bird) in moist mash, after the sulphur has been given for a few days is helpful. In some cases the flour of sulphur treatment seems to shorten the duration of the disease considerably, but it must be remembered that chicken pox, being a germ disease, cannot be cured immediately.—J. A. K.

Minorcas "Throw Back"

I hatched what I supposed to be pure blooded Minorcas this year. Some of them are the funniest looking chickens. A fourth of them are white, some spotted and the rest of them black and gray, and four of them had green legs, almost as green as peach leaves. Now the curiosity of it is, there have never been any white chickens on the place, and when my daughter hatched her chickens, from the same flock, she never had a white feather on hers and hers look larger and nicer than mine. I often would have one or two white feathers on my Black Minorcas but they generally lost them by the time they were grown. Now the why? I am curious to know.—Subscriber, Ceres.

Nearly all breeds "throw back" more or less. The fact that some of the Minorca chicks have more white feathers than others probably indicates that their mothers had more white blood than the mothers of the other chicks. In other words, the chicks your daughter hatched and those you hatched, while they had apparently exactly the same ancestry, probably had different mothers. It has been found by experimenting that the hens of the same pen, while they may look alike, will throw very different offspring. Some may throw mostly pullets, others mostly roosters; some big, vigorous chicks, others small, runty ones; and some never lay a fertile egg. The study of heredity is tremendously interesting, and we are learning that successful breeding depends on the characteristics of the hens used as mothers much more than has generally been supposed.—J. A. K.

Berries on Adobe

I have been reading your paper for a long time, I think that every farmer who fails to read it every week is losing money by neglecting it. Can you tell me whether or not blackberries, or strawberries will grow in adobe gumbo soil that cracks after it is irrigated? Will blackberries grow when the soil is covered with water or the soil kept wet all the time? I have a reservoir covering one acre that grows seaweed to perfection, alfalfa has proved a failure on this soil. I shall be glad to hear from any reader of the Cultivator who has had experience raising berries.—J. H. J., Lemoore.

This question was referred to H. Culbertson of El Cajon who answers:

"I have no experience with the above on that class of soil, nor have observed their growth under those conditions. I have seen good strawberries on black adobe soils of a granular or mealy make up. If I understand the term 'gumbo,' as the questioner describes his soil, it would be the opposite of the granular, or a compact pasty condition. In this a lack of experience and observation forbids attempting any cultural explanations. Several years ago there were large quantities of strawberries grown out towards the Coast from Los Angeles on adobe soil. Some one out there might answer the questions."

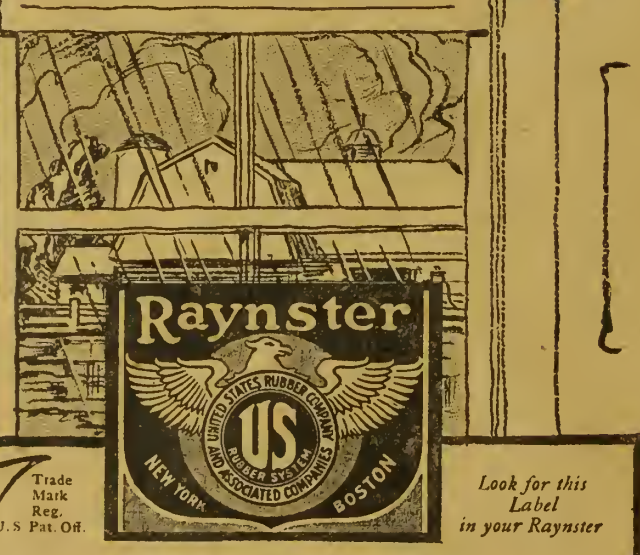
Home Made Vinegar

Would you kindly give me advice as to what to do with the juice of apple, peach, grape and other fruit parings and wastes which we saved for making vinegar. It has turned to vinegar but has a moldy taste. Last year had better luck but a thick scum kept gathering. What can we do to prevent that?—Subscriber, Los Angeles.

This question was referred to W. V. Cruess of the state university, who answers:

"Would suggest that the inquirer use a small amount of ordinary bread yeast to start fermentation of the juice. A cake of compressed yeast will be sufficient for five gallons of juice. When the yeast fermentation is complete, which will be in about two weeks time, I would advise that he add about one pint of strong vinegar to each galion of the fermented juice. This will check the growth of moid. When the vinegar has become sour enough for use it should be placed in bottles that are filled absolutely full and corked tightly. If the scum which appears on the vinegar is slimy and tough it is only vinegar 'mother' and is not harmful to the vinegar. If the scum is white and wrinkled and easiiy broken it consists of 'wine flowers' which will spoil the flavor of the vinegar. The addition of one pint of strong vinegar to each gallon of fermented juice will prevent the formation of this 'wine flowers' film. If the vinegar has become moldy there is practically nothing that can be done to remove the moldy taste. It is sometimes possible to remove part of the moldy flavor by shaking the vinegar with a small amount of cotton seed or olive oil."

Raynster



Trade Mark Reg. U.S. Pat. Off.

Look for this Label in your Raynster

A Label That Defies Weather

The Raynster Label means the best in weather-proof clothing. It is the identifying mark on a complete line of raincoats for men, women, boys and girls—heavy rubber surfaced coats for outdoor workers, extremely dainty silk coats for women and girls, or fine imported cloth coats—suitable for overcoats or ulsters. These coats do double duty, they protect against rain or cold.

Be sure the Raynster Label is in the coat. That is the sign of full value for your money. In a garment showing the Raynster Label there is no question about materials or workmanship. It is the signature of quality. Look for the Raynster Label when you want a reliable raincoat.

Get a Raynster today. It is good insurance of health and clothing to provide a Raynster for each member of your family.

If you wish, we will send you the Style Book showing many Raynster models. Drop us a postal.

Settling Estate in Iowa

A married woman having real estate in Iowa in her own name comes to California with her husband and three children. In case of her death without will what about the Iowa real estate? How soon can the estate be settled?—Subscriber, Van Nuys.

Her estate would have to be probated in Iowa as to the real property there and would descend in accordance with the laws of Iowa and not of California. The time within which it would be settled would depend largely upon the amount of the estate.

Trespassing Animals

Is there any liability upon the part of one who has caught a cat in a trap under his rabbit coops after repeatedly losing rabbits on account of neighbors' cats? The rabbits have been duly fenced and the neighbors notified of the injury their cats were doing.—Subscriber, Los Angeles.

There is a decided variance among the cases upon this matter of trespassing dogs and cats; in fact it

seems that the courts have treated from an individual standpoint each case arising. The weight of authority, however, seems to be as follows: It is not enough to justify the killing of a trespassing dog, cat, or other animal merely because they trespass, or merely because they may by the act of trespass or during the trespass do some comparatively small act of damage or there is fear of their doing such small damage; in order to justify the killing of the animal it is necessary that the animal be caught in act of doing damage relatively important to the value of the animal killed. It should possibly be further shown that the owner of the animal had knowledge of the fact of precedent damage caused and the fact that traps were set or poison out and warned to keep his animal at home. It would be the opinion of the writer that in the above case there would be no liability upon the part of the rabbit owner. The above statement is made in view of the many questions along this line which have come in.

Exemption from Seizure for Debt

What is the exemption law of California with respect to a rancher? — Subscriber, Laton.

Implements of husbandry not exceeding in value $1000; also two oxen, or two horses, or two mules and their harness, one cart or buggy and two wagons, and food for such oxen, horses, or mules for one month; also, all seed, grain, or vegetables actually provided, reserved or on hand for the purpose of planting or sowing at any time within the ensuing six months, not exceeding in value the sum of $200; and 75 bee hives; one horse and vehicle belonging to any person who is maimed or crippled, and the same is necessary to his business; necessary household or kitchen furniture, including a sewing machine, stove, bed and furnishings thereof, provisions and fuel actually provided for family use sufficient for three months, and three cows and their sucking calves, four hogs with their suckling pigs, and food for such cows and hogs for one month, also a piano, shot gun and rifle. There are several other exemptions such as savings and loan association stock.

Crop Lease

A crop-leases certain land to B. The lease provides substantially as follows: B shall deliver to A or order three-eighths of all grain or other crops produced upon the farm of every kind, manner, or description, crops to be sacked and baled and delivered at certain warehouse. Is A entitled to three-eighths of the corn fodder produced? — Subscriber, Bonner's Ferry.

The accepted legal definition of the word "crop" is "everything produced from the earth by annual planting, cultivation, and labor." Under such definition and under the wording of a lease as above stated A would be entitled to his proportion of the corn fodder, except only in case there was a known usage or custom prevailing in the locality wherein the farm was located concerning such fodder. In such instances it has been held that where such custom or usage was known to both parties and was general, it might be presumed that the contract impliedly embodied such custom and was made with reference to the same.

Broker's Fee

In case of a party receiving and utilizing information offered him to his profit from a broker, being aware of the fact that the information was part of the agent's stock in trade as evidenced by his announcements that he is compelled to charge his patrons "a small fee or commission" upon the amount of business secured by means of the information, has the broker any legal recourse for the collection for his services?—Subscriber, San Jose.

While the question should be made more definite for an answer to be of great utility to the individual subscriber it may be generally answered for the benefit of readers as follows: One of the essential elements of a contract is that it be certain; there is apparently nothing in the above to show what the commission may be. There must be a meeting of the minds

Choose the Tractor with a Satisfactory 4 Year Working Record

WATERLOO BOY
Original Kerosene Tractor

Pin your faith to the tractor whose record you know. Four years of consistent success in the hands of thousands of American farmers have established Waterloo Boy supremacy.

Waterloo Boy users have demonstrated its ability for ample power in all work, under various soil conditions; its average consumption of less than 2 gallons kerosene to the acre of plowing; its threshing cost of 15c per hour. Waterloo Boy users plow from 8 to 12 acres per day and get special acreage advantages in other farming operations.

They have found this reliable Three-Plow Tractor easy to operate, strong and durable in construction, and fully up to their expectations in performance. Dust-proof gear construction, complete accessibility, automatic lubrication and reliable ignition insure easy and continuous operation. Every part of the Waterloo Boy performs its service.

Its Record Is Your Guarantee

Get these facts from our users themselves. They spell Waterloo Boy success for you. Many bona fide voluntary expressions of our users' complete satisfaction are contained in our catalog. Consult this book before going further into the tractor question. It will save you time, labor and money to buy a Waterloo Boy. Write for our literature today.

Want to Hear From Owner of Farm or fruit ranch for sale. O. O. Mattson, St. Paul, Minnesota.

FROM SHELL TO ROASTING-PAN

Written for California Cultivator
By Jean A. Koethen

THERE is more than one way of raising turkeys. Probably there is more than one "best" way, for there is no feeding formula warranted to grow every turkey hatched. The successful turkey feeder is the one who best understands the nature and needs of the birds and feeds accordingly. To be sure, feeding is not the only thing to be considered. Cleanliness and a dry, comfortable environment have their place. Nevertheless, the little turkey that loses its slender hold on life is almost always a sacrifice to improper feeding, and so our first question is always, "What do you feed, and how much?"

Driving out one of the less frequented streets of Riverside last week we came on a flock of Mammoth Bronze turkeys so sleek and thrifty looking that I told my companion, "Some one here knows how to raise turkeys. I must find out how it is done."

The somebody proved to be Mrs. J. M. Burns, and she very willingly told me, for the benefit of Cultivator readers, just how she does it.

Mrs. Burns has but three breeding hens, and yet she has managed this year to raise 55 fine, healthy birds, weighing from eight to twenty pounds each, and they were contracted for sale before Thanksgiving at 35 cents a pound alive.

All the poults are cared for by turkey mothers, but not all are hatched by turkeys. Mrs. Burns' system is as follows: She sets the first turkey that goes broody after a sufficient number of eggs have been laid, and at the same time she sets a chicken hen. As each turkey is set a chicken hen is set with her. The turkey is given 15 eggs, the hen ten. From this number of eggs Mrs. Burns expects at least 20 turkeys, and these when they hatch are given to the turkey mother. The turkey is set in a carefully made nest on the ground in a box two feet long, 18 inches wide and about four inches high. One side is open so that the turkey may go in and out without jumping down upon the eggs, and the whole is carefully covered to keep out rain. As soon as the hatch is over she is moved to a coop to which is attached a run six feet long, three feet wide and three feet high. The top and ends and one side of the run are of wire, but the other side is tightly boarded so that the poults may aldays have protection from the wind. A run this size can always be moved to suit the weather, and the poults always have a windbreak if they need it. The coop and its run are moved to new ground every week. This is extremely important because there is no floor in the coop. Mrs. Burns believes it is absolutely necessary for the young birds to be on the ground night and day, and the ground must never be allowed to become foul. The wire which covers the run is so coarse that the poults can go in and out through it as soon as they are strong enough, but the mother is kept in confinement. The poults are kept inside the run the first two weeks by means of boards placed around it. and then are given their liberty.

One very noteworthy thing about the feeding of the turkeys on this ranch is that they get absolutely no green feed but the young, tender devil grass in the lot where they run. The turkeys and three cows are kept in an acre-and-a-half lot planted to devil grass. The cows keep the grass nibbled short, and every month the lot is flooded, so that the poults have always before them a supply of tender new growth. On this they run and thrive from the day they are let out of the coop till they go to the butcher. They have no lettuce, no chopped onion tops or dandelion, just plain devil grass.

Another noteworthy thing about the feeding of the poults is that they have no grain feed whatever and no cereal of any sort till they are two months old,—no bread crumbs, no steel-cut nor rolled oats, no cracked wheat. Until they have passed those first critical months the poults get nothing but boiled egg, curd and the grass they pick on range.

The first day out of the shell the young birds get no food at all. Late in the afternoon a dish of gravel or chick grit is placed before them so that they get their crops in working order.

The morning of the second day their mistress comes with a little chopped egg which has been boiled 30 minutes, sprinkled with black pepper, and scatters it on the ground in the run. She does this five or six times a day for a week. "Just precisely how much do you give at each meal?" I begged, for this is the critical part of turkey feeding. "I always leave them hungry" said Mrs. Burns, and I cook two eggs a day for 20 turkeys." Figure out how many teaspoons two eggs chopped fine will make, and it is plain the 20 poults do not get over a teaspoon at a meal. The hen is fed separately and does not have to share the babies' egg. This eliminates one difficulty that is encountered when poults are raised by a chicken hen. The chicken, being a more devoted mother than the turkey, always refuses to eat anything she cannot share with the turkeys.

The second week a little curd or cottage cheese is mixed with the boiled egg, and the amount of curd is gradually increased and the amount of eggs decreased till by the end of the second week the poults get nothing but curd. The quantity of curd is gradually increased till by the end of the third week the 20 poults are receiving what would fill perhaps half a small sauce dish, but they are still fed five times a day, and these frequent feedings continue till they are two months old. A box of gravel or grit is kept in the run, and a chick fountain of fresh water. Whatever else the poults have they must forage for. "But they must be kept hungry," Mrs. Burns repeated, "if they do not come running to meet me when I go to feed them I know I am feeding too much."

When the poults are two months old a little kafir corn, milo or wheat is added to the ration, but they are still fed four or five times a day. The grain portion of the ration is increased until by September the birds are ready for fattening.

In September whole corn is added to the other grain, but it is of necessity added gradually because the poults do not readily learn to eat it. By now they are fed but three times a day. As soon as they have learned to like whole corn two baskets are hung on posts in the lot, just high enough to be out of the way of the chickens. One of these baskets is filled with whole corn, the other with seed barley that has been soaked 24 hours. From now on the corn and barley are kept before the birds and they eat as freely as they will.

The poults are not allowed out in the wet while they are small and are greased a little under the wings at first with pure fresh lard so that there may be no danger of lice. A little later a box of ashes is placed in the coop for them to dust in. "What do you do for sick turkeys?" I asked, but Mrs. Burns shook her head with the oracular remark, "A sick turkey is a dead turkey," which is precisely my own conclusion.

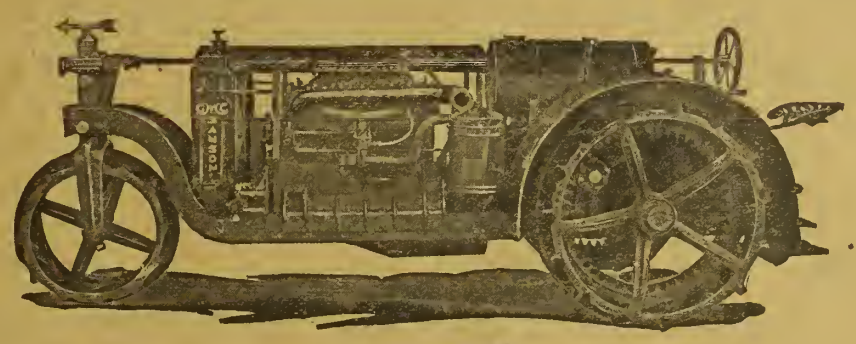
160 Hens—1500 Eggs

Mrs. H. P. Patton, Waverly, Missouri, writes: "I fed two boxes of 'More Eggs' to my hens and broke the egg record. I got 1500 eggs from 160 hens in exactly 21 days." You can do as well. Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs," and you will be amazed and delighted with results. "More Eggs" will double this year's production of eggs, so if you wish to try this great profit maker, write E. J. Reefer, poultry expert, 4709 Reefer Bldg., Kansas City, Mo., for a $1 package of "More Eggs" Tonic. Or send $2.25 today and get three regular $1 packages on special fall discount of a season's supply. A million dollar bank guarantees if you are not absolutely satisfied, your money will be returned on request and the "More Eggs" cost you nothing. You take no risk. Write today. Pin a dollar bill to your letter or send $2.25 on special discount for three packages. Or ask Mr. Reefer to send you free his poultry book that tells the experience of a man who has made a fortune out of poultry.—Adv.

GMC TRACTORS

SAMSON SIEVE-GRIP TRACTOR

GMC TRACTORS



MODEL S-25

The durable tractor is not achieved in a day. Many features, time and experience dictate, enter into its construction.

After nearly two decades of manufacturing and field experience, the GMC SAMSON SIEVE-GRIP TRACTOR is submitted as ideal durability. Many in successful operation for years, and in as effective use today, testify to its ruggedness.

The quality of the GMC SAMSON SIEVE-GRIP TRACTOR is guaranteed before built by careful selection of high-grade materials, made to specifications and over-sized to secure liberal reserve strength. Final severe tests further assure a durable product. It is built SAMSON in name and SAMSON in strength.

The GMC SAMSON SIEVE-GRIP TRACTOR performs the work of ten horses on the farm. It will do your plowing, discing and harrowing economically and efficiently, without packing the ground. It is adapted to countless other uses on the farm for many of which horses are unsuited. It will CUT YOUR COSTS. IT WILL INCREASE YOUR INCOME.

The durable is the efficient, economical tractor.

Our booklet, Better Farming, is yours for the asking.

TWILIGHT IN THE MOUNTAINS

Written for California Cultivator
By Ida M. Blake

Together we wandered at twilight,
Among the great oaks and pines,
While shadows of evening gathered
On bushes and rambling vines.

Softly the breezes of evening
Told of the coming night.
The pines told the story in whispers
To all of the oaks in their might.

Birds heard the story repeated
And home to their nests quickly flew,
It wakened the owl from his slumber
And he solemnly called, "Who-o-o".

The brooklet so merrily babbling
Sang of the stars and the moon,
Of the wonderful day that had ended
And the night that was coming so soon.

Guardian angels in heaven
Lighted their lamps one by one,
And we whispered in the evening silence,
"'Tis night, and the day is done".

EXPLORING FOR SWEETS

HOW often the man who has dined well shakes his head at the offer of dessert! That shake traces back, perhaps, to the apple sauce, cranberry jelly or sweet pickle you served with meat. This satisfied his appetite for sweets and made a dessert unnecessary.

Follow the lead of this head shake and see where it takes you, for a wartime cook must have the imagination of an explorer. You may discover dinner combinations that satisfy in spite of "no dessert."

It is the custom in many lands to serve some sort of sweet dish with meat. There is the fruit compote of Spain, chutney of the Orient, baked bananas of the tropics and candied yams of our own southern states. These dishes have the long approval of those who dine well. They often satisfy the sweet appetite, yet call for little or no sugar. This trail then is worth following and may lead to hidden treasures in your own orchard and garden. Here are some dishes similar to those served in foreign lands that make excellent combinations with roast or fowl.

Apples Cooked in Cider

For a dish that needs neither sugar nor spice, try apples or pears cooked until clear in boiled sweet cider. Serve hot in large portions with meat.

Apples and Raisins

Simmer raisins in the water in which they were soaked overnight; add quartered apples and simmer together until done.

Apples and Bananas

Quarter fruit and place in a baking pan; dot each layer with butter and chopped nuts; bake in a quick oven basting frequently with a sauce made of a half cup of water, a tablespoon of white syrup and a little lemon juice.

Baked Pears

On baking days, try baked pears. Place pears in deep baking dish; cover closely and bake slowly until pears are a deep red.

Steamed Pears

Steam pears until tender with a little water and a tablespoon of white syrup.

Sweet Potatoes Plain

A sweet potato is full of sugar and very filling. They are best either baked or boiled and sliced into meat gravy. Serve them often as a substitute for both dessert and bread.

Sweet Potatoes "Southern Style"

Boil and peel potatoes; brush them over with syrup diluted with water; brown in oven or under blazer of gas stove.

Candied Yams

Slice boiled potatoes into a baking pan; sprinkle each layer with sugar, cinnamon and bits of butter; add a few cloves and a half cup of hot water; brown in the oven. Sugar may be omitted and a tablespoon of white syrup added to the hot water. This rich dish usually accompanies the Sunday chicken in the South. In the tropics plantains or bananas, cooked in somewhat the same style, are served with chicken.

Creamed Sweet Potatoes

Boil the potatoes; mash until smooth with butter, milk and a teaspoon of syrup; season with cinnamon and brown in the oven.

Squash in Ramekins

For this dish use pumpkin, hubbard squash or crookneck squash. Boil, drain and mash smooth, add butter lemon juice, cinnamon, and a little syrup; bake in ramekins or baking pan. Pass ramekins hot from the oven after the plates have been served.

New dishes are treasure finds, so treat your people to these sweets that travelers find good—the family table deserves the best. Serve these dishes in the approved way—that is, serve them hot with meat. Omit dessert and let them represent real sugar economy, even if a little sugar has been used in their preparation.

CLEAN UP THE CORNERS

Take a look around and get in the left-overs. There are still pumpkins and squashes tucked away, melons to be preserved or pickled. Brine or can them if you are too busy to make them up now.

What of the late tomatoes? Ripe or green, they can be put away for winter or eaten now. What better stretcher for that expensive bacon than fried tomatoes? Ripe tomatoes may be canned, dried, made into paste, marmalade or pickles. Green tomatoes may be brined whole for winter dishes or sliced and brined for pickles or made into marmalade. Save them all.

Sorghum is particularly good in the butters and relishes below, but any other syrup may be used in making them, or a combination of sugar and syrup.

Green Tomato Marmalade

Two pounds tomatoes, two teaspoons ginger root, one and a half cups sorghum, two lemons cut thin.

Cut large green tomatoes in cubes, crush ginger and place in cheesecloth bag. Add sugar and lemon. Cook slowly without stirring until ingredients are tender and mixture is thick. Seal while hot.

Green Tomato Mincemeat

Two quarts green tomatoes, one and a half cups sorghum, one pound seeded raisins, one-fourth cup citron, one and a half pounds chopped apples, three-fourths cup chopped suet, one tablespoon salt, one cup cider vinegar, two teaspoons cinnamon, one teaspoon cloves, one teaspoon nutmeg.

Chop tomatoes or run through meat grinder using coarse blades, and drain off juice. Cover with cold water and let it come to a boil. Scald for half an hour and then drain thoroughly. Repeat until the tomatoes have been boiled three times. Add all ingredients except spices, stir well together and cook until thick. When cold add spices and stir thoroughly. Heat and seal in glass jars.

Tomato Butter

Ten pounds ripe tomatoes, six cups sorghum, three pounds apples, three cups vinegar, half ounce stick cinnamon, fourth ounce whole cloves, half ounce ginger, fourth ounce mace.

Tie spices in a bag and boil all ingredients together about three hours or until thick, stirring frequently. Remove spice bag and seal.

Tomato Carrot Relish

One cup ground carrot, two cups ripe tomatoes, one cup sorghum, one teaspoon ground horseradish, one teaspoon ginger, one teaspoon vinegar, one lemon sliced thin.

Cook carrot until tender, add tomatoes peeled and sliced and other ingredients. Cook slowly until mixture is thick. Pack in hot jars and sterilize.

Pumpkin Butter

One gallon cooked mashed pumpkin, one quart or less sorghum, one gallon boiled cider, spices to taste.

Boil about two hours and stir constantly, or cook in stove until proper consistency. Seal while hot.

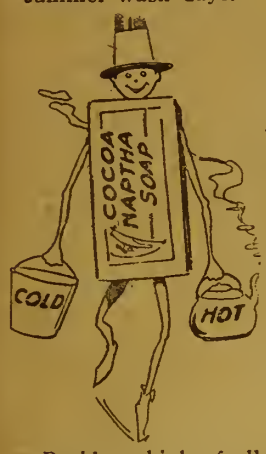
Lives there a man with ear so sprung
Who never to himself hath sung:
"K-K-K-Katy, beautiful Katy, etc.?"

Let our object be, our country, our whole country, and nothing but our country.—Webster.

FOR HOT OR COLD WATER

The Wash Day Problem Is Solved.

You know how inconvenient it is sometimes to keep a sufficient supply of hot water for wash day—and also how extra hot it always seems on summer wash days.



Don't worry. Now you can use cold water just as effectively as hot—and get just as good results.

Beside, think of all the fuel you save—and you don't need to boil the clothes at all!

Thousands of housewives are finding that Cocoa Naptha Soap is a real friend, especially in war time when every nickel counts. It's a great big cake, containing pure cocoanut oil, made by Los Angeles Soap Co., and just suited to the waters of this section. Ask your dealer for Cocoa Naptha. Give it a fair trial.

Genuine comfort if you ask for and get—

GREEN PICKLED OLIVES

By F. T. Bioletti

The green pickled olives of commerce usually known as "Queen" olives are prepared by a fermentation process. This fermentation produces lactic acid which gives them their peculiar piquancy and helps to preserve them. Experiments have shown that pickles practically identical in character and quality with the imported Queen olives can be produced in California from the Sevillano and Mission varieties. The Manzanillo can be prepared successfully in the same way.

Other experiments have shown that this pickling process can be applied successfully to ripe olives, at least to the Ascolano.

It has been shown also that ripe olives pickled in the ordinary way can be given the piquant quality by a supplementary fermentation.

The olives are picked after they have reached good size but before they show any sign of coloring, either red or yellow.

They are placed in a two per cent lye (two and one-half ounces of lye per gallon of water) and left until the lye reaches the pit. The lye is then replaced by lye changed twice daily until all taste of lye has disappeared.

They are then placed in seven per cent brine (nine ounces of salt per gallon of water).

All these operations should be carried out with as little exposure to the air as possible.

The olives are kept in the brine in closed receptacles at ordinary room temperatures until fermentation has developed the characteristic flavor and acidity. This will require from three weeks to several months, according to the temperature and the amount of flavor desired.

When the fermentation has reached the desired point, the brine is taken off, strained or filtered and boiled. The olives are rinsed quickly with water and then covered with the hot brine. They may be kept in barrels or preserving jars without further treatment.

If intended for shipment or to be kept for a long time, they may be placed in glass preserving jars or lacquered cans. These are then filled with the boiling brine, sealed and heated to 212 degrees Fahrenheit for about 20 minutes.

WISE BOY GOES BACK TO SCHOOL

I guess every fellow has a spell of thinking that going to school is a waste of time. I know I had two or three spells, but I always managed to recover. One thing that helped me was a statement made one day by the hired man who worked on my dad's farm. I had said something about school being a waste of time. The hired man looked me straight in the eye and said: "When I was just a little bit older than you, I was offered a job at a dollar a day. I quit school and went to work. That was 20 years ago—and I'm a dollar a day man yet," says The Case Scout in September Boys' Life.

Not very many boys will make a foolish move if they get the straight dope on a proposition, and if any of you are really figuring on quitting school, here's a little test I would advise you to try. Make a list of a dozen men in your neighborhood who you know have gone at least through high school. Then ask each one of these men this question: "Are you sorry you went through school?" When you have finished with this list make another of a dozen men who you know have never gone to school at all or who dropped out before they finished the eighth grade. Then ask each one of these men this question: "Are you glad you didn't get an education?" Keep track of the answers you get and then do a little serious thinking.

CARTOONISTS ARE ELOQUENT

A cartoon by a French artist has the puzzled kaiser looking down with a scowl upon the fields of France over which swarm innumerable masses of infantry and artillery under the flag of the United States.

"What ships brought all these soldiers?" he demanded of his companion.

"The Lusitania, your majesty," was the reply.—New York Advocate.

YOU PAY-USE-LESS
CALUMET BAKING POWDER
has proved in millions of bake-day tests that it is the best baking powder ever made. No baking powder of anywhere near the same quality is sold at such a low price.
You use less Calumet—because it *is* the highest grade baking powder. One teaspoonful is equal to *two* teaspoonfuls of most other brands.
And there is no "*luck*" about it *when* you use Calumet. No loss. It is absolutely sure. It is the most economical of all. Millions of housewives use it—and so do leading domestic science teachers and cooking experts.
You save when you buy it—You save when you use it
Calumet contains only such ingredients as have been approved officially by the U. S. Food Authorities. It is used in the Army and Navy.

LIVESTOCK

The quality of cattle reaching the Los Angeles market is showing a slackening, consequently the prices are somewhat lower but the killers would pay more if they could get the better sorts.

The percentage of good cows reaching the market is increasing and market for all cows is firm.

There is a better tone to the hog market and receipts are equal to the demand. With the killing gangs recovering from the flu packers will be able to handle more hogs. The bulk has been selling at $16.50.

Good lambs remain firm while the medium sorts are barely steady at prices quoted. In other words a premium is being paid for quality. Ewes are poor property. Wethers are fully steady and in good demand.

Report of live stock conditions on the Los Angeles market as compiled by the United States Department of Agriculture, Bureau of Markets, through the local office:

Good Steers .....12.00@13.00
Medium Steers .....11.00@11.50
Common .....9.50@10.50

Barley Hay	19.00@21.00
Alfalfa	17.00@21.00
Stock Hay (in order)	17.00@20.00
No. 1 Barley Straw, bale	50@80

Damaged hay (all kinds), according to condition.

Citrus Fruit Market

Los Angeles, Calif., Dec. 4, 1918.

New crop Navels are going in fair quantities to the Eastern markets, bringing prices ranging from $3.50 to $6.25. The demand for them is steady. The few Valencias yet being offered are bringing good prices though not the spectacular prices of a few weeks ago. The highest price reported on the New York market on Tuesday was $10.45.

Lemons are still meeting big sale. Eighteen carloads sold in New York on Monday from $2.35 to $4.15. All distributing centers are taking them freely at about the same as the New York prices.

Shipments

Shipments of citrus fruits from Southern California to date since November 1, 1918: oranges, 128 cars, lemons 594, total 722. To same date last season; oranges 1802, lemons 290, total 2092. From Central California to date; oranges 1103, lemons 126, total 1229. To same date last season; oranges 440, lemons 31, total 471. From Northern California to date; oranges 51, last year same date 29.

CATTLEMEN'S MEETING

A meetlng of the cattlemen of Los Angeles, San Bernardino and Orange Counties will be held at the Food Products Buildlng, Liberty Fair Grounds, Los Angeles, on Saturday, December 7, at 10:00 o'clock a. m.

This meeting is called at the request of the secretary of the California Cattlemen's Association and the Local Counties Association. The purpose of the meeting is to form an association which is to be a branch of the state association. The principal matters to come before the meeting will be the acceptance of by-laws, election of officers and appointment of delegates to represent us at the zone meeting.

LEGAL QUERIES

Continued from Page 585

of both parties, or an offer and distinct acceptance; the fact that a party receives property of another may render him liable to pay for the reasonable market value, not for any percentage; but the fact that one in conversation with someone who happens to be in the brokerage business, picks up information which might be valuable hardly would render him liable to pay the broker either morally or legally; if the broker wishes to charge for such information there should be a distinct written agreement, and it would seem that that would be the only method whereby the broker could recover. There are also several statutes which provide that such contracts should be in writing. These apply to different states of facts, however, and are known as "The Statutes of Frauds".

OILPULL
TRACTOR
LA PORTE IND.
Proved by 10 Years Farm Work
Breaking virgin sod, sun-baked for years, on the prairies of the West—deep-plowing the much tilled land of the smaller farms of the East—year after year of the hardest kind of farm work has proved the supreme fitness of OilPull Tractors.
This dependability and service has been remarkably demonstrated by the first OilPull built, that is still working in South Dakota, and by old OilPull No. 11 still on the job in Michigan—year in and year out continuous performance that gives the only real basis upon which a tractor can be judged. In these ten years the OilPull Tractor has built up a record of continuous, reliable, economical operation unequaled in the tractor industry.
Backed by a Written Guarantee
As if it were not enough that throughout all these years the OilPull has proved its ability to operate successfully on all grades of kerosene, the makers give you an absolute guarantee that it will do so. The fact that this is the only tractor company that gives such a fair and square, iron clad written guarantee tells a big story in itself.
And you will find near at hand Advance-Rumely service—established and maintained through 26 branch offices and warehouses, where complete stocks of machines and repair parts are always on hand.
The Rumely OilPull Tractor may be had in sizes from three to ten plow, standard as to design and construction. A post card will bring you the OilPull catalog.

TRACTOR SERVICE SCHOOL

A tractor service school is to be held by the J. I. Case Threshing Machine Company at its San Francisco branch, 15th and Kansas Streets, December 10-14. All interested in the operation and care of tractors are invited. This school will cover every phase of the tractor and those attending will participate in the overhauling and repairing of tractors and receive expert knowledge from those competent to give it. There will be no charge for instruction.

Thousands of Western Farmers Look for the Giant Trade Mark

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

The Giant trade-mark on each case of Giant Farm Powder is put there for your protection. When you see it you know you are getting the real Giant Farm Powder—the kind that has been cutting blasting costs for more than half a century.

Giant Farm Powders—Eureka Stumping and Giant Stumping—have become so popular that many other high explosives are often in error called "giant powders." Don't be misled. There is only one brand of Giant Powder. Demand the genuine.

"I have tried all stumping powders on the market under every practical working condition," writes James Foran, Big Lake, Wash., "hereafter I will use nothing but Giant." Joseph Labunski, Cedar Camp, Ore., says, "Whenever I use powder, it will be Giant."

Send Coupon or Postal mentioning this Paper

K-W High Tension Magnetos are Protected Against Powder Fine Dust-Oil and Water

IN many localities tractor manufacturers find it necessary to equip their tractors with "periscope" air intakes which reach up above the cloud of fine dust. But the Magneto must be mounted on the engine and give satisfactory service under these same conditions. This is one feature that has made the K-W Magnetos the standard on tractor work.

These tractor manufacturers don't worry about dust getting into a K-W Magneto. They know its working parts are protected against even the finest Alkaline dust, and oil and water can't reach its internal parts and give trouble.

The protection of all working parts is only *one* feature of K-W Magnetos. K-W users get quick and easy starting without troublesome batteries or coils; more power out of the same fuel, and continuous, reliable, no-trouble ignition.

If you are not using K-W Ignition now, write us and let us show you how a K-W Magneto will cut your fuel bills and free you from ignition troubles, regardless of the weather or working conditions.

Insist that your new tractor be K-W equipped. Forty tractor manufacturers pay more for K-W Magnetos because of K-W superiority. Write for list of K-W equipped tractors.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

It is customary to reserve our cover as a sort of place of honor, and such being the case and desiring to pay proper tribute to California Marvel, the pure bred Shorthorn steer that was bred, fed and shown to a championship at the great International Live Stock Show, by the University of California, we cheerfully grant him the cover. California Marvel has done much toward putting California to the front; we can do no less.

COMMUNITY COUNCILS

One of the real lessons taught by the war was the power of organized effort. The war was won through organization.

Now comes the Council of National Defense, backed by President Wilson, with a plan for the establishment of community councils for the purpose of efficiently meeting the problems of peace.

According to the State Council of Defense these councils will be formed "not only with the idea of service during the readjustment period, but also with the intention that they will live and function to the betterment of their respective communities during the time of prosperity now apparently assured.

"These community councils will be thoroughly democratic; their membership will be extended to every man, woman and child, and they will be organized along the broadest possible lines. They will include all the advantages of community centers and farm bureaus, giving the fullest opportunity for community expression and initiative."

The President calls the move one of "vital significance," and says that when thoroughly carried out it will, in his opinion, "result in welding the nation together as no nation of great size has ever been welded before."

Great possibilities lie within the plan. When a community works and thinks together, the individuals come to understand each other, and with understanding will come a sense of fairness that will help us over many of the rough stretches in the road ahead.

A COAST STOCK YARD?

Several of the daily papers have carried stories regarding the probable establishment of a stock yard in Los Angeles. The plan is said to be sponsored by the Farm Bureau Marketing Association, operating in the San Joaquin Valley.

There is little question but that an improved marketing system for live stock is the most vital need of California producers. But that very fact would seem to argue that great care should be exercised. A satisfactory market can not be brought into existence over night and in the light of the experience of older sections it might be well to "look before we leap."

And besides, it begins to appear that possibly the government has accumulated some valuable information regarding the operation of live stock markets and may have arrived at some conclusions that will prove workable. At any rate Secretary Houston, in his report, just received, recommends to Congress "that some form of supervision over the packing industry" be established.

If the proposed plan will meet the needs in a satisfactory way, well and good. We are for it, but we would urge great caution. Why not bring the matter before all the live stock organizations of the state?

ABOUT A FEED LAW

Secretary Houston, in his annual report, recommends a federal feed law, under which the government could proceed in a uniform manner and protect the buying public against misbranded and adulterated feeds entering into interstate shipment.

Assuming that such a law is possible, it will be necessary to have our own law to protect consumers against crooked manufacturers in this state not doing an interstate business.

A bill providing such protection will come before the legislature this winter, and its passage is assured if the live stock interests of California will give it the support necessary. It is a foregone conclusion that the crooked manufacturer and dealer will be on hand to fight it, but if every producer interested, and all should be, will write or see his representative and senator and explain the need of the protection the bill will become a law.

THE 1919 WHEAT CROP

We have recently received a number of inquiries as to whether or not the price for the 1919 crop of wheat has been fixed.

The president's proclamation of September 2, 1918, establishing guaranteed prices for the 1919 wheat crop applies to wheat harvested in the United States during 1919 and offered for sale before June 1, 1920. As in the case of the 1918 crop the wheat must be offered for sale "to such agent or employe of the United States or other person as may be hereafter designated" at any one of the principal primary markets. Up to the present date, however, the agency by which the 1919 wheat crop is to be purchased has not been designated.

Thus, although the guarantee for the 1919 wheat crop will continue until June 1, 1920, there is no present assurance it will be purchased or handled by the food administration grain corporation.

BRED IN CALIFORNIA

Another champion steer from California! And our sheep and hogs did well too. The list of winnings made by the University live stock makes most interesting reading, but it seems to us that the most important fact regarding the showing is the fact that every animal was bred in California.

Two years ago the same institution demonstrated that this state could produce as good cattle and sheep as any section, and now added proof is furnished that California producers can grow as good pork as the corn belt.

With these facts in mind, is it too much to expect that in the future this state will take its place as one of the really great live stock states? We think not—but if we can produce as good live stock as any state, should not our producers be provided with as good markets as other sections enjoy?

THE LIBERTY FAIR

During the past ten days the California Liberty Fair was open to the public. In every respect the fair came up to expectations—even to the light attendance.

The many buildings were filled to overflowing with splendid exhibits. Only the live stock department suffered materially on account of the many postponements.

Probably there will be a large deficit when the books are checked. But to one who watched the interested visitors, heard their many questions and their expressed plans for the future, there can be no other feeling than that the enterprise paid.

And the men responsible for the initial show know what a power, for better agriculture in Southern California, the institution can be made. And they are determined that the Los Angeles Fair will be a permanent fixture.

KILL THE VARMINTS

An English farmer has been fined 20 pounds sterling for allowing rats and mice to partially destroy 12 stacks of oats and barley. The importance of food to the world's welfare is such that its ownership lies not only in the man who produced it or the man who purchased it, but the entire public is concerned in the preservation and proper distribution of that food. Californians have appreciated this point and the economic necessity of preserving its food once it is produced and have made many a campaign against squirrels and other rodents. It is criminal to passively permit farm waste of food and feed products.

WHY NOT?

A movement is on throughout Southern California to encourage all firms and individuals to give War Savings Stamps as Christmas and holiday gifts instead of money. A wide adoption of this suggestion will put California over the top in her War Savings quota.

HIGH PRICES AND AVERAGES

Nearly all the different breeds of live stock have registered record breaking prices. The public has become accustomed to sensational sales and reported prices running into four, five and even six figures excite slight interest. Many of the high sales are undoubtedly genuine and a basis can be found for justifying them; others are so palpably out of line that they are read with fingers crossed and an amused smile.

Generally speaking such sales, while not disturbing to the rank and file of the breeders, often tend to discourage the man who is thinking of getting into the live stock business, and in the end usually act as a boomerang to the particular breed. At such times it is well to bear in mind that the real condition of the market is disclosed in the general sale averages for the breed. If one takes the trouble to investigate the situation it will be found that, notwithstanding the many high prices, the general average of values placed by the buying public is no higher for pure bred live stock than are present prices in practically all other lines of trade, and that such average values as have been placed on breeding stock are based on a solid foundation, namely, a world food shortage, particularly of meat supplies, that will require a good many years after the war to supply.

Five-figure prices make good news, but safety lies in averages.

STILL MORE TO DO

During the past year and a half the farmers of the United States have been told that the destiny of the world depended very largely upon their efforts. That they measured up to the responsibility is one of the great facts of the war. From the moment that appeal for increased production was flashed from Washington the farmer stripped for action and met every demand. Largely, very largely, through his efforts the world was saved from autocracy—and now he is being told that largely — very largely — through his efforts will the world be saved from anarchy.

We find it difficult to subscribe to the opinion that the world is likely to be submerged in anarchy—there are too many sane, level headed people for that — but it is a fact that a hungry man is hard to handle, and because we want to see the peace of the world restored quickly and completely there is little doubt but that the farmer will answer just as effectively this new call.

This thought does intrude: After saving the world from autocracy and heading it away from anarchy, will not the farmer be privileged to ask for a squarer deal than he has been drawing in the past?

Orange growers of the Lindsay district Tulare County are rushing their fruit to market. So much fruit was brought in that the trucks had to stand in line, sometimes for hours at a time to make deliveries, an expensive proposition for some of the growers who were paying $2.50 an hour for large trucks.

Out of 38 stands of bees Dave Larson of Stevinson, Merced County, sold two and one-half tons of honey at 20 cents per pound, besides increasing the number of stands to 100. This has been a very good year in this locality; the bees can feed early in the spring on willow blossoms.

Rice harvesting has been completed at Dos Palos, Merced County.

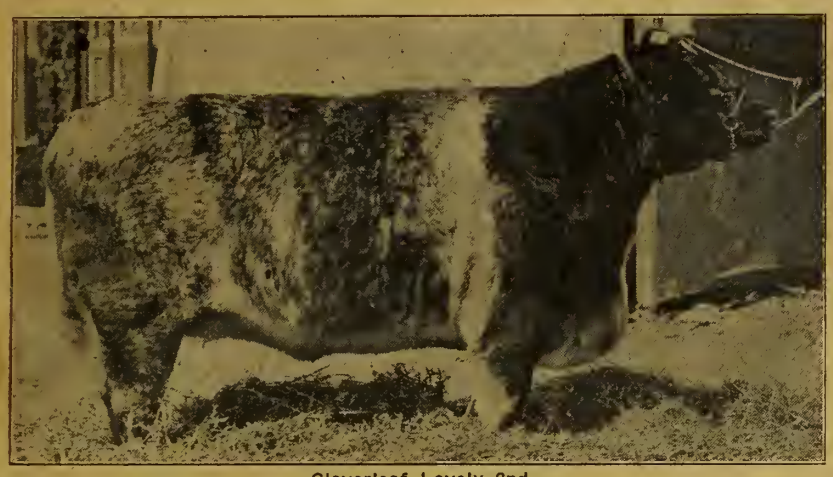
The Liberty Fair Live Stock Show

Written for California Cultivator by R. P. Royce

TO PROPERLY tell the story of the Liberty Fair live stock show it would be necessary to go back several years, to the time when a few men who looked into the future realized that Southern California was not only adapted to live stock but needed live stock in the scheme of future development. It would then be necessary to tell of the struggle a few men had to make the community realize the value such a show would be. Then the actual organization of the Liberty Fair, the appointment of C. R. Thomas, the man responsible for the American Royal Live Stock Show, as manager; the year of work, ending with every foot of stall and pen room in the attractive new plant spoken for; then the postponement; the flu; the repeated postponements; the wind storm that destroyed the part of the horse stalls and the judging arenas; the loss of entries; the real opening; and the rain! Quite enough to discourage an older fair, not to mention a rather shaky new venture, but it just happened that in the bright lexicon of the men behind the Liberty Fair no one ever took the trouble to look for the word fail. Consequently the fair became a fact, and even though it suffered some, and lost about 40 per cent of the original entries, a start was made. That is the essential point—a start was made, and if one was interested in speculating as to the probable trend of development he would undoubtedly find a wide field of possibilities opening up.

Every one connected with the live stock department is certain that the fair will become a permanent fixture, and, such being the case, the influence the institution will have on the future development of Southern California will be impossible to estimate. The live stock industry in this state is developing rapidly and all who are familiar with the situation feel that it is just on the eve of events of tremendous importance.

The outstanding feature of the fair was the live stock show and the outstanding feature of the live stock division was the show of beef cattle and hogs.



Cloverleaf Lovely 2nd

Senior and grand champion Shorthorn cow. Owned by the Maxwell-Miller Company.

No California show has ever attracted cattle from a wider territory. Cattle from as far east as Missouri, and north into Washington and Canada, competed with some of the best that California has, and while the visitors were successful in getting away with the most coveted placings it was not always clear sailing, and by the time the judging was completed they knew they had been to a cattle show.

A number of the Eastern exhibitors found ready sale for some of their top animals and at prices quite satisfactory. California cattlemen are no longer satisfied with $150 bulls—they want the better kind and are willing to pay the price.

Princely Stamp

Senior and grand champion Shorthorn bull. Owned by the Maxwell-Miller Company, Steamboat Springs, Colorado.

The swine show was strictly a local show — all California hogs — and, for the most part, from the vicinity of Los Angeles. During the show one of the exhibitors sold nearly $10,000 worth of breeding animals, and there were numerous sales at excellent prices.

Generally speaking, the show was quite above expectations, but before next year's show several improvements will be needed for the convenience of the exhibitors and visitors.

The greatest need is for a suitable judging arena. It was first planned to judge the cattle under a tent provided with several tier of seats, but the wind storm that destroyed the large tent covering part of the horse stalls, also destroyed the judging tent and the cattle were forced to show in the open. No satisfactory place was provided for showing horses, so they were shown on one of the main roads of the grounds, which had to be crossed by the crowds going to the stalls. The swine were shown in a tent, but the spectators had no seats.

But for an initial effort the show was a success, everyone was good natured and inclined to overlook any minor inconveniences.

Manager C. R. Thomas is to be congratulated for the successful staging of an event that is destined to be a powerful aid in the improvement of the live stock industry of this state.

Shorthorns

The show of Shorthorns was not the largest, in point of numbers, that has been held in this state, but few California shows have brought together a more attractive lot of cattle than passed before B. C. Cowan, former secretary of the American Shorthorn Breeders' Association, for judgment.

The rating of the various classes by this veteran Shorthorn authority met with little criticism from the ringside, but in several instances a considerable difference of opinion was noted. Judge Cowan worked over his classes carefully, and two points that he insisted on were quality and well covered shoulders.

Diamond Choice, the aged bull heading the T. T. Miller herd, was the only entry in class. This bull, a son of Diamond Goods, was presented in pleasing form—very smooth, and nicely covered. Viewed from the front, there is little to criticise, but he hardly carries his width aft and down into his quarters to the extent one would like.

Five two year old bulls made up what the judge considered the most difficult class. The short-aged Maxwell-Miller bull, Princely Stamp, of remarkable character and style, seemed to attract the judge from the moment he entered the ring and, while not shown to advantage, he was never moved from first place, and kept going until he was made senior and grand champion. This bull has developed exceedingly well since the Fresno show but still lacks widening out and deepening to overcome his appearance of being too upstanding. If he acquires the needed width and depth and still retains his other features he will be a bull to watch.

Really the ringside favorite was the white Greendale Sultan, shown by T. T. Miller. A different type of bull from the winner, reminding one of his famous sire, Lespedeza Sultan—very wide and deep and thick, lacking somewhat in smoothness, perhaps, but a good bull. The judge faulted him for a bareness of shoulder and set him down to third place, below the roan Village Flash bull, Hallwood Flash, shown by the Dibblee Estate, smoother in his covering, perhaps, but not so thick. Standing in fourth was Pacheco Lad 92nd, shown by the Pacheco Cattle Co., a smooth bull, not especially thick, and with somewhat less attractive head than Cumberland Goods from the Henn herd. Quite a few felt that the last bull could have stood higher and not looked out of place.

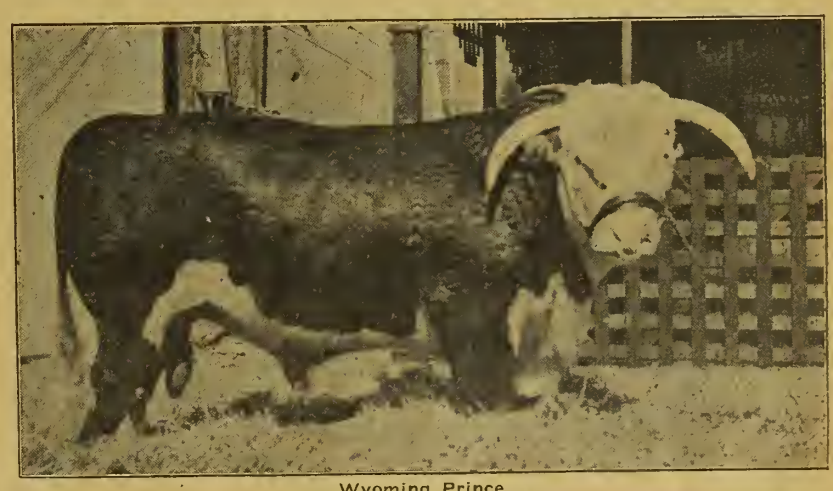
Miss Rialto 2nd

Junior and grand champion female, shown by the Hereford Corporation, of Wyoming.

The two senior yearlings did not make an especially attractive class. In the junior yearling class, Pacheco Marshall, virtually a senior calf, who stood first at Sacramento, had a rather easy time landing ahead of the T. T. Miller entry, that in turn had little trouble keeping ahead of the two Colorado calves.

The junior champion was uncover-

Continued on Page 606



Wyoming Prince

Two year old bull that headed the first prize aged herd, shown by the Hereford Corporation of Wyoming.

Agricultural News Notes of the Pacific Coast

Northern California

O. W. Jarvis has been appointed farm adviser of Sacramento County.

A farm bureau center has been formed at Camptonville, Yuba County.

Plans are being made to have an El Dorado County Pear Show in 1919.

The state tractor school began sessions at Chico, Butte County, February 10.

Farm Advisor Lee of Alameda County reports that there will be 5000 more members.

A large number of feeder stock has been brought in to the Oroville district from the mountains.

The purchasing and marketing departments of the Humboldt County farm bureau have been merged.

Farm Adviser Sweet of Butte County has been giving demonstration of fruit tree pruning in Sutter County.

Farm advisor of Alameda County reports that there will bee 5000 more acres planted to wheat this year than last.

It is proposed to bring under irrigation 2500 acres of red land in South Thermalito, the water to be supplied from Lake Almanor.

Modoc County farmers have joined in making a shipment of wool to government purchasers at Boston. The average price is 57 cents.

Farm Adviser Harrison of Yuba County reports purchase of a large number of pure bred bulls and boars by farmers in that county.

The Butte County farm bureau is planning to carry on experiments in a number of orchards to help solve the problem of controlling June drop of oranges.

The campaign to advertise the recreational possibilities of the El Dorado national forest will be taken up again. This advertising was dropped because of the war.

Pruning demonstrations have been held in various sections of Sutter County during the latter part of November. Others will be arranged for during the present month.

The semi-annual meeting of the Amador-El Dorado Livestock Association, which was scheduled to be held at Jackson, Amador County, has been postponed on account of the epidemic of influenza.

Rice fields which have not yet been harvested are suffering very severe damage from ducks. As the feeding grounds become smaller the ducks are concentrating on the rice that is left in the field.

Dean Hunt of the college of agriculture of the state university has returned from a visit to England and France as a member of a commission appointed by the president to study agricultural conditions there.

Farm bureau meetings will be resumed in Napa County. The following schedule will be observed for December: Union District, 16; Tucker, 17; Mt. Veeder, 18; Lodi, 20; Soda Canyon, 21; Chiles Valley, 24; Pope Valley, 27; Mt. George, 28.

The ending of the war has brought up the price of hops. A sale was reported from Santa Rosa last week of 2190 bales for 26 cents a pound. Hops two months ago were offered at two cents a pound without buyers. European demand accounts for the increased price.

Central California

The State Farmers Union is in session at Modesto.

Public schools of Santa Cruz County opened last Monday.

The Ceres farm bureau center held a fig conference December 6 and 7.

The State Farmers' Union convention is being held at Modesto this week.

The Santa Cruz County farm bureau has taken up the good roads campaign.

By use of a salt solution it has been found possible to separate fermented prunes from the good stock.

Turlock reports warehouses full and running over with barley and beans, being held for a better market.

At Hanford on December 19 a fig institute will be held. Prof. I. J. Condit of the state university will be in charge.

The government has announced that it will not fix price on beans, will not commandeer any beans and will hereafter make its purchases in the open market at market prices.

The Turlock district of Stanislaus County practically closed its shipping season for green fruits and vegetables the last of November. During the season 3562 carloads of produce were sent out.

A number of suits have been filed in Fresno County by raisin growers against picking contractors who failed to pick grapes within agreed time, with result that the fruit was damaged by rains.

Fruit growers of Santa Clara County are making serious investigation of the possibilities of drying their fruit so as forstall possibilities of loss such as they suffered from unseasonable rains this year.

Vine pruning demonstrations will be given in Kings County on December 16 and 17 by Prof. F. Flossfeder of the state university. Places where demonstrations are to be given are to be announced later.

The central labor camps established in grape growing districts the past season have proved entirely satisfactory in the solving of the labor problem. The same plan will probably be followed in the future.

The "Stanislaus plan" for financing farmers was explained by Secretary Bowles of the state council of defense to the Tulare County division. No action has yet been taken but it is assumed some move will soon be made to try it out.

There will be local meetings of the Stanislaus County farm bureau at Denair, December 9; Mitchell, 10; Thalheim, 11; Tegner, 13; Wood Colony, 16; Hickman, 18; Fair View, 20; Orange Blossom, 21; Claus, 23; Ceres, 26; Patterson, 27.

Horticultural Commissioner Colins of Tulare County has been aiding in the gathering of orange maturity data which will be presented to the state convention of county commissioners held in Sacramento in an effort to arrive at some more equable maturity test.

An Oakdale, Stanislaus County, correspondent gives as a reason for the recent increase in milk prices the fact that owing to the influenza epidemic their families and their helpers were down with the disease and many cows were turned out in pastures without milking.

Southern California

The first car of Redlands navels went out December 4.

A carload of cotton was shipped out of Coachella Valley last week.

Freak bloom has appeared on some of the walnut trees in Ventura County.

Imperial Valley shipped out 355,000 pounds of turkeys for the Thanksgiving market.

The San Dimas marmalade factory expects to employ 600 people for a six months' run.

The San Dimas Orange Growers' Association held its annual meeting last Saturday.

Orange County has 150 acres planted to avocados.

The Arlington district expects to ship out 25 carloads of navels for the Christmas trade.

Mentone olive growers report an average price of $210 per ton, prices going as high as $300.

Courses in the rolling tractor school will begin at Brawley December 16, lasting for two weeks.

Tomato growers of Imperial Valley are setting out their plants which will bring the spring crop.

The Pomona Valley Cannery is preparing to ship overseas for government use 1500 cans of tomatoes.

In the week before Thanksgiving turkey buyers from San Francisco to San Diego were busy in the Imperial Valley.

Orange growers of the Rialto district are studying up the possibilities of growing vegetables along with their citrus fruits.

The wind storm the last of November did considerable damage to beans in Santa Barbara County. Walnut groves also suffered somewhat.

The December meeting of the Tustin farm bureau was postponed because of the influenza epidemic. The next one will be held January 3.

The Sheep and Wool Growers' Association of Imperial Valley has been organized with O. N. Shaw, president and L. C. Main of Holtville, treasurer.

Twenty thousand bags of beans have just been turned into the pool of the Lima Bean Growers' Association by independent Orange County growers.

Much Lima bean straw is going into the citrus orchards as fertilizer since the cancellation of the food administration order reserving it for stock feed.

Farm Adviser Bahmeier of San Bernardino County has been appointed director of development work on the state farm colony near Durham, Butte County.

Instead of the former seven day schedule to Chicago, Redlands orange packers say that it takes under present conditions fully 12 days to put Redlands fruit on that market.

The Brawley News reports shipments from that station on one day last week of nine cars of hogs, nine of milo, three cars of sheep, three cars of fertilizer, one car of horses and one car of calves.

G. E. Gordon, who was for several months assistant farm adviser of Riverside County, has been transferred to the Los Angeles County office. His position in Riverside will be taken by R. E. Nebelus.

The Coast and General

Oregon reports a slightly bette market for dried beans.

Skagit County, Washington has jus harvested a good crop of potatoes.

The Farmers' National Congres was held at Jacksonville, Florida December 2 to 6.

Hood River apple growers are dis cussing proposed federal ruling t govern box grading.

John D. Ryan, director of the ai service has resigned, as has Fuel Ad ministrator Garfield.

The Northwest Fruit Growers' Con ference held at Spokane last week had a big attendance.

The American Poultry Associatio held its annual meeting at Jackson ville, Florida, December 3 to 4.

Wheat smut is reported exceeding ly serious in northern Idaho, on ranch showing 97 per cent of th wheat infected.

The annual meeting of the Nationa Grange at Syracuse, New York, las week formulated a protest against th zone postal rate.

The quartermaster's division of th United States army has secured suf ficient provisions of potatoes an onions for winter use.

The Wenatchee apple district o Washington has already shipped ou as much fruit as was estimated fo the total output, and there are 150 more cars yet to go.

Florida's shipment of oranges i 2000 carloads more than last year t this date but a little under the 191 shipment. Grapefruit shipments thi year are more than double the recor year of 1916.

The Northwest Live Stock Sho has been called off owing to the in fluenza epidemic. The Pacific Inter national at Portland has also beer called off with the exception of th fat stock show, which will be held.

Frank Meredith, secretary of th Washington state fair, has $14,96 with which to begin financing the 191 fair. Cash receipts of the state fai this year amounted to $35,510. The 1917 legislature made an appropria tion of $58,000 for fair work.

Federal suggestion that appl grades be lowered for the remainde of the pack is being opposed by deal ers in the Northwest. The questio will be thoroughly gone into at th coming Spokane convention. The new rules provide that ten per cent of th grade and five per cent of the culls may enter into the fancy pack.

Commercial crops valued at $40 000,000 have been produced since th first of the present year on lands irri gated by the government in region which were formerly the domains o jack rabbits and sage brush in th Yakima Valley, according to estimate made by R. K. Tiffany, project man ager in Yakima for the United State reclamation service.

A report from Astoria states tha the cranberry crop for this season i estimated at approximately 15,000 bar rels. This includes all of the cran berries grown on both sides of th Columbia River at its mouth. The crop is fully three times that of the previous season, and the quality of the fruit grown this year compares most favorably, as the fruit is of much larger size and better color.

A City Rest Room for Country Women

Written for California Cultivator by M. E. Bemis

IN THE history of every growing town in the center of a prosperous farming community, there comes a time when it has outgrown the short dresses of the country village and is primping and putting on the airs of the coyish young town. It is at this period that the farmer's wife, when she comes to town and puts the baby up on the counter to amuse himself with the cat and the fly paper, with a stick of candy for a baton, and then goes over to the dry goods department and lets the baby amuse himself with the thread and notions, gets frowned upon. Then it happens that all farmers' wives are apt to be looked upon with suspicion, or imagine that they are, which is all the same, and straightway a feeling grows among the farmer folk that the town merchants don't care for the trade of the country people. The breach widens and the mail order houses get the benefit.

It has been a long time ago since Phoenix, Arizona, was a country village, but some of the after effects of the "coming out" period lingered for long years after Phoenix was listed among the cities. The old hitching posts around the court house and the city hall were removed, and paved streets and fancy lighting standards came to mark the progress of the town. Modern department stores came as a matter of course with their elevators, floor walkers and smartly groomed clerks that catered to the wants and fancies of the well dressed town lady and were icily polite to the tired, dusty farmer's wife.

Maybe you never had to get up and get breakfast for four hired men, feed the chickens, churn, get the children ready for school, get lunch set out for "hubby" to put on the table at twelve, and then drive with the baby seven miles to town to do the necessary shopping. Well, if you are a woman and haven't, you are lucky, for some women do these things and when they arrive in town they are more or less dusty, just a little tired and somewhat cross. Wouldn't it be fine if there were some place where she could brush up a little, bathe her face and hands, and perhaps put the baby to bed?

Some of the stores had rest rooms, but these were generally occupied by well dressed women, and—well, somehow the tired mother from the country didn't feel just at home, and so for years Phoenix kept growing more and more metropolitan and the mail order catalogues came in literally by the carload.

Along in the early days of statehood the town had a wise mayor who sized up the general condition and told the city fathers that if they wanted the trade of the farmers they must look after the needs of the farmer and his family. "Build a rest room for the women of the country so that when they come to town they will find one place where they can feel at home and can make themselves presentable before going to shop," said the wise mayor. But the business men said "No!" Some of the merchants said, "We have rest rooms, and if these are not big enough, we can enlarge them."

Nothing was done then, but good ideas have a way of rolling around and finally getting in the way where people can't help but fall over them. So it happened that a year or so after the wise mayor had gone back to private citizenship the District Federation of Women's Clubs met and appointed a committee to make an investigation as to the feasibility of putting up a building in Phoenix for the benefit of country women when they came to town to trade.

This committee reported favorably and urged the city commission (the town had just adopted the commission form of government) to appropriate money for the purpose. There was still a good deal of opposition, but finally it was decided to go ahead, and the city engineer's office was instructed to draw the plans. The building was erected on the southeast corner of the city hall block. It is appropriately arranged and is architecturally pleasing.

There is a comfortable reception room with desk and chairs. Here too is the parcel room where bundles may be left to be called for or sent in from the stores. The main rest room opens off the reception room. Here are tables with the latest magazines, a branch of the public library, couches and comfortable chairs. In the basement is a kitchenette, dressing room and nursery.

Was it a success!

Ask those who come and find real rest and can go out and shop without that discomfort that comes from conscious dust and dishevelment.

Reading Room in Municipal Rest Room.

Ask the casual visitors from other towns who see the country women come and go away with pleasant looks and resolve to go back to their own home town and build rest cottages.

Ask the merchants if it has helped to make a better feeling between the country and the town people, ask them if it has increased their trade.

Ask the mail order houses, ask the babies—oh, pshaw, what's the use, one wouldn't and the other couldn't tell you, but here is what we will do, we will let the matron tell us what she thinks. She says:

"The room has proved its worth in the community and the merchants now feel that this building is one of the best advertisemtnts Phoenix has ever had.

"But now we have outgrown our quarters, and were we to build again, I am sure our structure would be three times as large, unless, indeed, it were the plan to construct several such places in different sections of the city. If possible we would have a playroom for the children, apart from the rest room, which requires quiet. And our plans would include an attendant to care for the children. The kitchenette would have all the built-in features, dividing the cupboard into pigeonholes, so arranged that each woman can leave her small belongings from day to day as she sees fit.

"This accommodation has been taken advantage of by many, and our small quarters are often overcrowded during the hours between eleven and two. Parcels are sent direct from the stores to the rest room, to accumulate during the day and to be called for by the owner when she is ready to leave the city. It is a regular meeting place for friends. It has been made a general information bureau and a free employment agency. Advertising cards are left by dressmakers, canvassers, nurses, housekeepers, etc. We also conduct an "Exchange" where women bring their handiwork to be sold without commission, the funds to buy the much desired thrift stamp or to represent a payment on a Liberty Bond.

The following testimonials voice the appreciation of the people and are copies from the "Guest Book" in which visitors register at their pleasure:

"Meeting a real need in the life of the city for the country woman, the business girl and the transient in town!"

"A few moments spent in the cool, refreshing atmosphere of the municipal rest room is a treat to the shopper and visitor in Phoenix, and she leaves feeling proud of this acquisition to the comforts of this city."

"This place is really the most popular 'club' in town."

"Without a doubt the rest room is the wisest thing in the city for the comfort of those who want to stop somewhere for a short time to rest, write a letter, or read."

"The homelike atmosphere, combined with the splendid conveniences of the place, forms a rest room that Phoenix may well be proud of."

We might go on indefinitely with the many praises sounded in its behalf but will let these suffice to prove its many ways of serving the public.

This account of the Phoenix municipal rest room would not be complete without something more than a passing reference to its matron, Mrs. I. R. Abbott, who has done so much to make the venture a success. Mrs. Abbott opened the doors to the public in the fall of 1916 and has been its matron ever since. A smile and a pleasant word greets each visitor, and cheered by her hearty "Come again," many a shy woman from the country is made to feel that the city is not so cold and unfeeling as it seemed before. The popularity of the rest room is due in no small degree to the efforts of Mrs. Abbott to make every visitor feel at home.

Pruning Old Orange Trees

Written for California Cultivator by J. B. Neff

THE object in the early years of an orange orchard is to grow strong trees which will carry large crops without damage to the trees and to do this within a reasonable time. After the tree is grown the object is to have it produce good crops of profitable sized oranges.

We will assume that the planting has been of good trees and well done, the proper tillage care given and that the trees have reached the age of 15 to 20 years. It is often found that an orchard at this age does not produce so large a percentage of fine fruit as when younger. This may come from various causes, such as planting too many trees to the acre, insufficient water at times, need of fertilizers or need of pruning along with other causes.

Pruning is as necessary to success in growing oranges as with other fruits and if altogether neglected the crop will be disappointing though other care has been given. Oranges which bring the highest prices do not grow on trees which have small leaves and slender twigs, neither do young and abnormally vigorous trees have smooth fruit, hence we must have the medium, and this can be brought about by judicious pruning. If we take a tree having small leaves and small twigs we find it will bloom profusely but that too many of the blossoms will fall and that the remaining small fruits will drop badly until but a light crop is left and these are of small sizes. By pruning out sufficient of the old growth the new wood will be larger and the leaves will grow larger, which in turn will produce larger and better fruit. It is difficult to give detailed instructions as to the amount taken out as each tree requires treatment in some manner different from its neighbor, but observation of the trees in the orchard will soon teach the grower to take out the proper amount to produce the desired sizes.

The pruning of Valencia orange trees is often neglected because there are always oranges on the trees and the grower dislikes to take any off without selling them, so the pruning is limited to the dead branches while the pruning should be such as to keep the branches from dying. Pruning of navel orange trees should be done as soon as the fruit is gathered, while Valencia orange trees should be pruned in May or early in June when the fruit which is cut off in pruning can be sold. This fruit should be removed from the cut branches at once and placed in boxes until sufficient is gathered to take to the packing house.

The openings made by pruning should not be large as sucker growth will form in such spaces. This growth will need much watching and pinching of tips to prevent unduly long branches which do not produce fruit. If large branches must come out use a sharp fine-toothed saw. Cut close to the body or main branch so the wound will heal quickly, and cover with mineral paint.

(Mr. Neff will give next week a second paper on pruning old orange trees.—Edit.)

TEAGUE QUALITY

CITRUS TREES

AWARDED THE GOLD MEDAL AT FOUR INTERNATIONAL EXPOSITIONS.

For Productive values, fine quality of fruit and vigorous growth Teague's bud-selected, (pedigreed) properly trained and carefully handled orange and lemon, pomelo and lime trees are the trees to plant. An experience covering a third of a century warrants the assertion that Teague Quality Citrus Trees possess these qualifications in a superlative degree. All the standard commercial sorts, and garden and ornamental varieties; the largest assortment of citrus trees in America. . . . We invite correspondence from intending planters. . . . Consultations on citrus planting by appointment. 1918 Price list just out; send for a copy.

The R. M. Teague Citrus Nurseries

Box 67, SAN DIMAS CALIFORNIA

FOUNDED IN 1889 AT IT 29 YEARS

Finest Quality Best Varieties

We can highly recommend our stock of fruit and ornamental trees including:

Catalog Sent FREE

European Sycamore (platanus orientalis) The most desirable shade tree used in California. Universally sold all over the State. Transplants easily and grows rapidly.

Bartlett Pears on Quince Root double-worked on Beurre Hardy.

Boxwood (buxus sempervirens).

English Holly (ilex aquilfolium)

Oregon Grape (mahonia aquifolium)

Persian Mulberries Trees which will bear young and produce large, luscious fruit.

Niles Giant Rhubarb Easily excels any other variety in the great size of the stalks which are exceedingly crisp and juicy.

Walnut Pruning

Written for California Cultivator By J. B. Neff

SINCE the season just passing has been very profitable to the walnut grower it should prove an incentive to the adoption of better methods and better care of the orchards. The one thing that has been neglected in walnut growing probably more than any other is the consistent and regular pruning of the trees. Trees that have not had much pruning in their early years are apt to be brushy and filled with dead branches. The growth is also likely to be short, with possibly too many fruit spurs which are not vigorous and consequently produce small walnuts. A mistake is made in simply cutting out the dead wood as the pruning should be with a view of cutting out enough to prevent the choking of the branches which causes their death. It is good practice to go through the orchard just before the nuts are ripe and mark all the branches which have dropped so as to be in the way of the team. This marking can be done by tying strips of muslin where the cuts are to be made, and many surprises will be found after the nuts have been gathered as frequently a branch which has been in the way has lifted until it may be eight feet from the ground. However this should come out as it will be lower in the coming years. After these troublesome branches have been taken off the general pruning should begin. Enough branches should be taken out to allow the sunlight to get through and make shadows on the ground instead of a solid shade when the tree is in full leaf, and also to promote a more vigorous growth since large walnuts grow only on strong wood.

Do not head back at any time but go back a few feet and take out all of the branches as it is not practical to thin out each particular branch to its end. Many trees could have at least one-half of their present wood taken out with benefit to the tree and profit to the owner. It is well also to thin out on the side away from the wind as that is usually thickest and tends to draw the tree out of plumb and expose the trunk to sunburn. The large cuts should be protected by a thick paint, preferably a mineral paint. The bleeding of the cuts will do no harm.

Reclaiming Land

Written for California Cultivator By H. Culbertson

WHERE there is water enough to grow alfalfa the following method has worked remarkably well. Red granite soil near the foothills that had been in grain until a half ton of hay was a good average crop was made to produce eight tons of alfalfa to the acre. The land was sowed to alfalfa in the spring. The following winter a carload of stable manure was put on each acre. It was harrowed over eight or ten times and a hay rake was used to get off the material that would rake up with the hay. This produced a covering on the surface with the leaves that fell from the alfalfa; the soil was covered with a mulch for three years. Each of the two following years 800 pounds of bone meal was applied. This produced a growth of alfalfa that had to be cut rather early to prevent lodging. The cows did not object to the early harvesting. It is so uncommon to see a good field of alfalfa in a foothill section that this field was a special point of observation. The object of the treatment was not growing alfalfa, but a condition that would grow strawberries. The

result was the largest berries and the most of them the first year that the writer has ever seen. Had not a strawberry disease come into the community there would have been great results the second and third years. The field has been showing fine results in other crops.

This would not be complete without some reference to the physical condition of the soil at the time it was plowed for the berries. The condition of such soils before treatment is that when a good rain comes it runs together in a compact mass, dries out quickly and gets almost as hard as a traveled road. After the above treatment there was an opposite condition. The soil was what cultivators call a live soil. In the complete preparation of the soil there was considerable tramping by the team, but it did not pack. Another piece of land near this in the same condition as this was before treatment had to be reworked on account of its packing. Looking up reports as to the probable bacterial condition it was found that an alfalfa field under above conditions contained over three million to the cubic centimeter. Reducing it to cubic inches there was between forty and fifty millions. This number of living organisms in one cubic inch ought to make a live soil. One of the conditions for the large development of soil bacteria is a surface with a covering as the above had and frequent irrigation. All this is important when it is considered that the number of bacteria in the soil is indicative of the amount of crop it will produce.

NEW PLANT QUARANTINE REGULATIONS

A quarantine further restricting importations of nursery stock and other plants and seeds into the United States as a protection against the introduction of insect pests and plant diseases, has been signed by the secretary of agriculture. The order will become effective on June 1, 1919.

Under its terms, fruits, vegetables, cereals, and other plant products imported for medicinal, food or manufacturing purposes, and field, vegetable, and flower seeds, may be imported without permit or other restrictions. Other classes of plants for propagation permitted entry, including certain bulbs, rose stocks, fruit stocks, cuttings and scions, and seeds of fruit, forest and other ornamental and shade trees, and of hardy perennial ornamental shrubs, may be imported only in accordance with the permit and other requirements of the regulations. The entry of these classes of plants is represented by experts to be essential to the floriculture and horticulture of this country under existing conditions.

DOES CYANIDE DAMAGE FRUIT TREES

Killing scale insects by placing cyanid of potassium under the bark of fruit trees has been stated to cause the death of the tree. Accordingly Metcalf (Science XLVII, No. 1214, 1918) conducted experiments along these lines on scale infested apple and pear trees. In each of six trees, half-inch holes were bored, filled with chemically pure potassium cyanid, and then plugged. Four of the trees apparently were followed by a dying condition, but during the summer began to recover. All of the trees became free of scale and have continued healthy and vigorous for the past three years.

The effectiveness of the cyanid treatment utilized as an insecticide in this manner, however, remains doubtful, as during the same season the scale disappeared from adjoining trees which while infested were untreated.

A NEW CONTACT INSECTICIDE

Through the combining of nicotine and oleic acid, a new contact insecticide termed "nicotine oleate" has been produced. It is soluble in soft water and forms a soapy solution that may be used to emulsify an animal, vegetable, or mineral oil.

In certain tests two and one-half quarts of a 40 per cent nicotine solution were combined with one and three-quarters quarts of commercial oleic acid to make one and one-quarter gallons of "nicotine oleate."

This is said to be more effective against aphids than a spray of free nicotine, and costs only about one-half to prepare.

It should not be used on plants that are to be eaten such as lettuce, kale or spinach, as the "oleate" feature prevents the spray from volatilizing.

On dormant fruit trees, its use with a non-volatile oil, such as linseed, cottonseed, or fish oil should make it valuable for the destruction of eggs of insects and some scale.

APPLE VALUES AND STANDARDIZATION

Apple values are well maintained throughout the various marketing points and strong prices are ruling for barrel and box stock at this time.

While it is not possible with any degree of accuracy to show in dollars and cents just how much this prosperous condition is influenced by the law of supply and demand, it is a known fact that the present large demand and ruling high prices for California stock are due in a great measure to the stipulations and enforcement of the apple standardization law, which constitutes a part of the activities of the state horticultural commission.

For labeling packed apples "California Fancy" which were not up to legal standard, a Watsonville packer was fined $100.

PEAR BLIGHT AND THRIPS

In the Rogue River Valley of Oregon, County Pathologist C. C. Cate is directing a campaign against pear blight by spraying against the thrips which are considered most active in disseminating pear blight. The spray used is nicotine sulphate 1-800 and distillate-oil emulsion one and one-half per cent. It is time to spray for thrips.

BRAWLEY TRACTOR SCHOOL

A tractor training center at Brawley from December 16 to January 18 under the direction of the state board of education and the local high school will give instruction in the gas engine and gas driven farm machinery to promote efficiency in crop production in the valley. The demonstration classes will meet in a garage on the main street for three weeks and the fourth week will be used to do field work in plowing and preparing land for planting. Indications are that the classes, both day and night, will be crowded.

LaCrosse
Happy Farmer TRACTOR

The La Crosse Tractor Means a Happy Farmer

AS you stand beside the La Crosse Tractor, every working part of it is right under your hands where you can reach it easily. Step into the driver's seat—and you are ready to do any power farming job as simply as you would run your automobile. There are no difficult adjustments to make—no out-of-the-way places to get at. From where you sit you can operate the implements as well as the tractor single-handed.

You need a tractor for the amount of work it will do **quickly.** Because of its simplicity, the La Crosse is the tractor you can depend on to do the work you want in good time and without delays. It is as simple as it is powerful.

The Simple Three Plow Tractor

The simplicity of the La Crosse Tractor is the result of the experience and genius of the men who designed it. From the entire automobile, tractor, vehicle and farm implement field, the highest type of men have been chosen for La Crosse engineers. When you buy a La Crosse Tractor, you secure the finished product of the best brains in the tractor world.

The La Crosse is the successful three plow kerosene burning tractor. Its simple twin cylinder engine with the six inch bore and seven inch stroke delivers most power per gallon of fuel.

The La Crosse is the tractor which is easy to handle. It turns within a space of 9 feet and is self-guiding in the furrow.

La Crosse Tractor Implements

Like the La Crosse Tractor, La Crosse Implements are designed and built to do their work most economically and easily. All of them can be handled by the use of a rope from the driver's seat on the tractor.

Ask your dealer to show you La Crosse Tractor Plows—both moldboard and disk—the La Crosse special Tractor Disk Harrow and the La Crosse Automatic power-lift and power-pressure Grain Drill.

See the La Crosse Now

The La Crosse Tractor offers you 12-24 horsepower for **1150** —full three plow capacity, with guaranteed drawbar pull of 2000 pounds and 24 belt horsepower. It is famous the country over as the tractor with "most power for the money".

Now is not a bit too soon to see the La Crosse dealer near you and have him place your order for Spring delivery. Write us today for his name, as well as that of the district distributor, who will make arrangements for you to see the next outdoor demonstration.

12-24 H.P. for $1150

LA CROSSE TRACTOR COMPANY
Department 832 C La Crosse, Wisconsin

Maximum Yield Big Profits

the result of reading our new illustrated catalog and planter's guide.

Fruit growers whether experienced or not will profit greatly by reading our new catalog.

It contains practical articles on preparation of soil — selection of proper varieties — pruning—shaping—irrigation and many other items of particular interest to the planter.

Write to us and let us know your local conditions—what varieties you have in mind — whether citrus, deciduous or ornamental trees, roses or vines.

Many years of experience will enable us to give you helpful suggestions.

Our new catalog just off the press will aid you materially in making your planting more successful.

Pear Blight

FROM "Blight, the Pear Grower's Nightmare," by A. L. Wisker, we quote:

Bees, flics, and some other insects euter the flowcrs; aphids puncture the delicate bark on the tips of new shoots with their beaks, and some other insects inoculate these tender parts of the tree by simply gripping them with their claw-like feet. Climbing cutworms, beetles, grasshoppers, and ground squirrels eat through the protective outer bark and inoculate the cambium layer. A blighted limb rubbing against a healthy limb through action of the wind will break the bark and produce blight in the healthy branch. The implements of tillage, tearing through blighted roots, may inoculate healthy roots close at hand. Similar results may follow where singletrees or parts of harness strike a diseased tree and shortly thereafter break the bark on a healthy tree. One case has been reported in which a leading orchardist of the Sacramento Valley lost several hundred trees less than two years old as a result of flood water coming in contact with them for several days,, the water having first passed through an old orchard in which blight was most active. His theory is that the diseased sap, containing millions of germs, was washed off the old trees and carried into bark cracks or wounds on the young trees by the water.

Aside from those agencies that distribute blight at blossom time, the worst agent of distribution is the ignorant pruner, who does not realize that he is dealing with a disease as infectious and as deadly to many varieties of the pear as is blood poison to human beings. The methods of the surgeon in the operating room should be the pruner's guide, since the diseased part of the tree must be cut off so far below any sign of infection as to insure the removal of all diseased tissue. Dependent upon the activity of the disease, the growing condition of the tree, the time of year, and the danger to the tree should re-infection occur, it will be necessary to cut from a few inches to as much as two feet below the point where the last sign of infection is visible.

Development of the Disease

After infection during the growing season, blight in the pear may develop so as to be recognizable within a few days or it may not become evident for as much as six weeks. With blossom infection, from two to three weeks will probably be the usual term. The newly formed fruit and new twig growth begins to darken, wilts, shrivels, dies, dries up, and finally turns black, the leaves frequently adhering to the dead wood during the winter following. Before turning back the fruit sometimes appears as if covered with a downy, grayish mold, and may appear to sweat tiny drops of moisture. This is the exudate arising from the fermentation of the diseased sap, frequently having a milky color, syrupy consistency, sicky-sweet taste, and peculiar, fermenting odor. Given off by the diseased wood, the exudate often shows as good-sized drops and the fluid may exude so copiously as to run down the branches for a considerable distance. At first the exudation is teeming with the bacilli of the disease, and if bark wounds or growth cracks are encountered new infections occur. As fast as the sun dries up the exudate the germs die, heat and dryness being fatal. Direct exposure to bright sunshine for ten minutes is usually fatal, but if a large limb is cut off and allowed to lie in the sun the germs in the inner bark will remain alive so long as there is a substantial quantity of moisture remaining.

The appearance of the exudate in bead-like drops is an infallible sign by which blight may be recognized, but it is not always in evidence in the early stages of blight. Another means of identification is the discoloration of the cambium layer, which, under the disease, shades from light pink through several shades of red and reddish brown to a dingy, water soaked color, this last appearing as the wood is killed. In the apple, the pink or red color is not always noticeable.

Surgical Methods Only Control

No injections, sprays, medication, or applications of chemicals have any value in blight control after infection starts. Once within the tree, blight either dries up and dies, unaffected by any exterior application, or it runs its course uninterruptedly until the roots are reached and the tree is killed. The latter is the usual result with most varieties if the trees are thrifty and vigorous, unless the disease is properly cut out.

In cutting out blight the antiseptic methods of the operating room must be followed, or there is great danger of re-infecting the tree or spreading the disease to others. After each cut the tools used must be sterilized, and the best practice demands that the cut surface be similarly treated.

Until recently, bichloride of mercury solutions were considered infallible as disinfectants when used at a strength of one to one thousand. Recent experiments by Professor F. C. Reimer, of Talent, Oregon, in charge of the Southern Oregon experiment station, cast grave doubts upon this belief. During the summer of 1918 Professor Reimer painted the surface of fresh cuts on pear trees with a virulent culture of blight germs and immediately applied to the different trees used in the tests various alleged disinfectants, including carbolic acid and bichloride of mercury, standard strength. In September, 1918, I saw the trees. Treated with either solution, every tree had developed blight, to such an extent that it was past saving. The results were the same where most of the other disinfectants were used, but where cyanide of mercury crystals were dissolved in water, strength one to five hundred, the solution kept in a glass or earthenware jar and applied with a paint brush, not one case of blight developed!

Even though experiments cover but the one season, the results are so satisfactory that it appears safe to discard all other disinfectants in favor of cyanide of mercury, particularly since the unreliability of bichloride of mercury is so well proven. The new distinfectant should only be used in the strength given until further experiments are made. It burns in greater strength and may not control in weaker solutions. One ounce, costing about a dollar, will make about sixteen quarts of the solution.

Cultural Methods

Pear blight control is rendered much more effective if cultural methods are employed that tend to check too exuberant growth, since the wood tissues under rank growth infect more readily and are favorable to rapid extension of the disease. At the same time, repressive cultural practices, carried to such an extreme as to re-

tard growth to a degree that greatly reduced the yield, failed to prevent severe blight injury to Bartlett trees in a few cases in an experiment made by Loma Rica Nursery at Grass Valley, during the summer of 1918. In this experiment nearly all infections died out without extending more than twelve inches, and the progress of the disease was very noticeably slowed down.

Any given variety of the pear varies in its susceptibility to blight in different localities and under different climatic and cultural conditions, but the relative tendency to blight of all varieties is consistently retained under all conditions. Such varieties as Seckel, Anjou, Nelis, and Comice are always more blight resistant than Bartlett, Howell, Bosc, or Dana Hovey when subject to the same conditions. In some resistant sorts, such as Comice, while infection does not readily occur, great injury is apt to result if blight does fasten itself upon the tree. When Anjou and Nelis are infected, the progress of the malady is apt to be slow and injury is frequently negligible.

At this time the search for blight proof species and varieties has failed to produce a single one, and those found to be most strongly blight resistant generally have fruit of such poor quality as to have no commercial value. However, there is a tempting field of adventure open to the plant breeder, since it is logical to believe that hybrids will in time be produced, possessing both quality and blight resistance in the highest degree.

Varietal Resistance

All the most highly resistant species have come from China and Japan, where blight is unknown. Several of these Oriental species are decidedly resistant, and there are cultivated varieties of these species exhibiting similar resistance and some having high quality. There are other pear species in the Orient as blight susceptible as the wild pear of Europe, pyrus communis of the botanists or "French seedling" of the nurserymen, the ancestor of all our best pears.

There is no species more susceptible to blight than pyrus communis, and the blight problem is rendered most difficult because all our best pears belong to this species. Many nurseries still use it in seedling form as the stock or root upon which to bud the desirable varieties. Up to a few years since, this was the practice in California, but in 1913 the writer set in motion propaganda favoring the use of the so-called Jap seedling—pyrus serotina—as a root stock, this being a species reasonably resistant to blight. The result may be judged from the fact that when Dr. W. L. Howard, of the University of California, in 1917 completed an investigation of the seedling situation, so far as it concerned the use of different stocks by the nurserymen of the state, he found that 63 per cent of the pear stocks used were pyrus serotina. California nurserymen are nothing if not progressive, and the percentage at this time probably stands close to 90 percent. Thus has the practice of two generations been completely changed within a few years.

EL DORADO PEAR SHOW

There is talk of reviving the custom of holding a pear show in El Dorado County. The last was held in 1913. Those who are urging the holding of the show say that El Dorado's pears can sweep the boards at any show and that the show should be an advertising feature of much value.

Apples for the English Market

Shipments of apples from the Watsinville district this year are running well up to last year's although the season this year started two or three weeks later. According to the Pajaronian:

"There are some 450 cars to move out yet not including about 350 cars held in cold storage. This will make a total of 2073 cars for the season aginst 2040 cars shipped last year.

"The taking off of restrictions on importing apples into England has started some fruit in that direction and several cars of Watsonville apples have started for the trip across the ocean. It has been figured that the freight and handling will cost approximately $3.00 per box to land the fruit in England. The rate from Watsonville to the Atlantic docks is 55 cents, and the latest quotations on the ocean rates was $1.63. This with the handling and wharf charges will approximate $3.00. The greatest drawback to the shipping fruit foreign is that you cannot reserve shipping space. Ships clearing for England will load "spot" cargoes when they have the space, but no shipper can be absolutely sure of the ship or the time that he can get his apples across.

"This makes the element of chance cut a figure in the exporting of fruits and other perishable goods at this time.

"The average price for the fruit in England is said to be 12 cents a pound and with the apples netting about 44 pounds to the box it would bring the price around $5.00 a box. With the freight charges deducted the shipper would receive about $2.00 per box for his fruit if he had the good luck to connect with a ship and get his product across promptly."

FERTILIZER BUYERS CAN SAVE CAR SPACE

Farmers' organizations and fertilizer dealers are urged by the United States department of agriculture to combine orders for fertilizers so as to permit maximum car loading. The average carload of fertilizers in 1917 was 20 tons a car. It is estimated that with the average increased to 50 tons a car the saving will approximate 192,000 freight cars and 24,384,000 car-miles.

Farmers' cooperative buying associations are urged to combine sufficient orders to guarantee maximum loads, and farmers buying individually can help by making their needs known early in the season in order that dealers may order in maximum carload shipments.

PISTACHIO NUTS

Regarding their recent shipments of pistachio nuts Tribble Brothers of Sacramento County write: "I believe we have the honor of growing the first commercial crop of pistachio nuts in the United States. We have about 150 pounds and they are pronounced as good as or better than the best imported varieties both in color and quality. The meat averages about 47 per cent in proportion to weight of shell, which is much heavier than the imported varieties, these imported nuts averaging 33 per cent."

PRUNE SYRUP

Experiments are being made in the manufacture of syrup from prunes not of first class appearance and quality. With our grape syrup, our prune syrup —not to mention sorghum—we will soon be able to cultivate, instead of everlastingly repressing, that sweet tooth.

MOTOR TRUCK AIDS IN FOOD DISTRIBUTION

The motor truck can be made an important factor in facilitating the transportation of perishable farm products. It promises to prove a permanent and valuable adjunct to the railroads.—U. S. Food Administration.

A hog ought not to be blamed for being a hog, but a man ought.

TREES
—with roots such as these
are grown only on our foothill soil and location. Hardy-of selected parentage-well-grown-absolutely reliable-and free from root-knot and diseases common to other localities.
We know we can meet your requirements. Our stock of trees is complete. Submit today a list of your wants for special quotations. Remember, behind each tree is our guarantee.
Those who wait will be disappointed. Write now—right now!

FRESNO, CALIF.

California at Chicago

By R. P. Royce

TWO years ago when the small exhibit of steers and wethers, bred and developed by the animal husbandry division of the University of California, swept the boards at the great International Live Stock Show, held each year at Chicago, the attention of the entire live stock industry was turned toward California. Prior to that year, live stock men gave little thought to California as a possible contender for high honors, but when the final awards were made and California held the two most coveted prizes of the show—not to mention several others—the Eastern men began to ask questions. How was it done without corn? What feed was used? Wasn't it an accident—a fluke? And, could they repeat? The first two questions, and others along the same line, were answered at the time by Professor Gordon H. True; the last two questions have just been answered, and very convincingly, too, by the showing made at the 1918 International. And just to make sure that the East would understand perfectly as to California's possibilities as a live stock section a few hogs were taken along and landed dangerously near the extreme top. The detailed record follows:

Fat Steers

California Marvel, first prize senior yearling and champion Shorthorn steer.

California Knight, sixth prize senior Shorthorn calf.

California Leader, third prize junior yearling Angus steer.

U. C. Jock 3rd, first prize senior Angus calf.

California Grizzly, second prize junior cross-bred calf.

Fat Sheep

Fifth on Shropshire wether lamb.

Third on pen of Southdown lambs.

Fourth on Hampshire yearling wethers.

First on Hampshire wether lamb.

Second on cross-bred yearling wethers.

First on cross-bred wether lambs.

The International Grand Champion Fyvie Knight 2nd

Junior yearling Angus steer, grand champion at the 1918 International Live Stock Exposition, shown by Purdue University. Sold at auction for $2.50 per pound—the record price.

Reading from the left: Tom Clark, George Cram, Aberdeenshire, Scotland; Dean J. H. Skinner, John Clay, veteran commission man; Prof. C. F. Gabbie, J. S. Douglas, the feeder.

Second on pen of cross-bred wether lambs.

Fat Swine

Sixth on Berkshire senior pigs.

Fourth on pen of Berkshire senior pigs.

Second, third and sixth on senior Poland-China pigs.

First on pen of Poland-China senior pigs.

Fifth and sixth on Duroc-Jersey junior pigs.

First, best group of five steers, wethers and barrows, shown by an agricultural college.

Every animal shown was bred and developed at the University farm and, with the exception of the few cross-breds, was a pure bred.

California Marvel, the champion Shorthorn steer, was sired by Sultan Mayflower, a grandson of Whitehall Sultan, the greatest bull that has rendered service in America during the past twenty-five years. His dam is Glenbrook's Marvel, who also descends from the same source. Perhaps no calf dropped in California has been watched with keener interest than has been manifested over this one. The fact that he is out of the same cow that produced the sensational 1916 grand champion, California Favorite, and that he was born just about the time his illustrious half brother made his trip to Chicago—and to fame, served to make him the center of interest among California cattlemen. From the first it appeared that he had the making of a real show steer under his rich coat of hair and as he developed under the skillful handling of Alex McDonald, there was never any reason to change the faith that was centered on him. He was shown but one time in 1917 and that time he was made grand champion at the Pacific International Live Stock Show at Portland. At that time it was felt that he would have been a formidable contender at Chicago and it was regretted that he was not given the opportunity to go East. However, he was groomed for the 1918 show and that the high expectations that rested on him were not misplaced is evidenced by his record.

The senior Angus calf, U. C. Jock 3rd, first in his class at Chicago and reserve champion Angus steer, is also a blood relation to a former champion. The dam of this calf also produced U. C. Jock, the champion Angus and reserve grand champion of 1916. From the above it is quite simple to draw the conclusion that good steers must have good mothers—and that blood will tell.

For the first time California exhibited hogs at the International. It is one thing to fit and ship cattle such a distance, but it is quite another thing to fit and ship hogs. Notwithstanding that fact the hogs attracted a great deal of favorable comment and, in the case of the Poland-China barrows, did remarkably well. As a matter of fact, it was generally thought that the pen of California Polands should have been the champions rather than reserve.

This year's showing is but added proof that California can produce live stock, the equal of any section, and the pioneering carried on by the University is bound to have a far reaching influence and should be given the unstinted support of all.

CATERPILLAR
Reg. U.S. Pat. Off.

DISC PLOWS

As famous for service and durability as the "Caterpillar" Tractor—both products of the same factory—both the result of long experience and a knowledge of the needs of Pacific Coast farmers.

Built originally for use behind the "Caterpillar" Tractor to make a complete plowing outfit without an equal, these plows can be depended upon to give superior service in any kind or condition of soil, with minimum draft and maximum ease of operation.

Besides being built heavier and stronger than most plows offered for tractor work, "Caterpillar" Disc Plows possess other exclusive points of advantage that are worthy of your investigation. It will pay you to send, today, for the "Caterpillar" Disc Plow catalog.

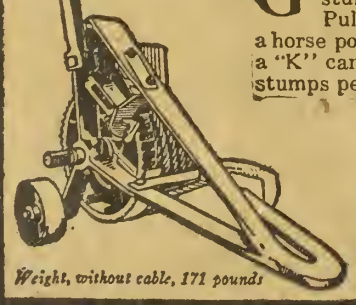
Stop Wasting Money On Your Stump Land
Turn It Into Dollars

GRASP the OPPORTUNITY and put DOLLARS in your pocket by clearing your stump land. Stump land was never so valuable as it is TO-DAY. The "K" Stump Puller will do the work in less time and the least expense. Cost just about ½ of a horse power machine and about ¼ of the cost of dynamite. One man or woman with a "K" can out pull 16 large horses. One person single handed can pull from 50 to 150 stumps per day.

HAND POWER
K Stump Puller



Weight, without cable, 171 pounds

No stump too big for the "K"

works by leverage—same principle as a jack—one man can lift or pull 48 tons alone. Works easy as rowing a boat. Works on hillsides or marshes where horses cannot operate. Has 2 speeds and weighs 171 pounds. Made of the best steel. Absolutely guaranteed against breakage. Endorsed by U. S. Government officials. Highest bank references.

Send for my special offer and free book on Land Clearing

WALTER J. FITZPATRICK Box 17 182 Fifth St., San Francisco, Calif.

Such a splendid record should lend courage to all who are seriously planning either to enter the live stock game or to continue on in the business of producing meat.

We move for a vote of thanks to Professors True, Thompson and Miller—and to Alex McDonald, George Phillips and Homer Stokes, the men responsible for California's record.

NORTHERN CALIFORNIA NOTES

Written for California Cultivator
By W. S. Guilford

IN SPITE of the fact that rains have been followed by drying winds and sunshine, the cost of harvesting rice during the last few weeks has been very high. The heavy clay soil in the rice fields dries out slowly, and before it is in condition to make the operation of binders satisfactory, the rain comes. This makes it necessary to do the best possible under the conditions, and with labor costing from $4.00 to $7.00 or $8.00 and board a day, and everything else in proportion, the expense is enormous. Growers tell of binders cutting from one-quarter of an acre to an acre a day, and many are paying $25 a day for binder outfits, machine, driver and stock. The mud and rice straw form an ideal combination for clogging binder wheels. Binder drivers carry a tool which consists of a rod with a hook on one end and a chisel on the other. With this they endeavor to keep the mud from clogging the wheels, but this is only partly effective. The wheels are frequently clogged so that they will not revolve in the frame. Then it is simply a matter of stopping and digging the mud and straw out with a big pocket knife—a tedious operation. One operator has suggested that this frame which carries the bull wheel should be made wider and longer, giving more clearance to the wheel, but the objection to such a plan is evident, that with such an outfit the time required to "ball up" the wheel would be a little longer—but the time required to "dig out" would be longer.

And when the mud conditions are like this the horses and mules pulling the binder have an awful time. They simply flounder around and "wallow through" the mess. When one bogs down it is necessary to unhitch the team, dig out the animal that is stuck, get more stock and a long chain, pull the binder out and get a new start. By this time it is noon—or night—and no rice has been bound. Most men will not work long under these conditions.

Early maturing varieties, early planting and early and abundant water will make early harvesting possible, and troubles like these can be avoided.

Cultivator readers will learn with regret that influenza followed by pneumonia is responsible for the death of the wife of F. R. Steele, prominent in Berkshire affairs. Other victims are E. M. Downing, manager of the Chico plant of the California Packing Corporation and one of the leaders in the dried fruit business in the Sacramento Valley; Wm. Hagan of Maxwell, one of the most extensive operators in the rice business; and Lindsay Hudson of Willows, an irrigation engineer who had made a large place for himself in the agricultural affairs of the valley.

EL DORADO POTATO STANDARD

The potato committee of the El Dorado County farm bureau has adopted standardization rules and formulated buying and selling agreements.

All shipments must be made in standard 100-pound sacks. Each sack must bear a tag showing classification, grade size and quality of contents.

Potatoes will be classed as choice and fancy. Choice will be divided into two grades—first and second. Firsts must weigh from three ounces up, be free from knobs, and practically free from disease; seconds must weigh from two ounces up, cut, and not too rough.

Fancy will take three grades—special bakers, 12 ounces up; fancy bakers, eight to twelve ounces; medium fancy, three to eight ounces. All stock to be uniform in shape and practically free from disease.

Plans were made for the cooperative buying of all sacks, fertilizers, tags and seed potatoes. By this method it is believed production cost can be reduced materially.

IS NOW A PROFESSOR

Mark Walker has been appointed to the chair of professor of chemistry in the University of Redlands. He will still, however, continue his professional practice at the old location and his clients will be served as carefully and promptly as in the past.

HENDERSON BUSH LIMA

George T. Wilson of Rivera brings to this office a plant of the Henderson Bush Lima which is a wonderful exhibit of the prlificacy of this bean. The plant is little more than 15 inches high with a spread of about 12 inches, but the beans are so thickly set that it is hard to conceive how one more pod could be placed on the bush. He says the field netted over thirty 80-pound sacks to the acre.

SOUTH AFRICA CONSERVES WHEAT

The far reaching effects of war on remote parts of the world may be seen in efforts to safeguard the wheat supply of South Africa. According to the wheat conservation act, recently enacted, standard flour is to contain not less than 75 per cent of the wheat berry, and 83 per cent of standard flour is to be mixed with 17 per cent of meal, barley, rye or other regulation substitute.

This South African ratio is noticeably silimar to the 80-20 plan of wheat conservation enforced here in America and in the Allied countries.

GERMANY'S DRYING RESOURCES

According to German estimates, the use of all drying apparatus in that country would dehydrate about 184,000,000 bushels of potatoes. The German potato harvest, which this year is fairly satisfactory, constitutes one of the principal food resources.

means comfort for the cow and a generous, easy milk flow. BAG BALM, the great healing ointment, will keep the udder free from sores, chaps, cuts, bruises, cracks, bunches and inflammation.

BAG BALM

IS ESPECIALLY EFFECTIVE AT THE CALVING PERIOD WHEN CAKED BAG FREQUENTLY OCCURS.

Its penetrating and softening effect is immediate. Every dairy should keep Bag Balm on hand.

Sold by druggists and feed dealers, in big 60c packages. Write for free booklet, "Dairy Wrinkles."

DAIRY ASSOCIATION CO.

WALLIS

America's Foremost Tractor

THE perfection of the Wallis principle in tractor construction established a new standard of tractor quality.

Wallis was the first to use a rear axle gear drive—entirely enclosed. Wallis built a powerful four-cylinder engine of latest tractor type, and drop forged, cut and hardened steel gears. Wallis enclosed all gears and moving parts in a light but durable steel armor where they run in a bath of oil. Lowest plowing cost per acre is a Wallis accomplishment. This is economy which plays an important part in the final estimate of your farm profits.

Why the Wallis principle is the accepted standard of engineering excellence and operating economy is explained and illustrated in the new Wallis catalog. A copy will be mailed upon request.

SULPHUR

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

Try our new brand of VENTILATED Sublimed Sulphur, 100 per cent pure, for making Paste — (Atomic Sulphur) — and for dusting.

For Lime Sulphur Solution, use our DIAMOND "S" BRAND refined Flour Sulphur. We can furnish you this sulphur at such a low price that it will pay you to mix your own solution.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre of our Diamond "S" Brand Powdered Sulphur. Write direct to

San Francisco Sulphur Co.
624 California Street, San Francisco, Cal.

We are equipped to make immediate shipment. Send for illustrated booklet; price list and samples, and please state for what purpose you use the sulphur, quantity needed, and date of shipment prefered. Tel. Kearny 871.

CALIVADA
Sheep MANURES Steer

From highest nitrogenous feed. Decomposed and concentrated by age in their own liquids, containing the highest percentages of Nitrogen, Phosphoric Acid, Soluble Potash, and readily available Humus.
Shipped commercial dry. Cars average 22 to 24 tons. Saves four-fifths labor in application. Thousands of tons now being shipped to citrus and deciduous growers in California.

Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Symptoms of Worms

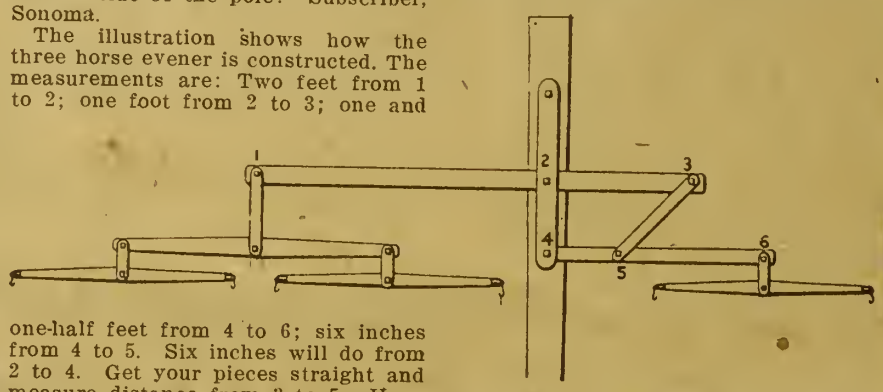
In response to query as to symptoms of worms in fowls Mrs. Koethen answers

'There are certain symptoms of worms in fowls, such as dullness and an unhealthy look, but these are seen in other diseases. There is no sure way of diagnosing worms unless you see them. The streaks of red, in connection with great looseness of the bowels, might indicate serious intestinal condition, but if they follow a dose of physic, and the birds are apparently in perfect health, there is nothing to worry about.

Three Horse Evener

Can you tell me how I can make a three horse evener—one that can be used in a pole disk to work two horses on one side of the pole?—Subscriber, Sonoma.

The illustration shows how the three horse evener is constructed. The measurements are: Two feet from 1 to 2; one foot from 2 to 3; one and



one-half feet from 4 to 6; six inches from 4 to 5. Six inches will do from 2 to 4. Get your pieces straight and measure distance from 3 to 5. Have square holes cut in irons for bolts, so they can be easily removed. In this cut the nigh horse walks next to tree; should you wish to drive the off-horse next to the tree, you can reverse the plan. You must place the double tree part back six inches from the place where you would hitch two horses, or shorten traces. I am using one on a disc and do not notice much side draft.

Sea Onion

Can you tell me what a sea onion is? It has been recommended as a cure for asthma.—Subscriber, Owensmouth.

Sea onion is a name given to the bulb of the squill, a common garden plant of Southern Europe. Cut in thin slices it is used as an expectorant and diuretic; in large doses, as an emetic and purgative. The botanical name is Urginea maritima.

Rabbit Questions

I recently bought a young Belgian doe that was not supposed to be bred. Yesterday I found evidences of miscarriage. She seems all right, only acts very quiet and stays in her nest all the time. If she did miscarry would she ever be able to carry a litter full time after losing her first? In case she recovers how long before she should be tried with a buck? Do you have for sale or can you recommend a thoroughly reliable book on rabbit raising, and what is the price?—Subscriber, Sacramento.

You do not state age of doe so it is hard to tell just what was cause of miscarriage. She might have been frightened or roughly handled. Bred does should be where it is quiet and receive no rough treatment. This she might have received prior to your receiving her. Do not think it will happen again. Wait a while and when the doe seems normal and active, eye bright, coat smooth, breed her. Feed sprouts of trees, some weeds and vegetables as set forth in Gibson's Rabbit Book, which we recommend (paper $1.00) or the Western Rabbit Book (50 cents), and we think all will be well with her. Follow instructions carefully and nature, care and proper feeding will bring you good results in nearly all cases.—W. D. W.

No 400-Egg Hens

O. C. Hudson of the Hudson Poultry Farm at Escondido calls our attention to a statement in the issue of November 2, to the effect that the pens in the Storrs egg-laying contest consist of five hens each. He says:

"This may mislead a number of your readers to believe there are actually some 400-egg hens in that yearly contest. The eighth annual contest is now under way. As in the previous competitions there are 100 pens of ten birds each. However, there are five-bird contests at Mountain Grove, Missouri, and Pullman, Washington. It takes some birds, you know, to make even a 200-egg average in these contests on a dry mash ration."

The Cultivator is always glad to have its statements challenged or corrected. We want nothing so much as the truth.

Early vs. Late Molters

You made a statement, "The early molting hens are the ones that can be depended upon to fill the egg basket this winter." If this is so why are all the experiment stations preaching keep the late molters; kill the early molters? Please give your experience about late vs. early molt through California Cultivator.—Subscriber, Glendale.

You are right about the late molters being the dependable layers. If I seemed to say anything to the contrary it was the fault either of my typewriter or the linotype man. The experience of experiment stations and commercial poultrymen coincides without a dissenting voice.—J. A. K.

Turkeys Too Small

In your issue of November 16 I notice an article by J. A. K. which states that a six months old tom turkey usually weighs from 16 to 20 pounds, a hen from 9 to 11. I have been raising turkeys three years and do not get anywhere near those weights. I have Bronze turkeys. Can you tell me the reason? My neighbors do no better. I just weighed two six months toms and they weikhed nine pounds each, both raised by different parties. Is it the breed, feed or management? If so kindly advise me how to improve.—Subscriber, Saugus.

There must be something wrong with your breeding stock if your toms weigh only nine pounds at six months of age. Perhaps their sire is undersized. You cannot expect good sized offspring from an undersized father. Again, your stock may be inbred. If you will mate your hens this coming year to a tom of standard weight, which is 25 pounds for a cockerel and 33 pounds for a yearling cock, and make sure that he comes of stock entirely unrelated to the hens, I think you will find your toms a good deal larger next year. Another factor which determines the size of the offspring is the age of the hen. Never breed from pullets. If you do you are almost certain to have undersized, delicate poults. A turkey hen should be two years old before she is used as a breeder. Feeding makes some difference, in the weight of the birds, but hardly the difference you mention. In Cultivator of December 7 is a description of the method of a Riverside woman who has been very successful with her turkeys. The article is entitled "From Shell to Roasting-Pan." —J. A. K.

Chicken Ticks

Can you tell me how to exterminate the California chicken tick? My hen house is infested with them after standing unused all summer. I enclose a specimen.—Subscriber, Reedley.

The specimens enclosed are surely ticks. You can recognize them by their bed-bug shape. Commercial poultrymen who have had experience

Shells every ear *right!*

Big or little, wet or dry, without injuring corn or breaking cobs.

Thorough shelling! Appleton "clean shelling" is *clean shelling*. Remarkably flexible finger-like devices hold *any* size ear with exactly right tension for best work—biggest ears can't get damaged by too much pressure; nubbins can't get thru partly shelled by too little pressure.

APPLETON Sheller

Thorough separating. U-shaped, raised-lip screen agitates both upward and forward—allows *all* shelled corn to fall through to cleaning pan below, where all trash and dirt is blown out. No other method does such *complete* separating and thorough cleaning. The Appleton does

more work with less power

because it is simpler—fewer chains, sprockets and gears. This also means less repair trouble and longer life. The Appleton proposition is *certain to win you* when you *know* all about it. Send for booklet *today*.

ith these pests say there is no way f getting rid of them when a house s once infested, but you might try orrosive sublimate (eight ounces of ublimate to 20 gallons of water) ainting or spraying walls and roosts ill you are sure every tick has been eached. If the corrosive sublimate olution touches the ticks it kills hem, but there is always danger that hose hidden in cracks will not be ouched. If your house can be tightly losed, probably fumigating with for-naldehyde would destroy the ticks, s would the cyanide process used for itrus trees.—J. A. K.

Pullets Slow to Lay

Of my R. I. Red pullets hatched April 11, only one or two are laying. Were they hatched too late or what is he trouble? Am feeding butter milk nash with cooked potato parings in he morning, sprouted oats or green stuff at noon, and scratch feed at night. Frequently add fish meal to the morning mash, also keep grit, charcoal and shell where they can get it any time. Have two White Leghorn pullets hatched at the same time, one has been laying some for the last six weeks and the other one has not laid at all. What do you consider the best mash, and is there a good egg-maker or tonic you could recommend? Would you advise buying eggs or chicks from Hoganized stock? Have found incubator chicks rather sickly and hard to raise. What makes the yolks of the eggs a pale yellow? Is there something lacking in the feed? —Subscriber, Long Beach.

Your ration is very good, but the pale yolks of the eggs indicate that the hens are not getting enough green feed. Sprouted oats are not properly speaking green feed though there is some green in them. The best egg maker would be green cut bone or more buttermilk. When pullets are slow about beginning to lay a little extra animal food or protein in the form of linseed meal or Soy bean meal will often start them. You might add a little of the vegetable meal to your mash for a month and then discontinue it for a month. There is nothing quite so good as green cut bone, but this is not always available. For from 12 to 20 hens give ten cents' worth of bone twice a week. Your Red pullets ought to be laying. Probably they only need a little encouraging in the shape of extra protein. Buy your eggs or chicks from Hoganized stock if their egg record is satisfactory. The Hogan system tells you what a hen ought to do, not what she has done. Sometimes the two correspond; sometimes not.—J. A. K.

Hens Not Laying

Can you tell me what ails my hens, they all look fine but they don't lay? I have 34 hens and 20 pullets as large as hens and I am not getting an egg. I feed wheat and barley mixed, bone meal and the table scraps. Where there are any droppings and it gets damp it gets full of little white worms like maggots; has that anything to do with their laying? They have plenty of greens to eat, a large chicken yard and two houses. Hoping to get an early reply.—Subscriber, Marigold.

If your hens have no animal food except bone meal it is no wonder they do not lay. They should have a good dry mash, preferably a buttermilk mash, before them at all times. If you prefer to buy the ground grain and mix the mash yourself make it two parts bran (by measure) one part corn meal, one part ground barley, one-half part beef scrap or fish meal and one-half part Soy bean meal. If there is much meat in the table scraps some of the beef scrap may be omitted. Perhaps some of your hens are over two years old. If they are, not many eggs are to be expected. You do not say what breed your pullets are nor how old. Pullets of heavy breeds do not lay as early as Leghorns, and the larger the breed the later they are in getting busy.—J. A. K.

Breeding Leghorns

I would like to know how many hens a White Leghorn rooster will serve in the spring? — Subscriber, Hemet.

A White Leghorn rooster will serve from 12 to 20 hens in the spring, the number depending upon his age and vigor.—J. A. K.

Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Boulevard, Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.

Unsigned communications receive no attention.

Wire Cut

I have a horse with a bad wire cut on her back heel, in the fetlock joint. She runs and plays as if nothing was wrong, but her walking and running seem to give it no chance to heal. The wound is watery and pink in color. Please tell me what I should put on it and how to care for it so it will heal. —Subscriber, Coachella.

Clip off the hair around the wound and keep it as clean and dry as possible. Make a powder of equal parts of air slaked lime and talcum powder. Dust this on two or three times a day. It may be that the end of a nerve was cut off and is now exposed. That always causes a wound to heal very slowly. If you touch it with the end of your finger and it appears very sensitive then sear the surface by drawing a red hot iron across it quickly. After that the powder will heal it in a short time.

Swollen Ankle

I have a very good mule and about two weeks ago his ankles started to swell. When I would work him the swelling would disappear but now they seem to be getting worse. He keeps biting them as though they itch and has pulled the hair out from the knee down. He has no lice. Is it blood trouble? Please tell me what is the trouble and what to do for it.—Subscriber, Chowchilla .

The trouble may be partly due to the condition of the blood. Give him these powders. Four ounces nitrate of potash, one ounce of powdered rosin, four ounces powdered gentian and six ounces farina. Mix all and give a tablespoon of the mixture in the feed twice a day. Also clip off the hair over the swollen parts and use this lotion. Put one ounce of the chloride of zinc in a gallon bottle and fill it with clean water. Wet the ankles with the lotion twice a day. It will do more good if the lotion is warm when applied. Warm it in an earthen or granite dish but not in tin. Brush the swollen ankles often with a good stiff brush.

Thrush

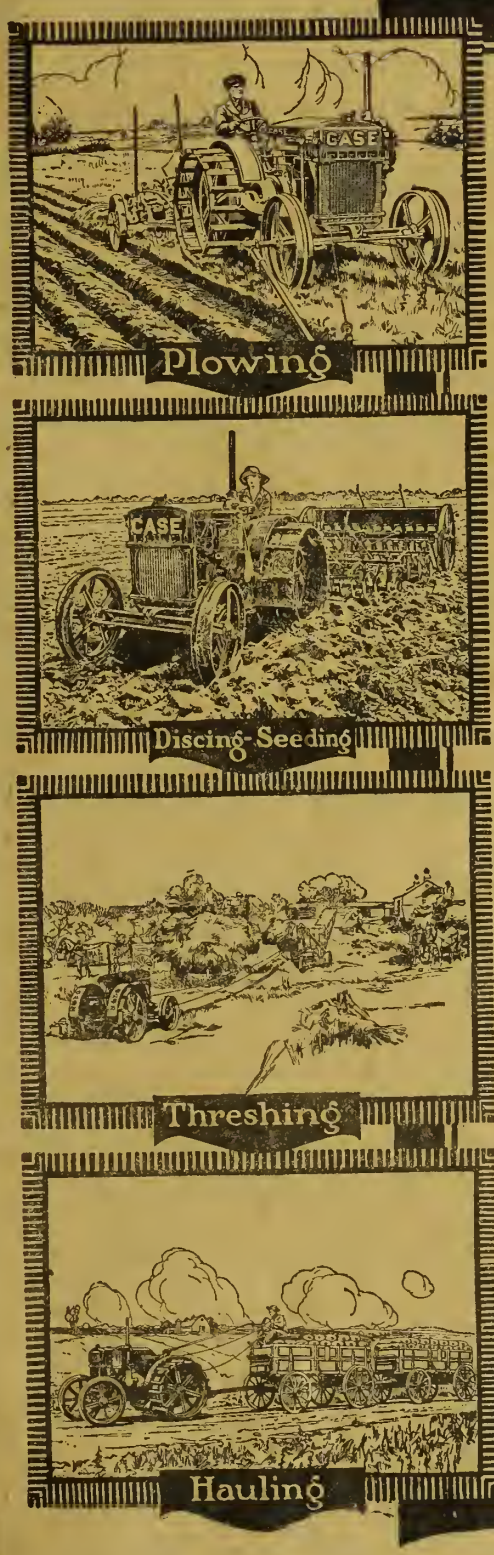
I have a horse with what I suppose is thrush. It is a soreness in the crack of the fore feet that oozes out a white watery substance. The horse is fat and in fine spirits. I have tried iodine, bluestone, distillate, creolin and formaldehyde and also cross words. Bluestone and distillate seem to keep it down but nothing I have tried seems to cure. What will I do next?—Subscriber, La Mesa.

Cut all the loose edges away and clean out all the pus with warm water that has a few drops of carbolic acid in it. Clean out the cracks to the very bottom by using a piece of cloth over the end of a table knife. Draw it through several times until you think no more pus can be left. Wipe it out clean and dry and then dust in plenty of calomel. Pack some of the calomel way to the bottom of the cracks. Put more calomel on the outside, cover with surgeon's cotton and bind it all on with a bandage. Keep the horse in a dry place. You may need to change the dressings a few times but each time they may be left on several days. If you do your work thoroughly the horse will soon be free from the thrush.

Injured Teat

My cow while in pasture cut the end of one of her teats about a quarter of an inch from the end and it seems to have cut to the milk duct. I kept the cut well greased and the outside is healed but there seems to be an obstruction inside. I have to start the milk with a chicken quill; then it milks all right for a stroke or two when it is almost impossible to squeeze the milk out again. I have kept a quill in all the time lately and then it seems to milk very well but the cow don't like the treatment. What is the remedy?—Subscriber, Escalon.

In healing the skin has probably drawn up smaller than it originally was and a fold has been left in the membrane that lines the milk duct. This acts as a valve and closes the opening. In time it will probably contract and give no more trouble. The quill or milk tube is about the only remedy. Tincture of iodine on the outside might help some. Grease it also so the iodine will penetrate better.



Why a Case Tractor Is More Profitable

THE number of working days for an advanced tractor like the Case 10-18 is rapidly increasing. Men thought of tractors principally for plowing twenty-six years ago, when we first began to build motor tractors.

In later years, with the introduction of our smaller sizes, men were satisfied with a maximum of 30 days' use per year.

But war-time conditions have brought about changes not only in the mechanical development of tractors, but in their adaptation for multiplied uses.

More Ways to Use Your Tractor

Our latest and best small tractor, the 10-18, is purposely designed for maximum use. It is adaptable for all kinds of work. It represents years of study in the field, dozens of extensive investigations.

The Case 10-18 is small and compact. It weighs little more than a team of horses. Its length is 102 inches, width 56 inches and height 54½ inches. It turns in a 22-foot circle, and can get around easily. It goes through a small gate or door and easily shares the road with other vehicles.

While rated at 10 horsepower on the drawbar, it develops nearly 14. While rated at 18 on the belt, it develops up to 24. This reserve power makes it ever ready for an emergency.

There are dozens of improvements in this Case 10-18. For instance, it has a one-piece main frame, with a four-cylinder engine mounted crosswise. This frame construction affords a dust-proof housing for the rear axle, bull pinion shaft, transmission and the bearings for these parts. It also provides a base for the motor.

This type of construction brings rigidity. It minimizes vibration and prevents disalignment of gears, which are all cut steel and fully enclosed. Thus we multiply strength, reduce weight and conserve power.

Another feature is its economical consumption of kerosene. It has a Case Sylphon Thermostat which controls the cooling system and insures complete combustion of kerosene. And it prevents raw fuel from passing by the pistons and diluting oil in the crank case.

An improved air-washer delivers clean air to the carburetor. No grit nor dust gets into the cylinders to minimize their efficiency and shorten their life.

Our illustrated booklet describes all the advanced ideas in the new Case 10-18.

We will gladly send a copy free. Or it may be obtained of a Case Dealer.

LIBERTY FAIR LIVE STOCK SHOW

Continued from Page 595

ed in the senior calf class, and was the white Bashan Augusta, from the Dibblee herd. This youngster, full of quality and put up on pleasing lines, is an attractive prospect and had no difficulty in heading his class. Beauty's Dale, a sappy, good coated roan son of Earl of Avondale, was second over a Count Glory calf, shown by T. T. Miller, that, incidentally, is out of the same dam as the junior champion female. The fourth calf was a Dibblee entry that had plenty of size but was a bit coarse to the eyes of the judge. The March calf by Maxwalton's Pride 2nd, was a favorite with the judge, who found him nicely covered, and particularly nice about the tail head and down into his quarters. The white calf shown by T. T. Miller was a son of Greendale Sultan and although he might have been larger, his quality, style and acceptable type could have carried him higher. The third calf headed his class at the state fair, but was turned down because of a tendency to coarseness, that was not particularly noticeable.

Only an aged cow was shown and she was not especially attractive. Among the four two year olds, the thick, nicely fronted roan, Cloverleaf Lovely 2nd, from the Colorado herd, took the judge's fancy over Pacheco Lass 103rd, winner at the state fair. The winner, as noted, was thicker, handled well and had an attractive head, but she is not level of rump; quite plain, as a fatter of fact. The T. T. Miller heifer was hardly as large, but showed to better advantage than the Dibblee entry that was nursing a calf.

The six senior yearling heifers made a very strong class, and it was on this class that the ringside differed with the judge. After considerable deliberation the outstanding White Mayflower was left at the top. This heifer, by Sultan Mayflower, the bull at the head of the University herd, has developed well since last year. She still retains her sweetness, has a remarkable heart, a good top and carries her width well. She is, however, just a little rough about the tail and that finally cost her the grand championship. The light roan that was placed second is not at all attractive about the head and, while thick, is not overly strong of top, indeed she could have stood considerably further down the line, below her stall mate, left in third, and below, at least one, of the Hawkins entries. The Sacramento junior and reserve grand champion, Pacheco Lass 118th, headed the junior yearlings. Hillshade Beauty was second and the Dibblee entry was third. There was little question but that Flora Anoka, a white daughter of Lavender Sultan, should top the senior heifer calves. The Dibblee Estate had the other two entries—both attractive, but not of sufficient class to stand above the winner. The junior heifer calves made a nice class but were not particularly strong.

AWARDS

Exhibitors: Maxwell-Miller Cattle Co., Steamboat Springs, Colorado; T. T. Miller , Los Angeles; Pacheco Cattle Co., Hollister; Estate of Thos. B. Dibblee, Santa Barbara; Wm. Henn, Kansas City, Missouri.

Get of sire,—1, True Dale, Pacheco Cattle Co.; 2, Scotch Cumberland, Dibblee.

Produce of dam,—1, White Briar, T. T. Miller; 2, Overbrook Susan 2nd, Maxwell-Miller.

The Herefords

The Hereford show suffered more than the Shorthorns through the postponements of the fair. One herd that was in the stalls for the October opening found it necessary to ship several weeks ago in order to make the Royal and International, and the one California herd that was entered did not arrive. Consequently, with the exception of the bull classes, the fight for honors was between two herds, the Hereford Corporation of Wyoming, Cheyenne, Wyoming, and the Curtice Cattle Co., of Calgary, Canada. For the most part the honors were awarded fairly equally and generally to the satisfaction of all. Chas. H. Hill of Los Angeles did the judging.

The only entry in the aged bull class was the massive 2400 pound Beau Perfection 48th from the Canadian herd. This bull represents to a high degree the type of Hereford that the Western man likes. He has the scale and bone demanded but is not coarse. His progress down the line to the grand championship was, for the most part, clear sailing, although the junior champion gave him a scare for the final decision.

The five two year old bulls caused the judge some worry. Two types were represented in the lot, Wyoming Prince and Beau Donald 192nd, representing the larger type, and the three Henn entries were of the pattern most in favor in the Eastern shows—the thick, soggy, short legged kind. After working the class over carefully the judge split his type. Beau Donald 192nd was placed first. He is a bull of great size, with one of the most imposing fronts to be seen—a strong, beautiful head, full of character and topped with a magnificent pair of horns. He is not so pleasing when viewed from the rear, owing to the fact that he is noticeably lacking in quarter development. With full quarters there is little question but that he would have been premier bull.

Requesting your local merchant to stock articles advertised in the California Cultivator helps your town, the advertiser and the Cultivator.

Having selected the top, the crowd felt that the logical second place would go to the Wyoming bull, but the judge thought otherwise and picked the cracking good light colored bull, Beau King 10th, shown by Henn, and sandwiched him in ahead of Wyoming Prince. Under a different judge it is quite possible he would have stood first. Henn showed another bull of much the same stamp as his second bull into fourth place and a grandson of Perfection Fairfax, with many good qualities, but lacking finish, took fifth money.

The junior yearling winner, Bonnie Laddie, afterwards made junior champion, is a calf of much promise and was an outstanding winner in his class. Lamplighter 19th, a Henn entry, fitted into second nicely over Perfect Lad 4th.

Only one entry came forward in the senior bull calf class. The three junior calves made an interesting class. The sappy New Era 2nd won easily over his stall mate and the Canadian calf looked about right in third.

The female classes were entirely between the Canadian and Wyoming herds. Curtice showed the only aged cow. Each firm showed a two year old and neither were especially strong. Curtice had the one senior yearling and the only senior calf. The junior yearling class brought out the undefeated Miss Rialto 2nd, a beautiful young thing with a sweet head, a neat horn, and nicely balanced fore and aft. She was clearly the class of the female division and after winning in class she passed on down the line having everything her own way. The Wyoming herd had the top in the junior calves with the lovely little Lady Fairfax 2nd. The second calf had more size but was hardly so good along the top or at the tail head.

In the group classes the judge favored the herd with the stronger females and for that reason the Wyoming herd had everything. The ringside expected to see the aged herd go to the Canadian exhibit on account of the outstanding bull but the tie went the other way.

All in all, the Hereford show was good. A great deal of interest was manifested in the breed and at least one new herd will become a fact as a direct result of the showing made at the Liberty Fair.

Aberdeen-Angus

The Congdon & Battles herd of Aberdeen-Angus, from North Yakima, Washington, was the only herd of doddies entered. This herd, which is considered one of the leading collections of the breed in this country, attracted a great deal of attention, and made a highly favorable impression on many Southern California cattlemen. A full show herd was led before Chas. H. Hill, who rated them somewhat differently than was expected. The judge upset all "dope" when he made the aged cow, Idessa of Rosemere, senior champion and the junior yearling heifer, Barbara of Rosemere 24th, junior and grand champion, thus overlooking entirely the cracking two year old, Queen of Rosemere 5th, that was junior champion at the 1917 International and still quite the most attractive female in the herd.

AWARDS

THE DAIRY CATTLE

The show of dairy cattle was a distinct disappointment to the management and the visitors, and was not representative of the dairy industry of California and, with the exception of a few herds, was not a creditable exhibition.

Had it not been for a few Holstein and Guernsey breeders and the McFarland Ayrshires, the show would have been a total failure. It is hardly possible that any show approaching the importance or size of the Liberty Fair has ever been held in this state that could not boast of a single Jersey entry, but such was a fact at the Los Angeles show.

The Holsteins

There was little competition until the champions were brought forward for Judge E. W. Major to place—many of the classes having only one entry and several of the classes not filling at all.

Frampton Bros. had the only aged bull—Segis Pontiac De Kol Burke Clyde, junior champion at Sacramento in 1916. This bull has developed into a highly attractive bull, of nice lines, and style, together with those qualities one looks for in a high class dairy bull. The two year old bull had little

ASSOCIATION PLANS TO SOLVE THE 1919 LABOR PROBLEM

The Valley Fruit Growers' Association is signing up under its new membership plan ranch employers of labor in Fresno, Madera, Kings, and Tulare Counties.

This association successfully handled the difficult labor situation of the past year by establishing central labor camps throughout the valley, making labor available when needed. The workers were steady, the prices stable and reasonable, and the general situation in the neighborhood was improved by the knowledge that these camps could be depended upon not only for the regular supply of help, but also for extra men in emergencies.

One of the chief reasons for the present campaign for memberships and the three-year contract is to place the growers' association in a position to buy tents and equipment and to prepare in time for next season. Setchel after a survey of state wide conditions, believes that the labor shortage in 1918 will be nearly as acute as in the past year. The association struggled along last year with little equipment, and while not much is being asked this year, the camps, at least, are to be a more prominent feature of the preparations. As publicity and the good wages paid and steady employment have proved the best methods of attracting the workers here, so he believes the camps will be the best way to insure their return and to hold them throughout the season of the various harvests.

Numbers of workers have left the agricultural sections altogether. The officials of the association believed that most of them who have gone to the shipyards will remain there or to the city. Once having had a taste of the war profits in the form of extremely high wages and the things they will buy, a great part of them will not return to the farming sections. For this reason, in his opinion, the labor outlook in the valley never looked more serious.

"The situation of the present is not unlike that in the spring of 1916," said an official. "At that time an association was shown to be absolutely necessary. That year, by means of organization and publicity, enough men were secured to handle a record crop in record time. The state's labor resources were developed in 1917, and Oriental labor played a part in that development.

"The California Associated Raisin Company is cooperating to receive assessments of members of that company and so lighten the burden of collection, which would be quite heavy if each grower had to be seen to collect the ten cents an acre. The growers are mailing in their checks. Old members, especially, are doing this, thus making the cost of collection amount to only the cost of a postage stamp."

PRUNE GROWERS LOOKING AHEAD

Prune growers are determined not to be caught again as they were the past year without means of saving their fruit in case of unseasonable rains. They have started an active campaign to find out about evaporators for the caring for fruit, whether it be from unseasonable weather or from an excess crop to enable them to save as much as possible.

In line with this effort Prof. W. V. Cruess of the state university and Horticultural Commissioner Cody, of Santa Clara County have been going over that county and collecting all

Here is a sample of the concise way our catalogue deals with various fruits:

Peaches

California leads all other states in the production of peaches, in fact it is the leading horticultural product of the state.

Both the Clingstone and Freestone peaches have been bringing handsome returns to the growers and the heavy demand for foreign shipments as well as for home consumption, makes peach growing one of the most profitable industries.

The California Peach Growers' Association represents 6000 growers. It is incorporated for $1,000,000, and now controls 85 per cent or more of the tonnage sold on the market. Since this Association has been formed, grades have been standardized and prices have been obtained which have been remunerative to the grower and give an impetus to the planting of new acreage.

The trees do best on well-drained, sandy loam and white ash soils. If planted on heavy soils, care must be taken to have it well drained. The so-called "hard-pan lands," if properly blasted allowing the roots to extend into the deep, free soil below, produce fruit of the finest quality and the trees are very prolific. Such land is usually rough and requires leveling before planting.

When the trees are set, cut them back to 18 inches from the top of the ground and shorten in all branches, if any, to two buds.

The first winter after planting cut away all branches up to 12 inches from the ground and leave from three to five branches to form the head of the tree and prune these back to 12 inches. These branches should be distributed on the trunk of the tree to prevent crowding and development of forks. Forked trees, when loaded with fruit, are liable to slip down and ruin or entirely kill them.

The second winter thin out the small lateral branches leaving not more than two or three on each of the framework branches and cut these back about one-half. This system can be followed each year but thinning of lateral branches must be resorted to in order to prevent smothering the inside of the tree.

As a rule, peaches are set from 20 to 24 feet apart. On light soils set the trees 20 feet apart, but on heavier soils 22 to 24 feet is preferable.

Peaches are divided into two classes, viz., Freestones and Clingstones. Some of the very early varieties of the freestones cling slightly to the pit, which, however, is not an objectionable feature. The freestone varieties are used for canning, drying and shipping, while the clingstones are principally used for canning and shipping. The freestones best suited for canning are Foster, Elberta, Lovell and Salway; those for drying are Elberta, Muir and Lovell.

The Muir Peach

Is Unexcelled for Peeling and Drying Purposes

MUIR—The Muir is the King or Queen, as it might be called, of all the free stone peaches for drying purposes in California. It was originated on the place of John Muir, near Silverville, California, but was first propagated by Mr. G. W. Thissell, of Winters, California. It is very large in size and a perfect free-stone, having a clear yellow flesh, which certainly presents a most beautiful appearance when properly dried.

In addition to its attractive appearance it contains more sugar qualities than any other peach, which allows it to dry exceedingly heavy, making it a very profitable variety to the producer. We feel that this peach is so widely known and favored among California planters that it is needless for us to mention all of its good qualities.

We believe that everyone who contemplates planting a peach orchard for drying purposes should certainly not overlook the Muir. The California Peach Growers' Association have demonstrated that this variety is the only one that can be "Process Peeled" successfully. Time of ripening latter part of July.

Drying of Peaches

In drying peaches great care should be exercised so as to obtain a clean, well colored, and desirable product which always tends to make it more saleable.

Fruit should never be picked, for drying until well ripened, at which time it contains its largest quantity of sugar, dries very rapidly, weighs heavy, and makes a large percentage of fancy fruit. In picking up fruit which has dropped voluntarily, sunburnt and green shriveled fruit should never be taken, as it only tends to lessen the value of the good product and reduces the profits.

In cutting fruit one should be careful to see that a complete circle of the fruit, with the knife, is made otherwise it is partly torn and when dried presents a very poor appearance.

In placing the fruit on trays, which are used for sulphuring and drying, it should all be placed face up; the tray having cleats of sufficient height to admit the largest peaches without touching other trays when stacked. These trays should not be allowed to stand longer than is absolutely necessary before entering the sulphur house. When this is allowed a crust forms on the fruit and proper sulphuring is very difficult. * * *

data possible to work out the best way this may be gone at and at the same time to find the best type of evaporator for the climate and fruit of this valley. Their report will be watched for with great interest by growers.

Sorting Out Fermented Fruit

Experiments have also been made in sorting out fermented prunes from the sound fruit. To do this solutions have been employed of five per cent salt, of ten per cent sugar and of ten per cent ordinary corn syrup. Most of the fermented prunes will float in these solutions, the sound fruit sinking to the bottom. By means of a dipping basket and small tank the sorting by this method can be carried on rapidly. Slabs that are not fermented will sink with the sound fruit and must be removed later by hand sorting. A salt solution leaves the prunes with a dull finish, while a corn syrup of glucose solution produces a glossy appearance which is more attractive than the finish left by the salt.

FARMERS UNION LAUNCHES FEDERATION OF FARM ORGANIZATIONS

At the state meeting of the Farmers Union held last week at Modesto a movement was started to form an organization of all farmers bodies in the state, this federation to be known as the California Federated Farm Organization. A committee was appointed to investigate the conditions over the state and determine the most efficient manner of coordinating the activities of the farmers' organizations of California. They will report to the different organizations on the character of association evolved and it is expected that every body of agriculturalists in the state will become affiliated with the organization.

The personnel of this committee: John A. Orr, Ceres; J. M. Cochrane, Modesto; R. H. Frazer, Modesto; Guy H. Miller, Modesto, and N. E. Saunders, Chowchilla.

A similar effort was made some years ago but apparently the time was not ripe for carrying it to a successful conclusion. Such cooperative action of all farmers' organizations is a vital business necessity. Under such a plan the individual organizations of citrus men, bee men, vegetable growers and all others should have control of their own affairs and should not by any means lose their identity, but in matters of legislation and larger affairs affecting the interests of all there should be some machinery for securing quick, centralized action.

CLOSING THE RAISIN SEASON

President Giffen of the Associated Raisin Company estimates the crop of the season just closed at about 160,000 tons. This is only exceeded by the record crop of last year. The early rains cut down the output at least 20 per cent.

Checks for final payment are now being made and growers will receive a total of a million and a quarter dollars. The payments will be made at the following rates: Muscats, $7.04 per ton; Thompsons, $17.70; Sultanas, $10.88; Malagas, $12.84; Feherzagos, $11.50.

As 70 per cent of the crop had been sold when the rains came, it was impossible to raise the price. Two years ago the price was raised one cent per pound. The crop had been only 20 per cent sold at that time. In addition, the government denied the request of the association to raise the price on unsold Thompsons.

breeders of pure bred hogs

Calco Hog Troughs prevent disease—they are absolutely sanitary.

Calco Hog Troughs are made of Armco rust-resisting iron — strong, durable, smooth.

With Calco Troughs every particle of feed is used, none left to sour and breed filth.

Popular sizes in Calco Troughs include:

Size	Depth	Length	Price
10¼ in.	5 5-16 In.	40 in.	.....$3.70
10¼ in.	5 5-16 in.	60 In.	..... 4.50

LIBERTY FAIR LIVE STOCK SHOW

Continued from Page 607

to recommend him and in no way was of show yard caliber. The Burr Creamery Co. had an easy top in the senior yearling class as the three entries that stood below were much after the same pattern as the two year old. Stalder Bros. had an attractive junior yearling, Rosamaine's Pontiac Netherland, that would have given the junior champion a run for the money had he been shown to advantage. The winning senior bull calf was quite pleasing, but Stalder Bros. showed two good youngsters. The aged cow, Belle Juliana De Kol, shown by the Los Angeles County home, was really a good sort and furnished the judge his grand champion female. Only one two year old was shown. The senior yearling was afterwards made junior champion and the junior heifer calf shown by Stalder Bros. was also reserve junior champion.

AWARDS

Exhibitors: Frampton Bros., Artesia; Mrs. P. H. Jarrett, Lancaster; Stalder Bros., Riverside; Los Angeles County Farm, Hondo; Burr Creamery Co., Los Angeles; G. M. Brown, Los Angeles.

Bull three years old or over—1, Segis Pontiac De Kol Burke Clyde, Frampton Bros.

Bull two years old or under three—1, King Segis Pontiac, Mrs. P. H. Jarrett.

Senior yearling bull—1, Sir Manuel Hengerveld, Burr Creamery Co.; 2, King Segis Pontiac Pieterje Jr., Mrs. P. H. Jarrett; 3, Prince Arfidgara Walker, Mrs. P. H. Jarrett; 4, Prince Delmar De Kol Walker, Mrs. P. H. Jarrett.

Senior bull calf—1, Sir Manuel Korndyke, Burr Creamery Co.; 2, Rosamalnes Spofford, Stalder Bros.; 3, Rosamaines De Kol, Stalder Bros.

Cow four years old or over—1, Belle Jullana De Kol, Los Angeles County Farm; 2, Emma Palmer Longfield, Burr Creamery Co.

Cow two years old or under three—1, Hazelwood Doo Doo, G. M. Brown.

Senior yearling heifer—1, Hazelwood Ormsby Korndyke, G. M. Brown; 2, Blanche Segis Walker, Stadler Bros.

Junior yearling heifer — 1, Abbekerk Pontiac, Stalder Bros.

Junior heifer calf—1, Rosamaines Segis Ormsby, Stalder Bros.; 2, Rosamaines Cleopatra Ormsby, Stalder Bros.; 3, Rosamaines Duchess Ormnsby, Stalder Bros.

Senior champion bull—Segis Pontiac De Kol Burke Clyde, Frampton Bros.

Junior champion bull—Sir Manuel Hengerveld, Burr Creamery Co.; reserve junior champion, Rosamalnes Pontiac Netherland, Stalder Bros.

Grand champion bull—Segis Pontiac De Kol Burke Clyde, Frampton Bros.; reserve grand champion, Sir Manuel Hengerveld, Burr Creamery Co.

Senior champion female—Belle Juliana De Kol, Los Angeles County Farm; reserve senior champion, Hazelwood Doo Doo, G. M. Brown.

Junior champion female — Hazelwood Ormsby Korndyke, G. M. Brown; reserve champion, Rosamaines Segis Ormsby, Stalder Bros.

Grand champion female—Belle Juliana De Kol, Los Angeles County Farm.

Young herd—Stalder Bros.

Get of sire—1, Burr Creamery Co.; 2, Stalder Bros.

Produce of dam—1, Los Angeles County Farm; 2, Burr Creamery Co.; 3, Stalder Bros.

The Guernseys

Three herds of Guernseys were on hand but owing to the fact that few classes contained over one or two entries, Judge Major had little work in satisfying himself as to how to rank them. The chief attraction was the aged bull, Imp. Itchen May King, the celebrated Dupee herd bull. He was shown against the Humphrey entry, Bullion of Edgemoor, and there was no question as to the victor. The younger bull classes contained only one entry each.

The female classes were not difficult until the junior yearlings were reached and in this class Mary Lady of Edgemoor and Escalon Mary furnished very close competition. The former won because of a lighter shoulder, a straighter top and a better udder. When the eligibles came forward for the junior championship a decision bordering on the hairline sort was necessary. Humphrey showed a heifer, in milk, that was a trifle weak back of the shoulders and a little droopy behind, but of slashing dairy type; against her, and the winner, was a daughter of the senior and grand champion cow, of beautiful type, but a little heavy in the shoulder and a bit thick in the hide. She had, however, a beautiful top, splendid depth and a beautiful udder.

AWARDS

Aged bull—1,Imp. Itchen's May King, Dupee; 2, Bullion of Edgemoor, Humphrey.

Senior yearling bull—1, Escalon Challenger, Humphrey.

Senior bull calf—1, Dauntless of Edgemoor, Dupee.

Junior bull calf—1, Escalon Gold Brick, Humphrey.

Aged cow—1, Imp. Mildred 2nd of les Godaines, Dupee; 2, Imp. Dawn of Sarnia, Dupee.

Senior yearling heifer—Escalon Lady, Humphrey.

Junior yearling heifer—1, Merry Lady of Edgemoor, Dupee; 2, Escalon Mary, Humphrey; 3, Calla Grove Itchen May, Calla Grove Farm.

Senior heifer calf—1, Century Girl of Edgemoor, Dupee; 2, Escalon Evangeline, Humphrey; 3, Escalon Bopeep, Humphrey.

Junior hefer calf—1, Calla Grove Merry May, Calla Grove Farm; 2, Escalon Dorothy, Humphrey.

Senior champion bull—Imp. Itchen May King, Dupee.

Junior champion bull—Dauntless of Edgemoor, Dupee; reserve junior champion, Escalon Gold Brick, Humphrey.

Grand champion bull—Imp. Itchen May King, Dupee; reserve grand champion, Dauntless of Edgemoor, Dupee.

Senior champion female—Imp. Mildred 2nd of les Godalines, Dupee.

Junior champion female—Century Girl of Edgemoor, Dupee; reserve junior champion, Escalon Lady, Humphrey.

Grand champion female—Imp. Mildred 2nd of les Godalines, Dupee; reserve grand champion, Century Girl of Edgemoor, Dupee.

Young herd—A. B. Humphrey, Escalon.

Get of sire—1, get of Imp. Itchen May King, Dupee; 2, get of Bullion of Edgemoor, Humphrey.

Produce of Dam—1, produce of Merry Dance of Riverside Farm, Dupee; 2, produce of Calla Grove Itchen May, Calla Grove Farm.

The Ayrshires

E. B. McFarland, San Mateo, had the only herd of Ayrshires, but because of the admitted high quality of his show string, considerable strength was added to the dairy cattle division. This herd has been in the stalls at Exposition Park since October 14.

AWARDS

Exhibtor: E. B. McFariand, San Mateo.

Senior yearling bull—1, Steybrae Improver.

Junior yearling bull—1, Steybrae Commander.

Senior bull calf—1, Steybrae Robins Queechy.

Junior bull calf—1, Steybrae Captain; 2, Steybrae White Prince.

Cow, four years old or over—1, Willowmoor Vesta 4th; 2, Burnside Mary 7th.

Cow, three years old and under four—1, Muna Rosewood.

Heifer, two years and under three—1, Lady Stair of Steybrae; 2, Caroline of Steybrae.

Senior yearling heifer—1, Steybrae Grace Darling; 2, Steybrae Jeannie Deans.

Junior yearling heifer—1, Steybrae White Queen; 2, Steybrae Peggoty.

Senior heifer calf—1, Steybrae Kirsty; 2, Steybrae Shirley.

Junior heifer calf—1, Steybrae Cherry; 2, Steybrae Nona.

Junior champion bull—Steybrae Commander; reserve junior champion, Steybrae Improver.

Grand champion bull—Steybrae Commander; reserve grand champion, Steybrae Improver.

Senior champion female—Willowmoor Vesta 4th; reserve senior champion, Lady Stair of Steybrae.

Junior champion female — Steybrae Kirsty; reserve junior champion, Steybrae Grace Darling.

Grand champion female — Willowmoor Vesta 4th; reserve grand champion, Steybrae Kirsty.

Produce of dam—Produce of Willowmoor Jean Douglas.

Brown Swiss

J. Irwin Burk, Gilbert, Arizona, was the only exhibitor of Brown Swiss cattle.

THE SWINE SHOW

The swine show might be termed a local show, but for the fact that the Bassett and Marsh Poland Chinas and the Humphrey Berkshires were entered. And if one had any doubts as to what kind of hogs are being produced in the Southern end of the state this show would set him right. Southern California is raising good hogs—as good as will be found in the West—and lots of them.

The Durocs and Hampshire departments numbered the largest entries but the Poland Chinas and the Berkshires yielded to no breed in point of real quality. Only a few Chester Whites were shown.

The Duroc-Jerseys

The Durocs were out in force with an exhibit that was "class" from start to finish and indicated why Southern California has come to be considered a Duroc center. The aged boars were headed by Thompson's Pilot Defender, an extremely large mellow sort, good headed and with a good top, but a little lacking in underpinning, the Conejo Ranch were second with Councillor, reserve grand champion boar at Sacramento last September, and the Ireland Ranch was third with their good boar, Cherry Volunteer 2nd. One of the most pleasing types noted among the boars was the cracking good senior boar shown by Graham. This boar, Orion's King Gano, looks to be one of the most valuable herd boar prospects in the state. He has extreme length, plenty of size, and a smoothness rarely seen. Many felt that he could have been made grand champion, but when the championship ribbon was to be tied, Professor J. I. Thompson, who placed the Duroc awards, asked to withdraw as judge because he selected the Graham boar while in the East. Judge Doty made the decision.

The older sow divisions were made attractive because of splendid array of sows shown by the Conejo Ranch. Incidentally, most of the Conejo sows were sold during the show.

The pig classes were dominated by the Ireland Ranch entries that showed exceptional size, together with the type most sought after in modern show rings.

Exhibitors: Ireland Ranch, Owensmouth; W. B. Hewitt, Van Nuys; C. T. Thompson, Bishop; Conejo Ranch, Newbury Park; Donald H. Graham, Lancaster; H. W. Hellman Estate, Los Angeles.

Aged boar—1, Thompson's Pilot Defender, Thompson; 2, Councilor, Conejo Ranch; 3, Cherry Volunteer 2nd, Ireland Ranch.

Senior yearling boar—1, Pathfinder's Pride, Conejo Ranch.

Junior yearling boar — 1, Ireland's Orion Defender, Ireland Ranch; 2, Pioneer Defender, Hellman; 3, Orion King of Ireland, Ireland Ranch.

Senior boar pig—1, Orion's King Gano, Graham; 2, Model Lad, Conejo Ranch; 3, Latest Model, Conejo Ranch; 4, Prince Dreadnaught, Graham.

Junior boar pig—1, Ireland's Cardinal Model, Ireland Ranch; 2, Golden Cherry 7th, Hewitt; 3, Golden Cherry 5th, Hewitt; 4, unnamed, Hellman; 5, Cherry King Del Sur, Graham.

Aged sow — 1, Enchantress, Conejo Ranch; 2, Critic's Lady 3rd, Thompson; 3, Belle Crescent 2nd, Thompson; 4, Arabelia, Conejo Ranch.

Senior yearling sow—1, Model Lady, Conejo Ranch; 2, Western Princess, Conejo Ranch; 3, Fairy Princess, Conejo Ranch.

Junior yearling sow—1 Critic Rose, Conejo Ranch; 2, Pioneer Queen, Hellman; 3, Sunshine Girl, Conejo Ranch; 4, Starlight, Conejo Ranch; 5, Golden Girl, Conejo Ranch.

Senior sow pig—1, Pathfinder's Golden, Conejo Ranch; 2, Little Sallie, Graham; 3, Model Rosebud, Conejo Ranch 4, Windsor Queen Again, Graham; 5, Model's Bess, Conejo Ranch.

Junior sow pig—1, Cardinal's Model Queen, Ireland Ranch, 2, Big Cherry Lady, Graham; 3, Golden Cherry 2nd, Hewitt; 4, Golden Cherry 3rd, Hewitt.

Senior champion boar — Thompson's Pilot Defender, Thompson; reserve champion, Pathfinder's Pride, Conejo Ranch.

Junior champion boar — Orion's King Gano, Graham; reserve champion, Ireland's Cardinal Model, Ireland Ranch.

Grand champion boar — Thompson's Pilot Defender, Thompson.

Senior champion sow — Critic's Rose, Conejo Ranch; reserve grand champion, Ireland's Maid, Ireland Ranch.

Junior champion sow—Ireland's Maid, Ireland Ranch.

Grand champion sow — Critic's Rose, Conejo Ranch; reserve champion, Ireland's Maid, Ireland Ranch.

Aged herd—1, Conejo Ranch; 2, Conejo Ranch.

Young herd—1, Ireland Ranch; 2, Hewitt; 3, Thompson; 4, Graham; 5, Conejo Ranch.

Herd bred by exhibitor — 1, Ireland Ranch; 2, Hewitt; 3, Thompson; 4, Conejo Ranch; 5, Graham.

Get of boar—1, Get of Critic D, Conejo Ranch; 2, get of Golden Model, Conejo Ranch; 3, get of Great Model, Ireland Ranch; get of Cherokee Disturber, Hellman; 5, unnamed, Thompson.

Produce of sow—1, Produce of Cardinal's Lady C, Ireland Ranch; 2, produse of Golden Cherry, Hewitt; 3, unnamed, Thomnson; 4, produce of Pioneer Queen, Hellman; 5, unnamed, Conejo Ranch.

Barrow, any age—1, Ireland Ranch; 2, Graham; 3, Graham; 4, Graham; 5, Conejo Ranch.

Three barrows, any age—1, Graham; 2, Conejo Ranch.
Best display by exhibitor—1, Conejo Ranch.

The Hampshires

There isn't another fair in the West that can marshal a display of Hampshires the equal of those shown at the Liberty Fair . Six herds were in the pens and they were all high class herds. For the most part the awards were participated in rather evenly.

Llano Vista headed the aged boar class with Langdon's Choice. The other four boar classes were divided. Conejo Ranch was to the front with their good lot of aged sows, but Llano Vista managed to land second. Denker had the edge in the young sow classes, and landed the sow championships, while Llano Vista had the boar champions. Judge Doty made the awards.

Exhibitors: Conejo Ranch, Newbury Park; Llano Vista Ranch, Perris; Roy Dawson, Gardena; C. J. Gilbert, Lancaster; F. C. Fairbanks, Redlands; L. A. Denker, Saugus.

Aged boar—1, Langdon's Choice, Llano Vista Ranch; 2, Oro, Dawson; 3, The Harvester Again, Gilbert; 4, Conejo Chief, Conejo Ranch.
Senior yearling boar—1, Duke's Allen, Conejo Ranch.
Junior yearling boar — 1, Harvey's Choice, Fairbanks; 2, Maloy's Controller, Denker; 3, Zodiac Wonder, Denker; 4, Authority, Conejo Ranch.
Senior boar pig — 1, Liberty, Llano Vista Ranch; 2, Leading Chief, Conejo Ranch; 3, Direct Kid, Denker.
Junior boar pig—1, Director Jr., Denker; 2, Maloy's Pride, Denker; 3, Tip Top, Denker; 4, Walter G, Llano Vista Ranch; 5, Gay Allen, Conejo Ranch.
Aged sow — 1, Leading Wave 2nd, Conejo Ranch; 2, Compeer's Descent, Llano Vista Ranch; 3, Leading Wave 3rd, Conejo Ranch; 4, Elmyra 2nd, Conejo Ranch; 5, Direct's Model, Llano Vista Ranch.
Senior yearling sow — 1, Wavelet, Conejo Ranch; 2, Corinna, Llano Vista Ranch; 3, Alta, Llano Vista Ranch; 4, Duchess, Fairbanks; 5, Perfect Quality, Conejo Ranch.
Junior yearling sow—1, Little Mesa, Denker; 2, Senorita, Conejo Ranch; 3, Fern, Llano Vista Ranch; 4, Beauty Mesa, Denker; 5, Second Echo, Gilbert.
Senior sow pig—1, Dearie, Denker; 2, Chief's Wave, Conejo Ranch; 3, Winnie, Llano Vista Ranch; 4, Chief's Wave 3rd, Conejo Ranch; 5, Judith, Liano Vista Ranch.
Junior sow pig—1, Allen's Idol, Conejo Ranch; 2, Wildflower, Denker; 3, Twin Oak, Denker; 4, Do Do, Denker; 5, Martha Allen, Gilbert.
Senior champion boar — Langdon's Choice, Llano Vista Ranch; reserve senior champion, Harvey's Choice, Fairbanks.
Junior champion boar—Liberty, Llano Vista Ranch.
Grand champion boar—
Senior Champion sow — Little Mesa, Denker; reserve senior champion, Leading Wave 2nd, Conejo Ranch.
Junior champion sow—Dearie, Denker; reserve junior champion, Allen's Idol, Conejo Ranch.
Grand champion sow — Little Mesa, Denker.
Aged herd—1, Llano Vista Ranch; 2, Conejo Ranch; 3, Denker; 4, Gilbert.
Young herd—1, Denker; 2, Conejo Ranch; 3, Llano Vista Ranch; 4, Dawson; 5, Fairbanks.
Herd bred by exhibitor—1, Denker; 2, Conejo Ranch; 3, Llano Vista Ranch; 4, Dawson; 5, Fairbanks.
Get of boar—1, Conejo Ranch; 2, Denker; 3, Llano Vista Ranch; 4, Gilbert; 5, Fairbanks.
Produce of sow—1, Conejo Ranch; 2, Denker; 3, Gilbert; 4, Fairbanks; 5, Dawson.

The Poland Chinas

When the Bassett herd from Hanford meets the Hartsook herd (recently purchased from H. I. Marsh, Modesto) from Lankershim there is certain to be a hog show, even if there is a bit of difference in the type. That is for the judge to worry about—and J. L. Thatcher, who tied the ribbons, put in his share of worrying but acquitted himself to the satisfaction of all. Just to make things a bit more interesting, Hale Marsh put in some young things of his own.

In the aged boar class, the general scale, good back and feet, carried E. B. A. Wonder to the top over the Bassett entry, Orange King. In the senior boar pig class two distinct types were placed before the judge and in his selections he looked for size combined with quality. The seven junior boar pigs gave no end of worry to the judge, who finally picked his four tops from the Bassett herds and his fifth from the Marsh herd. The four aged sows of Hartsook's were so outstanding that the principal question was to align them correctly.

The really hard class of the show was the senior sow pigs and so close were the tops that the judge asked that the class go over until morning when the better light would help him decide.

Poland-China awards next week.

Chester White Swine

F. T. Spoor of Compton was the only exhibitor of Chester White Swine.

FAT SWINE, CAR LOTS

Exhibitors: Donald H. Graham, Lancaster; Conejo Ranch, Newbury Park.
1, Graham; 2, Conejo Ranch.

SINGLE STEERS

Exhibitors: Congdon & Battles, North Yakima, Wash.; Curtice Cattle Co., Calgary; Hereford Corporation of Wyoming, Cheyenne, Wyo.; T. T. Miller, Los Angeles.
Steer or heifer, one and under two years—1, Black Yak, Congdon & Battles; 2, Beau Donald 212th, Curtice Cattle Co..
Steer or heifer under one year old—1, Cheyenne, Hereford Corporation; 2, Introduction, T. T. Miller.
Champion steer or heifer—Black Yak, Congdon & Battles.

A NEW HOG PRICE AGREEMENT

Pork producers will be interested in following communications just received from the live stock commission of the federal food administration for California. This new agreement means that Coast markets will continue to rule one cent under Chicago prices for the months of December, 1918, and January, 1919. The Chicago price for December is 17½ cents per pound for average packers' droves, thus making the Coast minimum, for average droves, 16½ cents. Producers should refuse to accept less than the minimum price, and if local conditions do not warrant their receiving this price, they should ship to San Francisco or Los Angeles.

To the Packers and Pork Handlers of California:

On November 18 a conference was held in Washington with the meat division of the food administration and the representatives of the division of coordination of purchase with reference to the price to be paid for hogs in California by those purchasing from the producer.

It was the unanimous agreement that the producer in California should receive the Chicago price less one cent and the division of coordination of purchase and the meat division authorized notification of this fact and requested that any deviation from this price be immediately reported to them.

The accompanying letter of the live stock commission is in complete accord with the policy of the food administration, and the authorities at Washington have empowered the live stock commission for California, through the federal food administrator, to speak as the local representative of the national food administration. Ralph P. Merritt,
Federal Food Commissioner for California.

To Licensed Packers of California:

A meeting of the majority of the California signers of the agreement with the food administration dated January 21, 1918, relative to price for hogs, was held at the offices of the federal food administration on Saturday, November 23, 1918.

Several representatives of packers and slaughterers discussed the results of the operation of such agreement upon their business, especially in regard to the accumulation of lard and certain cuts upon the Pacific Coast, and it was agreed that a meeting of packers with the live stock commission of the food administration at which representatives of the swine breeders should be present, would be held early in January, 1919, to consider a price policy for that year's farrows.

The food administration maintains that this agreement of last January with the Pacific Coast packers is in force and it is the understanding of the conference that the licensed packers will fully observe the terms of such agreement for the months of December, 1918, and January, 1919, the agreement being as follows:

"The food administration adopts the following minimum policy for the period during which similar minimums are in force by the Middle West:

"The average price of packing hogs bought by the packers at all terminal points in California will not be less than one cent under the food administration minimum effective on the Chicago market (such Chicago minimum is 17½ cents per pound for the month of December, 1918). Any packer may make it a condition for the maintenance of the minimum, that he shall charge any loss of condemnation by federal or municipal inspection to the raiser or shipper."

United States Food Administration for California.—Live Stock Commission.

The new Gustine Cooperative Creamery with its 100 patrons has been in operation about one year and is now handling from 2600 to 3000 pounds of butter fat per day.

Tuberculin Tested State Supervision Production Butter Fat Everything Guaranteed

King Korndyke Pontiac

(shown above)

by every right of inheritance should transmit great production and high class type. His sons and daughters have already proven his ability to transmit type of the first rank—daughters with the big, deep bodies and the ample, fine textured udders that go with large dairy production. As for his sons, one of them sold for $6500.00 at public sale, going to head W. J. Higdon's fine herd at Tulare.

Two daughters of King Korndyke Pontiac recently freshened in our herd and made very satisfactory records. King Korndyke Pontiac Charlotte, under official test made 22.92 pounds butter in seven days as a junior three year old. Natoma Superba Pontiac, freshening at two years four months, made 19.25 pounds butter in seven days. We have several other of King's daughters to freshen this winter and they look especially promising.

You need one of his young sons in your herd. Come and see what we have on hand or write for pedigrees and prices. We make liberal terms if desired.

Individuality Breeding

"He Has Developed Wonderfully"

Is the universal statement of all who saw our great junior herd sire

King Korndyke Pontiac 20th

when we bought him as a calf, and who again saw him out on the show circuit this year, where at California State Fair he was defeated in class only by the twice grand champion bull.

The way he is deepening and lengthening out, and the splendid vigor which he possesses, are most pleasing to us, as he is doing even a little bit better than we expected of him.

And his first calves that are now coming are certainly beauties. It is not too early to begin to figure with us on one of his young sons for your herd. Come and see them or write for description and price of one.

NOTE: We are selling some choice, highly bred cows and heifers bred to King Korndyke Pontiac 20th in the Tulare Sale, November 20-21.

Our Entire Herd is Tuberculin Tested

Alfalfa Will Replace Bran

ASIDE from labor, and the general high price of feed stuffs of all kinds, perhaps no single problem has given the dairyman more concern than the question of securing bran or a feed that could satisfactorily be substituted for bran.

The Nebraska experiment station has recently made public the results of a feeding trial in which finely chopped alfalfa was compared with bran.

California dairymen will doubtless be interested in the Nebraska results which will be found applicable to Pacific Coast conditions and, if applied, will go far toward relieving a situation that promises to continue for sometime.

The Nebraska station report follows:

The problem of reducing the cost of the ration for the dairy cow is of much importance. Where roughage may be substituted for a grain or by-product concentrate, the cost of the ration is likely to be decreased. Throughout a large part of the western half of the United States alfalfa hay is abundant and comparatively cheap when calculated on its protein or energy units. In the form of alfalfa meal it may be shipped into a large part of the country east of the Mississippi River at a cost much less per ton than the cost of a mill product of like feeding value.

The North Platte substation of the University of Nebraska has conducted an experiment to determine whether chopped alfalfa may be substituted for wheat bran in the dairy cow grain ration of four parts corn, two parts bran, and one part oil meal, and the effect of such substitution on the performance of the cows. The first test extended from December 1, 1916, to January 30, 1917. During this time the cows were fed about 30 pounds silage per head daily and had access to a rack containing alfalfa hay. The second test was begun March 1, 1917, and closed May 30, 1917. The cows were fed silage and alfalfa hay throughout the test and had some grass during the last few weeks. The amount of grain was based on the milk flow—one pound of grain for three to four pounds of milk.

Six pairs of cows were selected for each test. Each pair was matched as closely as possible in respect to breed, lactation period, previous record, milk flow, percentage of fat, and other factors that would be expected to affect production. One cow from each pair was put into Group A, the other cow into Group B. The six cows of Group A were fed a grain ration consisting of four parts ground corn, two parts bran, and one part oil meal during the first period of 15 days, while the six cows of Group B were fed a grain ration consisting of four parts ground corn, two parts chopped alfalfa, and one part oil meal. During the second 15 day period the A group received the alfalfa while the B group received the bran ration. The test was extended through four 15 day periods during two periods of which the cows of Group A were fed the bran ration and the two periods the alfalfa ration. The cows of Group B were fed in a similar manner, only that when the cows of Group A were getting the alfalfa ration those of Group B were getting the bran ration, and when the cows of Group A were being fed the bran ration those of Group B were being fed the alfalfa ration.

During the third period of the first test one cow in Group A, being fed the bran mixture, went off feed for a few days and during the fourth period another cow in Group A, being fed the alfalfa mixture, dropped in production for a few days. As one cow was off when on bran and the other when on alfalfa, these deficiencies do not influence the final results.

During the second test one cow became sick. She and her mate were taken out of the test, leaving only five pairs of cows.

Results of the First Test

The six cows in Group A while on the bran mixture during two 15 day periods gave 3972 pounds of milk containing 144.3 pounds of butter fat; and lost 32 pounds in weight. The same six cows while on the alfalfa mixture during two 15 day periods gave 3952 pounds of milk containing 138.7 pounds of butter fat, and gained 233 pounds in weight.

The six cows of Group B while on the bran mixture during two 15 day periods gave 4244 pounds of milk containing 158.4 pounds of butter fat, and gained 128 pounds in weight. This same group of cows while on the alfalfa mixture during two 15 day periods gave 4332 pounds of milk containing 163.6 pounds of butter fat and gained one pound in weight.

Bringing together the results from both groups we find that the 12 cows while eating the bran mixture during two 15 day periods produced 8216 pounds of milk containing 303 pounds of butter fat and gained 96 pounds in weight. The same 12 cows while on the alfalfa mixture during similar periods produced 8284 pounds of milk containing 302.3 pounds butter fat and gained 224 pounds in weight.

Results of Second Test

The five cows in Group A while on the ration of corn, bran, and oil meal during three 15 day periods gave 7430 pounds of milk containing 250 pounds of butter fat and lost three pounds in weight. The same five cows while on the ration of corn, alfalfa, and oil meal during three 15 day periods gave 7147 pounds of milk containing 245 pounds of butter fat and lost 52 pounds in weight.

The five cows of Group B, while on the ration of corn, bran, and oil meal during three 15 day periods gave 7239 pounds of milk containing 241 pounds of butter fat and lost 125 pounds in weight. The same five cows while on a ration of corn, alfalfa, and oil meal during three 15 day periods gave 7309 pounds of milk containing 239 pounds of butter fat and gained 68 pounds in weight.

Combining the results from the two groups we find that the ten cows while being fed bran with corn and oil meal during three 15 day periods gave 14,669 pounds of milk containing 491 pounds of butter fat and lost 128 pounds in weight. The same ten cows while being fed alfalfa with corn and oil meal during three 15 day periods gave 14,456 pounds of milk containing 484 pounds of butter fat and gained 16 pounds in weight.

Two Tests Combined

Twenty-two cows while being fed a forage ration of silage and alfalfa hay, and a grain ration of four parts ground corn, two parts bran, and one part oil meal during an average period of 75 days, gave 22,886 pounds of milk containing 794 pounds of butter fat and lost 32 pounds in weight. The same cows during a similar period and

der similar conditions, and fed the me ration excepting that chopped falfa replaced bran in the grain ra- n, gave 22,741 pounds of milk con- ining 786 pounds of butter fat and ined 240 pounds in weight.

During these tests with 12 cows for o months and ten cows for three nths, chopped alfalfa was substi- ted for bran in the standard dairy ain ration of four parts ground corn, o parts bran, and one part oil meal without any appreciable unfavorable effect. The slight decrease of 145 pounds in milk and 7.5 pounds in but- ter fat production while the alfalfa was being eaten was more than over- come by the gain of 272 pounds in the weight of the cows. It is evi- dent that in these tests alfalfa was fully equal to bran. If these results are the same as are found in general practice, then alfalfa fed in this man- ner has the same feeding value as bran.

Will Raise Another Pig

Written for California Cultivator By Rupert Hendricks

Because I want to encourage the ys and girls of Southern California raise more pigs to feed our boys ver there," and in that way help win e war. I will write of my pig club perience.

During the latter part of April I pur- ased a Hampshire sow pig that was rrowed in March.

I fed a mixture of barley meal and ran, twice a day for several weeks. he amount was increased from time time until I was feeding three arts of the mixture. Later I changed e feed to rolled barley, soaked over- ght, and fed three quarts three times a day. I afterward changed to a buttermilk feed, fed from a self feeder.

While my pig was small I would let her out on the lawn where she could find plenty of grass. I also had a small patch of alfalfa which furnished green feed. After she grew fairly large I fed her fresh cut Sedan grass.

I showed her at the Southern Cali- fornia Fair at Riverside, and she was placed fifth in the pig club contest.

I have found it very interesting to take care of her and I expect to raise anther pig next year. I am 11 years old.

California Jersey Record Holders

The American Jersey Cattle Club nounces that the following list in- udes the highest producing Jersey ws, owned in this state, in their re- pective classes.

Aged cow — Fern's Silver Ray 5081, 14,692.8 pounds milk; 779.54 unds butter fat.

Senior four year old—Mermaiden's ern 269301, 96571.6 pounds milk; 536.9 unds butter fat.

Junior four year old — Interested ap's Santa 296928, 13,308.5 pounds ilk; 805.72 pounds butter fat.

Senior there year old—Jewel of Venadera 275316, 10,262.6 pounds milk; 609.54 pounds butter fat.

Junior three year old—Pride of Cal- ifornia 314819, 7820 pounds milk; 480.89 pounds butter fat.

Senior two year old—Interested Jap's Santa 296928, 9052.5 pounds milk; 588.16 pounds butter fat.

Junior two year old—Mamie Owl 261075, 7830.3 pounds milk; 435.14 pounds butter fat.

Under two years old—Jewel of Venadera 275316, 8017.8 pounds milk; 442.4 pounds butter fat.

Urges Fish Meal for Hogs

To stimulate greater interest in the roduction of fish meal, which is a ood substitute for tankage in the eding of hogs, E. Z. Russell, in harge of swine investigations for the nited States department of agricul- re, recently visited a number of heries along the Gulf coast as well a number of marketing centers in e South. Tests conducted by the epartment show that fish meal is ual in feeding value to tankage. It ntains about 57 per cent protein. It made by drying nonedible fish and grinding fine. This meal is being used at the government farm at Belts- ville, Maryland, to replace tankage. The menhaden fisheries on the Atlan- tic coast can produce annually 10,000 tons of fish meal. Fisheries along the Gulf states and Missippi River have been wasting or manufacturing as fer- tilizer large quantities of nonedible fish. Mr. Russell's visit to the Gulf states was to investigate the feasibil- ity and to urge the fisheries to manu- facture these nonedible fish into fish meal for swine feeding.

Lice and Hogs

This is the time of year when lice d ticks are apt to be very bad on gs.

In cold weather hogs will not go to mud or wallows, and oil put in e wallows is not effective. We have und nothing more effective than pping in crude oil. For this pur- se we use a vat 24 feet long, three et wide and six feet deep. This vat filled with water and a four to six ch layer of crude oil is put on top. he hogs, big and little, are run rough this oil and water and come t thoroughly covered with oil.

We have heard people say that it is d to put hogs through a dip in cold eather, but we have dipped hogs all rough the winter months for several ars, and have had no bad results. he heat of the hog's body melts any rplus oil and the animal does not ill.

The oil not only kills the lice and ticks, but kills the "nits" or eggs, and leaves the hair soft and glossy.

If one is not equipped with a dip- ping vat the crude oil can be applied with a brush or broom, care being tak- en to apply plenty of oil along the back and behind the ears.

We plan to dip our hogs every two weeks, winter and summer, and it would seem that by practicing regu- lar dipping that lice and ticks would finally be eliminated—but it does not work out that way. These pests seem to be everywhere and the only way to keep from feeding them valuable hogs' blood is to dip at regular and frequent intervals.—W. S. G.

A four day tractor demonstration will be held near Fresno December 18, 19, 20, 21 under the management of the Central California Tractor As- sociation. Fifteen tractor firms will participate.

N. W. Thompson Imported and American Bred

Percheron, Belgian and Shire Stallions

My new shipment of Stallions has arrived consisting of Percherons, Belgians, and Shires personally selected by me from the best breed- ing sections of Iowa, Illinois and Indiana.

Two, three and four year olds that weigh a ton or better. The heavy boned, clean legged kind with lots of style and action.

The largest collection of high class Stallions west of the Rocky Mountains.

Prize winners at this year's big Eastern shows. Life Insurance and State Certificate of Soundness furnished with every horse. If in need of a really high class Stallion come and inspect my horses or write for full particulars. I can suit you in price, quality, and terms.

Patents — Copyrights, trade marks and labels registered. Solicitor of American and foreign. James R. Townsend, 712 San Fernando Bldg., Los Angeles. Phones: Home A4619; Sunset Main 347.

FERTILIZERS

Lime—Slaked. Corrects heavy sour soils quickly. H. B. Matthews, 495 Douglas St., Pasadena.

BUSHELS VS. SACKS

The field agent is often asked, "Why does the bureau of crop estimates persist in estimating crop production in bushels, instead of sacks or hundred weight?"

The bushel is the standard unit of measure throughout the United States. Ninety million people in 40 states of the Union think and talk bushels. The bushel measure is definite and congress and the various states have stabilized it, enacting laws specifying the number of pounds of the different commodities legally constituting a bushel. The census figures of crop production have all been reduced to bushels for all commodities for which legal weights have been established, and doubtless will be until a different unit of measure has been adopted.

A sack is not definite and cannot be made so, except by legal enactment standardizing the volume and then in turn standardizing the weight per volume of the different commodities.

The cental or hundred weight is now in general use in buying and selling grain and vegetables and seems quite likely to come into general use in estimating crop production throughout the state.

Oranges and apples are thought about and talked about in boxes, dried fruits in pounds or tons, and it is doubtful if custom will permit of a material change. A big box may hold 30, 40, 50 or even 60 pounds, yet market quotations are often made in lugs, without specifying the size. If the bulk handling of grain ever becomes prevalent, as now seems likely, the sack will largely disappear, particularly as a unit of measure, and the cental or bushel take its place.

Estimates of average yield per acre and total production will undoubtedly continue to be made in busheds for all grains and some fruits, as long as the bushel continues to be the standard unit of measure throughout the United States.

The following weights per bushel are used by the bureau of crop estimates in all estimates of crop production. Paste them up for future reference.

Buckwheat, 48.
Corn (shelled), 56.
Flaxseed, 56.
Onions, 57.
Peanuts, 22.

Rye, 56.
Tomatoes, 56.
Barley, 48.

IN THE HALL OF FAME

"Eight bags of cotton! The United States never could have produced such a 'prodigious quantity.' They had smuggled it across from some other country." The custom house officials at Liverpool promptly seized the cotton for duties.

That was in 1784, and in the whole two years following, less than 128 bags of cotton were produced in the United States. The trouble lay, not in the growing of the cotton, but in the cleaning of it. It was a day's work for a negro to pick the seeds from the fluffy white fibres in a single pound of cotton. The work was usually done in the evening, when the tired slaves were prodded and beaten until their quota of fibre was clean. No wonder eight bags seemed a "prodigious quantity."

But about that time a certain Northerner came to the South to teach school and stayed in the South to make a cotton gin. And the next year one negro, with two horse power, was cleaning 5000 pounds of cotton a day. Sone one had told Eli Whitney how much the South needed a machine for cleaning the cotton, and so he had watched the negroes at work until he had formed a plan for such a machine. It was to have a network of wires at such a distance apart that the cotton could pass through, but not the seeds. A set of circular saws with sharp teeth, so arranged that they projected between the wires, would pull the cotton through. Revolving brushes would keep the teeth clean. Such was Whitney's cotton gin, and such, with a few improvements for greater speed and cleaner work, it is today.

We know the story of how the gin was stolen before Whitney had secured the patent. We know how the rivalry of the pirated machines and of the inferior "roller gin" kept the inventor from securing the legitimate profit for his work. When his factory burned and he had to borrow money at 12 per cent interest to start again, his enterprise was doomed to failure. He finally returned to the North where he made his fortune in the manufacture of firearms — while the ungrateful South paid off her debts, increased her capital, and trebled the value of her land by means of his cotton gin.

In the end, however, his country appreciated his contribution. Over his tomb in New Haven is inscribed,

ELI WHITNEY

The Inventor of the Cotton Gin
Of Useful Science and Arts, the Efficicial Relations of Life, a Model of Excellence While Private Affection Weeps at His Tomb, His Country Honors His Memory.

THE WAY OF A FIGHTER

Corrigan, Sr. (admiring son in U. S. N. uniform): But why do they make the pants so wide at the bottom, Danny?"

Corrigan, Jr.: So they can be quickly rolled up, dad.

Corrigan, Sr. (warmly): Ye're no son iv mine iv ye're goin' to fight wid yer fate! 'Tis yer jacket sleeves that ought to be wide at the bottom!"—Buffalo Express.

WIREWORMS

Because the destructive wireworms work entirely underground, they are among the most difficult to control of all the insect foes of corn and cotton. Much may be done, however, to lessen their ravages by careful tillage, drainage, and proper rotation of crops, and entomologists of the United States department of agriculture tell how these measures can be put into effect.

Wireworms are the young of the common snapping beetles or click beetles, and the worms are yellowish or brownish, highly polished and slippery to the touch. They move actively and disappear rapidly when brought to the surface by the plow or spade. The eggs are laid in the ground, usually in the sod lands, and here the young worms are hatched. Three years are required for most kinds of wireworms to get their full growth and become beetles.

Some kinds of wireworms live only in land that is poorly drained and for this reason tile drainage of land is beneficial, especially where the general condition of the field is further improved by application of lime and by thorough cultivation.

In the Northwest and northern Middle West the dry land wireworm is sometimes very injurious. The following methods have been found to be valuable in the eradication of this pest: Disk or drag harrow the summer fallow as soon as possible in the spring, in order to produce a dust mulch and thereby conserve the accumulated winter moisture; continue the disking as often as is necessary in order to maintain the mulch and keep down the weeds; plow the summer fallow and immediately drag; plow the stubble as soon as the crop is removed.

The sugar beet by-products, tops and pulp, are of high value for stock feeding purposes. Arrangement should be made, therefore, to utilize the sugar beet by-products as an aid in producing an extra supply of meat and dairy products. Every pound of beet tops or pulp utilized for stock feed will save a certain amount of grain and other feed required for meat and dairy animals, or will increase the meat and meat products output if properly used.

Monarch Cultivator

Killefer Quality

The Killefer Monarch Cultivator has more varied uses on the ranch than any other tool we manufacture. As a Beet and Bean Chisel it has no equal. As an Orchard Cultivator, where deep cultivation is desired, it gives perfect satisfaction.

As an Alfalfa Cultivator, when fitted with our Special Alfalfa Tooth, it does excellent work, loosening the ground to a depth of from six to eight inches without injuring the stand. This deep cultivation enables the water to percolate to a greater depth than any cultivator on the market. Made in 5, 6 and 8 foot size.

Order a Monarch and make us prove our statements.

The Killefer Manufacturing Company
2209-21 Santa Fe Ave. Los Angeles, Cal.

Dr. LeGear's Poultry Powder

Get more eggs

This is the slacker season for hens. They need boosting. Give them Dr. LeGear's Poultry Powder. It will tone up their systems, *put more of* the feed into flesh, and stimulate the egg-producing organs.

I Guarantee Better Layers

if you use my Poultry Powder, because I know that it contains the best scientific ingredients to condition hens and make them lay. It is my own prescription, from 26 years actual experience as a poultry raiser and Veterinarian. Thousands of poultry raisers have proved that hens given my Poultry Powder *lay more* eggs.

You Pay For Results Only.

Get a package of my Poultry Powder from your dealer today, and use it according to directions. If it fails to do all that I claim for it, I authorize the dealer to refund your money.

FREE SAMPLE—Ask Your Dealer.

Dr. LeGear's Remedies are sold by 40,000 of the best dealers—never by peddlers. Ask your dealer today for liberal *free sample* package of Dr. LeGear's Stock Powders or Dr. LeGear's Poultry Powder, and get a free copy of Dr. LeGear's Stock and Poultry Book. If your dealer hasn't the samples and books, ask him to write us for them. We will supply him promptly.

A Year's Experience With Turkeys

Written for California Cultivator By Bertha Dunlap

MY EXPERIENCE in raising turkeys this year was not altogether satisfactory and I give it in hopes that other beginners may be helped and that I may also receive some information.

I read from one authority that "A year's experience in turkey raising was worth more than any information derived from books." Perhaps so. But where I was ignorant the experiment hasn't always provided the information.

Early in January one of my most valued hens, without previous warning in the way of eggs, began setting and she has continued to set nearly constantly ever since. We kept trying to break her up until the last of March, when she laid four or five eggs and promptly began to set again.

By the middle of April we gave up in despair and set her on some turkey eggs that would hatch May first. She proved a good mother for a few weeks and then rather than lay she went to setting again. It seemed impossible to break her up, so this fall we gave her some chicken eggs to hatch in order that her efforts would not be wasted. By the time they hatched she was ready to quit setting, but since laying another batch of eggs she is in the coop for wanting to set.

I paid a good price for her last Christmas as she was of good stock and a large bird, but as a layer she proved a failure.

I had 12 selected hens from good stock and a fine tom of the Mammoth Bronze, but all were young. The eggs were medium to very large, fertile and hatched into extremely large poults. The poults would thrive for a week or two, then they would suddenly droop, refuse to eat and die.

We couldn't see that anything was wrong with them, and after trying different remedies without success there seemed to be nothing we could do. We tried different foods in trying to fi a remedy, but with the same resul except when we mixed corn meal wi the curd it gave them bowel troubl The last two hatches, which were fe in numbers, we fed eggs and chees and never lost one. The little turk could help themselves to green clove and grass, but later I found out th it was best to grind the green fe and mix it with the mash, otherwis they wouldn't get enough. A commo kitchen food chopper is sufficient.

They also need lots of meat scrap blood and bone with the eggs an cheese. It takes a large amount cheese even for 100 poults. I had trouble from over-feeding as I neve lost a turk from liver trouble but hav all large healthy birds.

I had a great deal of trouble kee ing the poults with the mother he They never seemed to know her an would run with any hen that tried t coax them off, or even the gobble who was interested in helping wit them. After the hens went on th roost the gobbler continued to hov the little ones at night. A few turk I raised with chicken hens and the gave less trouble about mixing wit the others and they soon learned t know their foster mother.

My hens were all laying so wel with the one exception, that I did n notice that they were hiding the nests out until the grain was so hig that I couldn't find them. This course entailed quite a loss as som were only setting on eight and nin eggs, their second clutch, and whe cutting the grain the nests and eg were badly destroyed. Since then know that the hens should be confine until afternoon during the laying se son and not allowed to steal the nests out.

This year I am going to keep m yearling hens and tom and purcha old stock, instead of depending young hens as so many people do.

National Egg Laying Contest

By T. W. Noland, Director

This is the October and final report of the Seventh National Egg Laying Contest held at Mountain Grove, Missouri:

Pen 36, S. C. White Leghorns, owned by C. J. Labahn of Benld, Illinois, won the honors for the year with a record of 1171 eggs to their credit, averaging 234.2 eggs per hen, beating their nearest competitor 46 eggs.

Ninety-three hens, 31 per cent, laid 200 eggs or more during the year. The 300 hens averaged 171.86 eggs each during the year. The high hen, a White Wyandotte, laid 286 eggs, tying the previous high individual record of 1913-14, or third contest. The 300 hens in the sixth or previous year's contest averaged 175.2 eggs per hen per year fed on a perfect egg ration.

War Ration

The results of this, the seventh contest, prove that hens bred to lay will produce a high average although fed what necessity compels, the most available ration at hand. During the life of the contest the hens were fed a war ration consisting principally of corn chops as a grain feed. Each bird consumed 41½ pounds of corn chops, five pounds of wheat and 42 pounds of mash, making a total of 87½ pounds consumed by each bird for the year. The mash ration used in th contest was as follows: Twent pounds shorts, 20 pounds bran, pounds ground oats, 20 pounds co meal, 26 pounds beef scraps. Th birds were fed this mash moisten in the mornings, what they wou clean up by noon, and the same ma was kept dry in the hoppers befo the birds at all times. The grain w fed principally at night—all that th would clean up. The wheat used this contest was of a low grade an could not be used for bread purpose

The cost of keep per hen was $2. for the year. The gross receipts p hen were $5.75 per, year, leaving

ie Contest

Pen 36, S. C. White Leghorns, Missuri, won the $50 cash and silver cup laying 1171 eggs for the year, an erage of 234.2 eggs each. Hen 1, n 47, White Wyandotte, won the lividual prize by laying 286 eggs.

The winning pen in each variety as follows: S. C. White Leghorns, 71 eggs; R. I. Whites, 1125; White yandottes, 1120; Anconas, 1099; rred Rocks, 1099; S. C. Reds, 1089; ver Wyandottes, 1009; Buff Wyantes, 1002; White Rocks, 988; Buff pingtons, 954; R. C. Reds, 922; ack Orpington, 890; Buff Rocks, 826; C. Brown Leghorns, 809; White Orngtons, 748.

The winning individuals of each vaty for the year follows:

White Wyandotte, Missouri, 286 gs; Barred Rocks, E. C. Foreman, 8; R. I. White, 268; White Rock, F. Kneedler, 261; Ancona, Missouri, 7; Buff Wyandotte, J. E. Garrison, 4; S. C. Red, W. A. Magruder, 256; C. Red, Missouri, 253; S. C. White ghorn, Missouri, 248; S. C. Brown ghorn, Missouri, 246; Buff Orpingn, S. C. Fellows, 236; Silver Wyantte, Wm. Neiers, 231; Buff Rock, issouri, 229; Black Orpington, Missuri, 209; White Orpington, Robert Iten, 190.

STORRS EGG LAYING CONTEST

Storrs, Connecticut, November 28, 18.—Report for the week ending ovember 28:

The low temperatures prevailing ring the past week have no immeately apparent unfavorable effect pullet egg production if the egg eld of the birds in the laying contest Storrs may be taken as a criterion. uring this seven day period, the 1000 rds have laid a total of 1218 eggs, hich is at the rate of 17.14 per cent. we compare the heavy breeds with e Leghorns with respect to their te of output, we find that the Legrns were laying at the rate of 21.5 r cent for the week while the corsponding per cent production for e heavy breeds was only 13.1. Without another month, however, we may rmally expect the heavy breeds to rge ahead and then to maintain the per hand until about the first of ril.

A pen of White Leghorns belonging D. Tancred of Kent, Washington, hich won first honors for the third eek, was again in the lead with a oduction of 44 eggs.

The three best pens in each of the incipal varieties are as follows:

arred Plymouth Rocks

Samuel M. Monks, 69; Ingleside rm, 56; Rock Rose Farm, 45; Oren Agricultural College, 45.

hite Wyandottes

Obed G. Knight, 127; O. L. Magrey, ; Laurel Hill Farm, 74.

node Island Reds

Laurel Hill Farm, 118; Deer Brook oultry Farm, 70; Jacob E. Jensen, 55.

hite Leghorns

D. Tancred, 137; Wm. L. Gilbert ome, 113; L. E. Ingoldsby, 111.

iscellaneous

POULTRY SHOW AT LOS ANGELES

Next week, Tuesday the 17th opens Los Angeles the 21st annual show the Los Angeles Poultry Association, the fourth annual State Breeders' Show and the 7th annual of the Los Angeles Pigeon Club. The shows continue through the entire week.

During the same week will be held the annual meetings of the United Ancona Club and the International S. C. Black Minorca Club.

The judges are: O. L. McCord, Peoria, Illinois, Rhode Island Reds, Orpingtons and Minorcas; Capt. Harlo J. Fiske, Leavenworth, Kansas, Leghorns, Andalusians, Campines, Sussex, Dorkings, Polish and Hamburgs; W. M. Coats, Vancouver, British Columbia, White Rocks, Anconas, Cornish and Games, all bantams and water fowl; W. S. Russell, Concord; Barred, Partridge, Buff, Columbian and Silver Penciled Rocks, all Wyandottes, all Asiatics, W. F. Black Spanish, Houdans and all turkeys.

ARIZONA WILD TURKEYS CANNED

A canning demonstration was given during the latter part of June at Payson and Pine in Gila County by Home Demonstration Agent Florence Sandige. At both demonstrations the housewives were shown how to can vegetables and meats, as well as fruits, by the cold pack method. As there was very little fruit in the districts, special talks were made on the importance of canning vegetables and meats for practically none had been canned in that locality. A week ago a survey was made of how much had been canned and the following results were found: Payson had canned over 9000 quarts of vegetables, meats and fruits; Pine, a settlement of about 30 families, had canned over 10,500 quarts. Several women had canned over 500 quarts with practically no failures, and this was at a higher altitude where it required a longer period of processing. Food saving was the one thought of the women of those two thrifty though isolated districts, and nothing was allowed to go to waste. At the present time they are canning chicken, wild turkey and beef.

Cold, damp, poorly lighted and ventilated poultry quarters favor the spread of such diseases as roup. Such contagious diseases as these are difficult and sometimes impossible to control unless given attention in the early stages. Wherever preventive measures fail, separate sick birds from the flock as soon as there is evidence of disease, and then consult expert advice to effect a cure.

"When They Go To Market"

"This is the best fruit that you have ever sent us.—It's *prime* and should bring the 'top notch' price. What's happened,—land improved down your way or do you grow 'em by magic?"

"No, not by magic—and the land's the same old stuff.—I've been using my head a little and planting my new orchards in *blasted* holes instead of by the old 'spade dug' method. It's easier, takes less help, and the trees grow better and bear sooner. You can see for yourself that the fruit has improved in quality. Wish someone had told me about dynamite twenty years ago;—I'd be richer than I am now."

HERCULES DYNAMITE

can be used for planting trees, clearing land, digging ditches or cellars, breaking up stubborn subsoils, or cultivating between the rows of bearing orchards,—in fact, it can be used in so many ways and for so many purposes that you would find it the most valuable "hired man" that you have ever employed.

At this time of food and labor shortage it is not only good business but good, patriotic common sense to use every means at your command to produce the largest and best crops at the least possible expenditure in time and cash. And this can only be done by using the best modern methods.

Fill out and mail the coupon printed below and we will gladly send you, free of charge, our 68 page illustrated book, "Progressive Cultivation." This book tells you all about the uses of explosives on the farm and in the orchard.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.
Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Collecting on Note

I hold an unsecured note executed August 1, 1917, due in one year. When is it outlawed and what can I do to force payment? — Subscriber, Cordelia.

If the note was executed within this state it outlaws four years from the date of maturity, that is to say, on August 1, 1922. In order to collect you may bring suit against the defendant, procure a judgment, and levy execution upon any property he may have.

Note from Husband

If a husband gives his wife a note to evidence the loan of certain money, will it stand at his death in this state?—Subscriber, Rialto.

Either husband or wife may enter into any transaction with the other, or with any other person, respecting property, which either might if unmarried, subject to the obligations for fairness and with respect to undue influence which control all actions of persons occupying confidential relations with each other.

Collecting for Hay Sold

A sold two carloads of hay to B, who paid for one but makes no answer to the second. The hay was in number one condition and shipped over two months ago. Would it be best to attach some of B's property? — Subscriber, Escalon.

A is certainly entitled to bring suit and collect, but the advisability of such action is not within the scope of this department, as matters of business policy should enter any such decision. Possibly a good letter stating your intention to bring action unless payment is received within a certain date would bring results and save you the expense and trouble of litigation.

Use of Private Road

A power company has constructed its lines within its right of way along section lines. Over five years ago, before I came here, they commenced using the private road through my ranch. They cause quite a little trouble and I wish to stop them unless they pay me. Can I stop them from using my road and can I collect for past damage caused during the five years?—Subscriber, Elizabeth Lake.

It would hardly seem that any use which the power company has made of your private road would be such as to ripen into a right of way, and you could therefore easily have the same discontinued either by putting up and locking gates across the private road, or if that is not feasible and they persist in their trespass after notification from you that you wish them to stop, you could doubtless procure an order restraining such trespass. In such action you could collect for whatever damage you could prove had been done during the past three years only, unless their travel on your land was shown to be by your permission express or implied.

Plowing Up Avenue

A verbal agreement was made four and one-half years ago between A and B to give 15 feet of land to make an avenue 30 feet wide across a strip of land; it was graded and palms planted on each side. The avenue has since been continuously used by the public. A sold out; can a new owner plow up and plant his half of the avenue?—Subscriber, El Cajon.

A parol gift or grant of a right of way such as that stated which is followed by possession, use and enjoyment, with the knowledge of the grantor or donor for over five years, invests the grantee or donee with an absolute title to the right of way. The right of way is an interest in lands to be conveyed only by an instrument in writing, or it may be acquired by prescription which necessitates the full period of five years; therefore, the new owner is entitled to discontinue the use of the avenue as far as he is concerned.

Range Law in Riverside

What is the law relative to cattle range in Riverside County? What action may be taken to keep cattle from doing damage to growing crops? How may I collect for damage done? —Subscriber, Edna.

There seem to be no special provisions with respect to Riverside County; there were such for San Bernardino and also San Diego, whether they would carry over into a county formed therefrom it is difficult to state. Under the "Estray Act" wherein the recovery of damages is provided for such damages are recoverable where the "land is planted to growing crops, vines, fruit trees or vegetables and is at the time entirely enclosed by a substantial fence or other enclosure." In such case the actual damages with costs of suit may be recovered and plaintiff is entitled to the issuance of a writ of attachment against the animals upon filing his verified complaint and no animals are exempt from such attachment. Unless the land is enclosed it is very doubtful whether any damages could be collected.

Fencing Railroad Tracks

I own open land in Kern County through which the railroad runs. Is the company required to fence right of way through farm land if requested by the owner of the land? How may I obtain a crossing to pass from the land on one side to the other? How should I go about it to obtain a pipe line across the right of way to convey irrigation water to the land on the opposite side of the track from where the pumping plant is located?—Subscriber, Los Angeles.

Section 485 Civil Code requires railroad corporations to make and maintain a good and sufficient fence upon both sides of their track and in default thereof renders them liable for any animals killed, except in case where the right of way was procured through said land a price including the value of such fence was paid the owner of the land for the right of way, in which case it is the duty of the owner to maintain the fence. Section 485a of the Civil Code provides that the owner of the land through which the road is constructed has the right to farm crossings for ingress or egress, or to connect the lands with other adjacent lands and the railroad must construct and at all times maintain such farm crossing in good safe and passable condition, provided that the railroad commisssion has the authority to determine the necessity for the crossing; place, manner and conditions under which it shall be constructed; and fix and assess the cost. The pipe line matter would probably be within the scope of the last section. It would be best for you to take the matters stated up with the railroad commission and also with the railroad, and everything can doubtless be arranged.

Machine Not as Represented

An agent partially demonstrates a sewing machine and represents that it will meet certain other requirements; shows an illustration of a machine in his catalogue and represents this machine to be the same. He takes old machine with bill of sale as part payment on the new, which he leaves. The machine left is found to be not as represented and cheaper than that illustrated. I did not require him to give a full demonstration but took his word for most of it. What can I do to recover my old machine and void the contract?—Subscriber, San Jose.

Where there is actual fraud and deceit practiced the contract is void. Upon those premises upon the return or tender of the machine left with you, you are entitled to recover the one formerly owned by you. Upon that theory it is simple, but in practice it is not easy. The contracts signed in these cases are usually very stringent and carefully drawn; an investigation was made by you of the new machine and you were apparently satisfied, you certainly had the opportunity to fully investigate it and should have done so; as to the representations it is a matter probably between you and the agent; before an unbiased court his word would probably be as good as yours and he might not remember the matter as you do; the presumption is always against fraud and you have to establish your case. It is very doubtful if you could recover.

FARM LABOR CONFERENCE

The program for the second farm labor conference to be held in the state council of defense quarters, Ferry Building, San Francisco, December 18 and 19, has been arranged to cover:

Report of executive committee—Work done re labor poaching.

Five minute reports from farmers' delegates.

Outlook for immigration to United States, especially to California.

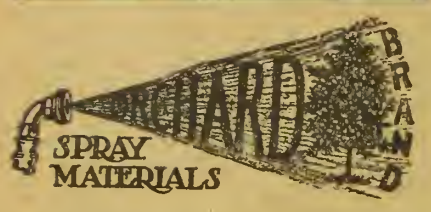
Estimates by federal and state officials re outlook for increased supplies of farm labor.

Proposed new state legislation concerning farm labor, i. e., anti-vagrancy. Accepting advances.

Discussion of delegates' resolutions, i. e., standardization of wages, closing of saloons, importation of labor.

Appointment of a new executive committee to carry out wishes of the convention.

Delegates will be present from about 60 organizations representing farmers, labor and the government. The meeting is open to the public. Details are in the hands of Frank T. Swett, president of the California Pear Growers' Association and president of the California Grape Growers' Association; J. P. Dargitz, former field commissioner for the farmer committee of the state council of defense, and R. L. Adams, federal farm labor agent for the state council of defense.



Orchard Brand

Lime Sulphur Solution

and

Prepared Bordeaux Mixture Paste

ORCHARD BRAND Lime Sulphur Solution, and ORCHARD BRAND Prepared Brodeaux Mixture Paste are our proved remedies for spraying peach, almond and other deciduous fruit trees; to control blight and shot hole fungus.

These prepared tree sprays are ready for use. They are scientifically blended. Just the right proportions to accomplish your purpose, as proved by years of experience.

ORCHARD BRAND tree sprays are the materials we sell and the measure by which the price is gauged. But the service that goes with them is next in value. Beneath it all is the solid foundation based on General Chemical success with tree sprays all over America, wherever fruit is grown.

When you get it fixed firmly in your mind that ORCHARD BRAND is the dependable tree spray, shipped in carloads and trainloads to the big fruit growing sections all over the land, you will want to make inquiry as to what it will do for your orchard.

You will want to make inquiry, to learn how to counteract free diseases, and how to control the harmful elements which destroy development of the trees.

You will want authoritive information on such matters. Hence, we invite you to write to us, giving the condition of your trees as you understand it. Our Entomological Department will then send you bulletins and authoritative data that will aid you in solving your problems.

Many years of scientific research, and practical experience on the Pacific Coast; besides the nation-wide experience, and the proper laboratory equipment, are at your service. Write to us now about your tree troubles.

PLEDGE OF THE LOYAL AMERICAN CHILD

In line with the movement of the food conservation campaign, the following pledge was given wide circulation in the homes of the children of the public schools in Denver, who took great pride in committing the same to memory:

I will avoid all waste, to this I truly swear.
I will be careful of my clothes and everything I wear.
No foolish pennies will I spend but save, that I may give
To those less fortunate than I, who find it hard to live.
And what I take upon my plate I'll eat up every bit
Nor make complaint because I am not very fond of it.
And dishes new I'll learn to eat as far as I am able;
But one thing I will never do, that's finick at the table.
This pledge I take because I am
A soldier true of my Uncle Sam.

GREEN PAINT

MOTHER BIRD, having finished her semi-weekly baking, was mopping the kitchen floor. Her twin sons, Turpin and Thomas bore her company, for far-reaching is the fragrance of molasses cookies. Anyway the boys had desired to ask their mother a question.

They had asked it and had been answered and now Thomas gave a petulant kick at the rounds of his three-legged stool.

"Well, Ma-a—I don't see why-y!" was his nasal complaint. "It's awful cheap! We have to earn the suits ourselves."

"Don't whine, son," Mother Bird admonished. "And that's enough cookies! Tommy, you'll have to sit some place else now, I want to get in here. You know you boys might just as well stop teasing. No use getting after me to join the Boy Scouts. If your father says you can't, why you can't and that's all there is to it. Besides, if your father refuses, it's probably because he's got some good reason for refusing."

"Good reason!" Turpin sniffed. He had been carving surreptitious decorations on the back of his chair but now he desisted gloomily, closed his knife and slid it into his pocket. "Good reason nothing!"

"No reason 'tall!" was Thomas' dark addendum. "Has he, Turp?"

"Naw!" Turp rested a pessimistic chin on his chair. "Just refusing 'cause he knows he can refuse. What's he know 'bout the Scouts—what they do or what it's for an' all?"

"Son, you're disrespectful!" Turp lifted himself, chair and all, out of the mop's path. "Well, what do they do?"

"Do lots of stunts!" Turp muttered. "Go on hikes—an' campin' trips—an' —an'—

Thomas took a hand.

"An' learn how to swim—"

"An' carry the wounded—"

"An' make bandages—"

"An'—an' you hafto do one kind deed every day!" Thomas said it with an air of virtuous finality.

Mother Bird was careful not to let them see her smile.

"Don't need to be a Scout to do kind deeds!" she commented.

To this the boys found no answer. Tom's masterly argument had gone wrong. It were best not to press the point.

"Plenty of kind deeds lying round!" said Mother Bird. It seemed to the twins that she said it with most unnecessary emphasis. She went over to the sink and began to rinse out her pail. "Lots of things you boys might do right round the house here for Cousin Emma and me and to help your father. Sometimes I think you forget your father isn't as young as he used to be. He's been trying to get at that front fence for a month but his lumbago's too bad. There's your job right there—if you're looking for kind deeds." She dried her hands on the roller towel and went into the pantry.

The boys remained silent. There was nothing to say. Thomas sent Turpin an uneasy glance or two; Turpin watched his mother.

There was ostentatious disregard of Boy Scout matters during luncheon. However the seed was rooted in the boys' minds, the same idea occurring to both Turpin and Thomas; if they painted the front fence, might not their father be sufficiently softened, sufficiently impressed with their deservingness, as to relent in regard to the Scout memberships?

Turpin approached his mother.

"Where is the paint?" he inquired.

Mother Bird kept her face beautifully impassive.

"Down in the basement, Turp. You know—back there with those old carpets and things."

But Thomas had found it.

"The green or the white?" he yelled up the stairs.

"The green, Tommy." Mother Bird took her hands out of her dishwater and went to the head of the stairs. "And Tommy—listen! Look in that long drawer of the carpenter table and get out a couple of pairs of overalls of your father's. I don't want you boys to be getting paint all over you."

Thomas ascended the stairs thumpingly, carrying one full bucket, one empty one, two paint brushes and the overalls.

"Now that's real nice!" Mother Bird approved casually. "If you boys hustle you can get through and surprise your father when he comes home this evening. Bless their hearts!" she smiled as they slammed out of the front door.

On the front porch the boys donned the overalls, resembling, when they had assumed them, loosely wrapped packages about to come open. Carefully they divided the paint, selected each his brush. A bucketful of green paint is full of fascinating possibilities, potent with promise.

"You begin at that end and me at this and work toward the middle," suggested Thomas.

"Nothin' doin'!" Turpin rolled higher his overalls and tied his handkerchief tennis-fashion round his forehead. "Begin together and see who can get out to the end the quickest."

"Oh, now, Tur-rp!" A heated discussion ensued. Clever arguments were advanced by both sides. At last a compromise was effected, the boys agreeing to paint one on the inside, one on the outside of the fence. Straws were prepared. Thomas drew the short one and work began.

For the first few moments there was absorbed silence. Then Thomas straightened up pridefully.

"That's going to be slick! Just as nice and green as anything. Looky, Turp!"

Turpin peered over. On the outside of the picket Thomas had drawn a horizontal and a vertical line, crossing at right angles. Now he was enjoyingly filling in the four spaces.

Turpin sniffed. "Look at you! Slopping paint all over the grass!"

"I should worry!" Thomas was drawing a face now. Eyes, nose, whiskers, hair, grew swiftly. "Hi, here comes Hicky Rice! H'lo, Fats!"

"H'lo!" Fats plumped down from his bicycle and stood rolling expressionless eyes from one to the other of the twins. Fat was bound for the drug store on an errand for his mother.

"Awful hot day." Fat tingled his bicycle bell with studied indifference.

There was something about Hicky Rice which always aroused in Turpin an itching antagonism. So now he replied brusquely:

"I don't call this a hot day! 'Swhat I call a fine day. I don't think much of these old cold days—gimme a nice warm day any time! 'Course I ain't fat!" blandly.

"Well, s'long." Hicky rode off at this insult. The painters painted on. Turpin had done five pickets and Thomas six. There was also much green paint on the two suits of overalls and on the faces of the twins strange, smeary woodland scenes were bedaubing themselves. The first enthusiasm of their interest, some of the fun of the thing, had worn off but in their place was a deep sense of self-satisfaction. Unwontedly kind thoughts fatherward filtered into their boyish hearts. They recalled their father's painful progress up the street that morning, his groans when he sat down in or rose from a chair, the difficulty he had picking anything up off the floor. It was good to be doing something for one's father who had the lumbago.

"Must be fierce to be getting old!" ruminated Thomas once.

The sun scorched down upon their cheeks and throats. There was not a breath of breeze, not a leaf of shade where the twins stood at the fence. They worked silently, dipped and painted and smoothed, reached and bent and rose. They had no more callers—all the boys of the neighborhood save themselves and Fats had gone down the river to the Presbyterian Sunday-school picnic. Turpin and Thomas had refused the Sunday-school picnic for these affairs had of late years become sadly anemic. Now they began to wonder whether after all——

(Continued next week.)

THE YELLOW STREAK

Belgium was devastated, her people enslaved, her children dying, her most precious possessions violently taken from her, for four years, and in all that time all her people, from king and queen down, did not complain of their lot as much as the Germans have since the armistice was signed.

France for 51 months was a battlefield, her capital endangered, her sons sore pressed by the invaders, but France never lost courage or whimpered.

Serbia was wiped out, the victim of atrocious crimes, but she kept her courage.

Russia, Austria-Hungary, Bulgaria, Turkey—all have been beaten in the field and forced to surrender, and every one of them has behaved with a certain amount of resignation betokening courage.

But Germany howls like a whipped cur, cringes before its conquerors, weeps crocodile tears, begs, whines; all the yellow, all the aniline dye works in all of Germany ever turned out couldn't make her yellower.—New York Sun.

A man can sell his reputation once; after that he couldn't give it away.

SOME GOOD PUDDINGS

Written for California Cultivator
By Mrs. C. L. Gardner

Tapioca-Corn Pudding

Four tablespoons of tapioca soake three hours in cold water Scald tw cups of milk in double cooker, the stir into it three heaping tablespoon of yellow corn meal with which h been mixed three tablespoons of N. molasses. Let this mixture cook twe ty minutes, stirring frequently to p vent lumping. Take from fire, ad tapioca drained from water, one-thir cup of honey, one-third cup of seede raisins, lump of butter substitute si of walnut and one-half teaspoon salt. Put in buttered baking di Pour over top one-half cup of mil but do not stir it in. Bake two hou in moderate oven. Eat with or wi out cream.

Elizabeth Pudding

One and a half cups of apple sau which has been sweetened with hone and put through colander to mak smooth. Add to it one cup of sta coarse bread crumbs, two well beate eggs, one-third cup of seeded raisin and one-fourth teaspoonful salt. Fl vor with nutmeg or cinnamon. Put buttered baking dish, dotting top wi bits of butter substitute. Bake moderate oven for one-half hou Good eaten either hot or cold, a with or without cream.

Virginia Pudding

Into two cups of boiling water st two tablespoons of corn starch, ad ing while the mixture is hot one-thi cup of honey. Let this cool. Th add to it the grated rind and juice one lemon, two eggs well beaten, o cup of bread crumbs and one-four teaspoon of salt. Put in buttered ba ing dish, dotting top with bits of bu ter substitute. Bake one-half hour moderate oven. Eat hot or cold, wi or without cream.

PICKLES—GREEN TOMATO AN RIPE CUCUMBER

Written for California Cultivator
By Mrs. W. H. Snipes

There are still a great many gre tomatoes in the home gardens a larger tomato patches, so I am sen ing a recipe for green tomato pickl which I consider the best I have ev tasted. Not nearly as much time trouble to make as most of the gre tomato pickles.

I wonder how many housewiv ever use the old yellow cucumber They make one of the best pickl ever placed on the table. I hope so of you still have some cucumbers th have gone to seed and will try t recipe and just see how very go they are.

Green Tomato Pickle

Slice a gallon of unpeeled gre tomatoes and six large onions, a mix them together. Stir into the a quart of vinegar, one cup of brow sugar, a tablespoon each of salt, pe per and mustard seed, a half tab spoon each of ground allspice a cloves. Stew until the tomatoes a very tender and seal in glass ja I sometimes add three or four red a green sweet peppers sliced in rings.

Ripe Cucumber Pickles

Twelve large ripe cucumbers. Pe cut in quarters lengthwise, remo seeds, then cut crosswise in one-in slices. Add vinegar to just about co er, two teaspoons salt, two of cur powder and one cup of sugar. L cook until tender and yellow. Se while hot in glass jars. Sweet pe pers, four red and four green, chopp makes a pleasing addition.

HOW TO PREPARE A HUSBAND

A good many husbands are utterly spoiled in the cooking. Some women set them constantly in hot water; others let them freeze by carelessness and indifference. Some keep them in a pickle all their lives. It is not reasonable to suppose that any husband can be tender and appetizing treated in this way, but they are really delicious when properly prepared. In selecting your husband you should not be guided by the silvery appearance, as in buying mackerel, nor by the golden tint, as in picking salmon. Be sure to select him yourself, as tastes differ. Do not go to market for him. The best are always brought to your door. But it is far better to have none unless you will patiently learn how to cook him.

A preserving kettle of the finest porcelain is best but if you have nothing but an earthen pipkin, it will do, with care. See that the linen in which you wrap him is nicely washed and mended, with the required number of buttons and strings securely sewed on. Tie him in the kettle by a strong comfort cord. The duty cord is breakable and apt to let him fly out of the kettle and become burnt and crusty on the edge. Of course, you know that, like a crab or lobster, you have to cook him alive. Set him near a clear, steady fire of love, neatness and cheerfulness. If he sputters and fizzles, do not be anxious. Some do that until they are quite done. Add a little sugar in the form of what confectioners call kisses, but no vinegar or pepper on any account. A little spice will improve him, but it must be used with judgment. Do not stick any sharp instrument into him to see if he is becoming tender. Stir gently, watching the while lest he lie too flat and too close to the kettle, and so become flabby.

If thus treated you will find him digestible, agreeing nicely with you and the children. He will keep as long as you like, unless you become careless and set him in too cold a place.

MORE THAN LIFE

Here is a part of the speech in which Mr. Lionel Barrymore, as Milt Shanks in "The Copperhead," explains his supposed treachery and proves himself to be a patriot:

"I wuz called to Washington by Lincoln, an' two days later, at night, in his library—White House—he walked over to'erd a winder, and, without turning 'round, he says, 'Milt'—— (Pause.) Funny I remember a clock ticking on the mantelpiece. (Pause.) I sez, 'Mr. President'—— (Pause.) 'Milt, how much do you love your country?' (Pause.) 'I calc'late I'd die for it,' I sez. (Shakes head.) 'Thousands o' boys is a-crying to do that.' Then he turned around. 'Would you give up sumpin' more'n life?' (Pause.) 'Try me,' I sez. The president run his hands through his hair an' went on: 'It means to be odious in the eyes of men and women—ter eat yer hear out—alone—for you can't tell yer wife—ner chile—ner friend.' (Pause.) 'Go on,' I sez. (Pause.) 'The southern sympathizers are organizing in our state—really worse than the soldiers. I want you ter jine them Knights o' the Golden Circle—ter be one of them—their leader—if you kin. I need you, Milt. Yer country needs you.' (Pause.) Hadn't been two minutes since he was laffin', but he lifted his hands, and it seemed we wuz the only folks in the world (pause)—and that clock. (Pause.) Funny I remember that. (Pause.) 'I'll do it,' I sez. (Pause.) He tuk a little flag out o' his pocket—like as not this very one—put it on the table like I'm puttin' it. (Pause.) 'As chief magistrate of the nation I'll muster you inter the nation's service,' he said. He laid my hand where the blue is and all the stars, and put his hand over mine (pause) and said nuthin'—jes' looked in my eyes—an' looked—— (Pause.) (Nods.) Well, I jined 'em."

THE TOUCH SYSTEM

One of two darkies who run a bootblack "parlor" in partnership was bragging of his well-developed sense of touch, particularly in the matter of money. He boasted that he could tell the denomination of any United States coin merely by feeling it. His partner wearied of these boasts and came back with this:

"Your sense o' feelin' ain't nothing to my friend Marcus. Him and me used to work on the Pullman down through Kansas. Marcus had been on this route for about ten years. One night when we was both a-sleepin', 'long around midnight I wakes up and I shakes Marcus and I says: 'Marcus, where are we?' An' Marcus he jest rolls over and sticks his hand out the window and he says: 'We're goin' through Oswego.'"

FEEDING THE BABY

The very prosperous looking gentleman stopped and permitted the very pretty girl to fasten a carnation in his buttonhole. Then he handed her a quarter.

"What is this for?" he asked.

"You have fed a Belgian baby," was the reply.

"Nonsense," said the other, adding a $5 bill to his contribution, "you can't do it. Here, take this, and buy a regular meal for the baby."—Pittsburg Sun.

NO-MAN'S LAND SOON TO GROW CROPS

The French government has already made arrangements for bringing back into cultivation the desolated and war-torn areas from which the enemy has been driven. The dense population of France makes prompt agricultural restoration necessary to relieve the food situation. Preference will be given to farmers who originally lived in the invaded regions.

JUST GROANS AND GRINS

"Here lies the body
Of William Jay,
Who died maintaining
His right of way.
He was right
As he sped along,
But he's just as dead
As if he'd been wrong."

There's not a pair of legs so thin,
there's not a head so thick,
There's not a hand so weak and white,
nor yet a heart so sick,
But it can find some needful job that's
crying to be done,
For the Glory of the Garden glorifieth
every one.
—Rudyard Kipling.

DARK COLORED BULL

Mr. Johnsing: "Say, Mr. Dorman, what am de meaning of dis here line on de ticket whar it says, 'Not transferable'?"

Mr. Dorman: "Dat means, Bre'r Johnsing, dat no gen'leman am admitted unlessen he comes hisself."

THE FALLEN IDOL

A sign in a restaurant has this variation of an old idea:

Pies Like Mother Made, Five Cents.

Pies Like Mother Tried to Make, Ten Cents.

The other day a woman boasted that she had bought six pounds of sugar by going to each of the three stores near her home. "But if I didn't use it, someone else would," she said cheerfully.

That's just the point!

Meet the wheat crisis by recognizing it — join the "Wheatless-till-harvest" clubs.

This is your first chance to defend the flag—go the limit.

Applied Patriotism

Woman has made herself indispensable to the Nation's war activities. This is being demonstrated daily in many splendid ways. The telephone operator takes her place in the front ranks of our "national army" of women.

Back of the scenes, invisible, her war work is to make telephone communication possible. Through her the Chief of Staff in Washington speaks to the Cantonment Commandant in a far-off state. The touch of her fingers forges a chain of conversation from Shipping Board to shipyard, Quartermaster General to supply depot, merchant to manufacturer, city to country, office to home.

Without her this increasing complexity of military, business and civil life could not be kept smoothly working. Hers is patriotism applied. She is performing her part with enthusiasm and fidelity.

The increasing pressure of war work continually calls for more and more telephone operators, and young women in every community are answering the summons—cheerfully and thoughtfully shouldering the responsibilities of the telephone service upon which the Nation depends. Each one who answers the call helps speed up the winning of the war.

Los Angeles Market

Los Angeles, Dec. 11, 1918.

BUTTER

Produce Exc. Quotations.
Prices to trade 1½ to 2½c higher.
Cal. Extra Creamery 61

CHEESE

Brokers' prices:
California fresh, lb. 33

EGGS

Exchange quotations. Price to retailers 2 to 3 cents higher.
Fresh extras 75
Case Count 70
Pullets 71

POULTRY

Hens; heavy, 31; light, 28; colored, 32; broilers, 27-31; friers, 33; roasters, 30; old cocks, 20.

Ducks, 25; ducklings, 28-30; geese, 28; turkeys, 30-34; squabs, 40-43; Belgian hares, 20.

LIVESTOCK

Fed steers have not been plentiful and those few that have been received brought $13.00 and in a few cases $13.50. Right at this time steers grading good or higher will find a ready market with stronger prices.

Good cows are also in demand. In some cases prices are paid in excess of the published quotations.

The supply of canners and cutters has fallen off. The quality of the bulk of supply is showing marked increase. Calves are scarce.

Poorly finished and light hogs continue to arrive. Prices are strong on stuff of desired weights and an advance of fully 50 cents has been registered. As a matter of fact the present level of prices at Los Angeles compares very favorably with Chicago prices. The supply of hogs is running light.

Handy weight lambs are strong and quoted prices are not only maintained but in some cases are sprung. Wethers are scarce but in good demand. Ewes go begging.

Report of live stock conditions on the Los Angeles market as compiled by the United States Department of Agriculture, Bureau of Markets, through the local office:

Good Steers .....12.00@13.00
Medium Steers .....11.00@12.00
Common .....9.00@10.00
Good Cows .....9.00@10.00
Medium Cows .....7.00@8.50
Common and canners .....5.00@6.00

Prices quoted below are for carload shipments. Driven-in, or truck hogs sell for ½ cent less:

Hogs—
No. 1 hogs, 150-200 lbs. .....16.50@17.00
No. 2 hogs, 250-350 lbs. .....16.00@16.25
Sheep—
Lambs, 65-80 lbs. .....15.00@15.25
Wethers .....11.50@12.00
Ewes .....8.00@10.00

POTATOES

Wholesale selling prices:

Box: Lemons, 3.50@5.50; lemonettes, 2.50@3.50; grapefruit, 2.30@3.00; limes, 1.50; Mandarins, 1.50@1.75; per cr., 1.75@ 2.00; tangerines, bx., 1.25@1.50; half orange bx., 2.50@3.00; new navel oranges, 3.00@6.00.

RICE

Prices which rice millers of this state have voluntarily agreed with the food administration for California to pay to growers for paddy rice are as follows:

No. 1 and No. 2 Japan, in sacks, $4.32 per 100 pounds.

No. 3 and No. 4 Japan, in sacks, $4.16 per 100 pounds.

Prices for other grades will be paid for on a basic value proportionate, and no higher prices than those quoted above for any grades whatever will be paid.

The millers agree further to sell cleaned rice and by-products for prices not to exceed the following:

Fancy Japan, 1½c per pound.
Choice Japan, 7⅜c per pound.
Fancy second heads, 6⅞c per pound.
Screenings, 5⅝c per pound.
Brewers', 5¼c per pound.
Rice polish, $50 per ton, carlots.
Rice bran, $36 per ton, carlots.

NUTS

The Almond Growers' Association has established opening prices as follows per pound:
Nonp. 27½
I.X.L. 25½
Ne Plus 24½
Drake 20

Outside dealers have named prices above these quotations and it is understood association stock is practically closed out and prices withdrawn.

Walnuts: Net prices have been named by the California Walnut Growers Association:
No. 1 Softshell 28
No. 2 Softshell 25
Jumbo 30
Fancy Budded 31½
Golden Gate Budded 29

Franquettes, Eurekas and other fancy varieties sold on sample. No. 1 Softshell guaranteed 88 per cent good; Fancy Budded, 90 per cent. In case of worms or damage by ants not more than five per cent.

BEANS

Jobbers' prices, cwt., recleaned:
Limas 11.00
Small Whites .....9.40@9.50
Large Whites .....8.00@8.25
Blackeyes .....5.40@5.60
Pinks .....6.75@6.90
Bayous .....7.25@7.40
Mex. Reds .....7.00@7.25
Cranberries .....8.25@8.50

HONEY

Cash to producers, country loading points:

Extracted, Water White, supplies very light, 22@23½; White Sage, supplies very light, 20@23; Light Amber, supplies very light, 18@20½; Dark Amber, 18@19 lb.; Beeswax, supplies moderate, 35@40 lb.

GRAIN

Wheat—Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles terminals:

Hard Wheat—	Per Bushel	Per Cental
No. 1	$2.20	$3.62 2-3
No. 2	2.17	3.61 2-3
No. 3	2.13	3.55
Soft White—		
No. 1	$2.18	$3.63 1-3
No. 2	2.15	3.58 1-3
No. 3	2.11	3.51 2-3
Club and Sonora—		
No. 1	$2.16	$3.60
No. 2	2.13	3.55
No. 3	2.00	3.48 ½

For sacked grain add nine cents per bushel of 60 pounds to above price. Deduction of three-fourths of a pound is made for weight of standard grain bags. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to merit.

Barley—Feed, 2.10@2.17½ per cental for choice spot; shipping, 2.25-2.27½; milling, 2.30.

Oats—Red feed, 2.40@2.60 per cental; seed, do, 2.85@3.00, white recleaned at 3.15@3.20.

Corn — Egyptian, 2.75@3.00 per cental for choice white; Milo, 2.65@2.70. Rye nominal.

HAY

Under date of December 7, Scott, Magner @ Miller says:

Receipts past week 561 tons, last week 844.

No doubt this decrease has been caused to a great extent by the shortage of cars. Stock cars at times have been offered for the shipment of hay but have had to be refused as weather conditions have been such that hay would be more of less damaged. There is enough hay arriving that was damaged by the recent rains without getting any sound hay in that condition.

Most of the arrivals were of damaged alfalfa hay, some very bad, most of which has had to be placed at the stockyards. The rains of the latter part of the week, should they extend into the interior, will no doubt wet these late cuttings of alfalfa again. At the same time they will be most favorable to growing crops and without doubt will place the country in a most favorable condition. The greater portion of the country at this time resembles spring, everything being well advanced. A sample of wild oats recently sent us from San Benito County district shows wild oats ready to cut, but, of course, at this time of year cannot be made into hay and is therefore being plowed under. It is, however, the most abnormal growth we have ever witnessed at this season. Practically no fancy wheat or red oat hay has arrived during the week and we believe some could be sold to advantage. Trade in general is extremely dull and we do not look for much improvement until after the holidays. Owing to weather conditions practically no rice straw has arrived during the week, most of it being more or less wet and not in shape to bale. Very little hay has moved for export and county demand is light.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling expenses must be added according to conditions.

Citrus Fruit Market

Los Angeles, Cal., Dec. 11, 1918.

There is the usual complaint by Eastern buyers of the tastelessness of the first oranges. While the fruit complies with the 8 to 1 test, they say, it lacks flavor and its poor color renders it still less attractive. Prices are down decidedly from the record prices received some weeks ago. The heavy run of large sizes also hinders ready sale and prices have to be shaded. Some Japanese oranges have been received in Vancouver, mostly Satsumas packed in 10 pound boxes.

The demand for lemons continues steady at practically the same prices held for the last two weeks.

Shipments

Shipments of citrus fruits from Southern California to date since November 1, 1918: Oranges, 478 cars, lemons 710, total 1188. To same date last season; oranges 1938, lemons 359, total 2297. From Central California to date; oranges 1820, lemons 151, total 1971. To same date last season; oranges 1132, lemons 39, total 1171. From Northern California to date; oranges 127, to same date last season 112.

AT THE AUCTIONS

December 6

New York: 4 cars Navels, 4.00-6.95, 5 lem. 2.75-4.15.

Philadelphia: 1 lem. 2.50-3.15.
Boston: 1 Nav. 5.25, 1 lem. 3.60-4.05.
Cleveland: 1 Nav. 3.45-4.05, 1 lem, 3.85.
Pittsburg: 1 Nav. 4.6015.35, 1 lem. 1.75-3.65.

December 9

New York: 5 cars Nav. 4.40-7.30, 7 lem. 2.90-4.30.

Pittsburg: 2 Nav. 4.55-5.55, 2 lem. 1.90-4.55.

St. Louis: 4 Nav. 3.60-5.55, 1 lem. 3.50-4.55.

Cleveland: 4 cars. Nav. 4.15-4.65, lem. 3.65-4.05.

Boston: 3 Nav. 4.75-6.00, 2 lem. 3.00-4.10.

December 10

New York: 7 Nav. 3.80-6.75, 1 Val. 4.75-7.65, 5 lem. 2.60-4.00, Arizona Nav. 5.00-5.80.

St. Louis: 1 Nav. 4.50-5.45, 1 lem. 4.35-4.80, Val. 4.10.

MARKET NOTES

High prices prevailing in Eastern markets for California Iceberg lettuce past ten days has resulted in rather heavy shipments from Southern California. Practically everything that was fit to ship was cut so that supplies this week are hard to find. The stock going out last week and this is of fair quality and in good crisp condition but solid heads are very few.

Recent bean purchases by the United States grain corporation, 42 Broadway, New York City amounting to about 60,000,000 pounds, included 25,000,000 pounds Colorado and New Mexico Pintos at seven cents f. o. b., 15,000,000 pounds Michigan White beans at 9@9¼ cents, 5,000,000 pounds California Pink beans at seven cents, 10,000,000 pounds California Small White beans at 8¾@9 cents. These purchases and some earlier in the season are expected to cover the army and export requirements for the next 90 days.

Onion prices have worked upward at Stockton about enough to pay for the resorting so Australian Browns there are moving slowly at 1.25@1.35 per cwt. Prices are practically stable in all other parts of the country, about 1.60@1.75 in the Eastern markets and $2.00 top in the Northwest.

The estimated acreage of Brussels sprouts in the Half Moon Bay district is 500 acres this year, as compared with 350 last. Canneries are starting up and shipping stock will be much reduced. The quality of the product and the yield per acre are much better than last year.

Shipments of celery from the El Monte district are going out in mixed cars. Movement will be light until January.

Butter is still going East from San Francisco.

The shipping season for California cauliflower and broccoli is now under way. While early November shipments were light, owing to the lateness of general fall rains, indications are that winter shipments will be heavy in spite of decreased acreage. The prospects for yields are much better than last year as growing conditions have been better. Fields which produced 250 pony crates per acre last year should produce nearly 400 crates this year if favorable conditions continue. It is true that much of the fall weather was bright and hot, but moisture conditions have been much ahead of the previous season.

The old time treatment known as the formaldehyde solution is the most satisfactory treatment of seed potatoes to prevent scab. It is as follows: Mix one pint of 40 per cent formaldehyde solution (commonly called formalin) with 40 gallons of water. Soak the uncut tubers in this solution for two hours. The same solution may be used repeatedly. Treated tubers not required for planting may be used for food or fed to animals with perfect safety.

GROUND SQUIRRELS MUST GO

There is to be no let up in the war on ground squirrels, says the state horticultural commission. A plan of action has been mapped out by the rodent control division which calls for a series of meetings and field demonstrations to promote interest in rodent eradication in cooperation with every county horticultural commissioner in the state beginning December 1, 1918. Superintendent W. C. Jacobsen will personally conduct this campaign.

The plan is to spend one week in each county holding meetings as well as practical field demonstrations in squirrel and gopher control; this to be followed by the field assistant independently, spending from one to four weeks in each county.

The ground squirrel must go! Every effort will be put forth to declare several counties entirely free from ground squirrels during the coming year. Three counties, through their county horticultural commissioners, already have expressed their desire to have the ground squirrels eradicated from the county's entire area or from certain districts therein. It is desirable that each county be able shortly to declare a certain area free and with this section as a focus, as soon as possible to eradicate the ground squirrels from the county's entire area. In order that any county, or part thereof, may be declared free of ground squirrels by the rodent control division of the state commission of horticulture, a thorough inspection of the area involved by a representative of the division must be made and this inspection be substantiated by ten prominent and representative land owners in the district.

CROP PROBLEM MET BY TRACTOR

The farmer of today faces the problem of raising more crops than he has ever produced before, according to W. H. Sanders, instructor in farm motors, Kansas agricultural college.

"To meet this problem of increased production the farmer must have more power for the cultivation of crops. Six horses is the maximum number that can be handled by one man and this number cannot give sufficient power. The gas tractor is rapidly coming to fill this lack of power because of its great amount of pulling strength and because it can be easily operated by one man.

"The gas tractor is being used more extensively in the wheat belt because it makes possible the cultivation of more than could be cultivated by horses. The gas tractor is rapidly replacing the steam engine in threshing because there is less danger from fire from a gas engine.

"The extensive use of the tractor is shown by the large number of tractor factories in the United States. At present there are perhaps more than

BIG MOVEMENT IN BEANS STARTS

Manager Turner of the California Bean Growers' Association at Stockton, reports 1918 beans of all varieties purchased by the United States Food Administration Grain Corporation. These beans are being assembled at Port Costa and will be loaded direct to vessels there. These purchases were quite extensive and practically cleaned up the low priced offerings from the market. The Bean Growers' Association furnished the largest block to make up this order. All varieties were furnished at the market prices and this will be the practice of the food administration in all future purchases. No prices will be fixed by the government this year. This first order for California beans is not for army and navy requirements. These orders will come later. These beans are for our Allies and friendly neutrals. The government purchases have not been confined to California, large purchases having been made in Michigan, and late reports indicate that 75 per cent of the Michigan crop has been sold.

The government has also purchased 10,000,000 pounds of Pinto beans. Release of tin to the canners permits them to resume the normal canning of beans and large quantities have been purchased for these interests.

Action of the United States shipping board in providing additional ships to handle California products will be of great assistance and in this way overcome the difficulties occasioned by car shortage, all of which add to the promise of better days for the bean growers.

RIGHT SEED INCREASES WHEAT YIELDS

Many bushels can be added to the 1919 Liberty wheat harvest, and farmers can reap added profits from increased yields with no more than the usual labor or expense if the variety of seed sown this fall is pure and is well adapted to the locality. The seed should be free from noxious weed seeds and not infested by destructive plant diseases. It should be clean, plump and heavy.

Increase next year's yield by adding bushels to every acre through preparations made now. Big wheat yields are produced on soil which furnished a firm yet friable seed bed over a compact subsoil. The ground should have sufficient natural slope to allow good surface drainage and should be provided with subsoil drainage. The soil should have plenty of vegetable matter and plant food, and should not be acid. Loams, silt loams, clay loams, and some of the clay soils are best types for wheat. Sandy soils and many heavy clay soils are not so suitable for wheat growing, the former being too loose in texture to retain moisture and the latter too compact to allow aeration and proper drainage. A silt loam overlying clay is a good combination.

COLORADO POTATO BEETLES

Deputy Quarantine Officer C. H. Vary reports destroying Colorado potato beetles found for the first time at Los Angeles on October 12, when a car of imported potatoes from Idaho Falls, destined Los Angeles and quarantined at the Salt Lake freight yards, was discovered to be badly infested with this pest by the quarantine inspector.

The beetles were located not only in the sacks of potatoes but also were crawling over the floor and sides of the car. The car was fumigated immediately and precautions were observed that none of the insects escaped.

Under usual conditions these beetles do not succumb readily to fumigation and great care must be exercised that all are destroyed.

While the shipment in question ultimately was diverted to Yuma, Arizona, the foresight and promptness of the state quarantine inspection service may have prevented a gross infestation by this destructive pest.

Under like conditions the Colorado potato beetle would be difficult to handle at destination points and this would justify drastic measures to prevent its becoming established.

THRESHERS SAVE 16,000,000 BUSHELS

Cleaner harvesting and threshing in the United States have come to stay. The so called "blanket test" has shown thousands of grain producers how to determine when a threshing machine is operating properly, and has been especially impressive. Other methods of farm conservation have resulted in further large savings of marketable grain.

Of 33 grain states where efforts toward cleaner threshing were centered, two-thirds have already reported an aggregate saving of 16,000,000 bushels of wheat.

SUBSTITUTE CEREALS FOR FEED

By announcement of the United States food administration, November 14, all regulations requiring the use of wheat substitutes in baking were suspended. Relaxation of the wheat regulation is a direct result of the military armistice which releases cargo ships from military service and enables them to tap the accumulated supplies in India, Australia and the Argentine.

The coarse grains formerly used as substitutes, will be abailable for animal feeds under plans now being worked out.

POLLINATION OF BLOSSOMS

There can be no doubt that insects play a most important part in the life of plants and flowers. Moths and wasps, bees, and many other insects, all assist in carrying the pollen from flower to flower; but of all insects for this purpose the bee is assuredly the most useful. The first object the bee has in visiting a blossom is to collect either nectar or pollen. The nectar is always lower in the flower than the pistil or stamens. In passing through the flower the pollen grains attach themselves to the numerous hairs on the body of the bee, and as the insect flies from flower to flower some of the pollen grains are transferred as the bee brushes against the stigma. The same result occurs when the bee is gathering pollen, a substance which is absolutely necessary to the existence of bee life, as not a single young bee can be reared without pollen.

The federal government, through the biological survey, requests definite information as to amount of grain used in different counties of the state.

MR. PLANTER:

The coming season promises to be the most favorable in many years for orchard planting. With such a season and

First Class Trees

a successful start for a profitable orchard is assured. WE GUARANTEE OUR STOCK — BETTER CANNOT BE HAD ANYWHERE AT ANY PRICE.

Our Specialties:

FRENCH PRUNES on all roots grown from carefully selected bearing trees unsurpassed for size and quantity of fruit.

PEAK'S CLING PEACH, in great demand by canners; ripens between Tuscan and Phillips and is fully equal to those old stand-bys in quality and productiveness.

KNOBEL APRICOT, an improved Blenheim; larger fruit and a heavier, more dependable bearer.

JAPANESE PERSIMMONS "Made in America." These home-grown trees live as readily as other fruit trees and are true to name; of the imported trees the few which live are usually untrue.

A Full Line

of all that is best in Fruit, Nut and Ornamental Trees, Vines and Plants; and our prices are very low as compared with other commodities. Write for our Price List; free.

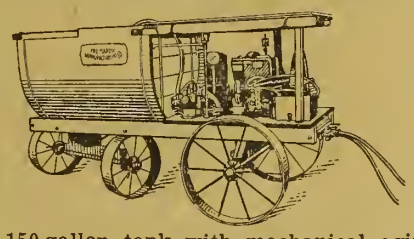
The Famous Hardie Junior Sprayer



We believe this is the greatest small power sprayer ever manufactured. And placed on the market with phenomenal success in every fruit section in the United States, and vouched for by thousands who own the FAMOUS HARDIE JUNIOR. Equipped with 1½ h.p. engine, battery ignition, 150-gallon tank with mechanical agitator, capacity of four gallons per minute with a steady working pressure of 200 pounds, and two 25-foot of the best spray hose, fitted with spray rods and nozzles; 4-inch tire truck with pole or shaft.

ALL FOR $300. DELIVERED ANYWHERE IN THIS STATE.

If truck is not needed, deduct $55.00.

These prices are subject to change without notice. The wise buyer will place his order now.

This low price is made possible by big production.

If you are interested in other types and sizes of the HARDIE POWER SPRAYER, write us for the big spray catalog, and learn why we can offer more spray pump value than any other spray pump manufacturer. The HARDIE ORCHARD GUN is now $12.00; none better.

Hardie Spray Hose Is the Safest Hose to Buy

Still Better Tillage Tools
Deering—McCormick

HAVE you seen the **New Third Lever** on a **Deering** or **McCormick** Three-Lever Disk Harrow? It is a depth regulator. With it you raise and lower the inner ends of the disk gangs to meet *all* field conditions. You do this quickly and easily without in any degree destroying the rigidity of the gangs, for which International Harvester disks have always been famous.

Have you seen the **New and Exclusive Attachment of the Tandem?** This is another feature we are proud of. The connecting braces tie to both leading gangs, extending from the tandem in such a way that the gangs *must* cut the ridges left by the leading gangs. In turning corners, the sliding connecting braces allow natural flexibility and following of the tandem without crowding sidewise.

International Harvester disk harrows have done top-notch good work for many years. They have built-in weight boxes, adjustable forecarriage, 4-wear wood bushings, tall hard oilers, etc., etc. This year they are simply unbeatable.

When you want seed beds that are right, be sure your tools —disk harrows, peg and spring-tooth harrows, cultivators, etc.—are Deering or McCormick. Write us.

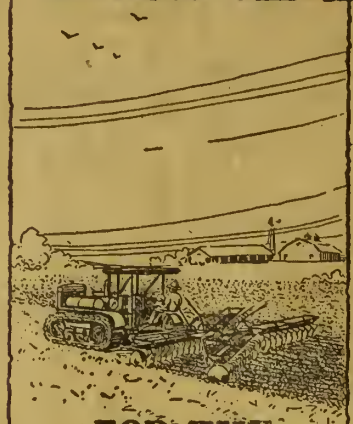
MOLINE
ENGINE DISC HARROW



FOR THE HEAVIEST AND MOST DIFFICULT WORK

For getting over the ground fast and at the same time doing a thorough job, even under the most difficult conditions, this is the disc harrow to use.

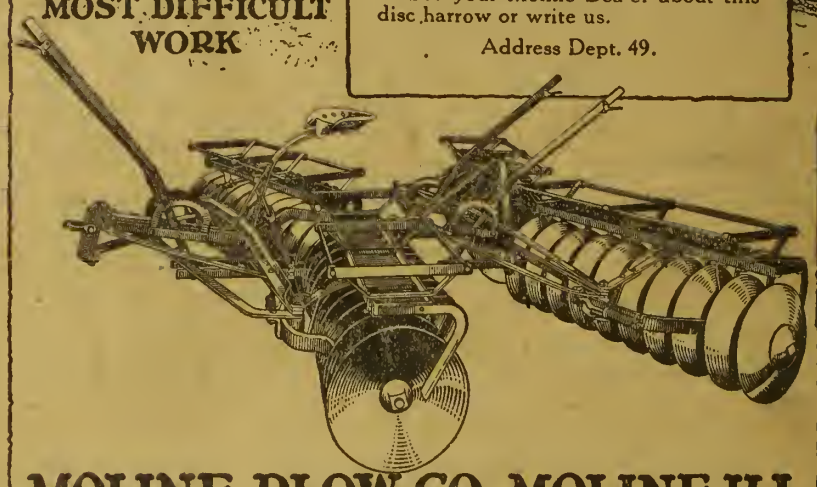
It is not an overgrown horse disc harrow, but was designed especially for heavy tractor use. This means that it is very heavy and powerful so that it can withstand the severest work to which it will necessarily be subjected.

Other features, such as perfect disc bearings, method of applying draft, taking up end thrust and securing flexibility, are features which enable the Moline Engine Disc Harrow to do the best work with the least effort and longest life.

Built in 6, 7, 8 and 10-ft. sizes with 18 or 20-in. discs.

See your Moline Dealer about this disc harrow or write us.

Address Dept. 49.



MOLINE PLOW CO., MOLINE, ILL.

We Manufacture Levelers for Any Power From 6 Horses to a 75 H. P. Tractor

A Schmeiser Leveler
of the "Giant" Type
WILL WORK WONDERS ON YOUR FARM

Moving immense amounts of dirt daily, and working on ground too tough for horses and Fresnos to tackle, SCHMEISER POWER LAND LEVELERS are now being used with utmost success by a great many ranchers, large and small—also by contractors—saving their owners time, labor and money.

WE SEND THEM ON THREE DAYS' TRIAL

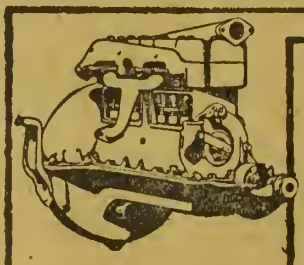
So extremely simple, a child could operate one, as a simple twist of the wrist raises and lowers the bucket or holds it stationary, as the case may require.

YOU SHOULD
send for our LATEST catalog J-600 which is full of interesting information on LABOR SAVING DEVICES and machines for moving the earth.

Schmeiser Manufacturing Company
22 Mechanic St. Davis, Cal.

Manufacturers of

Sure Pop Almond Hullers and Separators, 3 sizes; McGarvin Fruit and Olive Graders, any size; Schandoney & Harrington Equalizing Hitches, any size; Diamond Special Harrows, Baker Clips, Clevises, and Schmeiser Portable Automatic Hay Derrick. We sell the Martin Ditcher and Grader.



Correct Lubrication for the Ford Engine

The Ford automobile engine, illustrated here, like all *internal combustion engines*, requires an oil that holds its full lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. ZEROLENE LIGHT fills these requirements perfectly. *because it is correctly refined from selected California asphalt-base crude.*

"Zerolene is the Best"

—Say leading motor car distributors, because the records of their service departments show that ZEROLENE, correctly refined from selected California asphalt-base crude, gives perfect lubrication with less wear and less carbon deposit.

Most cars are now lubricated with ZEROLENE because their owners have learned through experience that there is no better oil.

ZEROLENE is the correct oil for all types of automobile engines. It is the correct oil for your automobile. Get our lubrication chart showing the correct consistency for your car.

At dealers everywhere and Standard Oil Service Stations.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

The president of the Red Cross summons us to the comradeship on the preceding page. The summons in this case is equivalent to a command to every American. The Hun is whipped but the war and some of its awful results create a condition which must still be met, and the one organization fitted to meet that condition is the Red Cross. It is making a great Christmas roll call drive for universal membership. American-like, we formerly gave little attention to the Red Cross, and countries like Japan far exceeded us in membership. Also, in true American way, when occasion came for universal membership, the problem was met and the organization was supplied with $100,000,000 per year and, still more, with the good-will of thousands of volunteer workers. It is a wonderful organization; let us all be comrades in it.

SUGAR

We may now eat all the sugar we wish. Or rather, we can eat all we wish and we should continue to economize. There is still need of conservation, and the power of conserving is shown by the fact that during the months of July-November the American people saved over and above normal consumption the enormous total of 775,000 tons. The holding out of a lump of sugar from a cup of coffee did not win the war, but the spirit which prompted it won the greatest war in history.

W. S. S.

The war savings campaign conducted some weeks ago was supposed to have secured sufficient pledges to cover the required $2,000,000,000 but since that time the "flu" has come, the war has ended, and the war savings campaign seems to have taken a complete reversal. Today many who bought stamps earlier are serving notice at the portoffice department and cashing in. Hence more millions must be raised. The government is still building ships and is still spending millions. Another Liberty Loan drive will come in the spring. Meantime clean up the old war savings stamp pledges, or, better, double them.

WANTED—A CHANCE

We believe the more important problems for the farmer during the next few years of reconstruction, or, rather, restoration of normal conditions, have to do with marketing. Presumably our labor question will be solved, or at least greatly simplified by the return to their normal occupations of war workers and of soldiers. Today the farmer stands ready to answer with production of any needed food if he can only be assured of a fair market. Under present conditions in California this assurance seems hard to give. Whether the bureau of markets connected with the department of agriculture or the state market commission will be able to solve these problems remains to be seen; at present the farmer stands helpless.

MORE CLUBS NEEDED

A source of great satisfaction to live stock observers is found in the growth of boys and girls' clubs. The number of pig, calf and lamb clubs has increased remarkably during the past year, and although they are unquestionably making future stockmen — and stockmen's wives—they are exerting a fine influence on the community. Any number of cases might be cited where whole communities have received the inspiration of better live stock and better methods of handling as a result of what the boys and girls have demonstrated.

So far nearly all the clubs formed in this state have been pig clubs, but we would like to suggest that the organizers extend their plan to cattle, both dairy and beef, and to sheep.

California is in real need of better cattle and these clubs can be made the means for developing and distributing better stock.

BREEDERS AND THE FUTURE

No better illustration need be furnished as to the general feeling in live stock circles regarding the future, than is disclosed in the pure bred cattle sales held at Chicago during the week of the International.

Forty-three head of Shorthorns sold for an average of $2307. This is the highest average recorded by that breed since the historic New York Mills sale in 1873. But this difference was noted. At the New York classic the wildest enthusiasm prevailed. It was spectacularly staged by speculators and had no more solid basis than a craze for pedigree. The recent Chicago sale was notable for the absence of excitement. Careful breeders calmly and in a business like manner appraised a very select offering for what they felt the future justified them paying.

During the same week Herefords made an average of $1566 and Angus brought near the $1000 mark.

TWO SHOWS—TWO CITIES

The champion steer at the Chicago International sold, on foot, for $2.50 per pound; the champion steer at the Liberty Fair brought 22½ cents per pound.

The question naturally arises as to whether the difference between the Chicago price and the Los Angeles price indicates the real difference between the two steers. Of course it does not. But the difference illustrates the attitude between the two cities. Chicago realizes the value of better live stock and appreciates the value of a great live stock show. Los Angeles does not.

It seems to us that no more graceful appreciation of the Liberty Fair, and particularly of the patience manifested by the exhibitors over the many postponements, could have been shown than for the meat interests of Los Angeles to have followed the Chicago example.

By doing so a great deal of enthusiasm would have been developed—and enthusiasm makes for a successful show.

LIBERTY FAIR

Of all the fairs pulled off under difficulties, the Liberty Fair, just closed at Los Angeles, holds the record. The flu quarantine, laid almost on the original opening date, was continued from week to week and even month to month, and this with some live stock in the pens waiting for the opening. Finally a short respite in the flu situation permitted opening. Then the storms began, and the flu it came back. Still the fair went on.

It was a wonderful fair in that it was the first in many years in Los Angeles. The number of exhibits was great, and the setting the most picturesque of any fair yet held in the state. All honor to those who persisted in the making of this great fair.

JOIN

The spirit of organization seems to be in the air. All the branches of live stock have existing organizations and a systematic campaign for more members is being waged by all. The officers are far seeing men who know the problems that confront their own business and the business at large. Each organization has its special problems, but all are interested in the larger questions that must be solved, and can only be solved through concerted effort.

If you are interested in any branch of animal husbandry it is your duty to put your shoulder to the wheel and help. The next few years will be years of reconstruction. Much is to be accomplished and much will be accomplished, but the extent of accomplishment will be measured not by what the other fellow does, but by what you do.

Imagine all the dairymen organized; all the beef interests organized; all the pork producers organized and all the sheep men organized—and all working together. What a power they would represent! Get in touch with the organization that represents your interests and join.

LONG QUESTIONS

There are some long questions connected with this farming business, and sometimes it seems that when a question is answered, even in part, by some hocus pocus there remains a still longer question yet to answer. We recently stood by an exhibitor of a beef steer in the judging ring at the International in Chicago. The breeder was of course pleased when he saw the red ribbon pinned on the youngster. Of course he thought the steer was entitled to the blue, but "Let that pass," he got second. For generations his forbears had been bred to produce the perfect flesh maker, and in feeding the best plan the human could devise had been worked out.

The next day, however, the carcass judging of the same class of steers gave still other results. The youngster which had proved red ribbon winner was found to be not in the money at all. The fat was laid on too thick. More, it carried a shade of deep yellow.

Now, we may admit that this was largely a freak or a "special" case of degeneration, for ordinarily the judging on foot follows, so far as the judge can "see through the hide," identically the same lines as the carcass judging. But this particular case was just one more proof of the ever-lengthening questions which confront the producer. How may this abnormal shade of yellow color be eliminated in the next generation? What caused it?

CAR WINDOW NOTES

Coming West has less of interest in the car window. Or, perhaps better, the interest centers on getting home and getting out of the country of storm doors, drifting snow and mud roads.

Speaking of roads I recall the California highways paralleling almost every railway. But in a ride from Los Angeles to Washington and return one scarcely sees a concrete base surfaced road until in the neighborhood of Denver. There are however, great mileages in some of these states. Brick is the favorite road builder in many sections though in coming through Southern Iowa rich black dirt—mud rather—is the principal surfacing seen from the car window.

After leaving Washington, when outdoor pansies were still in bloom, the first snow was falling in southwestern Pennsylvania and eastern Ohio and continued much of the way across, being exceptionally heavy in Utah.

Small boy, sled, big dog, hillside. The boy and sled arrive at bottom first but the dog soon lands on top of all.

Fourth Liberty Loan honor cards are in almost every window. Along tracks entering larger towns old freight cars which have been made over into "residences" and poorest and cheapest of tenements showed in many a window honor flags and service flags. It's a big country and strong for peace but with one idea when war has to be made for liberty.

Corn is a big crop generally. Some growers have however been disappointed and occasioned loss by buying seed from other states. In some sections seed was sent in little better than their own soft seed, and in addition not acclimated. Some fields were long on stalks and leaves and short on grain.

But speaking of fodder. There are millions of tons (millions is doubtless correct but is not intended to be taken literally — oodles would mean the same) of fine feed wasted this year. It was never cut. The huskers are now in the field taking the corn from the standing stalks. Stock will glean after but with little satisfaction or profit from the roughage.

There are some "banked up" houses. It is in Iowa. We recall in Ohio that our banking was usually the soil shoveled up against the cellar wall to prevent the frost "penetrating" the cellar. Even with the banking up I recall how Jack Frost's finger marks used to appear on the inside of the cellar walls after a few days of below zero weather. But these Iowa houses are banked with coarse strawy manure appearing stuff. May be effective but not aesthetic.

The Liberty Fair

By R. P. Royce

LAST week the story of the Liberty Fair live stock show was given considerable space, but our readers are not to infer that the live stock exhibits constituted the whole show. Far from it.

The Liberty Fair was a very complete exposition of the resources of California in general, and Southern California in particular. If any branch of agriculture or any manufacturing industry operating in that part of the state was overlooked such omission was not noticed. Indeed, the wide range of activities represented was one of the striking features of the show—and when one considers that this year's show was the initial effort and that it is planned to make the Liberty Fair a permanent fixture, and that, as such things go, each succeeding year will bring improvements, one wonders to what proportions, say, the "tenth annual," will reach. That the men back of the project were men of large vision was demonstrated on every hand; that they had imagination was likewise evidenced. Perhaps the fact that the established plant at Exposition Park was almost ideal for the staging of such an event went far towards its success, but the management was not content to accept things as they found them, they went about improving them.

New buildings, aside from the large and beautiful brick structures, were needed and in the construction of these additional buildings a definite style of architecture was followed together with a fixed color scheme—even to the ticket boxes and lemonade stands—all were cut from the same pattern—and the final result was a rarely beautiful setting. The only jarring feature on the grounds was the midway that stretched through the infield and served to connect the north and south sides of the park.

* * *

The fair was planned as an aid to increased food production and with that idea foremost the greatest effort was made to attract exhibits that would stimulate food production through actual demonstrations of efficient methods. Every educational agency was invited to aid and the fine response served to lift the Liberty Fair from the commonplace to a high place as a force for better agriculture. From the time one entered the main gate the educational phase of the fair was manifested. In a special building was housed the notable war-time exhibits of the college of agriculture of the University of California, which was under the direction of a corps of food production experts.

The schools of Los Angeles and the Southern part of the state installed large and attractive exhibits covering every angle of their work.

The agricultural and horticultural exhibits were housed in one of the new buildings. It was in this department that the county exhibits were found. Many of the southern counties were represented and, with the probable exception of the State Fair, the showing made by the various counties was easily the most extensive made in the state. No state produces a wider range of agricultural products than does California, but it is not until one looks over the assembled resources of a number of counties that a real appreciation of this fact is gained. One finds about every kind of fruit, of course. The field crops embrace about everything from cotton to broom corn. What wonderful possibilities has a state that can produce, to such excellence practically every major field crop of many states. Alfalfa—no other forage is needed. Corn, wheat, oats, barley, all the sorghums and kaffirs, beans, rice and cotton!

Fragrance of the piney woods drew the visitor to the forestry exhibit. It had a separate building of the type of the temporary fair buildings, but was unusually attractive with its broad eaves thatched with palm leaves from which hung a border of pine cones. About the walls, outside and in, were small trees and branches of pine and spruce and California redwood, making of it a veritable booth of Christmas greens. There were cleverly worked out representations of denuded mountain sides, soil washed away, water wasted; a reforested slope with young tree roots and undergrowth holding the soil, mulch forming, water being retained for the irrigation season; check dams in the mountain streams; channels at the mouths of canyons to spread the waters over the gravel for summer pumping; a model hillside farm with orange groves on its lower slopes, wind breaks properly planted, the upper and canyon "waste" slopes set to native trees to conserve the water supply. Then there were exhibits of forest fire fighting equipment, of a ranger's house, of the kitchen outfit for 200 fire fighters, lookout stations, etc. No wonder there were Boy Scouts there—and just plain boys—inquiring of the attendants how they might become rangers.

One of the main buildings was designated the "food products building" and in this building were installed all the manufactured food products exhibits. No finer or more varied display of the sort has been seen since the year of the exposition—and the big fact revealed by the exhibit was that most of the products were of California manufacture. Another large new building, designated "manufacturers building," contained scores of exhibits, other than food products, made in California. About everything made in the state from cotton underwear (knitting machines in operation) to 12-inch pumps had a place.

* * *

No California fair is to be expected that does not feature tractors—for, as has been remarked, this state is the tractor manufacturers' heaven. No suitable field was accessible for actual demonstration, but the tent in which were installed over a score of machines together with a big display of accessories was usually found to be crowded with interested fair visitors. Judging from the remarks one overheard in the tractor tent there is the prospect of a tremendous business just ahead for the tractor manufacturer, but the big question in the minds of the prospective buyers revolves around the point as to whether with the ending of the war will come a material decrease in prices. No one seemed to know the answer.

Over in the armory was located the remarkable war exhibit made by the government. One needed almost a whole day to properly "do" this exhibit. Every phase of the war was represented in some way and even though the war is ended the display lost none of its interest.

A separate and special building was given over to the various war organizations.

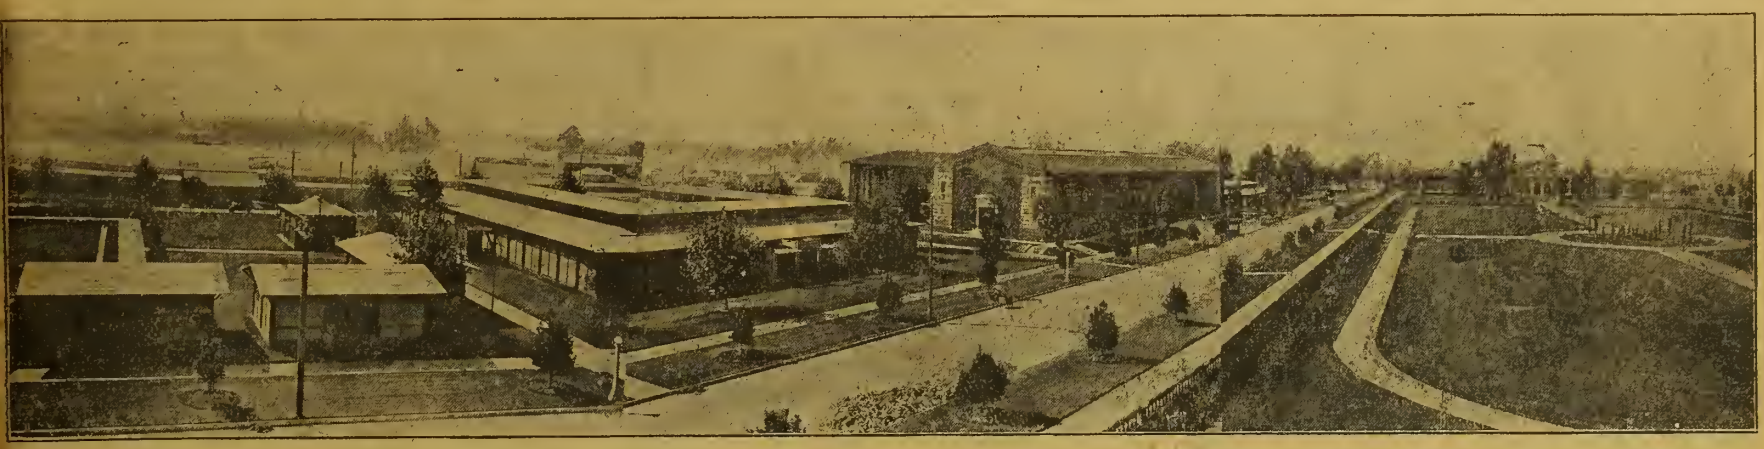
Each day was crowded full of interesting events, contests, meetings, etc. From the day that the fair opened to the public with a stirring military parade, in which several thousand soldiers and sailors participated, there was scarcely a dull moment. Each day was designated as a special day—either a southern city, county or organization day. The mornings were given over to an amazing number of contests, nearly every branch of athletics being represented. Each afternoon a racing card was furnished and during the last three afternoons a few horse show events were programmed. Each evening the gates were open and a magnificent display of fireworks was provided.

It was to be expected that the attendance would fall far short of what had been hoped for before the postponement. The public was loath to take any unnecessary chances with the flu, and while it is true that there was probably little danger, on account of the open air features, nevertheless the fear of infection kept thousands away.

And now the question arises—was the fair a success and will it become a permanent fixture? No definite answer can be given. From a financial standpoint, and measured in terms of dollars and cents, the fair lost money. It was not because Southern California is not ready for such an institution, or because of any fault of the management. Any loss registered must be charged directly and solely to the untoward situation resulting from the flu, and over which no control could be exerted.

The future of the fair has not been definitely settled, but there is little doubt in the minds of those interested but that this initial event will prove to be only a beginning and that a way can be found to perpetuate the show.

There is room in this state for at least two big fairs beside the state fair. Some feel that a winter date—a late January or early February date, would be better than a fall date. There are several very good arguments for and against such a plan. If San Francisco decides to make the California International Live Stock Show a winter show, then it might be advisable to have the Southern show either precede or immediately follow in order that a more attractive circuit would be possible. But in any event, no effort should be spared to establish the Los Angeles fair on a permanent basis.



CALIFORNIA HARDPAN

A discussion of the blasting of soil inevitably brings up that favorite family skeleton of the California real estate man, the hardpan areas in some of the best sections. If its existence be acknowledged at all it usually is in a hushed tone, with a "between-ourselves" manner.

Yet there is no real basis for being backward about the hardpan, for of all western soil types it is among the most productive when properly treated. Indeed, it is these very hardpan soils that are setting the pace, and owners should concern themselves with improved methods of blasting them and keeping them loose and fine, rather than with keeping their existence a secret with the possible idea of selling. Once the possibilities are understood the presence of hardpan will not cut down the value of any land.

The best method of blasting depends on the depth of the hardpan and on the nature of the over- and under-lying strata. The usual hardpan is only about two feet thick and begins one foot under the surface. The charges should go about two-thirds the way down through the hardpan, or about 28 inches. The size of the charge should be such as will break to the surface but not blow out a crater. The idea is to shatter and fine all of the hardpan to the looser soil beneath and to avoid wasting any force in the air.

Care should be used to see that the charges communicate. No unbroken ridges should exist between blasted areas, for they will interfere with the proper diffusion of moisture or irrigation water. It is folly to blast the ground only where trees are to stand, with the idea of permitting roots to penetrate more easily. When that object is accomplished the tree still will lack the benefit of the moisture

Agricultural News Notes of the Pacific Coast

Northern California

Placer County has resumed holding of farm center meetings.

Rice in the Marysville section has been somewhat damaged by rains.

D. M. Brueck has been appointed assistant farm adviser in Napa County.

Ukiah shipped 2000 pounds of turkeys to San Francisco for the Thanksgiving market.

Olives in the Oroville district are somewhat touched by the frosts of early December.

Grape growers met in San Francisco December 14 to consider the prohibition situation.

The recent rain fall and snow have been welcomed by stockmen and water power concerns.

Satisfactory results have followed the use of a cotton picking machine in Butte County fields.

The California Almond Exchange expects to be able to save practically all the rain stained nuts.

The rice mill of the Globe Milling Company at Woodland is shipping out three carloads of rice daily.

Farm Adviser Brueck is assisting Farm Adviser Sweet of Butte County in organizing farm centers.

The James Mills Orchard Corporation of Hamilton has made a shipment of Berkshires to Chili.

Sales of hops in Mendocino and Sonoma Counties are reported at 25 cents, mostly for English markets.

Chico has invited the California Fruit Growers' Association to hold its convention during the fall of 1919 at Chico.

The California Rice Committee of the food administration expects to have all rice out of growers' hands by March 1.

The Tehama County Stock Association has disbanded and will reorganize as a unit of the California Cattlemen's Association.

The Sebastopol Growers' Association is now engaged in winding up a very successful season. It shipped out 300 carloads of apples.

A suggestion is made that rice fields in Sacramento County should be fenced so that stock can be pastured to glean the scattered grain.

The orange packing season of the Oroville district is practically over and indications are that the shipments will total about 150 carloads. This is only about one-fourth of normal.

Prof. I. J. Condit of the state university has been conducting demonstration in the pruning of orange trees at Carmichael Colony and Orangedale in Sutter and Sacramento Counties.

The mountain ranges of the El Dorado national park are reported by Forest Supervisor Kotak as being covered with grass. He says there are still a number of herds left on the range.

The Live Oak farm bureau has requested the supervisors of Sutter County to pass an ordinance placing a $10 license on all dogs. The object is to reduce the number of sheep killers.

President Stephens of the Pacific Rice Growers' Association announces that the outlook is for the planting of 250,000 acres of rice in 1919. This will double practically the acreage planted this season.

Central California

Orange testing is over in the Lindsay district.

An immense acreage has been planted to wheat in the Tulare Basin.

The new Terra Bella Cannery is putting out a carload of tomatoes a day.

Porterville's orange crop is turning out to be much larger than was estimated earlier in the season.

Vine pruning demonstrations will be held in Fresno County at Selma, December 20; Bowles, 23; Monmouth, 23.

Watsonville has shipped out 1650 carloads of apples. This is practically the same as last year's shipment to same date.

Thousands of little red ladybirds have been shipped from California to work on pests in French orchards and vineyards.

The California Prune and Apricot Growers' Association has filed suit against one of its members for failure to deliver his apricot crop.

Charles A. Whitmore of Visalia has been appointed a member of the state highway commission to succeed the late Henry Widemann, of Vallejo.

The recent rains are a fine Christmas present to the grain men. Most of the grain has been drilled in and presents a uniformly good appearance.

A meeting of cotton growers in the San Joaquin Valley will be held about the middle of January at Fresno. Many half-acre experimental plantings of cotton were made throughout the valley.

The Santa Cruz Poultry Association is conducting an egg laying contest at Santa Cruz. The plan is for 12 poultrymen to keep 10 birds in test for one year. A prize of $25 is offered the winning pen of pullets and of hens.

Rice growers at Oakdale, Stanislaus County, are preparing to plant rice in the late fall instead of waiting for spring. They hope in this way to secure a crop before the shortage of water in the irrigation ditches in the summer.

Some farmers in Merced were exercised because their seed wheat, treated with bluestone as a smut preventive, failed to germinate. They feared the seed had been spoiled but the condition is now generally attributed to slow germinating weather conditions.

At the recent state convention of the Farmers' Union at Modesto J. J. Hardie of Modesto was re-elected president; J. F. Breton of Morgan Hill, vice president; Fred Millard, Los Gatos, secretary-treasurer; Allen Talbot and R. A. Taylor of Modesto, executive committee; J. A. Orr, Ceres, legislative committee; and A. Kammerer of San Jose, member of California Producers' Union.

The San Jose Grange has selected for officers during the coming year: Master, Jas. M. Kenyon; overseer, Alice M. Abbott; lecturer, Chas. F. Tibbetts; steward, Geo. W. Calkins; assistant steward, J. P. Munger; chaplain, Nancy S. Lillick; treasurer, Geo. W. Worthen; secretary, Mary L. Church; gate keeper, W. W. Reid; Ceres, Harriett L. Pettit; Pomona, Ruth E. Dean; Flora, Helen H. Babb; lady assistant steward, Martha A. Tibbetts; pianist, Alice E. Winans; trustee for three years, Isaac Gover.

Southern California

Now is the time to spray for peach blight.

Los Angeles County will soon start a drive on ground squirrels.

Santa Barbara County has harvested the biggest bean crop in its history.

Mecca, Imperial County, has shipped out its early oranges and tangerines.

Many bean growers are wondering what will become of the market since the close of the war.

A short course in beekeeping was given at Riverside, December 16-21, by the state university.

The new warehouse of the Oxnard Citrus Association is now completed and ready to handle lemons.

Considerable feeling is reported in Imperial Valley against the increasing number of Hindu settlers.

The Oxnard sugar factory is offering contracts to growers at $16 on 20 per cent beets on 9 cent sugar.

The Covina Orange Growers' Association has paid its members this year a half million dollars for oranges shipped.

Mixed carloads of vegetable products are urged as a means of increasing the market for Imperial County winter vegetables.

Japanese farmers are organized under the name of Nippon California Farmers' Association, with headquarters in Los Angeles.

The walnut season is just over in the Hemet Valley. The Walnut Growers' Association has handled 127 tons of nuts. This is a short crop.

Rhubarb growers of Los Angeles County have formed a marketing association with headquarters at the Terminal Market in Los Angeles.

There will be farm bureau meetings in Imperial County at Magnolia December 20; Eastside, 23; South Fern, 25; Laverne, 26; Mount Signal, 27.

Meetings of the Los Angeles County farm bureau will be held at Covina, December 21; Burbank, 23; Owensmouth, 26; Pomona and Inglewood, 27; Lankershim and Puente, January 2; San Fernando, 3.

The Ventura County Threshermen's Association has been organized to carry cooperative insurance risk under the workmen's compensation law. The association is not incorporated. M. W. Duval of Saticoy is the secretary.

The December issue of the Los Angeles farm bureau contains a valuable supplement giving the various cooperative marketing associations in this state with officers and headquarters, together with a short statement of their aims and work.

The release by the government of packed tomatoes commandeered for army use has brought down the price on these goods and tomato canners are wondering where they will get off. The Hemet-San Jacinto Growers' Association was so fortunate as to make sale of its entire pack to the British government.

An Orange County correspondent reports little damage to oranges from the recent high winds. Fortunately the wind was preceded by a generous downpour that soaked the ground, preventing the blowing up of dust and particles of sand that would cut the fruit and send it into the cull bin. A few limbs on the unprotected sides of the trees were broken.

The Coast and General

Representatives of dairy interests of eleven states will meet in convention at Boise, Idaho, February 10 to 12.

The Oregon State Horticultural Society held its thirty-third annual convention at Roseburg the first week in December.

The Northwest Livestock Association has become a member of the American Association of Fairs and Expositions.

Idaho Falls, Idaho, has a new dehydration plant and is now putting out potato flour, most of it being used by the army.

Yuma cotton buyers have agreed to buy on re-weights. The cotton market is picking up a little. All gins are running to full capacity.

The by-product plant at Wenatchee, Washington, formerly operated by the Skookum Packers' Association, is now under private management.

Construction work on the Columbia River highway between Hood River and Columbia Locks has been shut down on account of weather conditions and will not be resumed until next spring.

The federal department of agriculture has estimated this year's commercial apple crop at 24,400,000 barrels. Washington is the biggest producer with over 12,000,000 barrels. California has 3,300,000 barrels.

Last year up to November 1 the Hood River Apple Growers' Association had shipped out 111,143 boxes of fruit, as compared with 234,959 boxes this year. Last year growers of the association up to that date had delivered to the association 318,449 boxes, while deliveries this year reach 435,998 boxes.

The apple shippers of the Wenatchee district loaded and turned over to the Great Northern 75 cars of apples in one day and night retently. In some cases the sidings were emptied of loaded cars twice during the 24 hours, which represented some unusually swift work on the part of the warehouse and loading crews.

The largest potato deal ever consummated in the Yakima Valley was made when the Yakima Potato Growers' Association agreed that a Chicago firm should market the entire 1918 crop held by members of the association. Growers in the association have 3000 acres planted, from which the crop will be between 1200 and 1500 carloads.

Following the sixth annual meeting of the Washington irrigation institute, to be held at Yakima December 17 and 18, there will be a session of the Washington State Land Settlement Association. At the land settlement meetings plans for the development of the state by the returned soldiers, under some form of national aid, will be discussed.

During the shipping season, which is about completed at Yakima, Washington, 110 cars of winter pears were rolled from Yakima, according to the report made recently. The winter pears this season sold for between $45 and $50 a ton, so the total crop represents a gain of about $123,000 paid to the Yakima growers. Most of the winter crop was Winter Nellis pears, which were exceptionally good in quality this year, while the trees bore heavily.

The Future of the Long Staple Cotton Industry

Written for California Cultivator by M. E. Bemis

LONG STAPLE cotton growers who last spring planted in the bright sunshine of a dawning hope of 70 cents to $1.00 cotton, are now gathering in the gloom of a clouded market that unenthusiastically offers 55 to 60 cents a pound for what is confidently believed by growers and government experts to be the equal, if not the superior, in length of fibre as well as strength, of any cotton grown anywhere in the world. These are the cold unvarnished facts, pretty well understood throughout the Long Staple cotton growing sections. Some blame the government, some cuss the kaiser, some say it is the manipulation of the middlemen, some attribute it to a lack of sympathy for the grower on the part of the financiers.

American-Egyptian Cotton in Bloom
The man is six feet tall.

Since wiser men than I, and men who are in close touch with the government, the buyers and the bankers, are not agreed, it would seem that we might be excused in approaching the subject with an open mind and assuming at the outset that the condition of the cotton market at the present time is like the uncertain prices of some other commodities that have become the victim of changing conditions in part made necessary in prosecuting to a successful finish the Great War, and now the aftermath of war, the conditions incident to approaching peace. We can better appreciate the part that the war has had in making or unmaking the market by recalling that the price of cotton in the fall of 1914 was down to 18 cents a pound and a slow market. Again, the demand for Long Staple cotton for automobile tire fabrics and the fact that the exigencies of war made it necessary to restrict the imports of Egyptian cotton, brought the price up to 70 and in some cases for extra choice to 80 cents a pound last year.

In a consideration of the several factors that combine to make the market for Long Staple cotton uncertain and the price a gamble with the grower looking for the next deal and wondering whether it will be a pair of aces or a deuce, it is well to consider first of all the several types of Long Staple cotton and the uses of these varieties which have created demands, and the present as well as past crops and supplies.

Of the strictly Long Staple varieties of cotton, we may roughly group them into three divisions: the Egyptian, imported from Egypt; the Arizona-Egyptian, now known as the American-Egyptian, and the Sea Island. All of these have a length of staple of about 1⅜ inches up to 1⅞ inches, the several varieties of each of the three types that make up the group of Long Staple varieties showing considerable variation both as to quality of fibre and length of staple.

Taking up first the Egyptian cotton, we used in the United States, in the season of 1913-14, 151,091 500-pound bales; 1914-1915, 181,211 bales; 1915-1916, 269,324 bales; 1916-1917, 259,180 bales; 1917-1918, 136,824 bales. This present season the imports have been restricted to 120,000 bales (80,000 750-pound bales); there was on hand at the beginning of the season 67,280 500-pound bales. Most of the allotted amount of Egyptian cotton has been delivered so that the amount consumed for the next few months at least must come from other sources. So far as known the United States government has not used any Egyptian cotton for any war materials. The price of Egyptian cotton as fixed by the British and Egyptian governments is approximately 48 cents a pound at Alexandria, the cost of bringing it to America is about eight cents a pound, to which must be added insurance, exchange costs, brokers' and dealers' profits and exportation, making the price to the mills about 60 cents.

The Arizona or American-Egyptian cotton has now been divided into five grades; Number One, or Fancy; Number Two, or Extra; Number Three, or Choice; Number Four, or Standard; Number Five, or Medium. The official staple lengths are inch and a half, inch and five eighths, and inch and three-quarters.

The yields and prices since it was first grown in the Salt River Valley are as follows:

Long Staple Cotton Boll

	Bales.	Av'ge Price.
1912	240	20 cents
1913	2,200	.....
1914	6,200	16 cents
1915	1,150	22 cents
1916	3,350	43 cents
1917	16,200	69 cents
1918	45,000	.....

This year some 3000 bales will be produced in California.

Last year for the first time the Arizona Long Staple Egyptian cotton was grown outside Arizona, California growing about 3000 acres and producing about 1000 bales. This year, the acreage in California is about 5000 and the estimated production 3000 bales. Early government estimates of 45,000 bales (this includes California and the acreage in the Yuma Valley and also in Pinal County of Arizona) is likely to be somewhat less owing to frosts in the Salt River Valley which came this year about three weeks early. The estimates of the crop in the Salt River Valley by those best in a condition to know, places the production at 30,000 bales probably for the state, or a total in America of 35,000 to 40,000 bales.

The production of Sea Island cotton last year was 92,000 bales. Early estimates of this year's crop place it at 65,000 bales.

Later estimates on the production of Sea Island cotton place the production much lower, possibly it will not be more than 40,000 bales. Some Sea Island cotton has been used by the government in the manufacture of airplane fabric, balloon cloth and cloth for gas masks. Just what this amounts to in terms of bales cannot be stated, but as compared with the amount consumed by the mills manufacturing automobile tire fabric, it is probably small.

A glance at the above figures of production and imports of Long Staple

Why Our Trees Grow and Bear Fruit

—Climatic conditions are right.
—Soil suitable for growing young trees.
—Proper selection of seedling stocks.
—Buds taken from record-bearing trees.
—Scientific, intelligent budding.
—Best care and cultivation.
—Trees dug by improved methods which preserve good root system.
—Accurate grading of stocks, insuring uniform trees.
—Careful handling and packing, which insures trees reaching their destination in perfect condition.

Our Pedigreed Trees Give Best Results

Apples
Apricots

The Care of Cuts and Wounds on Walnut Trees

Written for California Cultivator By J. B. Neff

THE cuts in taking off large branches and the damages by storms and farm implements are often responsible for the short life of a tree, and also for the lessened production while the tree drags out an unprofitable existence. Stubs are left in cutting off the larger branches and these decay instead of growing over. The decay gets into the body of the tree, causing weakness and final loss of an otherwise good tree which might have lived indefinitely. The same may be said of wounds made by the plow or harrow. Branches which are too heavy to be held up with the hand to prevent splitting down should have the first cut made at some distance from the trunk and a second cut made flush with the trunk, leaving a smooth surface which can callous over in a few years.

All cuts on large branches should be made with a fine tooth saw as this leaves no bruised wood and heals more readily than a bruised surface.

Cuts which will not heal over within a year should have a covering of some kind of paint, either lead or other mineral substance is preferable but asphaltum paint will answer if applied frequently, and in all cases the trees should be gone over once a year to renew any uncovered places.

Trees which have been neglected and are already showing decay should have the decay removed and all the wood covered with some substance which will prevent further decay. The decayed place should then be filled with some substance which will prevent the entrance of water and at the same time have some pliability.

A convenient instrument for removing the decay is a carpenter's gouge, outside ground and about an inch across. The sterilizing can be done with Bordeaux paste. The place from which the decay was removed can then be filled with asphaltum and fine sawdust prepared as follows: Break the asphaltum in very small pieces and dissolve in gasoline, stirring the mixture and adding asphaltum until the substance is of the consistency of thick cream. Then add the fine sawdust until no more can be worked in the mass which will be ready for use.

This mass of asphaltum and sawdust should be of such consistency that it can be broken and will not run when handled. The method of use is to fill the hole and, with a hammer and blunt ended stick tamp the hole tight and fill flush with the wood of the tree. The gasoline will evaporate and leave the mass of asphaltum and sawdust which will prevent the entrance of water and at the same time will not present any sharp edges to cut the cambium of the callus which will grow over. Cement has been used for the same purpose but is not desirable for walnut trees and asphaltum alone will get soft enough to run on hot days.

Places that have had the bark removed by the plow should be kept thoroughly painted until healed over, or if decay has begun should be treated as in the case of decayed branches. Repair of an accident to the trunk of a tree can often be made, if taken at once, which will not leave a scar. The loosened bark can be put in place and fastened with small nails, the smaller the better, and a coating of paint applied over the break. Do not at any time use coal oil, distillate or any penetrating oil on the bark of a tree in such quantities as to reach the cambium layer.

Government Contract on Prunes

READJUSTMENT and placing ourselves on a peace basis will call for patience and possibly cause some financial loss. Immense orders placed by the war department are now being reduced and food products are sometimes released to other lines of trade. But embargo and uncertainty is affecting conditions sometimes seriously.

Regarding the prune situation we quote from a statement made by General Manager Coykendall of the California Prune and Apricot Growers. He says:

"The work of our association has been very much embarrassed by conditions developing from our government contracts. Government requests respecting prune sales have been accepted by us and other packers as positive orders and all actions have been regulated in harmony therewith. Their request to make no sales to the general trade of all sizes from 30s to 100s has been complied with. Early in the season their orders from us amounted to 31,000,000 pounds, but later they reduced this to 18,000,000 pounds, at the same time ordering all packers to hold all goods subject to their orders. Some time later they released to the trade 30-40s and 90-100s. This release, of course, necessitated the readjusting and prorating sales to the trade.

"Of our government orders, 3,600,000 pounds were to be canned for the navy, leaving 14,400,000 pounds to meet army requirements. Of this amount over 7,000,000 pounds have been shipped to date and 5,300,000 pounds are packed, marked with government markings and strapped with iron by government orders, and just at this point the government cancels all contracts. This, of course, means an entire readjustment of trade orders. The real trading season for prunes is from September to early in December. According to contract, the association receives all marketable prunes as early as offered and pays the initial price on delivery, which this year is a six-cent base price. Paying out six to ten times as much money as the government was paying to us made financing very difficult. The continued uncertainty as to the intended action of the government in receiving and paying for fruit, made it still more difficult for the association to adjust its financial affairs. Many of our members were justly impatient at what seemed to them unwarranted delays in payments, yet we feel sure that a full knowledge of the nature of these hindering conditions, which were beyond our control, and some of the most annoying of which were entirely beyond any possible foresight, will tend to change impatience to sympathy and confidence.

When this release of 15,000,000 pounds of prunes came and also the release at the same time of tomatoes, canned fruits, peaches, raisins, beans, etc., the association was doubtful as to just what the market might do. However, we have held all along that these goods belong to the government and that we should sell them for the account of the government and that any loss thereon should be borne by the government.

"In view of this situation we have asked the authorities to lift the embargo on exportation of dried fruits into Canada and Europe, as this would stiffen the domestic market and give our buyers confidence.

"The food administration has agreed to make a resurvey of the situation in two weeks and if the domestic market shows any surplus, will release the embargo on dried fruits. This would greatly help the clean-up of all dried fruits in California. And as a further ground of complete confidence we can state that orders are coming in so rapidly from our original buyers that every pound of prunes will be moved at the full contract price."

DON'T LEAVE OLD PAPER TRAYS LYING AROUND

This is the time of year when large sections of the vineyard landscape are disfigured by dirty old paper trays swept by the wind in every direction, blowing from one vineyard to the next and littering even roads and highways. A paper tray, tucked under a vine, is an ideal breeding place for thrips and other insects. Get a three-tined fork and stick it through the papers until you get all the papers you can handle, then set fire to them. You can clean up 20 acres a day this way.—Sun-Maid Herald.

MEXICO SELLING US PECANS

Several carloads of pecans have been sold in the United States this season, coming from Old Mexico. This year's crop is good. In view of the short crop in Texas the Mexican nuts are finding a waiting market at good prices. The basket trade in these nuts was very good before the days of the revolution—if one can think back that far—and is now coming to the front again. Cheap labor makes the Mexican nut an easy competitor of the American.

GRAPES CAN NOW BE SHIPPED TO NEW ZELAND

Restrictions on sale of grapes from Canada and the United States have been removed, except that all shipments received must be accompanied by a certificate from the shipper and another from the department of agriculture that the vines are free from infection.

This is expected to open up another fair market for Malagas and Red Emperors which of course come in the opposite season to that of the Antipodes.

SHASTA LOSES HORTICULTURAL COMMISSIONER

Geo. A. Lamiman, who for the past eight years has been horticultural commissioner of Shasta County, has resigned from that office and will take charge of the orchard properties of the Silva-Bergtholdt Company. Mr. Lamiman has been a practical horticulturalist for over 25 years and has had wide experience in soil, insect pest and plant disease work.

Chuckawalla Valley, with nearly a quarter of a million rich acres, hopes to secure irrigation under the Carey act.

The Slug Pest

To gardeners who fought the slug last year with lime and salt, with dust and despair, the following article may not give much new light but it may serve to show that they have company in their distress and that the thing has to be fought to a finish.

I was talking recently to a Japanese nurseryman, and the question of slugs came up. I said, "How do you get rid of slugs?" He replied, "Oh-h-h, poison—bran—better, you get up twelve o'clock night and pick him!" That was the conclusion I reached last year. But it is a case of try everything.

The eggs are deposited in masses, held together by a light colored substance, in moist places, such as under decaying boards, flowerpots, and refuse or under clods. The newly hatched slug is a little less than half an inch long and about one-seventh as wide as long. It is dull white, showing no discoloration except where the dark eyestalks can be seen through the transparent mantle. As the animal feeds it becomes darker until in about a month it is dark brown and the black spots begin to appear. In some cases these spots, which are arranged in a line, disappear and the body is of a solid color. When full grown the slug is nearly seven inches in length. Among the slug's few natural enemies is the common toad.

Owing to its habit of feeding by night and concealing itself during the day, it is very difficult to control. It will avoid food of a coarse nature. The application of arsenicals to the plant is impractical, chiefly because attack is local and the creatures avoid most poisoned substances. The use of poisoned baits is not entirely satisfactory because of the slowness of the slug to change its diet unless this becomes necessary to prevent starvation. The methods of control to be used vary according to the location in which the slugs feed and the nature of the food plant. In mushroom beds it is not practical to employ a poisoned bait because the slug prefers fungi to all other foods.

Where large plants are being injured poisoned baits may be employed with fair results. For this purpose baked or boiled white potatoes sprinkled with white arsenic have been found effective. This bait should be placed so that one potato will be in about two square feet of the affected area. Inferior potatoes are quite as useful as sound ones, and large tubers or roots should be sliced.

Wherever this pest occurs cleanliness will accomplish much toward its riddance. In small gardens or in green house they should be sought out at night with a lantern or pocket flashlight. The slugs at this time may be found feeding or crawling about in search of food. At such times they can be easily collected and destroyed. In the daytime they may be traced to their retreats by the trail of slime which they leave behind.

Treatment in the Feld

When abundant in the field or garden the slug is even more difficult to control than in the mushroom house or greenhouse, and the only solution of the problem consists in thoroughly cleaning up the hiding places of the pest, around the edges of the garden under old boards and stones, and in any place that is cool and moist. These places should then be sprinkled with lime, and where practicable lime should be applied directly to the area and plants on which the slugs are feeding. In time this will drive them away.

Japan is now making efforts to increase her wheat acreage greatly; also to build ships for carrying Japanese and Australian wheat in the Pacific trade.

CROP SYSTEMS THAT INCREASE YIELDS

By the introduction of cowpeas, soy beans and other legumes, and by planning the cropping system so that two crops can be grown on the same land in the same year, many farms can be made to produce greater yields than under the present cropping system with no additional man power. Thus, two men with a team, who under a cotton and corn system can farm but 33 acres of land, can handle 50 acres and raise 62 acres of crops under a system providing for a four year rotation including (1) cotton with a winter cover crop, (2) cowpeas, (3) oats or wheat followed by cowpeas, and (4) corn.

It is important that men and teams be kept reasonably busy at profitable work. Cotton requires little team work after the first of August, but a great deal of man, woman and child work; thus a system of cotton and corn alone is markedly inefficient in its use of horses and mules.

BROOM CORN

The amount of broom corn brush which can be raised on one acre depends almost entirely on the kind of corn, care of the crop, fertility, etc. The average production seems to be somewhere between 500 and 800 pounds per acre. One ton of good broom corn brush will produce 100 dozen ordinary sized brooms. Before going deeply into anything of this kind, it would be well to make a thorough study of it. The bulletin described will furnish ample information without cost.

THE CLOCK

Tick, tick, man, be quick,
There, you lost a splendid minute—
What a superb chance was in it.
I am El Dorado—mine me.
Virgin hordes of fortune line me.
With my lavish hands I measure
Fame and strength and joy and treasure.

Olive Trees
such as these are grown only on our foot-hill locations.—Note the good roots—for hardiness they have no equal.

We have a fine lot of Mission and Manzanillo trees, both on Picholine roots and grown from cuttings. We have had splendid success on all Olive plantings—a most important assurance to you.

Submit a list of your tree wants for special quotation. Do it right now.

We have also a complete assortment of Shipping Plums, Cherries, Prunes, Bartlett Pears, Fall Pears, Peaches, Almonds, Apricots, Walnuts, etc.

Our foot-hill grown trees are free from root diseases common to other localities. Our trees insure your future profits in fruit growing.

And remember—we will accept Liberty Bonds as full or part payment for trees. Write us today.

Heider Tractor and Rock Island No. 12 Tractor Plow at Third Annual Tractor Demonstration, Los Angeles, E. P. Bosbyshell Co., Agents.

FOR ELEVEN YEARS on America's leading farms Heider Tractors have given successful service. Every tractor question is answered by this long record in the field and in every power use on the farm. You make sure of *everything a tractor can do* in every soil, and in every kind of belt work, when you put the Heider on the job. And you make sure of easy running, economy and the right speed for each job. Seven speeds forward and reverse, all with one lever for either traction or belt. Men who have used the Heider for many years can tell you just what it does.

Close-up levers permit one man to operate tractor and disc. Note the unusual clearance. This disc can't get clogged. Two sizes, 8 and 10 feet. Can be used behind ANY Tractor.

Heider Model D, 9-16 H. P. Sold with or without plow attached. One foot lever controls automatic power lift of plows. Gets into fence corners and plows **ALL** the field.

Rock Island Tractor Plow

No one has been able to beat the plowing made possible with the Rock Island **"Front Furrow Wheel Lift"** Tractor Plow with "CTX" Bottoms. It's ready for any soil—and the pull of any tractor. Extra high clearance. "CTX" Bottoms turn the furrow slices clear over and prevent air spaces from stopping moisture. This means increased crops.

2, 3 or 4 Bottoms

Heider

The Real All-Purpose Tractor

Burns Kerosene or Gasoline

is the **unusual** tractor. And it gets unusual results. Its friction transmission is one of the biggest successes ever put in a farm tractor. You cannot strip the gears—nor lose power turning needless parts. You get your engine's best all the time without strain, and without wasting fuel. No sudden jerks in starting the load behind the drawbar or the machinery on the belt. Burn **Kerosene or Gasoline.** Especially designed manifold. Switch from one fuel to the other without carburetor changes. The Heider is the thoroughbred among tractors—backed by its own experience of 11 successful years and 64 years of building Rock Island Farm Implements.

Pruning Old Orange Trees

Written for California Cultivator By J. B. Neff

ORANGE trees are sometimes pruned in the form of a well built haystack standing on a platform supported by a single center pillar. This shows the pruner's artistic ability but is ruinous as far as the owner's bank account is concerned. The most profitable form is that of a deeply corrugated column, though not always attainable. This allows light to reach the interior of the tree and furnishes the largest possible fruiting surface on the outer part of the tree. When the corrugated form can not be produced to the full height of the tree smaller openings can be made by cutting out branches which start two or three feet back from the outside of the tree. It must be remembered that the small leaves are caused by the root system being unable to furnish material for the excessive number of leaves which are found on the very large number of small twigs and the remedy is to lessen the number of leaves by reducing the number of twigs since small leaves and fine fruit are not found on the same branch.

While very large oranges are usually sold at a discount there is seldom a loss on the large sizes and usually a very nice profit over the amount received for the same number of oranges of smaller size. If we take 100 boxes of size 176 to the box at $4.00 per box we have $400 and then the same number of oranges (17,600 oranges) in a size making 200 to the box we will have only 88 boxes which at the same price are worth but $352. There is a saving in picking, packing and boxes on the small size of about 50 cents a box, or $6.00, but after making this allowance there is a difference of $62 in favor of the large size while the difference in diameter of the two sizes of oranges is but one eighth of an inch. If we take size 176 at $4.00 per box and size 126 at $3.00 per box, with a difference of one-quarter inch in diameter, we have 140 boxes of size 126 worth $420, with a cost of extra boxes and work amounting to $20, or the same net amount as received for 100 boxes of 176 size.

When the price of 176 and 200 sizes is $3.00 per box there is a difference of $36 net in favor of the large size, and at $3.00 per box for 176 size and $2.50 per box for 126 size there is a net return of $20 in favor of the large size for each 17,600 oranges.

While it might not be possible in all cases, and not desirable where the oranges are already as large as 176 size, to make an increase of size as much as one quarter of an inch in diameter, it will always pay to increase the size of smaller oranges, which can often be done by some additional water or an extra cultivation.

The Nitrogen Outlook

Written for California Cultivator By F. H. Mason

IT IS generally conceded that the great nitrate beds of the Tarapaca and Tacoma Valleys in Southern Peru and Northern Chile are approaching exhaustion. They were discovered by the Spaniards at the commencement of the nineteenth century, but it was not until 50 years later that the scientific exploitation of them was started. Since then the industry has increased steadily, and latterly by such leaps and bounds that for the last few years the annual output has approached two and a half million tons of saltpetre, averaging 95 to 96 per cent of sodium nitrate.

The deposit extended for 260 miles, and an average distance of 14 miles from the coast of Northern Chile and Southern Peru. It averaged two and a half miles in width, and from three to six feet in thickness, while there was an overburden of 14 to 20 feet of sand and loose rock. The nitrate earth, or caliche as it is called locally, is mined or quarried in the usual way, broken into small pieces, and digested in iron vats, heated by steam pipes, to extract the nitrate.

The valleys are exceedingly arid, rain occurring only every three or four years, so great care has to be exercised in the use of water. When the solution is saturated, that is when it will take up no more nitrate, it is transferred to crystallization vats and allowed to cool when about half of the nitrate separates out in crystals. The solution, or mother liquor, as it is called, is then pumped back to the treatment vats and made to dissolve the nitrate from a fresh batch of caliche, when it is again returned to the crystallization vats. In this way the solution is used over and over again until it becomes too foul for further use.

While deposits of both sodium and potassium nitrate exist in other parts of the world, they are negligible compared to the Chile deposit. To all intents and purposes it may be said that the world has been drawing its nitrates from this great deposit for the last 50 years. Eighty per cent of these nitrates, it is claimed, have been empolyed for manurial purposes. Now, unless other deposits are found in the neighborhood or a method is devised for profitably treating the large quantity of material in the present deposit that runs less than ten per cent of nitrate and cannot by existing methods be treated profitably, the end is in sight. The pessimist gives it five years, the optimist 50. A mean between the two probably will hit the mark.

When the United States entered the war it was dependent entirely on the Chile saltpetre beds for nitrate from which to make nitric acid for the manufacture of explosives, such as guncotton, tri-nitroglycerine, tri-nitrotoluene, picric acid, and black powder. Realizing the inherent danger of the 5000 mile ocean journey that separated the deposit from the United States, the government appropriated first $20,000,000 and later $200,000,000 for the erection of plants for the manufacture of nitric acid and nitrates from that inexhaustible source of oxygen and nitrogen, the atmosphere.

After a great deal of pow-wowing, during which probably every up-to-date city from the Atlantic to the Pacific and from the Canadian to the Mexican border set forth its claims, the Muscle Shoals district in Alabama was selected for the principal plants, while several small plants were given to other places.

The development of water power was started at Muscle Shoales that when complete will give 660,000 horse power. Of this 260,000 horse

power will be used for the nitrate plants, while the balance will be employed for other electro-chemical industries.

Two plants are in course of construction at Muscle Shoals. At the smaller one ammonia will be made synthetically from atmospheric nitrogen and hydrogen derived from the electrolysis of water, and the ammonia will be oxidized to nitric acid by the aid of a platinum catalyst. The nitric acid thus made will be neutralized with ammonia, the final product being ammonium nitrate, which contains 35 per cent of nitrogen, and is the most concentrated nitrogen fertilizer that can be applied to the soil. This plant is designed to produce 200,000 pounds of nitric acid per day. When it is finished two other plants of like capacity are to be erected.

At the larger plant the nitric acid will be made by a more indirect though cheaper method. First, lime will be treated in an electric furnace with anthracite coal or coke for the production of calcium carbide: the carbide will be pulverized and treated in retorts, heated internally by the passage of an electric current through carbon resistance rods, with nitrogen for the production of calcium cyanamide, or nitro-lime; and the calcium cyanamide will be treated with superheated steam, which forms with it calcium carbonate and ammonia. The calcium carbonate can be used over and over again for the manufacture of carbide and cyanamide, while the ammonia will be oxidized by catalysis, as at the other plant, to nitric acid. This plant is designed to produce 2,000,000 pounds of nitric acid per day.

The nitrogen for use at both plants will be obtained from the atmosphere by first liquifying air, and subjecting the liquid to fractional distillation. Liquid nitrogen boils at a temperature of 190 degrees Centigrade or 250 degreens Fahrenheit, while liquid oxygen boils at 183 degrees Centigrade or 329 degrees Fahrenheit, so a sharp separation can be made. In fact, nitrogen containing less than four-tenths of one per cent of impurities is being made in this way at a number of different places.

In August the government closed down construction work on the water power plant, but not on the nitrate plants. It was claimed at the time that it would take three years to complete the plant, and it was therefore a non-essential—the labor and supplies being needed more urgently in other directions.

It is to be hoped work on the plant will be started at the earliest possible date. For the past four years nitrate has been used principally to make fuel for engines of destruction. Its price soared to a height that made it prohibitive to the farmer, and, consequently, the soil throughout the United States and the world generally has been depleted of that very essential invigorator of plant growth. It will be evident to all, then, that the products of these plants are needed throughout the whole country.

The smoke of battle has not sufficiently cleared to enable us to know what the nitrate situation is in Europe, but it is more than likely that all the nitrate manufactured there will be needed for home consumption. In 1903 the manufacture of nitric acid was started in Norway by direct combination of the oxygen and nitrogen of the atmosphere in an electric furnace, and immediately before the war nitrates were being produced at the rate of about 150,000 tons annually. The process, however, is an extravagant one, it requiring about two horse power per year to produce one ton of calcium nitrate.

A more promising source of nitrogen for fertilization of the soil is by the direct use of calcium cyanamide. While this material cannot be applied to growing crops on account of its caustic properties, for grain and such crops when plowed into the soil before sowing it possesses an advantage over nitrate of soda in that it yields up its nitrogen gradually. Calcium cyanamide decomposes slowly in the soil, forming first cyanamide, then urea, then ammonium carbonate, and finally nitrate. Then, too, it is not readily washed out of the soil during heavy rains, as nitrate often is.

The manufacture of calcium cyanamide was started in Norway in 1907. It is now manufactured at several places in Europe, America, India, and Japan, and the world's output immediately before the war was in the neighborhood of a quarter of a million tons per year. Of this Europe is by far the largest producer, the output at Odda, in Norway, alone being 90,000 tons. Calcium cyanamide contains from 20 to 22 per cent of nitrogen, as opposed to 16 per cent in Chile saltpetre and 12 to 13 per cent in "air saltpetre," as the Norwegian product is called.

With the cessation of hostilities it may be expected that the price of Chile saltpetre will drop, but the demand will be considerable for some time, and the drop is likely to be gradual. Undoubtedly all the warring nations have allowed their soils to become deficient in nitrogen, in order that the nitrates might go to the making of munitions, so there is likely to be a general demand and a heavy drain on the Chile saltpetre beds. With this source already approaching exhaustion it is urgent that the plants under course of construction in this country should be in operation at the earliest possible date.

HELPS SOLVE FARM LABOR PROBLEMS

To produce greatly increased yields of all farm products in spite of the scarcity of labor—that is the problem squarely confronting the farmers of America, for America must feed the *world* for years to come.

For years The Holt Manufacturing Company has been building and improving the "Caterpillar" Tractor, which now, more than ever before, is proving itself a most important factor in the saving of farm labor.

Today the wide expanses of America's fertile acres are being cultivated with the aid of thousands of "Caterpillar" Tractors. Thousands more of these tractors are hauling supplies and cannon in France.

The track principle employed in the "Caterpillar" Tractor, plus Holt manufacturing experience, Holt design and Holt high-grade materials, produces the most efficient, dependable and profitable tractor made.

Your neighbors—farmers, freighters, and contractors—are profiting by the labor saving and money saving advantages of the "Caterpillar" Tractor. You can do the same. Write for full information today.

There's but one "Caterpillar", Holt builds it

About Avocados

Written for California Cultivator By Ernest Braunton

THE avocado is here to stay and its tribe will increase. Over 30 years ago the writer ate avocados in Los Angeles. Fruits were then brought up from Mexico and South America in occasional small lots. In some cases little was left but the seeds and it is indeed strange that more seeds were not planted, for even seedlings were rare in Los Angeles 20 years ago.

Today a thousand acres of budded trees may be found in the Southern end of the state and their numbers are enjoying heavy annual additions. In regard to orchard planting I have no advice to offer, not having given any attention to supply and demand, nor desiring to offer business advice to my readers. If all had the same appetite for avocados that I have all available land would be planted to them. Though I like oranges, I have, during the past year, eaten at least ten avocados to one orange and am still eating avocados while good navel oranges grow in my garden ungathered. How far the general public shares my taste I cannot say. Nearly everyone who has eaten a good California avocado has liked it. The fruit must first be soft enough so that the flesh may be spread upon bread as easily as butter at ordinary house temperature. Green avocados are not more palatable than raw potatoes. In the future I will tell you much of avocados. The time for present season planting has not arrived.

Garden Design

In laying out your garden have a purpose in view, a purpose for everything you do. Some wind paths about merely because they think paths should be winding, and have no real or reasonable purpose in so doing. Without purpose gardens are laid out to suit the whim of the worker, a poor reason for doing anything. Better leave the work until you have some definite ideas of what you want and what should be done. The garden need not be planned today, or next week or next month. The world will continue to revolve and you will pursue the even tenor of your usual course even though the work is delayed until you gather your senses. Gently curving lines are the more beautiful, but they should at least appear best or necessary or we have no argument against straight lines, which we must confess are the short distances between two given points.

The use of straight lines often prevents one from doing some very silly things in laying out a garden. Straight lines may therefore prove a refuge. Or, again, they may prove a discipline, keeping the worker both figuratively and literally in the straight and narrow path of righteousness. If you lack purpose and have no well defined idea of what should be done, the straight line is indeed a refuge, for it will conceal from all, including yourself, that you were ignorant of the needs f the case. A good garden design, unless it is very small or in great need of formality, is vastly more natural, more comforting, more satisfying, and more attractive, if laid out with gently flowing curves in its main parts. But if you don't know how to lay it out confess your inability and "make straight your way."

Identity of Plants

Plants, fruits and other growing material falling under my department will, as far as my knowledge goes, be cheerfully identified or determined if good material is sent or left. When someone leaves a spray of twigs and foliage which in appearance are borne on a score or more species, it is too much of a task to "run them down," and often impossible, so no attempt is made. Foliage, unless of very marked character, is altogether insufficient for identification and will baffle the attempts of the best plant sharps. The fuller the material the easier is the task of determination. Let us have foliage, nowers and fruit if possible and the job will be tackled with a considerable amount of glee.

Did'st ever think we should act in political matters as we do in science? The scientist, on any question, makes long inquiries and studies the subject deeply before he makes up his mind and delivers an opinion. But all of us rush to the polls and vote one side or the other when in many cases we know nothing of the matters at stake. We vote for a measure we have not looked into, merely because it is put forward by the party with whom we affiliate. Yet often our private opinion is strongly at variance with the measure proposed. As Bailey has said, we come at length to substitute habit for reason. We are indeed a long way from the open mind and only when we come to dissect things political from a scientific and therefore common sense standpoint, shall we vote intelligently. This is "garden talk," for I wish you to "plant" it firmly in your mind.

Garden Foundation

At the recent Liberty Fair in Los Angeles a nursery firm had a very fine display of shrubbery. It began at the visitor's feet and rose higher and higher as it receded until by the time it reached the wall of the building it had been built up to 10 or 12 feet high. I could not but think how grand it would be to see these shrubs all in permanent place in the garden. No trees would be needed, nor should any be planted in a small garden, except strictly for shade or fruit purposes (better if for both purposes). One feature only was lacking in the display—a touch of color. It was all solid green. A few bright flowers would relieve the somber hue of foliage, but not even a shrub was in bloom. In the garden an occasional clump of flowers should dot the foreground.

Results from Roses

It was on the 25th of September that I cut back several score of old rose bushes that had enjoyed a period of dormancy for three months previously. In two weeks the first roses opened and the crop since then has been most satisfying. A smaller bed of unpruned roses of one year's planting did not in any way rival the parent bed. Summer rest and autumn pruning certainly give good results. One may occasionally have an unfavorable season, such as frosts of severity very early in the fall, but if so the fault is not in the procedure or garden practice. Even our orange crops are not a success every year, and if all went well with us, no effort of any kind would be necessary. What a useless existence it would entail upon us!

Dual Purpose Plants

Now that planting season has come let us all put in trees and plants that have both economic and ornamental value. For ten years I have harbored two nearly useless acacia trees. Their whole value lay in providing shade for the children during the hot weather. Two avocado trees would have provided fully as good shade and have attained the same size during the ten years. Even at this late time I shall plant two avocados near these acacias, and when the former have two or three years growth, I shall cut out the acacias. Let us consider all planting in the same spirit. Let us consider that if a plant has no use it has no beauty (for us). Fruit bearing plants are just as beautiful as those that "stand idly by."

It is expected that large acreages in the Butte City district of Glenn County will be set out to prunes.

GMC TRACTORS

SAMSON SIEVE-GRIP TRACTOR

GMC TRACTORS

MODEL S-25

The durable tractor is not achieved in a day. Many features, time and experience dictate, enter into its construction.

After nearly two decades of manufacturing and field experience, the GMC SAMSON SIEVE-GRIP TRACTOR is submitted as ideal durability. Many in successful operation for years, and in as effective use today, testify to its ruggedness.

The quality of the GMC SAMSON SIEVE-GRIP TRACTOR is guaranteed before built by careful selection of high-grade materials, made to specifications and over-sized to secure liberal reserve strength. Final severe tests further assure a durable product. It is built SAMSON in name and SAMSON in strength.

The GMC SAMSON SIEVE-GRIP TRACTOR performs the work of ten horses on the farm. It will do your plowing, discing and harrowing economically and efficiently, without packing the ground. It is adapted to countless other uses on the farm for many of which horses are unsuited. It will CUT YOUR COSTS. IT WILL INCREASE YOUR INCOME.

The durable is the efficient, economical tractor.

Our booklet, Better Farming, is yours for the asking.

Stockton, California

Conservation Program

From a harvest less in aggregate production than last year, the United States must export at least 17½ million tons of foodstuffs overseas during the coming season. That is about 12 million tons more than average prewar exports, or nearly two tons apiece for the average American farm where most of this food originates.

Rigid conservation of food and feed stored in granaries, cribs, barns and similar buildings—also products now in the fields — is essential to properly maintain our own population and to meet increased foreign needs. Animal feeds, though in a crude form, must be considered as food, since they are the basis for meat, milk and poultry products.

The vast quantity of food stuffs stored on farms makes opportunities for saving them correspondingly large. Following are common sources of food losses with suggestions for reducing them.

Fire

Remove inflammable rubbish, plow fireguards, use care with matches, lanterns and stoves. Supplement these safety measures with fire fighting equipment kept in a definite place for instant use. In brief, consider a farm as a food munition establishment.

Shelter

Prevent spoilage and deterioration by putting all foodstuffs possible under adequate shelter. Full utilization of storage space and prompt repair of roofs help greatly in preventing food losses. By sheltering foodstuffs on farms conservation is effected at the source.

Rats and Pests

Regard rats and similar pests seriously, as the direct enemy of starving humanity. Exclude them with concrete floors and destroy their breeding places. Rats must not eat holes in our bulwarks of national defense.

Stock Losses

More than a million tons of our food exports must comprise meats, fats, dairy products and poultry products. The quantity of this class of food depends largely on comfortable housing and the care which animals receive. Needless exposure and irregular attention may result in reduced production.

Breeding

The most important, and apparently the hardest lesson that the average live stock man has to learn, is the lesson that good feeding pays and pays big.

It is folly for anyone to take up the handling of any kind of live stock until he realizes that his success will depend upon his ability as a feeder. It makes no difference how well his stock is bred, failure is absolutely certain if he neglects the feeding end of his operations, and the majority of failures in the live stock business can be credited to poor feeding.

Time and time again we have seen beginners enter the live stock game full of enthusiasm and with rosy dreams of the future. They have been impressed with the value of pure bred animals and go forth and buy the best they can afford. They take their purchases home and very often the results are disastrous. If they have bought young stuff it doesn't develop as they expected, or, if they selected bred females, the offspring does not "come on." Usually they figure that the breeder has "handed them a package"—that he sold them animals inferior to the run of his herd, when as a matter of fact, the stock was all right but could not develope under the conditions provided for them.

Only last week we visited a herd of pure bred hogs, of which the owner was very proud. We were informed as to the breeding of his herd, and were naturally expecting to see something good, but at the first glance the story was told. He had the breeding all right, but he hadn't developed his young stuff. When pressed for an opinion we frankly told him that his spring pigs were decidedly undersized. He admitted that perhaps they were, but said that he had been a little short on feed and he figured he could not afford to buy. He figured wrong—he could not afford not to buy. Feed never gets too high that the breeder of pure bred live stock can not afford to pay the price. Well grown and developed live stock is always salable and the buying public is ready to pay the price. There is plenty of the stunted kind, but not enough of the well developed sorts, and no matter how well an animal may be bred, the buyer does not want that kind.

Lumber on California Farms

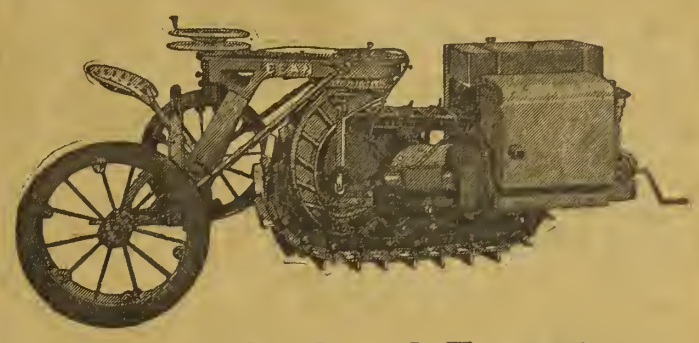
The agricultural experiment station of the University of California has issued Bulletin No. 299 "The Use of Lumber on California Farms" by Merritt B. Pratt. It touches upon the adaptability of use, cost, availability, structure properties, key for identification, etc. The bulletin may be had by addressing Agricultural Experiment Station, Care University of California, Berkeley.

Regarding the bigtrees or Sequoia. "The wood of the bigtree is lighter and more brittle than that of the Coast redwood, to which it is inferior in practically all respects except durability. Bigtree is cut into lumber to some extent, but its chief value is for posts, shakes and stakes for vineyards in the San Joaquin Valley. From one tree 14 feet in diameter, there were cut 12,000 2x2x7 grape stakes, 6500 4x5x7 posts, and 15,000 shakes, 2 feet long and 6 inches wide, the total value of the product being nearly one thousand dollars. The use of this wood is local, and it is mentioned only to distinguish it from the Coast redwood, with which it is often confused."

France is confronted by an industrial crisis. There are more than a million employes in war industries and the country is without raw materials to begin other manufactures. The older classes in the army are expected to return to civilian life as soon as possible, leaving only the younger classes for purposes of occupation.

The total of American casualties is announced as 236,117. After eliminating slightly injured who did not need hospital care, it is believed the total of killed, died of wounds or disease, or on the unclassified death list, the seriously wounded and the prisoners and missing, will work out not in excess of 125,000.

Glenn County has harvested over 21,000 acres of wheat.



34 Years' Orchard Experience in Special 6 H. P. Tractor

—Send for Free TrackPULL Book

A COMPLETELY convincing book, sent free, explains why men who own orchards or vineyards need the special 6 H.P. Bean TrackPULL Tractor.

This highly improved 1919 Model special tractor is the product of men who have specialized for 34 years in the building of orchard machinery. It is the result of all their experience, so it meets orchardists' and vineyardists' needs as no other tractor built for *general* work could ever be expected to do.

Don't make the mistake of buying a tractor that won't do *your kind of work.* The Bean TrackPULL is made for it. Don't purchase any other machine until you know just what this patented tractor saves.

Features Due to Patents

The Bean TrackPULL will right-about-face inside a ten-foot circle with tools deep in the ground. It pulls all the way around the turns just as strong as on the straight-away. No pivoting. No overstraining one side. Makes no difference how far off center you hitch.

This feature is due to the *front drive* principle—to the Bean's *patented single track.*

You steer with the track, just as you "steer with a team," "gee-ing," or "haw-ing" this way or that as you choose. Twelve-year-old boys can handle this machine with ease. Such machines keep boys satisfied on the farm.

BEAN

TrackPULL Tractor

Write Us Now

Send for the free book that tells all about the Bean, describing each feature and pointing out clearly just what each means *to you.*

Get the small tractor that will serve you best—a tractor built by a firm that has made a specialized study of orchard and vineyard needs for 34 years. You can depend on this kind of tractor. No other kind is designed especially for orchard and vineyard work.

Send the coupon for the free book. Do it now while you're thinking of it.

Special Improved features of the 1919 Model TrackPULL are found in Motor, Track Rollers, Drive Sprocket, Bearings and Rear Wheels. They provide extra reliability.

SULPHUR

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

Try our new brand of VENTILATED Sublimed Sulphur, 100 per cent pure, for making Paste — (Atomic Sulphur) — and for dusting.

For Lime Sulphur Solution, use our DIAMOND "S" BRAND refined Flour Sulphur. We can furnish you this sulphur at such a low price that it will pay you to mix your own solution.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre of our Diamond "S" Brand Powdered Sulphur. Write direct to

San Francisco Sulphur Co.
624 California Street, San Francisco, Cal.

We are equipped to make immediate shipment. Send for illustrated booklet; price list and samples, and please state for what purpose you use the sulphur, quantity needed, and date of shipment prefered. Tel. Kearny 871.

Bulk Handling of Grain in California

Bulk handling of grain is growing in favor in California. The actual demonstration of the value of handling grain in bulk, as contrasted with the wasteful, expensive, and antiquated method of handling in sacks, has been made in numerous places throughout the grain growing districts of California in the last year. From the northern reaches of the Sacramento Valley on both the eastern and western sides of the river, south of the Tehachapi range, a progressive farmer here and there last year began storing his grain in metal grain storage bins. Here and there an occasional big operator built special warehouses equipped with grain bins, or erected expensive reinforced concrete elevators.

The saving in labor, time, and the cost of jute bags which went to the prohibitive price of 32 cents last year, together with the great saving in grain was the actuating cause fostering this change from the old time method of handling California wheat and barley in sacks.

It is estimated by experts that 25 per cent of the wheat and barley raised in California is lost to the world's food markets by reason of handling and storing in sacks. These losses are traceable to a number of sources. As everyone knows, the grain sacks leak and a great amount of grain is lost by the wheat and barley working through the fabric of the grain bags. A little cut or tear and nearly the whole sack spills away in transferring it from pile to warehouse or from warehouse to railway car. Rats, mice and other vermin have easy picking when grain is stored in sacks. This food supply for the rodents adds to the growing plague that destroys so much valuable food material annually.

Fire and weather damage of grain stored in bags is excessive, and forms a large part of the annual grain loss charged against the sacking method. Theft of grain stored in sacks is an easy matter, when following the time honored careless California practice, the sacks remain for days and weeks scattered on the fields, as the harvester left them, or in straw covered piles by the roadside.

All these losses of money, labor costs, and wasted grain are eliminated through the storage and handling of grain in bulk, using small fire proof, rat proof, thief proof, and weather proof metal grain bins for storing the wheat or barley as it comes from the thresher. Shipping it in bulk as they do through the Middle and Eastern states and the Pacific Northwest is the secret for reducing excessive labor costs in handling. The change is coming in California, this year probably recording a marked increase in the number of grain growers who will have done away with the grain sack forever.

Future of Long Staple Cotton

Contiued from Page 629

show that we have been using a greatly increased quantity each succeeding year. The principal demand for this has come from the manufacturers of automobile tires. A considerable amount has also been used for expensive knit goods and laces.

The general situation is this: We have restricted the imports from Egypt; the ravages of the boll weevil in the Sea Island fields have cut the yields there; the government has used some Long Staple cotton for air plane and balloon fabric and for gas mask cloth.

To offset these demands and reductions of the supply we have a greatly reduced demand from the principal source of use, the automobile tire fabric mills, since most of these have been diverted to other uses for government needs; the demands for the more expensive laces and knit goods is less; a greatly increased crop of American-Egyptian cotton; a carry-over of a considerable portion of last year's crop and the use of lower grades of cotton by the mills in order to meet the rising prices of raw material. In other words, many are trying to meet competition by using an inferior grade of cotton, rather than raising the price of goods to the consumer. As an example, two mills alone are said to have curtailed the use of cotton with a staple of 1¼ or longer 30,000 bales and increased the use of cotton of shorter staples an equal amount. In this connection, it should not be lost sight of that the production of cotton not classed as Long Staple, but running 1⅛ to 1¼ was 1,213,000 bales last year and 267,000 bales more than in 1916. Of the staples running over 1¼ inch but not included in the American-Egyptian or Sea Island, the production last year was 141,000 bales, more than double the production of the previous year. These are the staples that are being substituted for the American-Egyptian cotton to a large extent. These are the staples that sell at 38 to 47 cents in markets where Sea Island sells for 72. These are the staples most in demand at the present time and undoubtedly will continue in greatest demand until mills manufacturing tire fabric are back to their normal work on a 100 per cent basis.

With the cessation of hostilities new factors are presented. The mills which have been manufacturing automobile tire fabric will naturally be released from government contracts and will as soon as possible get back to 100 per cent normal work. Just how soon this will be is problematical. First, the government has not so far as we know intimated when this change will take place. Possibly the needs of the army may require for some time to come army cloth, duck and other cotton goods. When the mills are again at liberty to take up their normal work, they will still be handicapped by lack of skilled labor which has been diverted to government needs, so that we cannot expect normal production of the mills using Long Staple cotton, until a large part of the overseas force has returned, and that may be six months or two years according to different authorities.

With this uncertainty as to when the cotton will be used, there is at least a partial explanation of the reason why buyers hesitate. To buy cotton the bulk, or at least a considerable part of which may, and probably will not be used until the 1919 crop is grown, is taking some chances. The buyer naturally believes in playing safe. Financiers frankly advise growers to hold their cotton whenever it is possible or to sell just enough at current prices to enable the balance to be carried.

So far we have considered the sit-

uation from this side of the Atlantic alone. We have forgotten that it was not so long ago that the price of cotton depended not so much upon the crop in America as upon the markets of Europe. In other words the price of cotton was fixed in Liverpool and not New York or Boston—or Phoenix. What will happen when the spindles in all Europe begin again to whir as they will when those who have been making war and munitions of war turn again to producing the essentials demanded by peaceful people? Mr. Brand has estimated that the demands of Europe will call for at least 2,000,000 bales more this year than last year. Just what proportion of this will be Long Staple and how great the demand for the extra staples will be as compared with the short staples probably no one knows.

The production of Egyptian cotton in Egypt for the past ten years or more has been something over 1,000,000 bales annually with the exception of one or possibly two years. Figures showing the exact number of bales available of this year's and previous years' crops have not so far as I have been able to learn been made public. Owing to lack of shipping facilities it is presumed that there may be a considerable amount of cotton, possibly 2,000,000 bales, maybe more and perhaps less, that will be no inconsiderable factor in determining the price of Long Staple cotton. As previously mentioned, the imports of this cotton into the United States were restricted to 120,000 bales for the season of 1918. Will the government place further restrictions upon imports of Egyptian cotton partly as a protection to American growers of this staple and partly because for many months shipping is going to be badly needed? That is one of the unanswered questions that make the future price of cotton uncertain. There is a possibility and this amounts to a belief among some of those in close touch with Eastern markets, that English mills will need every pound of cotton that Egypt has and this brings us back to the question just suggested, "Will Liverpool again control the world's cotton prices?"

After all the controlling factor of the price of any raw product is the demand of the consumer for the manufactured product, and the chief factor of the consumer's demand is first necessity and then price. The Long Staple cottons, whether the Egyptian, American Egyptian or Sea Island, have been used in the more expensive fabrics, knit goods, laces, mercerized goods and automobile fabrics. To a comparatively few these products are necessities; to the great majority of people they are luxuries. In these times of high prices the tendency has been to substitute, to a far greater degree than formerly, something not "just as good" but something cheaper. Many who could afford the luxuries of life have found it necessary to substitute cheaper things to a very considerable extent. Manufacturers have had to cater to the demands of the consumer and substitute shorter staples, even though inferior, in order to produce goods that would sell.

There is no questioning the fact that Long Staple cotton is greatly superior for many things. There is so far as we can learn no dispute about the extra length, quality of fibre and general superiority of the American-Egyptian over the imported Egyptian. For the first time we may likely see the production of Sea Island equal to the American-Egyptian, and may expect in the near future that instead of the price of American-Egyptian being governed by Sea Island the reverse will be true, but that condition does not yet obtain.

These are the conditions that altogether, and not singly or separately, affect the price of cotton today and that must be reckoned with in predicting prices that will obtain in the future. There are those who believe, and they are well informed, that American-Egyptian cotton will be worth on the Phoenix markets 70 cents within a few months. There are others that are not so confident, though no one predicts after-the-war prices.

What is to be the future of the Long Staple cotton industry in Arizona?

That all depends upon the answer to one other question, What is a fair price for American-Egyptian cotton? There may be as many answers to that query as there are growers of cotton, for the cost of production varies with the soil, the methods used and the individual. The cost of labor, teams and machinery has advanced to a very large extent in the past few years and we cannot expect that there will be any material reduction for some time to come. The average production has been for the past few years, in fact pretty nearly ever since it has been grown in the Salt River Valley, a little less than one-half bale this year's crop will average about the same. The cost of preparing the land properly, planting, cultivating, irrigating and the rent or interest on the investment, is just about the same whether one produces one-fourth of a bale or one bale, and it is at best (or at the least) expensive. It is my guess, without knowing positively, that the man that produces an average crop and sells it for 60 cents a pound, just about breaks even. The man that produces less than the averages loses, and the profit is made by the one that can and does produce from a half bale to a bale to the acre. The grower that has the right kind of soil in the right condition and handles it in the right way and produces from three-fourths of a bale to a bale to the acre will make money, big money, with cotton at 50 cents, while the quarter bale production would be at a loss at 75 cents and possibly a dollar a pound.

In the South cotton has been a tenant crop, and the soil of the Southland and the tenants grew poor together. Long Staple cotton is a crop that will never be a success with tenant farmers. This is said advisedly and with due regard to the fact that there are many tenant farmers who are better farmers than some farm owners, but taking into consideration the great majority of tenants that change their location with each new season.

Maximum production is the goal sought for in the production of any crop. This can only be had by the rotation of crops. When growers generally are planting from one-fifth to one-seventh of their average to cotton and the balance to alfalfa, corn and grain and feeding all the live stock the farm will carry, we will be producing more lint cotton than now, and at a cost that will make it profitable at a lower price than is likely to be offered for many years to come.

NATURE AS SHE IS OBSERVED

A nature study and biology teacher somewhere in America sends to The Nature Study Review (Ithaca, New York) the following casket of jewels culled from her pupils regarding their observations and conclusions in the domain of nature:

"Organic matter is when you have something the matter with your organs."

"Five devices by which seeds are scattered are wind, water, explosion, torn up, taken out, and thrown away."

"The peculiars of an insect are some of them bring diseases, others destroy food, suck the blood, spoil the flowers, lay eggs, and kill babies."

"The grasshopper, when he walks, he either jumps or hops."

"The jaws of a grasshopper move east and west."

"A larva is an unfinished animal."

"The flowers is to show what a plant can do."

Firestone

HOLDFAST
ALL RUBBER
PATCH STOCK

Repairs all injuries to inner tubes large or small. Sold in two sizes:

No. 1—30 square inches
No. 2—72 square inches

Each complete with tube of cement and Firestone metal buffer. This is but one item in the line of Firestone Accessories—a valuable branch of the Firestone "Most Miles per Dollar" policy which has built Firestone leadership in tire service.

Firestone Cementless Tube Patches, Firestone Cure Cut, Firestone Hook-On and Lace-On Boots and the Firestone Blow-Out Patches are other Firestone Tire Accessories which every motorist should carry as travel insurance.

These big helps in little troubles save expense and unnecessary road delays.

If your dealer is not supplied ask him to order direct or through his jobber.

Secretary Houston Recommends Control of Packers and Stock Yards

Written for California Cultivator

IN VIEW of the fact that California live stock markets are being studied by all the live stock organizations in the state, with a view of working out a better system. And also in view of the fact that in the recent report submitted by the federal trade commission it is charged:

"That the big packers together control the live stock markets.

"That such competition as appears to exist is limited and not real.

"That they together fix live stock prices."

The following remarks made by Secretary Houston in his annual report should be of interest. That portion of the report touching the meat industry follows:

Under the authority conferred upon the president by the food control act, substantial progress was made by the department of agriculture in the regulation and supervision of stock yards and of commission men, traders, order buyers, packers, and others handling or dealing in live stock in or in connection with stock yards. The important results already accomplished in the improvement of live stock marketing conditions, and in the elimination of many uneconomic and unfair market practices, demonstrate the effectiveness of the form of control which has been exercised under the war power and the desirability of continuing it or a similar form of supervision. Not only the stockmen who patronize these great centers of live stock trade, but also some members of the trade themselves, have recognized the possibilities for betterment of marketing conditions through their regulation by the department, utilizing its corps of supervisors clothed with the requisite authority. Besides the protection thus extended to consignors of live stock for sale at the markets, the opportunity is afforded for improvement in methods, facilities, and trade practices incident to the handling and sale of live stock involving many millions of dollars daily.

Closely associated with the supervision of live stock markets is the problem of a similar authority over the slaughtering, meat packing, and related interests which are centered at the principal live stock markets. Under the regulations applied to meat packing establishments by the food administration, limitations have been placed on profits on meats and by-products handled by these establishments, the installation of uniform accounting systems has progressed with comparative rapidity, and the centralization of control by a small group of packers has been materially checked. The economic welfare of meat production and distribution would be promoted by the continuation and development in some form of the supervision over the packing industry. Such control should be closely coordinated with that over the live stock markets. There is need, in connection with this supervisory system, of a central office to which packing concerns should be required to report currently in such form and detail that it would be constantly informed concerning their operations. Such an arrangement would afford protection to producers and consumers.

The restoration and maintenance of conditions which will justify confidence in the live stock markets and meat packing industry is the greatest single need in the present meat situation in the United States. It seems desirable, therefore, that the necessary legislation be enacted at the earliest possible moment. The assurance of open competition and the stabilizing of prices in the live stock markets, the elimination of evil practices, the adjustment of charges for market services, and the restoration of confidence in market conditions generally, apparently require three remedies, namely, regulation, information, and voluntary cooperation. Federal regulation, organized and administered as indicated above, exercised in close harmony with the regulatory bodies of the various states, is the most essential feature. Constant publicity, under government direction, of current market prices, supplies, movements, and other conditions pertaining to the marketing of live stock, meats, and animal by-products, would add immeasurably to the effectiveness of any form of regulation. It would also be a means of stabilizing the marketing of live stock and its products and of making available the information required by producers and distributors for the most intelligent and economical marketing of their products. Progress already has been made in the creation of machinery for such service at market centers in all parts of the United States. Legislative authority for its future development in connection with live stock market supervision should be continued and extended. Finally, better organization of live stock producers and closer cooperation between their organizations and those representing the different classes of intermediaries, all working in harmony with agencies of the government directly concerned, will also increase the effectiveness of regulation and publicity, make for the maximum of efficiency, and conduce to the welfare of the packers and distributors as well as of the producers and consumers.

Dairying Improved by Bull Associations

DAIRYMEN who would like to use pure bred bulls to improve their herds, but who cannot afford to purchase such animals should investigate the advantages of a cooperative bull association. These organizations are formed by farmers for the joint ownership, use and exchange of pure bred bulls. The purchase price and cost of maintenance are distributed according to the number of cows owned by each member, thereby giving the dairyman an opportunity to build up his herd at a minimum expense. The organization also helps its members to market dairy stock and dairy products, to fight contagious diseases of cattle intelligently, and in other ways to assist in improving the dairy industry. Farmers' Bulletin 993, recently issued by the United States department of agriculture, gives directions for the organization and operation of bull associations together with constitution and by-laws necessary for such an organization.

The typical cooperative bull association as recommended by the dairy specialists of the department, is composed of from 15 to 30 farmers who jointly own five bulls. The territory in which these farmers live is divided into five "breeding blocks," one bull being assigned to each block. As many as 50 or 60 cows may belong to the farmers in each block, and the bull in the block should be kept on a conveniently located farm. To prevent inbreeding each bull is moved to the next block every two years. If all the bulls live, and if all are kept until each has made one complete circuit, no new bulls need to be purchased for ten years. In this way each member of the association has the use of good pure bred bulls for many years, at a cost of only a small part of the purchase price of one good bull —usually less than is invested in a more inferior bull owned by individual dairymen.

In a survey conducted by the United States department of agriculture on 1219 farms in eight districts in Iowa, Minnesota, and Massachussetts in which there were no associations, it was found that there were 817 bulls, having an average value of $76. Had the owners of these cheap bulls been properly organized the same investment would have purchased the necessary bulls of an average value of $283. In one association having more than 100 members the original cost of good pure bred bulls to each member was only $23. When questioned regarding the value of cooperative bull associations, 150 farmers in Maryland, Michigan, and Minnesota estimated that the use of bulls belonging to the organization increased the value of the offspring in the first generation from 30 to 80 per cent, with an average of 65 per cent.

The selection of the bulls for an association is one of the most important considerations. A good pure bred bull will make rapid and marked improvement in the berds, and the association interest increases in proportion to the improvement obtained. If a poor dairy bull is used the milk production of the members' herds is sometimes reduced, the interest is lessened, and these conditions may lead to tbe breaking up of the association. Success in the operation of an association depends a great deal on the care that is used in its organization. Dairymen contemplating forming an association should consult the local county agent, write to the state agricultural college or to the Dairy Division of the United States Department of Agriculture, Washington, D. C,. for advice and assistance. The farmers' bulletin previously mentioned will be found of great value along this line, particularly the suggestions which are given in connection with the constitution and by-laws.

Raise Your Calves Without Milk

MILK is money! Don't feed it to your calves. SELL it! Raise them on the original and only COMPLETE MILK SUBSTITUTE—

Blatchford's CALF MEAL

You want fine, healthy calves with fat sleek bodies —feed BLATCHFORD'S CALF MEAL. Prevents scours. Costs ¼ of what you can get for your milk.

Write for Pamphlet Shows you how to make two profits instead of one. We'll give you name of your nearest dealer.

Blatchford Calf Meal Co.—Dept. 4709—Waukegan, Ill.

For Two Thousand Years

the people of Holland have been developing the Holstein-Friesian breed of dairy cattle. They have developed a breed that most economically turns large amounts of cosrse fodder into valuable dairy products, and is valuable for beef purposes. Holstein-Friesian cows exceed all others in milk snd butter production and return a greater profit upon the cost of their feed.

The Poland Chinas

(Continued from last week)

Poland China Swine

Exhibitors: M. Bassett, Hanford; A. L. Bassett, Hanford; Fred Hartsook, Lankershim; H. I. Marsh, Modesto.

Aged boars—1, I. B. A. Wonder, Hartsook; 2, Orange King, M. Bassett.

Senior boar pig—1, Big Bone Model, M. Bassett; 2, Big Major, Marsh; 3, A. L. Bassett; 4, Major Hadley Wonder 3rd, Hartsook; 5, Major Hadley Wonder 2nd, Marsh.

Junior boar pig—1, Model's Equal, A. L. Bassett; 2, California Model, A. L. Bassett; 3, Big Model Chief, M. Bassett; 4, Model's Equal, A. L. Bassett; Major Improved, Marsh.

Aged sow—1, King Wonder's Giantess, Hartsook; 2, Nelson's Wonder A. 2nd, Hartsook; 3, Model Giantess, Hartsook; 4, Miss Giantess, Hartsook; 5, Hustler's Giantess, M. Bassett.

Senior yearling sow—1, Cali Belle, M. Bassett; 2, Model Daughter, Hartsook; 3, Model Lady, Hartsook; 4, Long Model, A. L. Bassett.

Junior yearling sow—1, Lady Long Fellow, M. Bassett; 2, Wonder's Giantess, Marsh; Model Picture, M. Bassett.

Senior sow pig—1, Big Model Maid, A. L. Bassett; 2, Major's Beauty, Marsh; 3, Model Miss, A. L. Bassett; 4, Model Maid, A. L. Bassett; 5, Long Wonder Lass, Marsh.

Junior sow pig—1, Model Daisy, A. L. Bassett; 2, Smooth Model, M. Bassett; 3, Miss Hulda, M. Bassett; 4, Wonder Prospect Girl, Hartsook; 5, Wonder Prospect Lassie, Hartsook.

Senior champion boar—I. B. A. Wonder, Hartsook; reserve senior champion, Orange King, M. Bassett.

Junior champion boar—Big Bone Model, M. Bassett; reserve junior champion boar, Model's Equal, A. L. Bassett.

Grand champion boar—I. B. A. Wonder, Hartsook; reserve grand champion boar, Big Bone Model, M. Bassett.

Senior champion sow—King Wonder's Giantess, Hartsook; reserve senior champion sow, Lady Longfellow, M. Bassett.

Junior champion sow—Big Model Maid, A. L. Bassett; reserve junior champion sow, Model Daisy, M. Bassett.

Grand champion sow—King Wonder's Giantess, Hartsook; reserve grand champion sow, Big Model Maid, A. L. Bassett.

Aged herd—1, Hartsook; 2, M. Bassett.

Young herd—1, A. L. Bassett; 2, M. Bassett; 3, Marsh; 4, Hartsook.

Herd bred by exhibitor—1, A. L. Bassett; 2, M. Bassett; 3, Marsh; 4, Hartsook.

Get of sire—1, A. L. Bassett; 2, M. Bassett; 3, Marsh.

Produce of dam—1, A. L. Bassett; 2, M. Bassett; 3, Marsh.

The American Poland-China Record Association, W. M. McFadden, secretary, Live Stock Record building, Stock Yards, Chicago, Illinois, offered a silver trophy cup, value $50, for the best four pigs under six months old, from one litter, farrowed the property of the exhibitor. This was awarded A. L. Bassett.

A silver trophy cup, value $50, awarded to the winner of the aged herd went to Fred Hartsook.

The Berkshires

When the Liberty Fair was first projected, the Western Berkshire Congress planned to make a notable showing, and to close the show with a high class consignment sale. Had the fair opened on scheduled time there is little doubt but that the congress plans would have been carried through, but after the many postponements only two herds arrived—a disappointing number, but a surprise in quality. The Grape Wild herd owned by A. B. Humphrey, Escalon, and considered one of the top herds of the breed, came from the North and found ample competition in Rose Crest herd, owned by F. L. Hall, Perris. The character and quality of the Hall herd was a revelation to many and is entitled to be classed as one of the leading herds. C. R. Doty of Charleston, Illinois, one of the best known state fair exhibitors of the Middle West, acted as judge. Straight through the classes the honors were divided quite equitably. The junior yearling boar of Humphrey's, Grape Wild Emblem, was made senior and grand champion over the cracking good junior pig Grape Wild Chief. Hall won senior and grand championship on the beautiful senior yearling, Rose Crest Favorite 2nd, a sow of his own breeding, sired by Ames' Rival 118th. Humphrey won the aged herd, young herd and herd bred by exhibitor. Hall won the get of sire class on the get of Ames' Rival 118th. Humphrey won the produce of dam class.

Berkshire Swine

Exhibitors: A. B. Humphrey, Escalon; F. L. Hall, Perris.

Aged boar—1, Ames' Rival 118th, Hall.

Senior yearling boar—1, G. W. F. Leader, Humphrey.

Junior yearling—1, Grape Wild Emblem, Humphrey.

Senior boar pig—1, Rose Crest Rival Laurel 2nd, Hall; 2, Rose Crest Rival 4th, Hall; 3, Rose Crest Rival 3rd, Hall; 4, Escalon Rival 2nd, Humphrey.

Junior boar pig—1, Grape Wild Chief, Humphrey; 2, Escalon Artful, Humphrey.

Aged sow—1, Wilentha Lady 17th, Hall; 2, Leader's Artful Belle, Humphrey; 3, Grand Lady Fashion, Humphrey; 4, Wilentha Lady, Hall.

Senior yearling sow—1, Rose Crest Favorite, Hall; 2, Rose Crest Favorite 2nd, Hall; 3, Escalon Ladybird, Humphrey.

Junior yearling sow—1, Escalon Lassie, Humphrey; 2, Rose Crest Rookwood Lady 3rd, Hall; Rose Crest Rookwood Lady 2nd, Hall.

Senior sow pig—1, Escalon Blue Belle, Humphrey; 2, Rose Crest Hope 2nd, Hall; 3, Royal Polly, Humphrey; 4, Rose Crest Laurel 2nd, Hall; 5, Rrose Crest Lassie H., Hall.

Junior sow pigs—1, Grape Wild Rose 2nd, Humphrey; 2, Grape Wild Rose 3rd, Humphrey; 3, Escalon Artful Belle 5th, Humphrey.

Senior champion boar—Grape Wild Emblem, Humphrey. Reserve senior champion boar, G. W. F. Leader, Humphrey.

Junior champion boar—Grape Wiid Chief, Humphrey. Reserve junior champion boar—Rose Crest Rival Laurel 2nd, Hall.

Grand champion boar—Grape Wild Emblem, Humphrey; reserve grand champion boar, G. W. F. Leader, Humphrey.

Senior champion sow—Rose Crest Favorite, Hall; reserve senior champion sow, Escalon Lassie, Humphrey.

Junior champion sow—Grape Wild Rose 2nd, Humphrey; reserve junior champion sow, Escalon Blue Belle, Humphrey.

Grand champion sow—Rose Crest Favorite, Hall.

Aged herd—1, Humphrey; 2, Hall.

Young herd—1, Humphrey; 2, Hall.

Herd bred by exhibitor—1, Humphrey; 2, Hall.

Get of sire—1, Hall; 2, Humphrey.

Produce of dam—1, Humphrey; 2, Hall.

Single barrow—1, 2 and 3, Humphrey.

Pen of barrows—1, Humphrey.

The Draft Horses

Ruby & Bowers, Davis, California, staged a greatly appreciated showing of heavy horses. This firm had nearly 40 head of stallions and mares in their stalls. O. H. Brandt of Shellville showed Percherons and Clydesdales and the Dibblee estate, Santa Barbara, made a small but select showing of Clydes.

The horses were rated to the satisfaction of all by Professor F. W. Wilson of the University of Nevada.

Several new horses were brought forward this year. Among the Percherons, Ruby & Bowers showed a slashing good three year old, Halton. This colt has a great deal to recommend him; he has plenty of size, ample bone, a lot of quality and is a flash mover. He was easily the outstanding Percheron and found his way to the extreme top with no trouble.

Among the Belgians, the two full brothers, Stevenot and Brussels, were the attractions, the former being made champion.

In the Clydesdale classes the Dibblee estate brought out the aged stallion, Bonnie Edward. This imported horse furnished quite a surprise. He is quite the best Clydesdale the writer has seen in California, and although he had no competition he could stand a lot.

Toggenburg Goats

Exhibitors: Elmer McInturff, Lamanda Park; F. T. Heintz, Baldwin Park; Mrs. Ida M. Burdick, Lankershim; Mrs. L. O. Rhoades, Pasadena; L. C. Buhl, Upland.

Aged buck—1, Alessandro; Elmer McInturff.

Buck one year old and under two—1, Chieftain, F. T. Heintz.

Buck under one year—1, X. L. Triumph, Mrs. Ida M. Burdick.

Aged doe—1, Princess Louise, F. T. Heintz; 2, Glarna 3rd, F. T. Heintz; 3, El Chivars Margeline, Mrs. L. O. Rhoades.

Doe one year old and under two—1, Sue of Rancho 57th, F. T. Heintz; 2, Melbaline B., L. C. Buhl; 3, Endora, Mrs. L. O. Rhoades.

Doe under one year—1, Undine, F. T. Heintz; 2, Edith, Mrs. L. O. Rhodes; 3, Killarney, F. T. Heintz.

Champion buck—X. L. Triumph, Mrs. Ida M. Burdick.

Champion Doe—Princess Louise, F. T. Heintz.

Saanen Goats

H. F. and L. I. Schinker, Eagle Rock, were the only exhibitors of Saanen goats.

Anglo-Nubian Goats

Exhibitors: Mrs. P. B. Heintb, Baldwin Park; Mrs. E. A. Messerly, Eagle Rock; Miss Emma Kraft, Los Angeles; Minnie L. Barker, Venice.

Aged buck—1, Inkyo Kahnelloh, Mrs. P. B. Heintz.

Buck one year old and under three—1, Sekenyen-Re, Mrs. E .A. Messerly; 2, Inkyo Boskoh, Mrs. E. A. Messeriy; 3, Burnaby Trafford, Mrs. E. A. Messerly.

Aged doe—1, Kola Ku, Mrs. E. A. Messely; 2, Banzai Fetnah, Mrs. E. A. Messerly.

Doe one year and under two—1, Argante Mrs. E. A. Messerly; 2, Fantasma, Miss Emma Kraft; 3, Zola, Mrs. E. A. Messerly.

Doe under one year old—1 Fern, Mrs. P. B. Heintz; 2, Annabel Lee, Mrs. E. A. Messerly; 3, Phyllis, Mrs. P. B. Heintz.

Champion buck—Inkyo Kahnelloh, Mrs. P. B. Heintz.

Champion doe—Fern, Mrs. P. B. Heintz.

Pig Club Swine

Boar or barrow under one year, pure bred—1, Buzz, Charles N. Glahu, Owensmouth; 2, Crestsire, Wassen Chase, Van Nuys; 3, Barney Oldfield, K. and H. Gilbert, Van Nuys; 4, Robert Lynch, Gardena; 5, Success, Jr., Ed Paggi, Van Nuys; 6, Direct Messenger, Jr., Ed Paggi, Van Nuys.

Sow under one year old—1, Beatrice, Edwin Angier, Van Nuys; 2, Beatty, Edwin Angier, Van Nuys; 3, Bessie, Edwin Angier, Van Nuys; 4, Miss Berke, Warren Chase, Van Nuys; 5, Miss Victory, Paul Whitsett, Van Nuys; 6, Princess Pauline, Paul Whitsett, Van Nuys.

Boar or barrow under one year—1, Chappy, Kenneth Wheeler, Lankershim; 2, John Carter, Los Angeles Jefferson High School; 3, King, Kingsley Chadeayne, Van Nuys; 4, Chad, Kingsley Chadeayne, Van Nuys; 5, Sow, Richard Boch, Gardena.

Sow under one year old—1, Suey, Kenneth Wheeler, Lankershim; 2, Pride of Jefferson, John Carter, Los Angeles; 3, Liberty, Donald Spears, Los Angeles; 4, Betsy, George Sharp, Gardena.

The Sheep

Bishop Bros., San Ramon, had the only flock of Shropshires and Calla Grove Farm, Manteca, showed the one flock of Hampshires.

HUMPHREY ADDS GUERNSEYS, AND A NEW BERKSHIRE BOAR

The herds of Berkshires and Guernseys from the Grapewild Farms of A. B. Humphrey, Escalon, came south and made half the exhibit for each of the breeds.

Chas. Maurer in charge of the Grapewild herds stated that they had recently purchased the small, but select, herd of Guernseys maintained by the Calla Grove Farm, Manteca.

Mr. Humphrey has also received a son of the English Berkshire boar, Epocal, from the Gossard Breeding Estate, Martinsville, Indiana. It will be interesting to watch the judicious use of this new blood in this herd, which is counted one of the strongest herds of the breed.

FALL PIGS

Lots of fall pigs develop into peaked, pot-bellied, pitiful looking things.

The hog is an animal that is quite susceptible to cold and unless a dry bed is provided in the winter or rainy season a great deal of food is consumed in keeping the animal warm.

A regular supply of some kind of nourishing feed must be provided for fall pigs if they are to be kept growing throughout the winter—and they must be kept free from lice.—W. S. G.

Elliott-Brant Rancho Guernseys

We have an especially fine bunch of young Guernsey bull calves to choose a future herd sire from. Guernsey bulls cross well with all breeds of cattle and they increase the quality and color of the milk as well as the quantity of milk and butter fat. The Guernsey bull has won the battle with the scrub cow.

We have calves from A. R. cows with different sized records up to 750 pounds of butter fat. Our prices are reasonable and are based on breeding and records. Write and tell us your needs and we will tell you how we can fill them.

January Price for Hogs

A meeting in Chicago was participated in by representatives of the United States food administration, the committee of packers sharing in foreign allotment orders, representatives of the agricultural advisory committee and special representatives for the swine producers.

It was decided that the price of hogs for January shall be continued on the same basis as in November and December—17½ cents per pound. Throwouts are to include pigs under 150 pounds, stags, boars, thin sows and skips.

Because of the shortage of labor at the slaughtering centers, occasioned by the influenza epidemic and by the large number of men withdrawn for military service, the slaughterers have found difficulty in handling the large supplies of live stock which have been coming to market during the past few weeks.

The recent very heavy runs at the principal markets indicate that there may be in the country a larger number of hogs than the heretofore published estimates show. It is hoped that the runs of hogs to the markets and shipments on foreign orders will be of such reciprocal volume that the packing centers can now handle them without the embargo.

Last week we published a statement to the effect that Coast prices would, for the months of December and January, rule one cent under the Chicago minimum, thus California producers may expect to receive at least 16½ cents per pound next month, but in all probability the actual price paid will perhaps rule higher.

Mohair Men Meet at Phoenix

Written for California Cultivator By M. E. Bemis

Mohair growers met in Phoenix, Arizona, December 7 to 9 for their annual gathering. Mohair, this past season, has brought 85 to 90 cents a pound. But for the work of the association it is probable that it would not have brought over 60 cents. The use of mohair in army cloth has been of material benefit to goat men.

The convention was addressed by M. E. Musgrave, W. R. Chapline, Jr., of the national forest reserve, and R. H. Williams of the animal husbandry department of the state agricultural college. Delegates from Missouri, Texas, Oregon, Arizona and New Mexico attended the three day session. The association has succeeded in getting the United States bureau of markets to take up the matter of grading. A new use for mohair was reported, that of press cloth for cotton seed oil mills.

National forest investigations indicate that there is a considerable area of land that may be made available for goat grazing, thus encouraging the increase of goats on the ranges.

The officers of the association are: U. S. Grant, Dallas, Oregon, president; John Mahnke, Kelseyville, California, first vice president; H. A. Morgan, Wilcox, Arizona, second vice president; M. L. Conklin, Newville, California, third vice president; T. L. Morris, Hillside, Arizona, fourth vice president; F. O. Landrum, Laguna, Texas, secretary-treasurer. The next session is to be held in El Paso in the fall of 1919.

During the session the Red Cross Angora goat Marco, Mohair Men's American Red Cross offering, was sold for the benefit of the Red Cross. This goat was donated by an Oregon breeder and is going over the country and being sold for the benefit of the Red Cross and then is sent on. The sale at Phoenix realized over $100.

The national convention was preceded by the meeting of the state association of Angora goat breeders. This was the second annual session of this association. T. L. Morris of Hillside is president and Aubrey Gist of Skull Valley, secretary. This association has now a membership of about 25. The industry is one of growing importance as the number of Angoras in Arizona has increased from 80,765 in 1910 to 142,561 at the present time.

The state association went on record as favoring the selling of goat meat, instead of masquerading as mutton. During the session three Angoras donated by J. B. Weathersby of Klondyke were sold at auction for the benefit of the Red Cross. The animals brought $255.

The delegates to the national and state associations were given a banquet by the Phoenix chamber of commerce, at the close of the sessions.

Cattlemen in Zone Five Meet

Cattlemen from the counties of Los Angeles, Santa Barbara, Ventura, Inyo, Imperial, Orange, Riverside, San Bernardino and San Diego, constituting zone five under the organization plans of the California Cattlemen's Association, met Saturday, December 7, at the Liberty Fair and effected a permanent zone organization and elected officers.

The officers of zone five are: O. B. Fuller, Los Angeles, president; Fred H. Bixby, Long Beach, vice president; Walter Greening, Los Angeles, secretary. In addition to the above officers, the following men were elected directors—who with the president and vice president, serve as state directors — Harry Jones, Imperial; James Sloan, Lompoc; Frank Butler, Bishop.

Attorney Leighton of the cattle inspection board told the cattlemen of the progress made in administering the new hide and brand law. To date a number of convictions have been secured and several alleged cattle rustlers are awaiting trial. Mr. Leighton stated that the board intended to ask the next legislature to make a reward provision. To date 14,000 brands have been registered and a total of 20,000 is expected. The brand book is now in the hands of the printer and when published, copies can be secured by writing to the Cattle Inspection Board, California Building, Los Angeles.

C. R. Thomas spoke briefly of the trials and tribulations of the Liberty Fair, but illustrated what live stock shows could be made to mean to a community, using the American Royal as a case in point.

Following Mr. Thomas' talk the meeting passed the following resolution:

"Whereas, the Liberty Fair at Los Angeles has brought to our notice the fact that a fair of this kind is of untold benefit to the stockmen, and

"Whereas, a repetition, or another fair, held a year hence would bring added benefits, and

"Whereas, the stockmen represent-

ed at this, the first meeting of zone five of the California Cattlemen's Association, representing the counties of Los Angeles, Santa Barbara, Ventura, Orange, Riverside, San Bernardino, San Diego, Inyo and Imperial, appreciated the numerous advantages accruing to them as a result of such fairs and exhibitions;

"Be it resolved, that we, zone five of the California Cattlemen's Association, heartily indorse the efforts of the directors, managers and superintendents of the Liberty Fair now being held, and suggest that it is our desire that a second fair be held a year hence, and

"Further, we as an association pledge our good will and agree to aid in any way possible a repetition of this Liberty Fair, and

"Further, that a copy of this resolution be sent to the directors of the Liberty Fair, the Chamber of Commerce and the Merchants' and Manufacturers' Association of Los Angeles."

NEW FOREST GRAZING FEES

Secretary Houston announces that the increases in national forest grazing fees first decided on in 1916, but deferred on account of conditions which confronted stockmen during the past two years, will be put into effect March 1, 1919. At the same time, arrangements have been made to grant five-year grazing permits under certain conditions.

In a recent letter addressed to two national live stock associations, Secretary Houston says:

"In accordance with the conclusion reached by me on February 1, 1917, that the charge for grazing should be based upon the real value of the forage, I have decided that beginning March 1, 1919, the charge for grazing upon the national forests during the year-long period will be from 80 cents to $1.50 a head for cattle, varying with the advantages of the different ranges.

"The rate for sheep and goats on each forest will be 25 per cent of the rate for cattle. The rate for horses will be 25 per cent more than for cattle, and the rate for swine 25 per cent less.

"The proportionate charge for grazing during only a part of each year will be in accordance with the provisions of the national forest regulations."

UNIVERSITY SELLS STALLION TO EASTERN COLLEGE

California horsemen will be interested to know that the University of California has recently sold the Percheron stallion, Fernand, to the University of Illinois.

Fernand is quite easily one of the best Percheron sires ever brought West. He was personally selected in France by James McLaughlin on order of A. King McCumber for the Paicines Ranch stud.

Before his importation, he had earned quite a reputation as a sire of desirable types, and in the Paicines stud he rendered exceptional service. He was purchased by the University of California in the summer of 1916 and remained at the head of that stud until the past season when he was replaced by Aiglonel.

On several occasions Eastern breeders endeavored to buy him and the fact that he was finally selected to head what is generally considered the most select band of Percheron brood mares owned by any agricultural college, suggests the esteem in which he was held.

It is to be regretted that such a valuable sire could not be retained in this state where his services are certainly needed.

GLENN, A LIVE STOCK COUNTY

The possibilities of community breeding and what it will do in the way of increasing wealth and bringing the agricultural advantages to national attention is shown by what has been done in Glenn County.

Ten years ago there were very few registered animals in the county, and prospective buyers of breeding animals would as soon have thought of going to Zanzibar as to Glenn County to supply their needs.

Now, when a prospective buyer is in the market for one or a carload of registered hogs of three of the leading breeds, Glenn County is one of the first places that comes to his attention.

Recently H. P. Slocum & Son have supplied a large number of Durocs to the state colony at Durham; Berkshires have been sent to South America and a big shipment will probably soon be made to the Orient.—W. S. G.

SMALL FLOCKS PROFITABLE

There is more interest this fall than ever in small flocks of sheep, not only for small acreages under irrigation, but for large grain farms as well.

Every one who has bought a few ewes during the last two or three years is delighted with the results. Of course wool and lambs have been high, but the sheep would have been profitable at much lower prices. And they "fit in" the arrangements of most well regulated farms in such a way that once established they have a permanent place.—W. S. G.

COTTONSEED HULLS AVAILABLE

The live stock commission of federal food administration announces that cattle feeders will find a large quantity of cottonseed hulls available, at Imperial Valley mills at a price of $20 f. o .b. El Centro.

Cottonseed hulls have a feeding value about equal to straw or low grade hay.

NOTE: Skimmed milk is a dairy by-product. Vast quantities of it are either fed to live stock or wasted. The opening of a new market for skimmed milk is of real importance to the entire Dairy Industry. The facts set forth below deserve the thoughtful consideration of all farm people, and of all Agricultural Extension Workers.

HEBE

—and the Dairy Industry

Every phase of business and social life shows new conditions as a result of the war. Greater even than the call for men and munitions has been and is the call for food. America is the pantry and kitchen of the world today.

America has met the demands upon her, and one of the reasons is that within recent years through inventive minds of science alternative foods have been created out of an unchanged or diminished supply of raw products. One of these is ***Hebe.***

Hebe is a compound of evaporated skimmed milk and vegetable fat. *It is properly labeled and marketed for just what it is.* Hebe plays an important part in the economic food problems of the day. Hebe utilizes vegetable fat of very high food value. By using this highly refined vegetable fat a market is made for skimmed milk.

Of the 84 billion pounds of milk produced in 1917, less than 3% was condensed, and 41% was used for butter making. From the 41% made into butter there was left, as a by-product, 30 billion pounds of skimmed milk which the U. S. Dept. of Agriculture states was either fed to live stock or wasted. Hebe reclaims a portion of this skimmed milk and converts it into a nutritious food product.

Hebe, therefore, is a product, the manufacture of which creates a new and more important market for skimmed milk. The manufacture of Hebe is not an endeavor to gain large profits by replacing butter fat with a vegetable fat, for Hebe is a licensed product, the profits on which are regulated by the government.

Hebe is recommended principally for cooking and for coffee. Its use for these purposes widens the market for milk. The manufacture of Hebe provides a steady demand for milk. Dairymen realize the advantage of this when they reflect upon the fact that without regard to fluctuations in the price of milk, its production goes on every day. Hebe rescues for the consumer the valuable food constituents of the separated milk, and adds to them the healthful qualities of cocoanut fat, which the United States Bureau of Chemistry has pronounced high in food value.

Hebe is a distinctive alternative food having a place of its own, and its production, as has been shown in the foregoing, is a direct benefit to the Dairy Industry of America.

A booklet telling the interesting story of Hebe and its value to the Dairy Industry will be sent free on request. Address The Hebe Company, 3208 Consumers Building, Chicago.

Live Stock News Notes

The Greatest Shorthorn Sale

The annual sale of Shorthorns, nearly all calves, held by Anoka Farms, Waukesha, Wisconsin, November 30, resulted in an average of $1865 being placed on 48 head.

This is the highest Shorthorn average recorded in America since the famous New York Mills sale in seventies.

The top bull, Anoka Omega, a son of Lavender Sultan, fetched the top price, $12,000, and goes to head the F. C. Merry herd in Missouri. Anoka Omega was later made junior champion at the International. The highest priced female was Clipper Anoka 9th, a senior calf, that sold to A. J. Ryden of Illinois for $5500.

Hopland Berkshire Herd to Castleview

J. Francis O'Connor, Santa Rosa, owner of the Castleview herd of Berkshires, has recently purchased the entire herd of Berkshires maintained by A. W. Foster on his Hopland Ranch.

The Hopland herd, which was founded about the time of the P. P. I. E. has, since its begining, been regarded as one of the choice collections of the breed owned on the Coast.

Mr. O'Connor, it will be recalled, purchased the famous Brush herd of Berkshires and was highly successful in distributing them among the ranchers of Sonoma County, in a way that will be of great benefit to the breed.

Included in the Hopland purchase were a very high class lot of sows, and the herd boar, Iowana Rival Majestic.

Stalder Bros. Strengthen Show

Stalder Bros. of Riverside, who have one of the good herds of Holsteins in Southern California helped very materially to pull the Holstein show out of what looked to be, before the opening, a very bad situation.

For some reason the Holstein interests of the South did not see their way clear to make entries to anywhere near the extent the show deserved.

But Stalder Bros. showed up with a highly creditable string and made from one to three entries in nearly every class, thus adding strength and balance to the show. Most of the Stalder young things were sired by King Pontiac Netherland Segis 3rd.

Carlot Hogs Sold Well at Los Angeles

It had been planned to make the carlot show of hogs one of the strongest features of the Liberty Fair, and had the fair opened on scheduled time, an exceptional lot of hogs would have been in the pens. A large number of producers had "prepped" a carload for this particular show and had them ready early in October. When the postponement was announced most of the feeders did not feel justified in carrying their hogs along in the face of an uncertain opening and consequently most of the lots that would have shown found their way to the butcher.

Donald H. Graham was one breeder who held his hogs and made the show. Mr. Graham's carload consisted of February and March Durocs and, after winning first, was sold to Wilson & Company for 20½ cents per pound —said to be the Coast record. The carlot averaged 252 pounds.

The Conejo Ranch, Newbury Park, was second with a tidy lot of Hampshires that averaged 235 pounds. This lot sold for 17¾ cents—but in fairness to them it should be stated that there was not as wide difference between the first and second carloads as the price would indicate.

Dibblee Shorthorns Make Initial Show

Shorthorn men were very favorably impressed with the cattle shown by the estate of Thos. B. Dibblee, Santa Barbara. The cattle were selected by Manager John Troup, a Scotchman who knows good cattle and Clydesdale horses. Mr. Troup stated that the young Villager bull, Villager's Clipper, on which he had counted strongly, died a short time ago.

If present and prospective plans for the development of this herd materilize, the San Julian cattle will be factors to reckon with in California shows.

Miller's Shorthorns Now at Hollister

Thos. T. Miller, who has recently moved his Shorthorn breeding plant from near Los Angeles, to Hollister, was on hand when the Shorthorns were judged.

Mr. Miller stated that he is building a large cattle barn and that before long, he hopes to have one of the most modern breeding farms in the West.

His new ranch is located on part of the famous Pacheco Ranch, owned by the Pacheco Cattle Company whose headquarters are at Hollister.

Mr. Miller moved most of his Shorthorns to their new home early in November and his show herd was shipped immediately after the Liberty Fair.

Thompson's Pilot Defender

C. T. Thompson of Bishop, who made an attractive show of Durocs at the Liberty Fair, uncovered a surprise when he drove out his good aged boar, Thompson's Pilot Defender. This boar, a grand son of the noted Defender that was responsible for much of McKee Bros. success, was finally made grand champion.

Dr. Creamer Made a Killing

One of the most enthusiastic Duroc breeders of the South is Dr. Michael Creamer of Los Angeles, whose herd is maintained on his ranch at Ireland.

Dr. Creamer hasn't been in the business as long as some but he can show a good many of the older breeders a thing or two about feeding and breeding pigs. His young things shown at the Liberty Fair attracted a great deal of favorable comment because of their splendid size and "class." Not many men have the satisfaction of winning the reserve junior boar championship, and the junior champion and reserve grand champion on sows; first on young herd; first on herd bred by exhibitor; first on produce of sow; first on barrow; at their first show.

Conejo Ranch Makes Big Sale

One of the most important deals ever made in Duroc-Jersey swine, in California, was consummated during the Liberty Fair. Walter Gatten superintendent of the swine department of the Diamond Bar Ranch, Spadra, purchased 60 head of brood sows, bred and open gilts and three herd boars, from the Conejo Ranch, Newbury Park.

Mr. Gatten secured the complete herd of show sows, many of which were winners at the state fair and the Liberty Fair.

The boars selected include California's Great Wonder, grand champion at Sacramento; Latest Model, a senior pig; and Critic For Fair, a junior pig.

Mr. Gatten states that his firm is planing one of the top Duroc herds of the West and that before long they will have one of the largest herds.

California Ranks High in Testing Work

The dairy division, United States department of agriculture, has recently issued a directory of cow testing associations.

The report discloses the fact that there are at present 353 associations, representing 9778 herds containing 168,348 cows. The average number of cows per herd is 27.6 and the average number per association is 476.9.

California ranks sixth with 16 associations; second in number of herds in associations, having 653; second in number of cows, 19,814; first in number of cows per herd, 40.8; first in number of cows per association, 1238.3.

Two California county associations, Imperial and Ferndale, have 3000 and 2500 cows respectively. Only the Corcoran and Alameda associations have less than 1000 cows.

The January, 1918, estimate placed the number of milk cows at 23,284,000 and only .77 of one per cent are in cow testing associations. Assuming that there are approximately 550,000 milk cows in California, 3.6 per cent are in associations—a good showing for this state, but not a good showing for a state that does things in 100 per cent fashion.

Denker Strong in Sow Classes

L. A. Denker, Saugus, whose herd of Hampshire swine ranks as one of the leading herds in the West, made one of the most extensive exhibits at the Liberty Fair. The Denker entries annexed both the senior and junior sow championships and the grand championship.

Tilly Alcartra Past the High Mark

A. W. Morris & Sons, Woodland, report that on December 5, with 32 days yet to go, their marvelous cow, Tilly Alcartra, has already broken the world's milk reckord of 31,246 pounds. Up to that time she produced 31,300 pounds milk and is still milking right at 75 pounds a day. Tilly Alcartra is apparently determined to hold her place as the most wonderful cow in the world.

Champion Steer Brings 22 Cents

The Congdon & Battles senior yearling grade Angus steer, Black Yak, champion steer at the recent Liberty Fair, was sold to a Los Angeles department store for 22 cents per pound, which is probably the highest priced beef ever sold in Los Angeles.

2243 Pigs to the Red Cross

Farmers of Winneshiek County, Iowa, organized a Red Cross pig club last May and 2243 members agreed to donate a pig. The hogs have been shipped and it is expected that the sale will realize between $65,000 and $75,000, all of which will be donated to the Red Cross.

Bassett vs. Bassett

The old adage: Like father like son, was made good with a vengeance when A. L. Bassett, son of M. Bassett, veteran Poland China breeder of Hanford, won over his father in many of the classes at the recent Liberty Fair —and no one seemed to enjoy it more than the father.

The Bassetts are real live stock men—modest winners and good los-

ers. Mr. Bassett stated that their trade had been exceptionally good this fall and that they only had a few boars of serviceable age left. This firm has bred about 30 gilts and sows for spring farrow and the majority of them have been spoken for.

Bassett senior made the decisions in carlot classes.

Berkshires to Sell at San Francisco

It is more than likely that the annual Western Berkshire Congress Sale, usually held at the University Farm, Davis, will, this spring, be held at San Francisco during the week of the California International Live Stock Show.

These Congress sales have developed into established institutions, and have been important factors in the progress made along live stock lines in this state.

Each year the sale is preceded by the annual meeting of the Congress.

A Profitable Guernsey Cow

Apple Blossom of Indian Creek 32757, an eight year old Guernsey owned by H. P. Hamilton, Two Rivers, Wisconsin, recently completed a record of 14,107.8 pounds of milk and 702.57 pounds of butter fat, carrying a calf 275 days of her testing period.

This record qualifies her to the title of champion cow in Class AA, and replaces Benton's Lady Chesterbrook of Ingleside 28672, whose record was exceeded by 11.88 pounds of butter fat.

She commenced her test on August 14, 1917, after dropping twin calves on August 13, and it was only nine days after finishing her test that she dropped another bull calf. In thirteen months and nine days, this cow produced three calves worth from $100 to $250 each. Her own value increased several hundred dollars through her successful test and she produced over 700 quarts of milk which sold at ten cents per quart.

Deducting liberally from the total of these earnings for care and maintenance a sum remains equal to the earning capacity of a salaried man of no mean ability. Since September 9, 1914, a little less than four years, this cow has given her owners three heifer calves and three bull calves.

Foreign Live Stock Prices

A report from Amsterdam, Holland, under date of August 17, 1918, states that recent exportation of horses to Germany has caused speculation in them and great increase in the prices. According to current report a sound horse for draught or carriage purposes will command from $500 to $2000, while a pony or lame horse not seriously disabled, can be sold for $200 to $300. The high prices are due mainly to scarcity of horses. The advance in their prices, however, coincides with the increase in prices of all commodities which is from 100 to 500 per cent and even more in some cases in comparison with pre-war prices. Cattle are also very high priced chiefly for the reason stated above. From $200 to $400 is often paid for a good cow according to current statements on the subject. A similar report from Stockholm, Sweden, under date of August 21 reports the purchase of 250 horses made by the German military commission at 3400 crowns each, equivalent to about $1740.

Yuba County is offering tracts of land in her foothill section for a farm colony for war veterans.

RELEASING FAIR EXHIBITS

It is natural that fair managements should want exhibits of live stock in place on time for the opening, and want them to remain on display as an attraction to visitors until the gates close. But the necessities and convenience of exhibitors must also be considered, for after all the success of the show depends on them.

At the Kansas City Royal Show last month the directors of the Angus, Shorthorn and Hereford associations asked fair associations to limit the time required for exhibitors to be on the grounds from 9 a. m. Monday morning to Friday afternoon.

Of course this was meant to apply particularly to Eastern fair circuits, but it is well for all fairs to take notice.

At some fairs rules are always broken when there is good reason for it. At the Glenn County Fair at Orland for instance, the management makes the comfort and best interests of exhibitors the first consideration. If it is necessary for an exhibitor to get away before the last hour—in order to get to another fair—his premiums are paid and every assistance is given him.

But some boards are more arbitrary, and the new rule should find a place in all fair classifications.—W. S. G.

SOUTHERN DUROC BREEDERS MEET

Members of the Southern California Duroc-Jersey Breeders Association who were exhibiting or visiting the Liberty Fair at Los Angeles, held a special meeting and banquet the evening of December 12.

Matters of interest to the association came up for discussion, chief of which was a plan for holding a bred sow sale during February, 1920. Then breeders guaranteed 60 top gilts and with a year in which to get ready the sale should result in assembling a high class lot of entries, the selling of which should result in adding to the popularity of the Duroc in Southern California.

During the meeting a fund of $250 was handed to President Cramer to be delivered to the directors of the Liberty Fair as added premium money in the Duroc classes.

The following members of the association were in attendance:

Dr. Michael Cramer, Los Angeles, president of the association; R. K. Walker, Bonita, secretary; H. S. White, Chino, vice president; H. H. Brawley, Newbury Park; Donald Graham, Lancaster; W. B. Hewitt, Van Nuys; Walter Gatton, Spadra; Clarence Thomson, Bishop, R. A. Condee, of the George Junior Republic, Chino; and others interested in the development of Durocs in the Southwest.

The association numbers among its membership some of the biggest men in the live stock industry in the South, and much constructive work and development will result from the activities of the organization. Every Duroc breeder in the country south of the Tehachepi should lend his active support to the association.

Yearly records are very much in favor among a very large number of the beginning Holstein breeders in California at present, and that is as it should be. The true worth of a dairy cow is determined solely by her long time production and ability to transmit long time production, and the sooner the fact is realized by Holstein breeders the quicker will the breed take wonderful new strides in its progress.

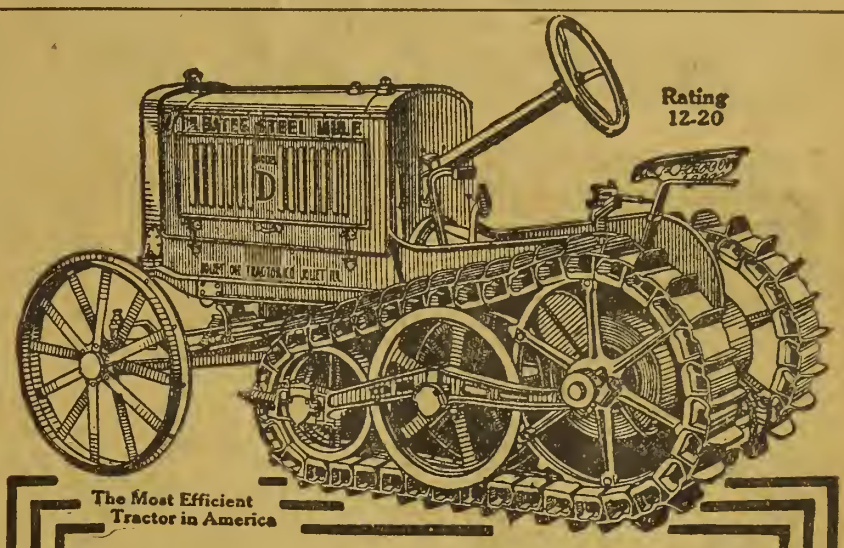
CONDENSARIES TO RECEIVE FULL SUGAR QUOTA

By a recent order of the food administration condensaries may now receive their normal requirements of sugar and new condensaries may be opened. The need of condensed milk abroad for the nourishment of the liberated nations and the Allies is officially reported to be extremely pressing. Shortage of feed and fodder throughout Europe has resulted in serious curtailment in dairy production abroad. Europe is expected to require butter and condensed milk from America in large quantities over a period of years.

Farmers of the United States are asked to prepare for furnishing the great quantities of milk that will be required by condensaries now existing in this country and those to be built.

Because he allowed one band of 1120 ewes, with their lambs, to wander over range which had not been assigned to him, while only a short distance away a second band got onto a nearby cattle range, C. H. Fee, a sheep owner of Ft. Bidwell, Modoc County, was recently asked by the United States forest service to contribute to the public treasury.

Check for $133.33, a considerable portion of which is assessment as exemplary damages, has been received at the United States depository in San Francisco.



LONG FIELD EXPERIENCE

has made the Bates Steel Mule crawlers a big success. It has brought the knowledge to build durable crawlers that practically double the usefulness of the tractor. These crawlers allow the tractor to pull much bigger loads and at the same time use much less fuel than if it were a wheel-driven type.

Six years of field experience with thousands of crawler tractors have taught the correct design for a three-plow tractor and what materials are necessary for giving long-life to the crawlers. Other knowledge equally valuable has come through this experience. We will gladly show you how you can benefit by the results of Steel Mule development.

If you are one of the few who have not Inspected the Model "D" BATES STEEL MULE we have our floor—be sure and do so at once.

THE ONLY CRAWLER TRACTOR ADAPTED TO BEET CULTIVATION WITHOUT MAKING CHANGES

Unsigned communications receive no attention.

Founder

I have a horse that has been lame for some time in the front feet. The hoofs seem to be separated from the center of the foot in places and there is where the soreness seems to be. He is so lame at times that he can not go. He eats well and is in fine shape otherwise. Please give cause and treatment. — Subscriber, Terra Bella.

The trouble is probably founder; inflammation of the soft tissues between the hoof and the bone of the foot. It might have been caused by an acute case of indigestion, taking a drink of cold water when overheated, standing in a cold draft of air when overheated or from any one of several other causes. The remedy is to soak the feet in cold water for half an hour once a day, putting a blister just above the hoofs. This will start a healthy growth of the hoofs and in time will relieve the irritation. Blistering ointment can be made by mixing half an ounce of cantharides, half an ounce of biniodide of mercury and four ounces of lard. Warm the ingredients when mixing but do not get them too hot. Clip off the hair just above the hoofs and brush the parts clean, then rub in the ointment with the ends of fingers for 15 minutes. Tie the horse so he can not reach the feet with his nose or he will rub it and blister his nose also. In 24 hours rub on plenty of lard and let the head down. This will form some scabs in the skin. In about two weeks you can brush the scabs off. Repeat the blister and continue to repeat it until three or four blisters have been applied. The relief in such cases is slow and is only complete when a full new hoof is grown, providing a relapse of the acute condition does not recur in the meantime. Do not overfeed the horse and be careful not to give him cold water when overheated. Letting him run in a lowland pasture where the feed will be moist continually and leaving the shoes off will also help.

Cough

For some time my horse has had a bad cough and of late seems to pant. What can I do for him?—Subscriber, Orange.

Have your druggist make a cough remedy for him as follows. Mix one ounce of the fluid extract of belladonna, one ounce of the fluid extract of digitalis, half an ounce of creosote four ounces of paregoric and enough simple syrup to make one pint. Give half an ounce of the mixture morning and evening. It can best be given by using a black rubber syringe that will just hold the dose and inject it well back in the mouth.

Boar Sick

I have a sick boar. Two months ago his scrotum and testicles swelled to about four times natural size. It has since reduced to its natural size; first one side then the other. The belly has since swollen up to about twice the natural size, his appetite is gone and he looks as though he would die. What can be done for him?—Subscriber, Oceanside.

Boars are sometimes bothered with a limy deposit in the male organs. Wash out the sheath with warm water with a little ivory soap in it. Use an household syringe and inject the soapy water well back into the sheath. Rub the scrotum with a mixture of one part turpentine to four parts olive oil. Put a teaspoon of baking soda in his feed once a day: It will dissolve the lime in the system and it will be carried off with the urine.

Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Value of Hen Manure

Will you please tell me how many pounds of nitrogen, phosphoric acid and potash there are in 100 pounds of hen manure?—Subscriber, Highland.

The content of poultry manure varies rather widely with the feed given, analyses showing amount of nitrogen to the 100 pounds of fresh manure ranging from 0.9 to 1.6 pounds, phosphoric acid from 0.7 to 2.0 pounds, potash from 0.25 to 0.9; in dry manure 2.13 pounds nitrogen, 2.02 phosphoric acid, 0.99 potash.

Home Made Vinegar

Can you tell me how to make vinegar from fruits? Are there any official bulletins or circulars to be had on this subject?—Subscriber, Upland.

The college of agriculture at Berkeley issued two leaflets on the making of vinegar from fruits. The first is "Home Made Vinegar," by F. T. Bioletti and W. V. Cruess; the second, "Candying Fruit, Making Fruit Vinegar and Salting Veletables" by W. V. Cruess. This latter leaflet is illustrated. Both may be secured free of charge by writing College of Agriculture, Berkeley, California. Also in the Cultivator of December 7 on page 584 will be found vinegar making directions by Mr. Cruess.

Lippia

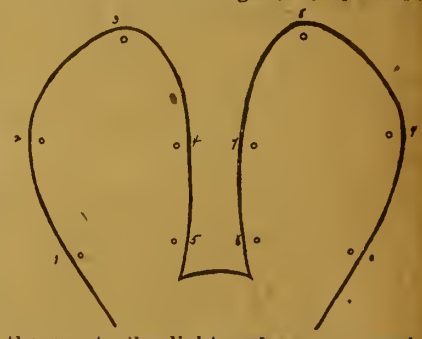
The lawn plant which I enclose seems to be dying out. Is it the nature of this plant to die in winter or what do you think the trouble is?—Subscriber.

The plant sent is Lippia, an evergreen tropical, injured by frost. The frosts this year have not been severe enough to affect Lippia except in very low sections. The plant is so hardy that I can see no other cause for its dying. Do not believe anything is wrong except temperature. It will be all right in the spring.—E. B.

Marking Rabbits Ears

Please tell me the proper way to mark rabbits to distinguish them from each other.—Subscriber, Victorville.

The writer uses this method of marking: Take small punch and cut hole at whatever part of the right or left ear is desired, just inside the vein that runs around edge of ear. Hold



the ear to the light and you can easily see where to press the lever punch. A hole in the lower outside of the right ear is (1); in the tip of same ear, (3); in tip of left year, (8). If you punch all three of these holes the number of that rabbit would be 138. Touch edge of hole with indellible ink and black dot will show if hole does

grow shut. Count holes from right to left and from low to high. Two holes doubles the number; two holes in tip of left year is 88; three holes triples the number, 888. Get small lever punch for this purpose.

Bronchitis

What is the matter with my chickens and what will cure them? They start just like they had a severe cold and gasp for breath like someone very bad with asthma. The first day they continually clear their throats as though they were choked. Some get well and others get no better until they can't eat, then I cut their heads off. I dissected a large rooster. His lungs were affected. There was a large chunk of substance around the lungs that looked like the yolk of egg stirred up, then fried hard. This apparently pressed on the lungs so they could not expand. Some of them wheeze so hard they whistle when they breathe. I gave coal oil. Some it seemed to help; others, not. They roost in an 8 by 10 by 7 chicken house. The cracks are not batted and there is no floor. The roosts are about three feet from the ground. I feed soaked barley, fresh skimed milk and clear water. They have good range and barn room with litter for scratch. —Subscriber, Kelseyville.

Your chickens are having a severe form of bronchitis, probably due to the unbattened cracks of your chicken house. Such a house, especially if it is crowded, is very hard on fowls Bronchitis always comes from exposure or drafts or dampness, and your hens will not get well until they are in warm, dry quarters. Put the sick ones in a comfortable sunny place. Feed bread moistened with milk if they will eat, and add to this food two grains of black antimony twice a day. A drink made of flaxseed steeped in water is often helpful. Sometimes the attack can be checked in its early stages by giving ten drops of turpentine in a teaspoon of castor oil, and repeating the dose after five or six hours.—J. A. K.

Dry Mash

I have six Ancona hens and eleven pullets, all layers, that were moved onto this 40 acre fruit ranch the middle of October and have hardly laid two or three eggs a day ever since. I feed egg mash and some scratch feed. They find so much on range they don't seem hungry. They do not care for mash. Ancona men have told me that this breed doesn't like mashes as well as any other breed. And such has been my experience the few years I have kept them. Is it best to give them any mash? — Subscriber, Freestone.

Why not keep the dry mash before the hens and at least encourage them to eat it? Perhaps it is because they have not been accustomed to dry mash that they do not seem inclined to it. Hens are like children. They hate strange dishes, but there is no reason for not making them eat what is good for them. I should keep them shut up part of the day, with the mash before them. They will learn to eat it if you do not allow them to fill their crops first with other things. Moving to a new home often checks or delays laying.—J. A. K.

Liver Trouble

I have had four Rhode Island Red hens die in the past month. They appear drowsy for a few days then just stand in one spot until they are dead. They are just beginning to lay, are fed corn and run at large. I cut one open and found the liver very large and one of the lungs was a dark red and had small yellow spots all through it. I wonder if there is anything that will help them and what is the cause? —Subscriber, Buena Park.

Corn, while it is a very valuable feed, is not good as an exclusive grain diet for hens. It contains too much fat and is apt to clog the liver. I think your hens are suffering from liver trouble due to this corn diet. Give them a mash with a large proportion of bran in it—say three parts bran by weight, one part ground oats or barley and one part beef scrap or fish meal—and see that they have all the greens they will eat. For the scratch feed give barley sprouted three to five days with your corn. Epsom salts in the drinking water once a week (about one-half tablespoon per hen) or the same amount in a moist mash, will help to relieve their congested livers.—J. A. K.

Grapes on Adobe

Would Thompson's seedless and Muscats grow well on dobe ground? I have been told that they grow too much to vines. Would it be all right to plant grapes on sub-irrigated soil where the water comes up to three and four feet in the rainy season and five to six feet in summer?—Subscriber, Terra Bell ..

This query was referred to F. Flossfeder of the state university, who answers:

"It is possible to grow Thompson Seedless and Muscats on adobe soil. It will be, in a good many cases, somewhat difficult to start the plants on account of the peculiar nature of the soil. In most cases vines planted in this kind of soil will make a vigorous growth and the vines can be pruned longer in order to counterbalance their vigor. I very much question whether it would be advisable to plant grapes on sub-irrigated soil where the water comes to between three and four feet of the surface. In the winter time as well as in the summer the grape vine demands a well drained soil."

Weights of Poultry

What should be the average weight of young roosters, also young pullets of four weeks old from a good strain of Rhode Island Reds, Plymouth Rocks, Brahmas, Orpingtons, White Leghorns? How much at eight weeks and how much at 12? — Subscriber, Woodlake.

I have not figures for all the breeds named, but an experiment at the Storrs experiment station in 1915 with Leghorns and R. I. Reds brought out the following facts: Reds require 6.5 weeks to make the first pound, 3.5 to make the second, and 5.5 to make the third. Leghorns require 7.5 weeks for the first pound, 5.5 for the second, and six for the third. A Red four weeks old should therefore weigh two-thirds of a pound; eight weeks, 1.66 pounds; 12 weeks, 2.34 pounds. Leghorns four weeks old should weigh 0.53 pounds; eight weeks, 1.2 pounds; 12 weeks, 1.86 pounds. In the case of the Reds the figures apply to both sexes. In case of the Leghorns, to pullets only after eight weeks, since pullets and cockerels were segregated at that age. Rocks and Orpingtons will weigh a little more than Reds at the same age; Brahmas about the same, for the Brahma is a slow grower.—J. A. K.

Rice Hulls for Fertilizer

The two rice mills here produce a lot of hulls. Lately a pile, the accumulation of about two years, has been reduced to ashes. Now would this make good fertilizer or top dressing for alfalfa? The haul is short and it can be had for the taking away. Our soil is rather heavy, some of it bordering on the 'dobe of the rice section.—Subscriber, Biggs.

This question was reported to Prof. J. S. Burd of the state university and he answers:

Rice hulls consist almost entirely of silica. The small amounts of potash and phosphoric acid they contain would hardly justify the cost of application.

Run All Farm Machinery With Your Car

Automobile Pumping Water with LAY Porta Power

Make Your Car $600 More Valuable With This Implement

YOU can make your car more profitable than a farm hand—make it pump water, run feed mill, hay hoist, hay press, cement mixer, milker, separator, etc. —by means of LAY Porta Power, an implement instantly connected with the rear tires and delivering 5 to 8 H.P. at the belt.

A stationary engine would cost you $150 to to $300 more, yet LAY Porta Power is far superior because it takes the engine to the job, not the job to the engine. It therefore does much more work during a busy season, and will add several hundred extra dollars to your income.

LAY Porta Power

LAY Porta Power can be quickly taken anywhere that your car can go. You can apply it in less than one minute, and in the same length of time can disconnect it and drive off. No adjusting of car. Hundreds of enthusiastic farmers write and say engine is not overheated, and no tire wear noticeable. Strongly made. Good for a lifetime.

VALUABLE FACTS about more money with Portable Power on the Farm and full particulars about LAY Porta Power. Mail coupon.

POULTRY

HOT AIR
Is great stuff, coming up from the furnace, but it doesn't get you much of anywhere in the poultry business. Profitable results come from having experience, good judgment and work. Don't let the experience cost you too much—there's where good judgment comes in. How about buying chicks? Are you influenced by big claims, de luxe adjectives, exorbitant egg yields, high prices, cheap prices? Call on your good judgment again and play safe. When you can, investigate. Will you risk a card and send for our circular?

We hatch White, Brown and Buff Leghorns, R. I. Reds, Barred and White Rocks, Black Minorcas, capacity 12,000 weekly. Quality of breeding stock and chicks will please you as will also the price and service. You can order a score or thousands. Safe delivery guaranteed and prepaid price quoted when requested.

"TESTED" and "GUARANTEED" Screw pipe, casing, valves and fittings. Riveted slip joint pipe; all sizes. New and used. "Pacific" pipe for all purposes.
PACIFIC PIPE CO., Main and Howard Sts., Est. 1906. San Francisco

For Sale—5500 feet 10-inch, No. 14 used riveted steel pipe, 2800 feet 11-inch, 2500 feet 12-inch, 2000 feet 4-inch. L. B. Vollmer, Monrovia, Cal.

MISCELLANEOUS

Soil Analysis: Is It Worth While?—Here is an answer that everybody can understand: it gives PRACTICAL RESULTS. It brings the user of abundant returns,—1st, in the saving of fertilizers; 2nd, in increase of his crops; 3rd, in improvement of his groves. I ask everyone whose citrus grove is not doing all that it should do to send for my free new folder (a post card will do) which gives much interesting information on the subject. R. R. SNOWDEN, Agricultural Chemist, 320 Stimson Building, Los Angeles, California. Phones: Office Pico 842; residence West 702.

CORRUGATED IRON—LUMBER. We are wrecking the Pacific Portland Cement Company's old plant near Suisun, and have about 100 tons of fine corrugated galvanized iron. Will fill orders any size.
We are also taking down the old Tanforan Race Track, and have about 1,000,000 feet of fine lumber and several thousand feet of good T. & G. redwood. Lumber sold in carload lots only. Get in touch with us.
THE MENDELSON CO., 748 BRANNON ST., SAN FRANCISCO.

I Ship 10 pounds walnuts for $3.00; 1 box of lemons 45 to 48 for $1.00 prepaid any express office. Have dried prunes and apricots. Ernest Vince, Santa Barbara, California.

Made of Redwood, Hawley's Perforated wooden well casing, the best and cheapest well screen made. Send for descriptive circular. G. M. Hawley, La Mesa, California.

For Sale—600 10-gallon Hisslow smudge pots, orchard heaters, in good condition. Address H. D. Meyers, 23 N. Raymond, Pasadena, Fair Oaks 3145.

For Sale—Walnut grafting wood or budding wood from vigorous proven Eureka walnut trees. Dr. C. A. Anderson, Zelzah, California.

To Reduce the high cost of living, send for our Wholesale to Consumer Catalogue. Smith's Cash Store, 112 Clay St., San Francisco.

For Sale—700 smudge pots in good condition, mostly filled, some extra fuel; $200 for the lot. G. A. Starrett, Rialto, California.

QUESTIONS AND ANSWERS

Continued from Page 645

Removing Tree Stumps

Please tell me how one can easily remove tree stumps out of the ground. —J. A. Smith, Owensmouth.

The method to be used in removing tree stumps depends altogether on the size of the stumps to be taken out and the texture of the soil in which they grew. Small stumps up to ten or twelve inches in diameter can be removed cheaply by any of the stump pulling machines but those of larger diameter will have to be removed by specially heavy machines or by the use of dynamite. Dynamite can be very successfully used on large stumps to split them into small sections which may be removed by a light stump puller.—J. B. N.

Getting Rid of Spiders

Will you kindly inform me of any method of doing away with spiders (black and otherwise) in a house? Have just rented one that is infested. Is not air tight enough to use formaldehyde efficiently. Also would like to know an antidote for black spider bites.—Subscriber, Alpaugh.

It will be very difficult to free the above described house from spiders. Spraying the sides with carbolic acid diluted with water, using one pint of carbolic acid to 25 gallons of water will afford temporary relief. If vines or bushes are growing on or against the sides of the house it will benefit greatly to build trellises and train the vines two or more feet away from the house. There are but few spiders that are dangerous because of biting persons. Probably the only one found here, and that only occasionally, is a black spider with a body not larger than a small pea and having a reddish spot on the under side. Dampened soda or borax, if applied immediately, is used as a remedy for all insect bites, and permanganate of potassium dissolved in water is also very efficient. The efficacy of any of these remedies depends on their immediate application as the poison soon spreads through the tissues and is out of reach of simple remedies.—J. B. N.

Bleaching Walnuts

I would like to hear in your paper the best methods of bleaching walnuts which you know of being used, the time to leave in the bleachers, do they wet them and do they dry after? —Subscriber, Napa.

The commercial bleaching of walnuts is not practical in a small way but the following formula and method may be helpful if only a few hundred pounds are to be processed and there is no association of which you can become a member. The walnuts must be perfectly dry before the bleaching is attempted.

Twenty-five pounds of bleaching powder (chloride of lime), 18 pounds sal soda, 50 gallons of water. Made by dissolving the bleaching powder in water, allowing insolubles to settle; then draw off the clear liquid and to it add the dissolved sal soda; agitate, and then allow the calcium carbonate to settle; draw off the clear liquor and make up 50 gallons with water. This should weigh about 425 pounds avoirdupois.

To bleach.—Use this liquor, adding sulphuric acid (strength 43 degrees B) in such quantity as not to amount to over .15 of one per cent absolute sulphuric acid in the whole bleaching mixture—in other words, to the 425 pounds bleaching liquid add one and one-fourth pounds of sulphuric acid of strength 43 degrees B, i. e., 50 per cent acid.

Dip the nuts five to ten seconds; then wash with water and dry at once. Do not use metal containers for the liquid at any time nor metal baskets to dip the nuts.—J. B. N.

Pruning Blackberries

On returning to a neglected place I found a tangled thicket of blackberry vines. I am cutting out the dead canes. The living ones are very tall, seven or eight feet high. Should they be trimmed back or left as they are? —Subscriber, Escondido.

A complete answer to the above would require more data on the conditions, whether the canes are in rows, and the number of them, etc. The ideal condition for the number of canes is in rows about eight feet apart and four to six canes every five or six feet in the row. If there are more than this there should be a thinning out of the number. When the new canes start in the spring about the above number should be allowed to grow, the others taken out when small. The bearing canes will have a number of branches. Some of them may be four feet or more long. The upper ones shorter. The main cane should be cut back to a point near the upper branch and at least half the length of all the branches cut off. If there is any shortage of water for irrigation cut off at least two-thirds the length of the branches. Under this treatment and with a good irrigation every week after the berries begin to show red a large crop of fine berries may be expected. Unpruned berries almost invariably start many more berries than the canes can properly mature. They are small and usually have a hard core that does not soften properly when cooked. Well pruned, the berries are large and without the hard core and in all respects much more satisfactory.—H. C.

EXPRESS EMBARGO REMOVED

The embargo on the shipping by express of standard bred poultry for breeding purposes has been removed. This is good news to the poultry breeders of America as all shipments will be carried by all express companies without delay.

Ices and sherbets may now be manufactured. Restrictions were removed December 1.

WHY NOT FEED ACORNS?

According to C. Hart Merriam, who writes in the August Geographic on "The Acorn; a Possibly Neglected Source of Food," the acorn is worthy of more attention than it has hitherto received from poultry feeders. The Indians of California from the earliest times have been accustomed to gather the acorns in the fall and pound the meats, after they are dried, into a kind of flour or meal which is dried and stored away to be made into mush and bread. This flour, which is at first very bitter, is leached with warm water until the bitterness has disappeared. It may be mixed with corn meal or white flour in the proportion of one part acorn meal to four parts corn or wheat or made into bread or mush by itself. The mixture is considered more palatable, but the Indians often use the acorn meal alone.

The analysis of acorn flour shows that when leached it contains 11.34 per cent water; .29 per cent ash; 19.81 per cent fat; 4.48 per cent protein; 62.02 per cent carbohydrates and 2.06 per cent fiber. The above analysis was made from very old flour from the California black oak. Another sample from the California valley white oak yielded: water, 8.7; ash, 2; fat 18.6; protein 5.7, carbohydrates, 65. These analyses show that while acorn meal would hardly be suitable for laying hens, since it contains too much fat, it would be an excellent fattening feed for chickens and turkeys, as it is known to be for pigs. It contains from 18 to 25 per cent of nut oil, and when mixed with other meals, should be valuable wherever oil or fat is useful.—J. A. Koethen.

BEST FEED

There is no best feed. This for several reasons. Every poultry feeding center has different transportation problems and also some home grown feeds may afford much cheaper feed than imported stuffs, but there are many most excellent proprietary feeds. Then there is dried buttermilk, cotton seed products, cocoanut products, packing house wastes and other similar concentrates which may be added to local grown stuff. Mrs. Koethen has recently given hearty recommendation to certain proprietary poultry feeds and adds:

If you prefer to mix your own mash, this one, which is recommended by Professor Jaffa, is composed of ingredients generally accessible at this time: Six parts bran (by measure); two parts ground barley; one part corn meal; one part alfalfa meal; 1 part soy bean meal; one part beef scrap; one-half part coarse bone meal. Linseed meal could be substituted for the soy bean meal if you prefer, but the soy bean meal is preferred by most feeders. If you have fed only bran and beef scrap, it might be all right to leave them in hoppers separately before the hens, but they are too fond of the dry buttermilk to have free access to it, and linseed meal, if fed freely, is hard on the digestion. It is better to mix all together into the dry mash and thus compel the hens, as far as possible, to eat a balanced ration.

Poultry at the Liberty Fair

Written for California Cultivator By Jean A. Koethen

IT IS always a rather difficult matter for one who is not up on all the show points of all the breeds, to describe a poultry show intelligently. You feel shaky for fear you may not notice which bird has the color special or the shape special for its breed, or may pass by the best Ancona or the most perfect Andalusian without an appreciative glance. That is why I leave it to the list of awards to say which bird was best in each particular and confine myself to more general topics.

Considering the number of postponements, and the nearness in date of two other shows, the Liberty Fair show was a surprisingly good one. Not in numbers, for a large show could not be staged in the limited room under the grandstand, but in quality. The birds were good, all of them, and some extremely good. There was a good crowd looking at them, too, — not all at once, but a steady stream of poultry lovers, farm folks and city people, admiring, discussing, taking notes of breeders' names and addresses. One only needs to attend such a show occasionally to realize how near to the hearts of the whole world are its feathered pets.

The first impression of the Liberty Fair show was a red one. Rhode Island Reds were twice as numerous as birds of any other breed. I counted 140 entries and may have skipped some. "Red" alley was worth going a long way to see and was constantly filled with admirers of these useful and beautiful birds. It is interesting to note in passing that more than one strain of Reds is now advertised as "bred to lay." An enthusiastic breeder called my attention to several eggs in the nest boxes in his utility pens—and the fact that he had provided nests was sufficient proof of his faith in his hens. Nothing could stop their laying. He also told me of a pen of six hens that averaged over 200 eggs apiece last year. It is a fine thing that we are coming to demand egg records as well as type in exhibition birds.

If the first impression of the show was red, the second was white. White Wyandottes, which have been somewhat neglected on the Coast, though very popular in the East, were out in full force. And such fine specimens. Evidently several skilled breeders are taking them up,—a move which will be for the interest of the entire poultry industry. Beauty, fecundity, rapid growth and excellent table quality are found in one package—so their admirers say. They are as good layers as the Reds and reach broiler size sooner.

Light Brahmas, Anconas and Andalusians were all rather large classes, but if I am not mistaken all the Brahmas and Andalusians came from the yards of two or three breeders. Mrs. Babb's Brahmas, which have attracted much attention at recent shows were conspicuous for their absence. Mrs. Kate Hamilton and J. R. Huddleston have made a great success with Andalusians, but have apparently few followers, probably because blue birds are more difficult to breed than other colors. Anconas have been taken up by several breeders who had already made reputations with other breeds, among them A. A. Bamford, the White Rock man, a fact which certainly speaks well for the solid virtues of this attractive breed.

I counted 64 Anconas, 47 Light Brahmas, 37 Andalusians and 30 Black Minorcas. Other classes were smaller but contained many good birds, among them W. G. Stewart's Orpingtons which always take most of the Orpington ribbons. There was the usual sprinkling of Hamburgs, R. I. Whites, Sussex, Rhinelands, White and Buff Rocks and good, but small classes of Barred Rocks and Cornish. White Leghorns were too busy, perhaps to be out in large numbers, but there were some good utility yards and several excellent single entries. Bantams were out in all colors and styles, including Black, White and Buff Cochin, Rose Comb Black, Partridge, Silver Duckwing, Black-breasted Red Game, Patriot and Crested Polish.

Perhaps no other exhibit attracted as much attention as the turkeys. There was a long string of the Mammoth Bronze variety, all big, vigorous, attractively colored specimens, a credit both to their owner and to the show, and a few fine White Hollands. A few Toulouse geese and Runner and Rouen ducks made up the water fowl display.

If it is true, as we like to believe, that the annual poultry show indicates the prevailing fashion in feathers, then we must conclude that the hen highest in public favor this year is the hen that is both a "looker" and a layer. Fine feathers are all right and greatly to be desired if they adorn a productive body. If not, points are of little value. Our utility stock is being steadily brought to standard in type and color and our show stock is being bred for eggs as well as points. This is as it should be and is perhaps only of many results of the war.

CAPONS ON THE FARMS

By Mrs. H. Ament

Capons are profitable anywhere but particularly on the farm because they can range and pick up one-half their feed. Every cockerel is a waste and expense and every poultry man wants to know what to do with him. If you caponize him you have turned waste to profit directly and indirectly.

Directly, because a rooster will eat twice what a hen will eat and produce only sex energy; indirectly, because the poultry yard will be quiet and "Biddy" can lay more eggs and infertile ones. When a cockerel is about six or eight weeks old the sex organs should be removed; at once they will begin to grow large and awkward and this will continue for six months when they will take on flesh until they weigh from 10 to 15 pounds.

Turning your cockerels to some account is a satisfaction, but selling a bunch of real capons in February and March, when there is no poultry meat, and realizing from $5 to $7.50 on each capon is gratifying to say the least.

TRUCKS FOR RURAL PARCEL POST

By Robert H. Olcott

The intention of the postoffice department to enlarge the rural parcel post by the installation of trucks, and thereby reduce the cost of postal transportation sufficiently to compete on an even basis with freight rates in an effort to reduce the high cost of living, and incidentally make use of the large number of trucks which the government will have little use for, now that the war is over, stimulates the hope that the producer and consumer are on the eve of a decidedly better acquaintance. For it has long been known that in most instances the high cost of distribution is one of the main reasons why city folk have to pay such a large price for products which net the producer but a modest return for his labor.

But even under present conditions the parcel post affords an opportunity for the farmer in remote sections to profitably dispose of some of his extra products for cash to the city resident to a far greater extent than is commonly practiced.

Take for instance, farm cured bacon and pork. There are any number of farmers living within 200 miles of the city who raise say 100 pounds of pork more than they consume, whose only market is the general merchant in their locality to whom they trade this extra meat, at a very reasonable price, together with their other products, for the staples which they have to have; the commodity of money rarely entering into the transaction.

On the other hand there are plenty of people, including the writer and several of his neighbors, who would welcome a chance to buy for cash smoked or salt pork at regular intervals, at the price which the country merchant pays for it (in trade), or even a little more; and at this time of the year might even take a half or whole hog (dressed) and divide it up among ourselves. Thus making it better for all concerned. And there is no reason why a market for other spare products cannot be found in the same people who buy the meat. All that is necessary is to see that the quality and price are right and that the product is well packed. All of which should be very simple.

TRACTOR PRODUCTION IN THE UNITED STATES

An investigation of the tractor situation in this country recently was completed by the office of farm equipment control of the federal department of agriculture. In connection with this investigation a report was received from every tractor manufacturer in this country concerning the number of tractors manufactured and their distribution between January 1, 1916, and July 1, 1918.

A summary of these reports is given below:

Number of Tractors Manufactured

1916	29,670
1917	62,742
January 1 to June 30, 1918	58,543
Total for 1916, 1917, and first half of 1918	150,955

Number of Tractors Sold—

To users:	
1916	27,819
1917	49,504
To exporters:	
1917	14,854
1918, first six months	15,610
Number of tractors on hand, in transit, or in hands of dealers at time of report (August, 1918)	11,388

Deep plowing will destroy grasshopper eggs and save the spring crop.

GOPHER A SERIOUS CROP PEST

The pocket gopher does more injury to crops than any other mammal. Exterminate it by using poisoned potatoes or apples or by trapping, advises Dr. Lee R. Dice, instructor in zoology in the Kansas state agricultural college .

"Alfalfa fields furnish almost ideal conditions for the development and multiplication of gophers as their burrows are not broken up by plowing and the root system provides an abundance of food.

"Gophers are stupid animals and will blunder into almost any trap that is properly set, and they can be poisoned easily at little cost and labor.

"The natural food of gophers consists of roots and seeds and succulent vegetation drawn down from the usrface. Hence a substitute of poisoned potato, sweet potato or apple can be used effectively. A few grains of strychnine inserted by means of the tip of a pen knife into such food placed in the burrows will serve the purpose. A sharp stick can be used to open the tunnel.

"Trapping is effective, steel traps set in tunnels being recommended. The light should be excluded by a board, which will also serve to keep the opening free from dirt. If this is not done the gopher will come with a load of dirt to fill up the hole. Other traps are on the market.

"Besides destroying the root systems the gopher covers much vegetation with mounds of soil. This often hinders harvesting as well as covers the grain."

TRACTORS RELIEVE BRITISH FOOD SHORTAGE

Changes in agriculture due to war are especially striking in the United Kingdom, where tractors have made possible increased crops in the face of a labor shortage. Since the beginning of the food campaign in November, 1915, when it became evident that the war would be long, Great Britain has imported more than 8,000 American tractors, and has orders outstanding for about 5,500 more.

Due largely to the operation of these machines, the combined acreage of wheat, barley, oats, rye, corn and potatoes in England and Wales is about 33 per cent greater this year than in 1916. According to the American consul general in London in a statement received by the United States food administration, the use of tractors in plowing has completely revolutionized farming methods. It is pointed out, however, that the large increase in cultivated land has been possible partly through plowing up pastures, and the cattle industry has consequently declined. This condition emphasizes the dependence of Great Britain on the United States for beef.

CHEAP BAGS FOR BEAN GROWERS

The California Bean Growers' Association announces that it has secured a special lot of bean bags at a reduced price and that its members may purchase these bags from the association at actual cost and without the addition of any brokerage or commission.

The quantity now on hand is 100,000 of 100 pound bags, the price of which to members will be 25¼ cents f. o. b. San Francisco. The association also has 50,000 of 80 pound bags which can be furnished the members at 20½ cents f. o. b. San Francisco. This offer is of course subject to prior sale, members being supplied in the order in which they filed their application.

What Keeps the Tractor on the Job?

You can't get full service from your tractor, unless *all* the fuel is ignited instantaneously. The one sure way to get the full power that comes from this complete ignition, is to have

BOSCH
MAGNETO IGNITION
with Bosch Impulse Starter

The rip-roaring Bosch sparks drive into the firing chamber with such penetrating power that all the fuel is completely ignited.

Besides this powerful spark, Bosch has the rugged, sturdy staunchness that stands under the hardest use. It will see you through any job, however tough and do it year in and year out.

With the big, strong, simple Bosch Impulse Starter, now in general use, you also will be sure of quick, easy starting.

Bosch costs more than ordinary ignition systems. Yet it is standard equipment on many fine tractors, because the manufacturers know it is the best. They want to be sure of giving real service, even at higher cost to themselves.

Whatever the make of your tractor, it can have a Bosch Magneto. The maker will install Bosch if you ask for it when you order, and the tractor you already have can have a Bosch fitted by any Bosch Service Station.

Be sure to specify: "Bosch Magneto Ignition" on your order

GOOD FARMING PAYS

Protect your crops against drought by using the Western Pulverizer, Packer and Mulcher for preparing your seed bed and keeping a moisture-retaining mulch on your growing grain.

The Western pulverizes, packs, mulches and makes a perfect seed bed in one operation, saves time, horse power and ⅓ seed, still producing a better stand. Seed will start at once when seeded. Especially adapted for breaking crust on growing grain, will break the hardest crust, forming it into a moisture-retaining mulch without injuring growing grain and will raise a crop with half the moisture during growing season.

MADE IN 12 SIZES, 1 AND 3 SECTIONS FOR HORSES AND TRACTORS

This year's crop will bring high prices; make it a record breaker by using the Western. Free illustrated catalog describing machine and its principle, shows its work by pictures taken in the field, gives nearest shipping point to you, contains valuable information on up-to-date farming. Worth its weight in gold to farmers and land owners. Send for it today.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Eucalyptus Damaging Orchard

Four years ago I bought land and set it to lemons; my neighbor had a row of young eucalyptus about one foot on his side of the line. The eucalyptus get no irrigation except from my grove. The result is my first two rows of lemons are greatly stunted. Have I a right to put a ditch on the line and cut the eucalyptus roots, or could I compel my neighbor to do it? Could he be compelled to dig up the eucalyptus trees?—Subscriber, Long Beach.

It has been directly decided in this state that where the trunks of trees are upon one property and the roots and branches extend into or over adjacent property that said roots and branches are the property of the owner of the adjacent property; he is entitled to cut them off at the division line and cut the roots, and thus himself abate the nuisance. Or he may bring action for damages and to compel the owner of the trees to abate the nuisance; such would doubtless be your best proceeding as there is but little question that in the case of eucalyptus trees, by reason of their quick growth and water searching proclivities, any ordinary ditching would only afford temporary relief and the shading of the trees would undoubtedly have a bad effect; the trees should be eliminated.

Stolen Bicycle

I left a bicycle in a shop for repairs. When I called for it I was told it had been stolen by thieves who had broken in. Must I lose the bicycle or must the repair man make it good?—Subscriber, Perris.

This being a case of deposit for mutual benefit of the parties, the depositary is bound to use ordinary care in relation to the bicycle and is responsible only for ordinary negligence. He is not an insurer of the property nor is he responsible for losses resulting without his negligence such as by theft or fire. If the bicycle was placed in his shop, the shop locked up securely and in the usual manner of such shops, then he is not liable for the theft of the bicycle.

Liability of Stockholder

I own stock in a corporation which is pursuing a policy which I consider disastrous. There is no market for the stock. How can I avoid liability for my share of any further liabilities incurred by the corporation?—Subscriber, Glendora.

There is only one method pointed out by the code and that is an unconditional transfer of the stock upon the books of the corporation. If you are considering only the avoidance of liability the stock of the corporation is doubtless practically worthless and a very trifling consideration would be ample compensation; it would not affect the validity of the sale that the person to whom you should sell might be execution proof; but you should be careful to see that there was an actual transfer of the stock upon the books of the corporation into the name of the vendee, a cancellation of your stock certificate and issuance of new certificate in the name of the vendee.

Straw Not Paid For

During this season I let a man, claiming to be a government buyer, have straw for which he agreed to pay as soon as baled. He baled the straw and shipped it, but has failed to pay for it or answer my letter. How should I proceed to get my pay?—Subscriber, Gridley.

The method stated is hardly the usual method pursued by the United States government in purchasing, and it is possible that your buyer may turn out to be a man of straw. You might ascertain the name of the consignee and where the straw was shipped to, also the name of the consignor and his title, if any; this may be ascertained from the railroad agent. If it is in fact a government shipment, you can thus trace out the department and properly place your claim; if not you may locate your man or set of men and take the matter up with the district attorney of your county or with the United States district attorney.

THE LIBERTY FAIR

Continued from Page 627

movement from ground beyond the roots on all sides, and, if irrigated, will suffer from too much free water held in the broken area by unbroken walls about it. Lines of charges should follow rows of trees at least one way, and if possible both ways. The middles of the squares may be left for blasting later on if desired.

Trees and other crops planted on hardpan soil that is not broken are bound to suffer during dry weather from a direct lack of water, owing to the failure of the moisture movement in the compacted ground beneath the roots. They also may starve, even though fertilized heavily, because of the lack of humus and bacterial action necessary to make the plant food available and to deliver it in proper solution to the roots. Trees in hardpan also suffer from wind damage. Blasting their immediate beds enables them to anchor themselves, but does not by any means bring about right feeding conditions.

The orchards and the garden offer particularly easy means of developing local experience in this method of managing hardpan. A small area well broken up, and given plenty of humus in the form of cover crop roots, soon ought to demonstrate its superior productiveness. On the results then can be based the plans for the larger expenditure necessary to treat many acres.

FEEDING VALUE OF SKIMMILK

Experiment station trials on 740 pigs show that when properly fed as a supplement to cereal grains (say, one pound grain to three pounds milk), 100 pounds of skimmilk will replace 28 pounds of grain that would otherwise have to be fed without the skimmilk. Using this as a basis the Michigan College of Agriculture figures out the relative value of 100 pounds of skimmilk with grain at varying prices:

Cereal grains Price per 100 lbs.	Relative value of 100 lbs. skimmilk
$1.00	$ .28
1.25	.35
1.50	.42
1.75	.49
2.00	.56
2.25	.63
2.50	.70
2.75	.77
3.00	.84
3.25	.91
3.50	.98
3.75	1.05
4.00	1.12
4.25	1.20

EVERY ONE SATISFIED

During the Southern California Fair held at Riverside last month the local Red Cross chapter conducted a raffle for a Duroc-Jersey boar bearing the militant name of General Pershing. A member of the Cultivator's staff happened to be the winner and the General became the property of this paper and an immediate problem.

Of course we have always been interested in this particular branch of animal husbandry and have entertained the hope that some day we might take a place in the ranks of the breeders, but we have always felt that we would prefer to select the time when it would be most practicable. Naturally, then, to suddenly acquire a pig—and a boar pig at that—when we were in no way prepared to properly take care of "half a herd" was disturbing, to say the least.

In casting about for a way out of our difficulty, and at the same time provide an opportunity for the General to aid in the campaign for more and better hogs in California, we decided to present him to the George Junior Republic at Chino and and we are just in receipt of the following letter from C. M. Davis, managing director of that institution:

"Our Mr. Condee has just handed me your letter to him of October 31 in which you state that the Cultivator desires to present to the Junior Republic the fine Duroc-Jersey boar known as "General Pershing."

"On behalf of the board of trustees, and the writer in particular, I wish to extend to you our great appreciation of this gift. It helps in such a fine way with our boys, as it shows to them, in a marked way, just how friends on the outside interested in stock raising, feel toward the Republic, and the way our boys are caring for our animals and their growing interest in the stock industry.

"Mr. Condee feels that we can use "General Pershing" to great advantage in the betterment of our herd."

General Pershing was bred by the Fontana Land Company, and was sired by Educator Col. and his dam was Crimson Lady Wonder.

The Cultivator Patterns

6714—Children's Dress. Cut in sizes 4, 6, 8 and 10 years. There is a broad box-plait at the center front of the blouse, with a corresponding plait in the skirt.

9055—Ladies' and Misses' Waist. Cut in sizes 34, 36, 38, 40 and 42 inches bust measure. The lower edge of the vest is cut in points which extend down over the girdle.

9054—Ladies' and Misses' Shirt Waist. Cut in sizes 34, 36, 38, 40, 42 and 44 inches bust measure. The collar is cut in fancy outline and is edged with a lace frill.

9077—Ladies' Dress. Cut in sizes 36, 38, 40 and 42 inches bust measure. The waist is semi-fitted and the skirt is a two-piece model.

9069—Ladies' and Misses' Dress. Cut in sizes 16, 18 years, and 36, 38, 40, 42 and 44 inches bust measure. The two-piece skirt is gathered to the underwaist.

9063—Child's Undergarment. Cut in sizes 2, 4, 6, 8 and 10 years. The garment fastens at the right underarm and is well reenforced.

9057—Ladies' and Misses' Four Piece Skirt. Cut in sizes 16, 18 years, and 26, 28, 30 and 32 inches waist measure. The skirt is gathered at the side-fronts and back to the slightly raised waistline.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

THE LITTLE GRAY LAMB

Out in the endless purple hills, deep in the clasp of somber night,
The shepherds guarded their weary ones —guarded their flocks of cloudy white,
That like a snowdrift in silence lay,
Save one little lamb with its fleece of gray.

Out on the hillside all alone, gazing afar with sleepless eyes,
The little gray lamb prayed soft and low, its weary face to the starry skies:
"O moon of the heavens, so fair, so bright,
Give me—oh, give me—a fleece of white!"

No answer came from the dome of blue, nor comfort lurked in the cypress trees;
But faint came a whisper borne along on the scented wings of the passing breeze:
"Little gray lamb that prays this night,
I can not give thee a fleece of white."

Then the little gray lamb of the sleepless eyes prayed to the clouds for a coat of snow,
Asked of the roses, besought the woods; but each gave answer sad and low:
"Little gray lamb that prays this night,
We can not give thee a fleece of white."

Like a gem unlocked from a casket dark, like an ocean pearl from its bed of blue,
Came, softly stealing the clouds between, a wonderful star which brighter grew
Until it flamed like the sun by day
Over the place where Jesus lay.

Ere hushed were the angels' notes of praise the joyful shepherds had quickly sped
Past rock and shadow, adown the hill, to kneel at the Saviour's lowly bed;
While, like the spirits of phantom night,
Followed their flocks—their flocks of white

And patiently, longingly, out of the night, apart from the others—far apart—
Came limping and sorrowful, all alone, the little gray lamb of the weary heart,
Murmuring, "I must bide far away;
I am not worthy—my fleece is gray."

And the Christ Child looked upon humbled pride, at kings bent low on the earthen floor,
But gazed beyond at the saddened heart of the little gray lamb at the open door;
And he called it up to his manger low and laid his hand on its wrinkled face,
While the kings drew golden robes aside, to give to the weary one a place.
And the fleece of the little gray lamb was blest;
For, lo! it was whiter than all the rest!

In many cathedrals grand and dim, whose windows glimmer with pane and lens,
'Mid the odor of incense raised in prayer, hallowed about with last amens,
The Infant Saviour is pictured fair, with kneeling Magi wise and old,
But his baby hand rests—not on the gifts, the myrrh, the frankincense, the gold—
But on the head, with a heavenly light,
Of the little gray lamb that was changed to white.

—Archibald Beresford D. Sullivan, in St. Nicholas.

GREEN PAINT

(Continued from last week)

THIS was after they had been painting for fully three-quarters of an hour.

The first note of revolt was sounded by Thomas. Thomas, very red faced, straightened up, holding his back.

"Say, you know this is some work?"

"Bet!" Turpin painted on with a dogged hand for a moment. Then he paused and glared from under his handkerchiefed head across the fence at his twin. "Say, what you think you're doing?" he demanded belligerently. "You better not take off those overalls!"

"Who said I was taking 'em off?" Thomas glared back. "I ain't taking 'em off. I'm just holdin' 'em out from me a little ways, to cool me!" Fretfully he resumed work.

In a moment he stopped again.

"I'm going to get me a drink," he announced.

"So'm I."

They went in to the house swiftly, returned laggingly. After the dim coolness of the indoors the temperature out here was unbearable. An intense burning stillness reigned; the white cement walk blinded their eyes; Mr. White's old collie, next door, panted as he lay under a tree. The boys picked up their brushes.

It was not long before Turpin succumbed, fell flat to the earth and lay on his back on the grass.

"I'm going to quit!" he declared. "I ain't going to do another lick!"

"I ain't neither!" Thomas also dropped.

They reclined, lethargic, for a moment. Then, at the same instant, the same thought struck them. Dad might be very glad to have the fence painted but would he be so agreeable about a fence left halfway painted? They gave the fence a squint. It did look patchy. A layer of green over an old one of brown is not really thorough and they had forgotten to do the edges so that the pickets presented the appearance of a row of faded maiden ladies beautified as to cheeks and chin but with ears and neck sadly neglected.

The boys arose. It was unnecessary for either to explain. They were adept at mind reading. All that was said was what Turp said:

"I'm goin' to get me another drink 'fore I begin. What you hafto tag after me all the time for?" fiercely. "Stay where you're at—I'll bring you a drink if you're so thirsty as all that!"

THERE were shepherds abiding in the field, keeping watch over their flock by night. And, lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them; and they were sore afraid. And the angel said unto them, "Fear not: for, behold, I bring you good tidings of great joy which shall be to all people. For unto you is born this day in the city of David a Saviour which is Christ the Lord. And this shall be a sign unto you; ye shall find the babe wrapped in swaddling clothes, lying in a manger."

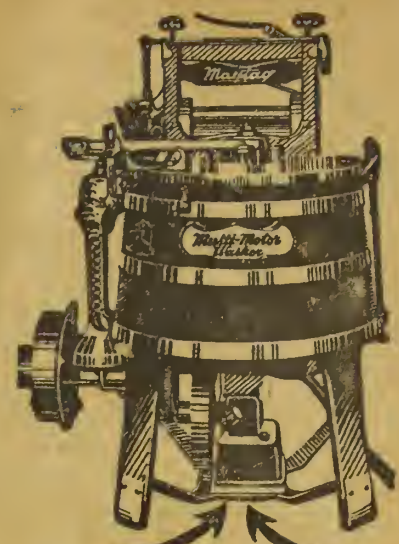
And suddenly there was with the angel a multitude of the heavenly host praising God, and saying, "Glory to God in the highest, and on earth peace, good will toward men."

And it came to pass, as the angels were gone away from them into heaven, the shepherds said one to another, Let us now go even unto Bethlehem and see this thing which is come to pass, which the Lord hath made known unto us. And they came with haste and found Mary and Joseph and the babe lying in a manger.

And when they had seen it, they made known abroad the saying which was told them concerning this child. And all they that heard it wondered at those things which were told them by the shepherds.

But Mary kept all these things and pondered them in her heart.

And the shepherds returned, glorifying and praising God for all the things that they had heard and seen, as it was told unto them.



See That Engine

It is positively the only successful engine of its kind on the market—it operates on gasoline, —about 5c worth does the wash—it is the principle exclusive feature of

The Maytag Multi-Motor Washer

This washer will not injure the daintiest linens or the most delicate laces and it will handle the heaviest blankets—doing the work twice as well and in less than half the time required by the old fashioned washer or back-breaking, knuckle-skinning wash board and tub.

Cocoanut Balls

Melt some of the fondant in a cup by placing it in a pan of hot water. When melted stir in grated cocoanut, using one-half cup of the cocoanut to a cup of fondant. Form into balls and roll in white of egg and then into some grated cocoanut until entirely covered. If liked the fondant can be colored pink, which makes a nice combination with the white cocoanut.

Cream Nut Bars

Melt some of the fondant and pour into a greased pan. Melt some more fondant and stir into it one-half cup of chopped nut meats, and pour over the fondant already in the pan. Now make some chocolate fondant, which is made like the other only a square of grated chocolate is added to the other ingredients. Stir until creamy, and while still soft pour over the nut layer in the pan. When cool cut into squares, and you will have a delicious candy as well as a pretty looking candy.

Lemon Creams

Melt a half cup of fondant in a cup and add the grated rind of one-half lemon, and one-fourth cup of candied lemon peel. Color with a few drops of yellow. Stir until stiff, and then form into fancy bon-bon shapes. Place on paraffine paper to cool.

Popcorn Fudge

Pop some corn and pick out the nicest grains and pass through a food chopper. Place in a saucepan two cups of granulated sugar, one-half cup of water, and a fourth teaspoonful cream-of-tartar. Boil until it spins a thread or to hard ball stage, then flavor with vanilla, and stir in one cup of the popcorn. Pour this over the stiffly beaten whites of two eggs and beat up until light and foamy, and then pour into a pan. When cool cut into squares. This is still better if a half cup of nutmeats are also added.

Stuffed Prunes

Soak some large prunes in water over night, after washing them thoroughly. In the morning dry off, and make a slit in side of each and remove seed. Stuff with fondant in which nutmeats have been stirred. Roll in powdered sugar, or dip in melted fondant.

Nut Taffy

Take two cups of brown sugar, one-half cup of water, and two tablespoons of vinegar, and a tablespoon of butter. Boil to the "crack" stage, then turn the mixture into a greased pan. Place a half cup of nut meats in the center, fold over the edges, and then pull like you would any other taffy.

CHICKEN PIE

Dress, clean and cut up two fowls or chickens. Put a kettle on range with three pints of water; as soon as water reaches the boiling point, add chicken, a few pieces at a time, otherwise the boiling will be stopped, and the water thus cooled will draw out so much of the flavor that the chicken will become tasteless. When all is added, cover and cook slowly until meat is tender, adding one half tablespoon of salt during the last half-hour of the cooking. Remove chicken and discard skin and some of the larger bones. Strain stock, skim off fat and then cook until reduced to four cups. Thicken with one-fouth of a cup of butter mixed with one-third of a cup of flour. Season with salt and pepper. Arrange chicken in serving dish, strain over gravy, let stand over night and reheat for serving. Make a decorated cover of a rich piecrust. It is much better to bake the paste separately and reheat before covering the pie.

LET THE CHILDREN MAKE CHRISTMAS

If there is to be a Christmas tree, let the children prepare the decorations; let them make cooky stars, polish apples, string cranberries and corn, and decorate the rooms. Christmas time that means constant shutting of doors in the faces of the children because grown-ups are busy in preparation for a grand surprise for these same children on Christmas day, is not nearly so happy a time as when the children themselves make Christmas. The old, old proverb, "It is more blessed to give than to receive," is always true, because it always work out just that way.

Don't think the small folks can not keep a secret; they can and do keep surprises as well as do the older folks. Let them have a share in the buying, and in all the delightful mysteries of the season. Christmas time should be a happy time—a time to which the children can look back as days of pure joy.

DIXIE PUDDING

One cup dried bread crumbs, one-half cup flour, one-half cup chopped beef suet, one-half cup molasses, one egg, one-half teaspoon cinnamon, one cup raisins, four teaspoons each cloves, mace and nutmeg, one cup grated sweet potato, one-half teaspoon salt, one-cup milk, one scant teaspoon soda.

Chop the suet fine; seed the raisins; peel and grate the sweet potato. Place all these ingredients in a mixing bowl; add to them the bread crumbs, also the flour, spices and salt sifted together. Next beat the egg lightly, white and yolk together, and add these with the molasses to the dry ingredients. Dissolve the soda in the milk and use to moisten the pudding. Stir and beat all well together; then turn into a greased mold and steam for three hours. Serve with either hard or liquid sauce.

ENGLISH PLUM PUDDING

One pound of beef suet, one pound of currants, one pound of Sultana raisins, one pound of mixed peel (lemon, orange and citron), one pound of flour, two ounces of sweet almonds (chopped fine), one-half teaspoon of mixed spice, one-half a nutmeg, one pound of sugar, one small teaspoon of salt, the rind and juice of two lemons, three soda crackers rolled fine, six eggs and one-fourth of a teaspoon of syrup. Thoroughly mix when dry, then wet with egg and syrup, and water enough to make very stiff, then let stand over night. In the morning put in bowls, and cover with cloths, then put in a kettle of boiling water. Boil it for eight hours. When wanted for use, boil again or steam until thoroughly heated through. Serve with either hard or soft sauce or cream. As I own a large steamer, I usually steam my pudding instead of boiling it, and I like it better that way.

THINKING

Written for California Cultivator
By Ida May Blake

I'm thinking of a land I know
As Christmas time draws near.
It is a land of pines and snow,
And fraught with memories dear.

I'm thinking of a village there,
Among those snowy hills,
Of frosty windows, clear, crisp air,
And pretty icy rills.

I'm thinking of the winter nights,
Of moonlight sleighrides too.
Of starry skies, of northern lights
And happy hours with you.

I'm thinking of another clime,
A land quite far away,
Where Christmas comes in summertime,
And roses bloom each day.

I'm thinking of this Southern land,
Of Baldy's snow-capped peak,
Of oceans blue, of sparkling sand
Where all may pleasure seek.

I'm thinking of the Christmas flowers,
Poinsettia's scarlet star,
And may I think and count the hours
To bring you where they are?

BETTER LUCK 'NEXT TIME

On Christmas Day I et an' et,
An' then about midnight I set
Straight up in bed an' give a yell
That brung dad out so fast he fell
Flat on the floor—a dandy fall,
But I jus' couldn't laugh at all!
All I could do was grab my shirt
Above the place where something hurt.

It might have been the punkin pie—
Or mince or cider. Wonder why
A feller's built to swaller stuff
When he's already had enough?
It seems to me in such a case
That something ought to close his face.
This stomach ache is pretty tough—
How could I know I'd had enough?

An' now vacation goes ahead,
Doggone it! with me here in bed;
An' 'twas Dick Feeney's sled that bore
The girl today that lives next door
To candy pull an' apple bake!
'Bout all I got was stomach ache
On Christmas. "But you bet next year
I'll have some fun—or pretty near!

A CHRISTMAS SONG

By Florence Evelyn Pratt

Oh, Christmas is a jolly time
When forests hang with snow,
And other forests bend with toys
And lordly Yule-logs glow.
And Christmas is a solemn time,
Because, beneath the star,
The first great Christmas Gift was given
To all men near and far.
But not alone at Christmas-time
Comes holiday and cheer,
For one who loves a little child
Hath Christmas all the year.

Thomas submitted. It seemed to him he had never been so warm. He felt his shirtwaist front, his collar band, his sleeves. Then with a defiant hand he reached around and unfastened his overalls.

"Don't care if I do get paint on me," he grumbled. "I'm going to pull the old things off."

He slid the overalls down over his feet, exhaling a luxuriant breath of bliss.

"Zowie! That feels good!" He leaned against the fence, gazing idly up the street.

Suddenly his apathetic gaze tightened into recognition. A figure was coming towards him along the sidewalk—his father, two hours and a half ahead of time.

"Whoo-oof! Jimini crickets!" Tom threw a glance at the fence. Then, "Turp!" he hissed. "Tur-rp!" This was tragedy. Their beautiful surprise was all squashed in the head!

"Turp!" again. Tom made for the gate, started on a dead run for the house. In his haste he neglected to look before he leaped. Turpin's bucket of paint stood immediately in his path and over it Tom stumbled and fell. Grain paint flew up in a glory of spatter over the cement walk, green paint spouted and splashed in full baptism over all the pansies in Father Bird's favorite pansy bed.

Before Tom could rise from the ruins his father was upon him, evidencing, by the speed with which he reached his son, the truth of the statements as to the supremacy of mind over matter, that a back is a mere nothing where larger issues are concerned.

Father Bird clutched his son.

"You young rascal!" he exploded. "What do you mean? Is there any devilment on the face of this earth you boys don't think of? I say what do you mean?" All those further things which Father Bird longed to say but was forbidden by his position as Sunday school superintendent, seethed in his eyes.

Thomas tore himself loose. His blue eyes were two flames. Usually a mild, nice little boy, he became before his father's eyes a savage young demon.

"What—what do you mean?" he choked. "What do you mean yourself, catching hold of a fellow an'—" Helplessly Thomas struggled for appropriate thunderings and fled.

Father Bird put his hand to his back and gazed at the fence, at the walk, at the pansy bed where each little pansy lifted a piteous, green-freckled face. Then he went out to the walk and creakingly picked up the overalls. Then he hobbled into the house.

Mother Bird started up from the bed where she had been trying to take a nap.

"Why, Sam, what you doing home?" she inquired. "Is your back worse?"

He began sputtering explanation but Mother Bird interrupted him in the heart of his first sentence.

"The white paint?" She sat up on the side of the bed. "You were going to paint it white again, Sam, after all that trouble we had that time before? I particularly told them the green! They were doing it to surprise you," she added.

"To—what?" Rage still choked him.

"To surprise you because you had the lumbago. Been out there nearly two hours, working like anything! It's an awfully hot day."

"Do you mean to tell me, Nell—do you expect me to believe that those young——"

"It is too bad about your pansies," Mother Bird went to the mirror and took down her pretty gray hair. "That was an accident, though, of course."

"Suppose the overalls were an accident, too," Father Bird remarked dryly.

He sat there for a while then rose with a sheepish smile.

"Well—it's up to me to apologize!" he confessed. "But you'll have to admit, Nell, that judging from the past I could hardly have been prepared for such consideration on the part of my sons! Where do you reckon they've gone?"

"Oh, I don't know—they won't come back till supper time now." Mother Bird stuck in her final hairpin. "They'll stay clear of here. You see, they're trying to get into the Boy Scouts," she added answering his defense.

The twins did "stay clear" until six o'clock. Then they came fooling slowly up the walk and lounged on to the front porch.

Father Bird was reading in the parlor. When he saw them he put down his paper and stole to the screen door where he stood out of eye range and listened.

"You might just's well take what's coming to you!" Turpin was advising in a hard undertone. "You'll get yours. Serves us good and right for trying to be kind."

"Going to paint the old fence white?" Tom's voice now. "I call that punk! Wait'll the first rain comes along an' then where'll it be?—Look a heap better green!"

Father Bird opened the door and stepped out.

"I don't know but what I agree with you, son."

"Sir?" Tom arose and ostentatiously turned himself fatherward.

It is rarely that a boy of any age, be he eight or eighty, apologizes by word of mouth. If there is speech, it is of the roundabout sort, couched in such manner as not to involve the speaker in any accusation of sentimentality. Generally male creatures act on the principle that actions are louder than words. Always they understand each other.

Father Bird drew two shining new quarters from his pocket, jingling them.

"I don't know but green does look better," he went on. "More the color of the grass and the trees. When you fellows get it smoothed up a bit—a second coat—know anybody you think could find any use for these?" He proffered the quarters.

The boys, after a second's hesitation, took them but the silence that hung in the air was not that of complete satisfaction. Dad had done pretty well but—a second coat!

Father Bird somehow sensed the strain. He added a last off-hand sentence.

"And when the job's all done," said Father. "You—I reckon we'll have to see what we can do about the Scout memberships. I've been thinking quite a long time that there isn't anything much better for a fellow than being a Scout. Makes him brave, y' know, teaches him a lot of practical things and that business of doing a kind deed each day—well, that's the right kind of stuff."

The boys gave a whoop then. The cloud of depression lifted for good—a world of sunshine flooded their souls. Father had squared himself. Father was all right. They raced for the front gate and charged down the street.

Mother Bird saw them from the diningroom window. She knew what that meant—candy, ice cream cones, chewing gum, pickles, peanuts, ginger ale—no appetite for supper. But she held her peace.

"Little scamps!" she murmured affectionately. "My—that fence they painted surely does look an awful sight, though!"—Farmers Wife.

SWEETMEATS MADE AT HOME

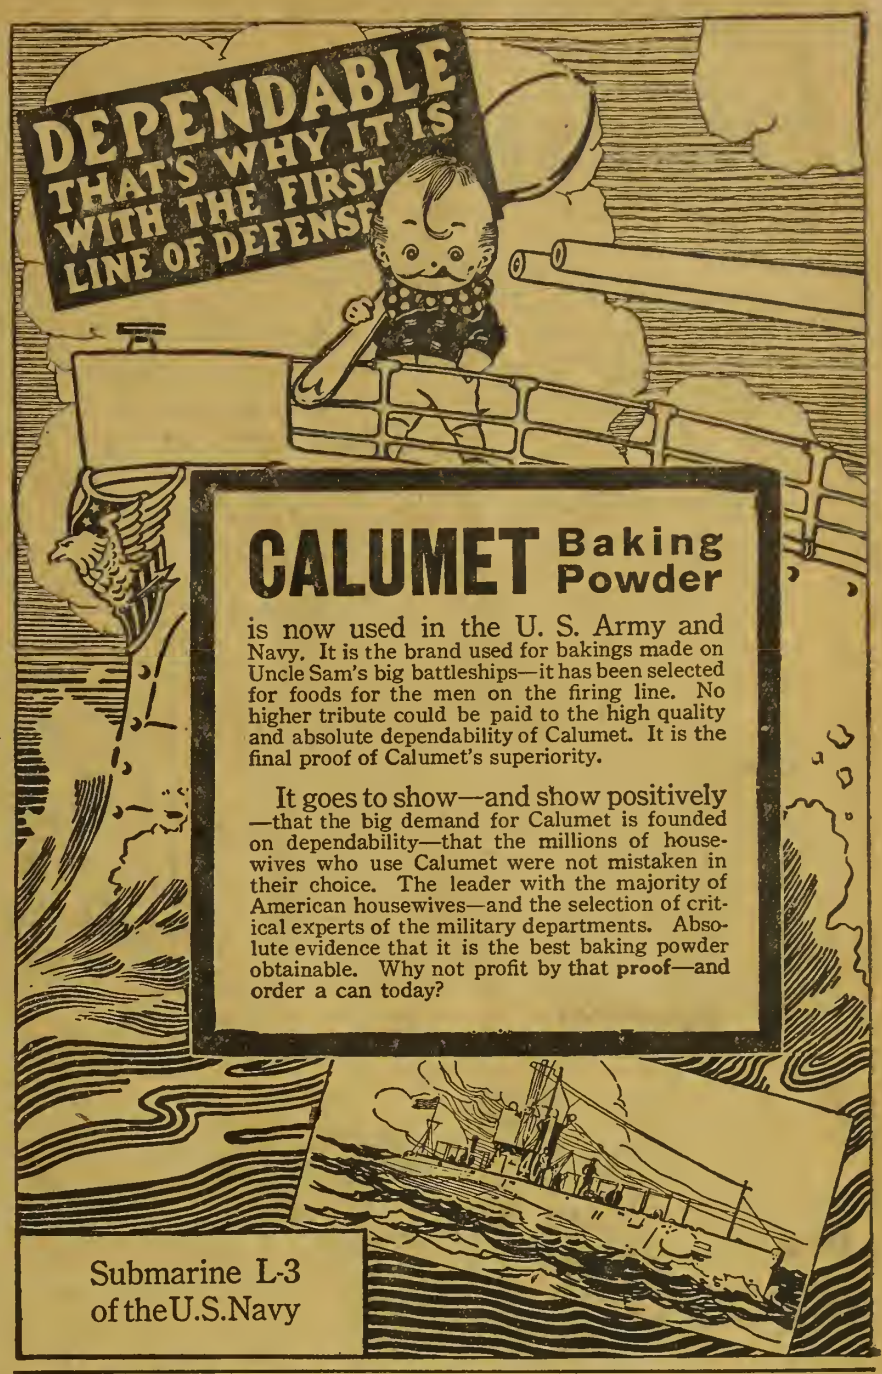
Our full sugar bowls are a Christmas present indeed. We are going to enjoy our Christmas candies as we never did before, especially our home made ones.

Fondant

Anyone who has learned to make fondant can make all sorts of delicious bonbons, but there are many other delicious candies made without using fondant.

To make the fondant take two cups of granulated sugar and place in a saucepan with one-half cup of water and one-fourth teaspoon cream-of-tartar. Boil until it will form a soft ball when dropped into cold water. Flavor with vanilla, and pour out on a platter. When partly cool stir with a spoon until it becomes creamy. As soon as it can be taken up into the hands knead until smooth. A half teaspoon of glycerine will help to make it smooth and easily worked.

When the syrup is boiling, if crystals should form around the edge of the pan remove with a damp cloth without shaking the pan. This fondant can be divided into different portions, and each portion colored with a different color with fruit or vegetable colorings. Fondant is nice used with nuts, candied fruits, or dried fruits such as raisins, dates, figs and prunes. Chocolate creams are made by molding the fondant in small cone shapes, and then dipping into melted chocolate.



DEPENDABLE
THAT'S WHY IT IS
WITH THE FIRST
LINE OF DEFENSE
CALUMET Baking Powder
is now used in the U. S. Army and Navy. It is the brand used for bakings made on Uncle Sam's big battleships—it has been selected for foods for the men on the firing line. No higher tribute could be paid to the high quality and absolute dependability of Calumet. It is the final proof of Calumet's superiority.
It goes to show—and show positively—that the big demand for Calumet is founded on dependability—that the millions of housewives who use Calumet were not mistaken in their choice. The leader with the majority of American housewives—and the selection of critical experts of the military departments. Absolute evidence that it is the best baking powder obtainable. Why not profit by that proof—and order a can today?

LIVESTOCK

The demand for good steers is improving—this week's early market showing a 50 cent improvement. Common steers are bad property owing to the fact that the retailer will take good cows in preference to poor steers.

The supply of common cows is falling off and the market could handle more on account of the cannery facilities.

The demand for hogs of desirable weights and finish continues strong. The early part of the week saw the market sprung above the opening range of prices.

The supplies are coming in in about the volume best handled by the market. No surplus has been accumulated. Prospects for satisfactory markets continue good and all familiar with the situation feel that producers need have no fear of a serious break. The Eastern markets are staggering under unprecedented shipments of light unfinished pigs and at the present time an embargo is in operation against Chicago.

The market is weak on lambs, Los Angeles demand calling for light weights. The quality of recent shipments is below the standard. Wethers are naturally scarce, and the market remains firm. Ewes are exceedingly draggy.

Report of live stock conditions on the Los Angeles market as compiled by the United States Department of Agriculture, Bureau of Markets, through the local office:

Good Steers .....12.50@13.50
Medium Steers .....11.00@12.00

RICE

Prices which rice millers of this state have voluntarily agreed with the food administration for California to pay to growers for paddy rice are as follows:

No. 1 and No. 2 Japan, in sacks, $4.32 per 100 pounds.

No. 3 and No. 4 Japan, in sacks, $4.16 per 100 pounds.

Prices for other grades will be paid for on a basic value proportionate, and no higher prices than those quoted above for any grades whatever will be paid.

The millers agree further to sell cleaned rice and by-products for prices not to exceed the following:

Fancy Japan, 1½c per pound.
Choice Japan, 7⅜c per pound.
Fancy second heads, 6⅞c per pound.
Screenings, 5⅝c per pound.
Brewers', 5¼c per pound.
Rice polish, $50 per ton, carlots.
Rice bran, $36 per ton, carlots.

NUTS

The Almond Growers' Association has established opening prices as follows per pound:

Nonp. 27½
I.X.L. 25½
Ne Plus 24½
Drake 20

Outside dealers have named prices above these quotations and it is understood association stock is practically closed out and prices withdrawn.

Walnuts: Net prices have been named by the California Walnut Growers Association:

No. 1 Softshell 28
No. 2 Softshell 25
Jumbo 30
Fancy Budded 31½
Golden Gate Budded 29

Franquettes, Eurekas and other fancy varieties sold on sample. No. 1 Softshell guaranteed 88 per cent good; Fancy Budded, 90 per cent. In case of worms or damage by ants not more than five per cent.

HONEY

Cash to producers, country loading points:

Extracted, Water White, supplies very light, 22@23½; White Sage, supplies very light, 20@23; Light Amber, supplies very light, 18@20½; Dark Amber, 18@19 lb.; Beeswax, supplies moderate, 35@40 lb.

GRAIN

Wheat—Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles terminals:

Hard Wheat—	Per Bushel	Per Cental
No. 1	$2.20	$3.62 2-3
No. 2	2.17	3.61 2-3
No. 3	2.13	3.55
Soft White—		
No. 1	$2.18	$3.63 1-3
No. 2	2.15	3.58½
No. 3	2.11	3.51 2-3
Club and Sonora—		
No. 1	$2.16	$3.60
No. 2	2.13	3.55
No. 3	2.00	3.48 ½

For sacked grain add nine cents per bushel of 60 pounds to above price. Deduction of three-fourths of a pound is made for weight of standard grain bags. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to merit.

Barley — Feed, 2.17½@2.22½ per cental for choice spot; shipping, 2.25-2.27½; milling, nominal.

Oats—Red feed, 2.35@2.55 per cental; seed, do, 2.85@3.00, white recleaned at 3.15@3.20.

Corn — Egyptian, 2.75@3.00 per cental for choice white; Milo, 2.65@2.70. Rye nominal.

HAY

Uunder date of December 14, Scott, Magner & Miller says:

Receipts past week 816 tons. All lines of the trade have been suffering from very low figures on both the badly and partially damaged hay and as a result the demand for sound hay and alfalfa has been materially reduced. This weather-damaged hay, however, will soon be entirely cleaned up and the market will probably then take on a stronger tone as warehoused hay will then come into demand. Interior trade is also dull but as stocks of hay are reported low, some activity may be expected shortly. Local arrivals during the week have moved off slowly, consumers showing an inclination to refrain from buying any quantity till after the holidays.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling expenses must be added according to conditions.

Fancy Wheat Hay (light 5 wire bales)	27.00@29.00
No. 1 Wheat or Wheat and Oat Hay	25.00@27.00
No. 2 Wheat or Wheat and Oat Hay	19.00@23.00
Choice Tame Oat Hay	24.00@26.50
Other Tame Oat Hay	19.00@22.00
Wild Oat Hay	19.00@21.00
Barley Hay	19.00@21.00
Alfalfa	17.00@21.00
Stock Hay (in order)	17.00@20.00
No. 1 Barley Straw, bale	.50@80

Damaged hay (all kinds), according to condition.

SEEDS

Flax	8@8½
Millet	5@5½
Rape	2½@5

Citrus Fruit Market

Los Angeles, Dec. 18, 1918.

A better general tone prevails and Navels are being well received in practically all markets.

Lemon prices are not spectacular but good demand and fair price takes up every offering.

Shipments

Shipments of citrus fruits to date since November 1, 1918: Southern California; oranges 674 cars, lemons 881, total 1555. To same date last season; oranges 1998, lemons 433, total 2431. Central California this season; oranges 2407, lemons 198 total 2607. Last season to same date; oranges 1471, lemons 50, total 1521. Northern California; oranges 174, last year same date, 159.

St. Louis: 6 cars. Nav. 2.90-4.40.

MARKET NOTES

Wisconsin cheese markets show a total reduction in stocks of 504,000 pounds during the past week. The reduction the previous week was in excess of 1,000,000 pounds.

Canadian potatoes are selling at various markets around $1.40 and $1.67.

Florida winter cabbage reports total acreage this year of 2429 as against 5950 last year. Decreased acreage this year caused by low prices and increased cost of production.

The war department recently purchased 11,000,000 pounds Pintos at seven cents f. o. b. shipping point, sacked recleaned. Total government bean purchases up to December 10 aggregated 70,000,000 pounds.

Florida string bean output has been materially lessened by heavy rains.

The bureau of markets of California reports Watsonville Bellflowers, fancies, large 1.75-1.85, while medium size is selling for 1.35@2.00.

PARTIAL LIST CALIFORNIA FRUIT AND VEGETABLE SHIPMENTS

From post card reports to the Los Angeles branch of the bureau of markets, report is made of the following shipment of cars of products from California for the week ending December 16: Apples, 153; cabbage, 9; cauliflower, 22; casabas, 44; celery, 84; dried apples, 1; dried apricots, 7; dried beans, 89; dried figs, 4; dried peaches, 17; dried peas, 1; dried peppers, 10; dried prunes, 27; grapes, 8; lettuce, 79; mixed vegetables, 91; mixed fruit and vegetables, 16; mixed dried fruit, 37; olives, 7; onions, 38; peppers, 3; potatoes, 106; pumpkins, 1; raisins, 286; squash, 1; sweet potatoes, 33; tomatoes, 3.

CEREAL EXPORTS PLEDGED TO ALLIES

Under the agreement of the United States food administration with the food controllers of the Allied nations, our breadstuffs export program for the coming year will aggregate 409,320,000 bushels, which is equivalent to more than 60 bushels for every farm in the United States.

The program calls principally for wheat, but from 100,000,000 to 165,000,000 bushels may he other cereals, including rye, barley and corn.

MILKING MACHINES SAVE LABOR

It may be that the dairyman, while labor is scarce, will have to rely on the milking machine. Milking machines have been on the market more than 25 years, but most of them have not been successful. Machines are now on the market that are past the experimental stage and are giving the best of satisfaction in the hands of many users, although others soon discard them. The successful use by the many shows that the machine is all right when properly used. The milking machine saves a great deal of hand lahor, making it possible for one man to milk 25 to 30 cows in an hour, although extra time is required for cleaning the machine. The machine does not injure the cow in any way and animals prefer machine to hand milking. It is a question whether the cows milked with a machine hold up in milk toward the end of the milking period quite as well as when hand milked. It is possible that the yield for the year may be a little less. Apparently, the machine will do better work than poor hand milkers, but it is not quite equal to skilled hand milkers.

When the machine is properly handled the quality of the milk with reference to its sanitary condition is better than when hand drawn. If the machine is not properly cleaned, then the milk is not in as good condition as that drawn by hand.

C. H. Eckles of the University of Missouri College of Agriculture suggests that a farmer who expects to purchase a machine will do well, first of all, to visit some one using a machine of the kind he is considering, and see it in operation so that he may decide for himself whether he wants it. In buying a milking machine use the same common sense that would guide the buying of any machinery. It is safer to get a make that has been in use for some time, preferably three years at least, in order that defects may have been corrected.

It is doubtful whether a milking machine is practical for fewer than 30 cows. The cost of an outfit for this many cows will vary from $150 to about $450.

MORE MILL FEEDS IN PROSPECT

With the return of all-wheat bread to American tables following the relaxation of substitute regulations, we may expect a somewhat increased supply of mill feeds. The amount will be further enlarged by the recently increased purchases of flour by the Food Administration Grain Corporation for export. Export of flour rather than wheat is now possible because of increased ocean tonnage available since the signing of the armistice.

A third factor which is expected to increase supplies of mill feeds is the cancellation of the so-called "milling extraction rule," which, as a war time measure, diverted into flour a considerable proportion of the wheat berry ordinarily used for feed.

All of these developments combined are expected to increase the mill feed output fully a fifth, and this extra feed should be available about the end of December. In presenting these facts the food administration warns against excessive optimism over the situation, since there will be a continued shortage of mill feed compared with pre-war years. The price of these feeds is being maintained by regulation at an artificially low level which obviously stimulates an abnormal demand.

Briefly, more mill feeds are in prospect and they will be available about the Christmas holidays, but the supply will he short of demand and continued conservation is necessary.

KILL THE VARMINTS

The department of agriculture is urging reduction in the number of coyotes, wild cats, mountain lions and other predators which live on the young of our live stock. The department reports that during last May a Wyoming stockman lost 100 head of sheep and seven colts, while his neighhor lost 50 sheep which were killed by two male wolves. A biological survey hunter took the trail after the marauders and followed the pair until he was able finally to kill them. Another bureau trapper accounted for a pair of marauding wolves near Mosquito Lake, Wyoming, which were credited with killing $4000 worth of live stock a year. A third government hunter recently killed a pair of old wolves which destroyed about $3500 worth of farm stock a season. In the same locality an old white wolf which killed 30 head of cattle last spring also fell victim to the trapping skill of one of Uncle Sam's hunters. But in addition to this work of the department trappers, those living next the mountains may add materially and may occasionally secure a bounty by doing some trapping or hunting.

VALUE OF 100 POUNDS OF MILK

From 100 pounds of skim milk 15 pounds of cottage cheese may be made, with a protein value equal to 22.5 pounds of pork. In other words, a quart of skim milk makes more than a third of a pound of cottage cheese. When a hundred pounds of skim milk is fed to a pig the skim milk is converted into about 4.8 pounds of dressed pork, when combined with other feeds to the best advantage. For every hundred pounds of skim milk fed to pigs instead of used for human food in the form of cottage cheese, there is a food loss equivalent to the protein in 17.7 pounds of meat. That is not all; after the manufacture of cottage cheese, the whey remains and is available for stock feed. From 100 pounds of skim milk made into cottage cheese there is a residue of about 80 pounds of whey, which is regarded as having a feeding value of about half that of skim milk, and on that basis, when properly combined with other feeds, will produce 1.9 pounds of pork. So, by making cottage cheese and feeding the whey to pigs, the human food production from 100 pounds of skim milk has the same protein value as 24.4 pounds of meat, or 19.6 pounds more than when all the skim milk is fed to pigs.

Accounts continue to mount up of the pitiable condition of British and other allied prisoners making their way back from German prisons.

General March announces that a million and a half men will be retained by General Pershing in Europe, the rest being returned to the United States as soon as possible.

WAR DIET AND HUMAN WEIGHT

A statistical report published in the German press and dealing with the effect of war food on the human constitution shows briefly that farmers and their families lost no weight during the war, but that persons living in large cities were affected to a serious degree.

According to Bavarian doctors the average person in cities lost about one-sixth his pre-war weight, but in small towns the loss has heen only about one-twentieth.

"Self providers," as farmers are called, lost no weight during the war, and this ohservation applies to hoth men and women. Among city consumers, however, men lost ahout one-tenth their pre-war weight and women ahout one-fourteenth.

Information of this kind reflects, in a measure, at least, the close food margins on which city dwellers in Central Europe have been living. According to the United States food administration, the situation has been more critical among the surrounding nations which Germany has drained of food and it is these newly liberated countries that must have food from America promptly and in plenty.

MORE VEGETABLES IN CHICKENS' DIET

The scarcity of beef scrap, together with its high price, has led poultry specialists of the United States department of agriculture to conduct feeding tests with laying hens in which cheaper and more plentiful kinds of protein feed are tried. In these tests feeds rich in vegetable protein have been used in connection with beef scrap to make up the laying ration. One pen of hens fed a mash containing 20 per cent beef scrap produced the greatest number of eggs, but a second pen fed a mash consisting of ten per cent peanut meal and ten per cent beef scrap produced an average of only ten eggs less during the test period of 5½ winter months. Mashes made with soy bean meal, cottonseed meal, and velvet bean meal, in combination with beef scrap, have been fed with fairly satisfactory results.

CHRISTMAS 1918

If slighter fare our tables here afford,
And fewer guests our homely joys enhance,
Where millions press we spread a grander board;
This year we hold our Christmas feast in France.

We shall be host to Nations! — all who strive
For deathless right, the greatest and the least
Who give their best that Freedom shall survive.
This year we hold a nobler Christmas feast.
—Arthur Guiterman.

Calco Metal Grain Bins may be erected quickly with unskilled labor. A hammer and a monkey wrench are all the tools needed. These fire-proof bins come in galvanized sheets, punched and shaped to fit. Galvanized stove bolts hold them in place. They are durable, rust-resisting, economic bins for grain handling. Capacities from 600 to 5400 bushels.

Save Grain

Handling grain in sacks causes waste—large waste. Experts find that 10% of all California grown grain is wasted through sack handling. One-tenth of each year's crop eliminated. One-tenth of the grower's profit—gone. One-tenth of the California crop of grain never reaches its market. Absolute waste. How? A little here and a little there.

Save Grain from Rain

Sacked grain in the fields becomes filtrated with dust—rain comes, the bottom of the sacks are spoiled—the grain often sprouts before it is shipped. How much grain did early rains cost you last year?

Save Grain from Vermin

Rats, mice, gophers,—little ways that destroy a great quantity of California's sun-drenched, golden crops. The holes rats and gophers gnawed in your sacks last year—how much did it cost you?

Save Grain from Leaking Sacks

Leaking sacks! They are ripped when thrown down, a snag, a nail, careless help—and the weak place gives way. How much did you lose this way last year?

Save on Labor

How about your labor problem? How many sack sewers, buckers and jiggers did you hire? You threshed and left the sacked grain in the field. You were trying to get the most out of your help.

Handle Grain in Bulk

Suppose you could harvest your grain *without* sacks, sewers, and jiggers. Suppose you could thresh your grain directly into a dump wagon—in bulk—and put it into a fire-proof metal bin on your own farm? You could let your *extra* help go and save those wages.

Save Sack Costs

You would save the entire cost of sacks. You would cheat the rats and gophers, the birds, the rain, fire and thieves. You would *save*—not waste.

Write for this Booklet

The Calco Metal Grain Bin is for the grain grower who watches the corners. It is rat-, mice-, gopher-, fire-, weather-, thief- and waste-proof. Write for the booklet, "Calco Grain Bins." It tells of the costs of handling grain by sacks and the saving in bulk handling. Just write your name and address on the edge of this page and mail it. It does not obligate you a particle. Do it NOW.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

A striking picture of a California asparagus field appears on this week's cover. The culture and canning of this luscious vegetable adds much to the worth of California agriculture, and while its area of growth is somewhat restricted all producers are interested in methods of growing and packing it.

W. S. S.

We do not know whether the sale of war saving stamps will be continued through the new year. We assume not, but suppose every Cultivator reader has purchased some of these "little bonds". In any case the attention of the younger readers of the Cultivator, who may have invested in thrift stamps, is called to the fact that these stamps should be exchanged before January 1 for war savings stamps. Bear in mind thrift stamps bear no interest; the only way to change them into interest bearing paper is to make this exchange.

ANOTHER RESOLUTION

Last week reference was made to the fact that California ranked sixth in the number of cow testing associations in operation—there are 16 according to government figures. It was also stated that this state ranked second in number of herds in associations; second in number of cows in associations, and first in number cows per association.

There is really no reason why California can not take first place in every angle of cow testing work. And once the value of these associations to the dairy interests is made plain we feel sure that the state will take her place at the head of the list.

There are over 500,000 cows in California; 19,814 cows are in associations. The number can be doubled and trebled in 1919.

A 1919 RESOLUTION

Packers assert that they have been able to buy hogs of better quality and finish the past fall than ever before. The reason is not difficult to locate. California producers are learning the value of better blood and better methods of feeding.

Surely the day of the "tule rooter" is passing—but is not passing fast enough! There are still vast numbers of the old familiar sorts ranging in this state. The most effective way to eliminate these unprofitable workers is through the use of better boars of any of the established breeds.

Great strides can be made in 1919 if the pork producers of California resolve that only pure bred boars will be purchased for use in their herds.

No question is more capable of convincing demonstration than that good blood pays. The year 1918 furnished plenty of evidence. Let 1919 furnish more.

E. J. VOSLER

Everett J. Vosler, for several years secretary of the state horticultural commission, later special investigator in Australia for the commission, later resigned to enter the U. S. army, died at Fort Rosecrans November 7, 1918.

While still a young man—he was born in 1890—Mr. Vosler has proven one of California's thoroughgoing investigators. His original work was done in the Colorado agricultural college, from which he graduated. He entered the service of the bureau of entomology of the United States department of agriculture, giving much time to the study of the alfalfa weevil. He came to California as assistant superintendent of the state insectary and was later promoted to the secretaryship of the commission.

In a tribute to him in the Monthly Bulletin, Superintendent Harry S. Smith of the state horticultural commission writes: "His whole life is summed up in those words of his, so characteristic of him, uttered by him on his deathbed: 'Mother, I have done my best.'"

WRITE BEFORE YOU SHIP

During the past few months the hog market has been characterized by unprecedented receipts at the primary markets. The killers had expected increased supplies, but no such runs as have been pouring into the markets for weeks were anticipated. On top of a flood of hogs the killing gangs have been demoralized through the influenza epidemic, and, being short of help and long on hogs, the packers were forced to appeal to the government for relief. Embargoes were established. But even under an embargo heavy accumulations have occurred.

So far as Coast markets are concerned, the situation has not been as grave as in the East. Los Angeles has handled all shipments, but San Francisco killers have accumulated a surplus, and with continued shipments in prospect the Coast firms are asking that producers do not ship their hogs without first ascertaining whether or not they can be handled.

There is no reason for producers becoming panicky. The price for January has been established; grain can be fed at a profit; and the packers will handle the situation if they are given a little cooperation by the growers.

All that they ask is that producers write before they ship.

SUCCESS does not mean the mere accumulation of money. That is but a part of success. There is a success greater than the mere accumulation of money. It is the accomplishment of a worthy purpose, the development of yourself and your associates, the creation in yourself of the qualities of leadership. It includes a broadened vision.

Here's to California Cultivator Readers: May 1919 offer opportunity for Broadened Vision and Greater Development—Hence

A HAPPY NEW YEAR.

THE YANKS ARE COMING

The Yanks are coming home from "Over There" and from "Over Here." Every ship across the Atlantic has its contingent of the returning boys. These, including others released from the various cantonments in this country, now aggregate 30,000 discharges daily. This is for the information of subscribers of the Cultivator who have written asking as to when "Our Boy" will be released. Such a question cannot be answered definitely as to any one, for, while the government is releasing the boys as rapidly as possible, it must retain some of the millions in the service for the final clean-up. It is supposed that at least one and a half millions will be left in Europe for many months to come. Release will come more swiftly for those in American encampments.

DIFFICULTIES

Edward Berwick writes that he thinks some Americans are getting cold feet in the matter of getting worth-while results from the war. He says:

"A family has just two ways to live—in accord or discord. Which is the whichest? The family of nations has the same choice. Discord's dire result are but too obvious. Discord spells dead failure, death and destruction! Accord, harmony, 'league of nations,' 'world commonwealth,' call it as you will, is now being 'damned with faint praise,' or declared impossible. This in face of the fact that in these last few months the civilized world has virtually pooled its issues, its food supply, its cash, its man power, and placed its every resource at the disposal of one individual. Accord downed discord!

"Difficulties? Yes! There always are! Americans live to surmount them! Let everyone quit 'knocking' the proposed league, and get back of President Wilson and make it possible. Today's impossible is tomorrow's fact accomplished!"

We may go one better and say that there is but one way for a family to live, and that is in accord, but if it should happen that the family grows larger and that ultimately some great double fisted brute proceeds to run amuck and beat up the weaker members of the family and smash up the furniture and create discord generally, the other big brothers of that same family become craven wretches if they don't take a hand and enforce control where there is no self control. Time was when America was too proud to fight, but, Glory be! that time will never come again, for the world now recognizes the necessity of pooling issues.

The League of Nations is all right and will have a wonderful influence in controlling the big brutes of the future but it will do it through the exercise of force because force is all the control which some beings recognize.

LOOK TO BANK BALANCE

Fruit canners, dryers and, in fact, all food producers are placed in a most embarrassing situation by cancellation of orders for goods which have been produced, canned and packed under the requirements of the department of war. Too often the cancellation was made in such a way as not to give entire freedom to the producer in disposal of his product. Some details of the situation as to prunes and apricots may be seen in Mr. Coykendall's statement in last issue. Where entire release has been given the market has not been able to take the increased offerings at prices equivalent to those which might have been had earlier in the season. The worst of the situation is in this, that the feeling prevails that producers are not being fairly treated.

For instance, the Lima bean people have a large supply of beans cleaned and sacked, ready for delivery but for which there is no sale. They were approached by a broker "who claims he has an inside pull with the government" and who agreed to take 40,000 sacks for government delivery providing he were paid his commission. As the association had the only supply sufficient to meet the demand of the war department it could not figure out why its members should be deprived of a part of the cost of producing the beans to pay the middleman. The middleman insisted that the deal could only proceed through him and made good in calling the entire deal off, and the government has failed to deal direct with the people who raise the beans.

The wheat growers of the Northwest have met with a similar situation, or, rather, have been unable to secure full values for their wheat because of grading rules made so as to favor the millers. For instance, one grading rule that Number One Hard should not contain in excess of 2½ per cent of rye resulted in literally millions of dollars being cut from the prices paid to wheat growers. Of course, the grading rule did not follow the wheat into the miller's hands, and he, after buying his Number One wheat, shaded some 15 cents per bushel because it contained less than a pound and a half of rye, still used it with all other Number One Hard in milling highest grades of flour. The millers made millions; the farmers did not.

The farmer has stood true blue, and when the nation shouted "Produce More" he has produced more—with less employment of labor and greater use of labor saving machinery. But he will not stand for being promoted. Secretary Houston recently remarked, "The farmer must be as insistent in looking to his bank balance as any other business man.

Canning Asparagus in California

By Arthur L. Dahl

OF ALL canned vegetables used during the winter none is more palatable than asparagus, for it is one of the few food products the flavor of which is really enhanced by canning. In fact, asparagus is one of the most popular members of the vegetable family. Besides having a pleasant taste, it contains some very valuable mineral salts required by the human body.

Asparagus is canned to a limited extent in the Eastern states, but the great bulk of the commercial canning is done in California, which is peculiarly adapted to the growing of asparagus. The long growing season, with the constant succession of warm, sunny days in the dry season; the rich soil of the delta region of the Sacramento Valley, and an abundant supply of water for irrigation, insure large and perfect crops of the stalks, and the enterprise of the packers in building their canneries in the immediate vicinity of the growing fields, which enables them to can the fresh asparagus within an hour or two after picking, thus preserving the tenderness and succulence of the fresh product. Asparagus, if allowed to stand too long after being cut, will become tough and bitter to the taste.

Most of the asparagus beds of California are located in the delta lands along the Sacramento River, which are exceedingly fertile and with a light and mellow soil. Asparagus can only be grown upon the richest types of soil, and as it requires a great deal of hand labor it is an expensive product. On the big plantations controlled by the canneries, however, it is grown in such vast quantities and the work is so systematized that the production costs are kept down to a minimum.

The plants are set in rows, four feet apart, and three years are required to bring them to a productive state. After the plants are matured, they are "hilled up" with soil to a depth of a foot or more. This forces the spears to grow about a foot to reach the light, and as no color is formed until the light reaches the tips of the spears they are perfectly white. For a long time after the California canned asparagus entered the market, many food experts believed that the stalks were chemically bleached, but the perfect whiteness of the product is caused by cultural methods alone.

After the spears force their way above the ground they become green in color from exposure to the sun. The harvesters pass between the rows, looking for evidence of the spears forcing their way to the surface. Whenever the ground appears cracked or broken, the harvester inserts a long chisel shaped knife, or "cutter," at such an angle as to cut the spears about nine inches below the surface. The spear is drawn from the ground very carefully so the tip will not be broken or cracked. Only one spear is cut at a time. The entire bed or field is gone over every day during the season, and only the ripe spears are taken.

The work of cutting the asparagus for the day's canning begins very early in the morning, as soon as there is sufficient light to see by. As fast as the lug boxes are filled they are hauled to the cannery, not far away. The quick handling of asparagus is imperative, if the true flavor and sweetness is to remain unimpaired.

At the cannery the asparagus is taken to the wash room, where it is carefully washed of all silt and then placed in racks and the irregular butt ends are cut off. The asparagus is then taken to the preparation room, where it is sorted and graded for size and color. Some of the spears are peeled and some scraped, the treatment depending upon the condition of the product.

When properly sorted and peeled, the asparagus is placed in large iron baskets and conveyed through a washing process which consists of passing

Blanching Asparagus

As soon as it has been sorted and washed in cold water it is dipped in boiling water. This not only for cleansing but to soften the fibers and fix the color.

under jets of cold water and of immersion in clear running water. The baskets are then run through the "blanching" tanks which are filled with boiling water. This serves to soften the asparagus and set its color.

The next step is to convey the product to the canning tables. Here the stalks are sorted and graded for the respective cans, and while waiting to be so graded the asparagus is kept in clear, cold water. In the larger canneries, such as those operated by the California Packing Corporation, every precaution is taken to insure absolute cleanliness. The tables, utensils and even the floors are washed at regular intervals during the day.

After the spears are placed in the cans the brine is added and the cans run through the "exhaust box" or "sterilizer," after which each can is sealed by an automatic sanitary sealing machine which crimps the caps onto the cans without the use of solder or soldering acids. They are then conveyed through the cooker and placed in a retort for the required length of time. Upon emerging from the retort they are loosely stacked in the warehouse and when thoroughly cooled are more compactly stacked to await shipment. The labels are put on just before they are sent out.

To determine the effect of time on the cut asapagus stalks, experts of the United States department of agriculture conducted experiments at one of the big California canneries. A quantity of asparagus was picked at the same time and divided into five lots. The first was packed within three hours after cutting, and upon arriving at the canning table every stalk was found to be fresh and crisp from tip to butt. The second lot was canned 24 hours after picking, and the stalks were found to have lost their clean luster but the tips were all tender and the flavor seemed unimpaired. Thirty per cent of the butts, however, were becoming tough and fibrous. The third lot, packed 48 hours after picking, showed more dulling of color and was growing yellow in color and slightly wrinkled. The tips were good, but showed a suggestion of toughness and bitterness. Half of the stalk was fibrous and of a decided bitter taste at the butt. Only half the stalk was edible. The lot held for 72 hours showed similar changes in a more marked degree, only the tips being edible. The fifth lot, which had been held for 96 hours, was found to be absolutely unfit for consumption.

Asparagus In California

Trimming the butts of the asparagus preparatory to delivery to the counter. This is done in shed adjacent to field.

The canned asparagus of California is now sent to all parts of the world, and thousands of acres of the richest land of the state are devoted to its culture. The annual production of canned asparagus amounts to approximately one million cases, and in addition large quantities are grown to supply the fresh markets of the state.

Asparagus thrives best on a sandy loam. As the crop requires a great deal of cultivation a light soil is necessary. The land must be fertilized regularly, either by the spreading of manure or commercial fertilizers, or by the growing of some sort of green covering crop, such as cowpeas, soy beans or other leguminous product. Even where manure or cover crops are used, a certain amount of commercial fertilizer furnishing phosphorus and potash is required. After the asparagus bed is established it is necessary to provide fertilizer every year. In most instances this is applied to the land in the autumn or winter and allowed to work into the soil with the winter rains.

As it requires three years to produce an asparagus bed which will furnish edible shoots, it is customary for growers to plant, during the first season, a crop of bush beans, peas or other vegetables between the rows of asparagus. The cultivation required by the asparagus will be sufficient for the companion crops and the return from such a crop will go a long way toward paying the cost of the asparagus bed. After the plantation has become established production can be secured for many years. At the end of each cutting season the asparagus bed should be thoroughly cultivated and fertilized. The ridges should be leveled and flat culture given during the remainder of the growing season.

The length of time an asparagus plantation will produce profitable yields depends upon the treatment it receives. While some beds produce profitable crops for as long as 15 to 20 years, the ordinary commercial plantation is renewed every eight to ten years.

Where asparagus is raised for the markets, it is essential for the grower to have it reach the market as soon after picking as possible, as it deteriorates very rapidly after being cut. It is not uncommon to pick over the same field twice a day as the shoots break through the soil very rapidly and the sooner they are cut when ripe the whiter and fresher will be the color and taste. As an evidence of the wide fluctuation in the price of asparagus in the markets, it might be cited that frequently in San Francisco asparagus will sell one day for 15 or 20 cents a pound, and the very next day, because of an unusual shipment, the price will drop to two or three cents a pound. Each day's supply must be disposed of that day, even at a loss to the grower. For this reason asparagus is one of the crops which is best served by the cannery. The amount of asparagus to be cut each day can be measured by the quantity to be handled by the cannery, and no loss is sustained by being forced to compete with large stocks of other growers.

POTATO WART INVESTIGATION

Vigorous action is being directed against the European potato wart disease, which was discovered in Eastern Pennsylvania. The federal authorities have detailed six trained plant pathologists to survey the infested area and have enlisted the services of several men engaged in similar lines of research from state agricultural colleges.

Assistance has been secured also from the Pennsylvania state college of agriculture and the Pennsylvania department of agriculture. It is hoped by this timely intervention completely to isolate and destroy all traces of this dreaded European plant disease, provided it has not been distributed already through the medium of infected stock to interior points.

Agricultural News Notes of the Pacific Coast

Northern California

A big food and farm bureau meeting is planned for Yolo County early in January. It will be held at Woodland.

Large supplies of potatoes are coming in from Northwest districts and these have brought down the market on local stock.

The Butte County Citrus Association has completed its pack. During the season the association shipped 18 cars of oranges.

County Horticultural Commissioner Earle Mills pronounces the pear blight situation in Paradise, Butte County, now under control.

The Oroville chamber of commerce has gone on record as favoring a cooperative movement for good roads bond issue for Butte County.

The farm adviser of Butte County addressed a large group of boys of the community Y. M. C. A. at Oroville. Mr. Sweet spoke on modern farming.

Experimental plantings of cotton in Glenn County are reported not to have matured properly because of excessive moisture from the rice fields.

Eight hundred acres in Yolo County has been leased by the California Packing Corporation and will be planted to onions, asparagus, carrots, tomatoes and other canning truck.

There was a big farm tractor parade in San Francisco December 18, conducted by the California Tractor and Implement Dealers' Association. Forty machines were in the parade.

The past year has been a good one for beemen. California's production this year is estimated at 100 carloads. This represents a large part of all the honey consumed in the United States.

The output of olive oil in the Oroville district will be light this year because of the short crop and the large tonnage that has been converted into Greek and other varieties of salt cured olives.

The Seriterre Company which owns about a thousand acres in the Wyandotte district of Butte County has started planting 200 acres to mulberry trees. It is planned to ultimately plant the entire thousand acres to mulberries.

The plant of the Sunical Packing Company at Oroville will be greatly enlarged before another season. It is now handling a large list of products: Spinach, pumpkins, tomatoes, peaches, olives, and in 1919 will add string beans.

Farm Adviser W. L. Sweet of Butte County has been demonstrating the new methods of pruning. The method is based on experiments carried on at the University Farm and it is said it will increase the bearing age of the tree by one year.

At a meeting of the Mendocino Stock Growers' Association it was agreed to support the effort of the State Cattlemen's Association to procure legislation enforcing the use of pure bred bulls on the open range and the forest reserve.

At a meeting of the live stock interests of Butte County Forest Supervisor Rogers of the Plumas forest outlined a new plan of ranging. It is proposed to throw the section of the national forest from the middle fork of the Feather River to Canyon Creek into one range. It is also agreed that only Shorthorns and Hereford bulls will be allowed to range on the national forest.

Central California

The new cotton gin at Bakersfield has just had its intial run on long staple.

The Tulare County farm bureau will hold its annual meeting at Visalia January 16.

The Tulare County farm bureau will hold its annual meeting in Visalia January 16.

Pruning demonstrations are being planned by the Aromas farm center, Santa Cruz County.

The farm bureau of Madera County held a two day fig institute at Fairmead, December 16-17.

The Terra Bella Canning Company reports that the season's pack will total about 14 carloads of tomatoes.

Manufacturers of grape syrup expect for another season to have installed machinery with flavor saving devices.

The 21st Annual Poultry and Pet Stock Show of the Santa Clara Valley, held at San Jose closed Sunday, December 8.

Kings County Poultry Association decided to postpone the show which was scheduled for December 18-21 until January 14-17.

Successful experiments have been conducted in the Clovis district of Fresno County in destroying mildew in partly cured raisins by dipping in lye.

The farm bureau of Santa Cruz County is planning to inaugurate a campaign for the eradication of squirrels and gophers. The drive will begin the first week in February.

Fresno is inviting tractor associations to hold a big demonstration at Fresno next spring. Fresno points out that it is the center of the largest field for tractor use in the state.

Fig growers' meetings which were to have been held at Visalia, December 12 to 14, by Prof. I. J. Condit of the state university, have been indefinitely postponed because of Prof. Condit's illness.

P. H. Bates, inspector of apiaries for Kings County, reports that the production during the past season has been far below normal. Out of 2244 apiaries inspected only 190 were found to be infected.

One of the largest shipments of hogs from Kings County was made December 5 when 12 carloads were sent to the Los Angeles and San Francisco markets. The shipment was valued at over $30,000.

County Horticultural Commissioner Collins of Tulare County denies the statement recently credited to him to the effect that there were no thrips in Tulare County this year. Mr. Collins says there are many thrips.

At the monthly meeting of the Kings County farm bureau it was decided to request that the United States employment bureau be continued there. Kings County ranchers are quite disgusted with the quality of labor available.

The first annual report of the county farm adviser of Tulare County has been issued. The report discloses the fact that 900 farmers are now members of the Tulare County farm bureau and recounts the varied activities of the bureau during the past year. The annual meeting will be held at Visalia, January 16.

Southern California

A new Pima cotton gin has been opened at El Centro.

Saticoy, Ventura County, harvested 2000 tons of walnuts.

Ventura County grew last year about 90,000 acres of beans.

Imperial County is asking for a branch of the state agricultoral college.

It is rumored that several experiments in tobacco raising will be made in Imperial.

Beekeepers of several counties of Southern California met at Riverside December 16.

The last "live stock shipping day" from Imperial Valley showed 45 carloads of stock out.

The Half Century Association is planning to establish a permanent labor camp at Brawley.

There are about 40 attendants at the tractor course being held at Brawley, Imperial County.

The Imperial County farm bureau bid on supplying turkeys to various cantonments of California.

The board of supervisors of Imperial County has placed a bounty of ten cents each on gopher scalps.

The California Walnut Growers' Association has marketed this year for its members 12,500 tons of nuts.

The San Fernando Citrus Association is employing a unit of the Women's Land Army to pick oranges.

Riverside has appointed a committee to take charge of its display at the National Orange Show to be held at San Bernardino in February.

Frosty nights early in the month are responsible for nipping some of the olives and throwing them out of the pickling class into the oil vats.

Notwithstanding two oil mills are operating in Imperial County, large quantities of cotton seed are being shipped to Los Angeles for refining.

Southern California growers produced tomatoes for more than $5,000,000 worth of packed goods. It required 20,000 acres to produce the fruit.

Ventura and Santa Barbara Counties still have millions of dollars' worth of beans stored, but the growers anticipate an early improvement in the market.

A canvass of the lands in water company No. 4, Imperial County, shows plantings of cotton cover 5360 acres while the plantings of the next crop of alfalfa are less than 3000 acres.

Many citrus growers of Rialto, Bloomington and Fontana are manifesting much interest in the proposal to make the raising of vegetable crops a companion industry to the raising of citrus fruits.

Some little concern is felt by packers in the Redlands district because of marks which some of the oranges show, fine lines running through the skin that throws fruit of the finest quality into second grade.

At the 19th annual meeting of the San Dimas Orange Growers' Association it is reported that the total shipment for the season was 128,622 boxes. Directors elected for the coming year are: E. W. Hart, president; J. S. Billheimer, vice president; Wm. Ferry, H. S. Gilman, W. A. Johnston, A. C. Phares, H. E. Walker; E. M. Wheeler, manager.

The Coast and General

Egg marketing clubs are becoming general in Arizona.

All restrictions have been removed by the federal government from purchases of lime for agricultural use.

The postoffice at Hood River, Oregon, expects to handle at least two carloads of apples in parcel post shipments.

The cannery at Cottage Grove, Oregon, has finished a successful pack of which blackberries were the largest single feature.

Arizona counties are generally encouraging the work of home demonstration agents in connection with the farm bureau work.

The annual meeting of the American Fruit and Vegetable Shippers' Association will be held at Chicago, January 31 to February 4.

America is becoming more of a sugar beet producer, producing during the last year about 60,000,000 pounds from 6014 acres.

There were 50 sugar factories in Poland which before the war handled about one million tons of beets per year. There were 20 factories destroyed during the war.

The Arizona county agricultural agents report not only a great increase in farm crops as a result of the war aid efforts but an exceptionally important increase in the interest in live stock.

At the recent meeting of apple growers at Hood River, Oregon, the new grades proposed for box apples by the federal bureau of markets were neither commended nor condemned, the growers preferring to leave matters as they are.

The University of Arizona is recommending a more general use of cotton seed meal in increasing the protein feed, but urges care in feeding to hogs, recommending not more than one part of cotton seed meal to seven parts milo or barley.

The winter lettuce plantings in the Salt River Valley of Arizona are not so large as in former years but it is hoped that with the return of more laborers with peace conditions it will be possible to build up the old industry or make it even better.

Roads now being built on the Cranberry Peninsula of Washington will open up larger plantings another year. It is expected that the fruit can be put more quickly on the market by trucks than where growers have to rely on railroads and water transportation.

There is friction between the growers of sugar beets and the manufacturers because of the manufacturers refusing to accept satisfactory pulp contracts for 1919. The growers insist that the pulp shall be distributed proportionately between the growers, then if there be a surplus let it be distributed to farmers who were not beet growers.

Sugar beet growers of the Yakima Valley were paid the sum of $40,000 as the first monthly payment for beets by the Utah-Idaho Sugar Company, which pays for the beets delivered on the 15th of each month. But few of the beets have been harvested, and it is estimated that the December 15 payment will amount to $450,000. The amount paid represents 4000 tons of beets, approximately the crop from 250 acres.

How to Grade Grain

By Rollin E. Smith, Grain Supervisor
United States Bureau of Markets

AN INCREASING interest in federal standards for wheat and corn is becoming apparent in many parts of the country, with a view to enabling grain raisers to grade their own wheat and corn with at least a fair degree of accuracy. In deciding upon the requirements for the different grades particular care was taken to make them definite, thereby leaving as little as possible to the judgment of the inspector. Some apparatus is necessary to make some of the tests, particularly for moisture, which during some seasons is one, if indeed not the most important, of all the tests for both wheat and corn.

Grades

Under the official grain standards of the United States for wheat the soft red winter class is made to include all varieties of soft red winter wheat and red hybrids of the Pacific Coast, and red club. This class is divided into two sub-classes, only one of which need be considered here, namely, red winter, which is the predominating wheat throughout the southeastern quarter of the United States. Therefore, in the central states, the grading of wheat is simplified as compared with some other parts of the country.

The sub-class red winter wheat, according to the definition of the official grain standards, includes wheat of the class soft red winter, consisting of both light and dark colored kernels. But red winter does not include more than 10 per cent, either singly or in combination, of red Russian, red club, etc.

Red winter, like all other subclasses, is divided into six grades, Nos. 1 to 5, and sample grade. Descriptions of the grades may be had, on request, from any federal grain supervision office, or of the bureau of markets, Washington, D. C.

The United States department of agriculture in October, 1918, issued a "Handbook of Official Grain Standards of the United States for Wheat and for Shelled Corn." This handbook contains brief specifications of the official standards for wheat and shelled corn, and a brief discussion of methods of grading. A copy of this handbook will be mailed to any address, on application to the United States Department of Agriculture, Washington, D. C.

How to Take a Sample

The first step in inspection and grading is to take a correct sample. Particular attention is called to the most desirable size of the sample, which is not regarded as representative of the lot unless taken as described below. It should be at least two quarts in size. It is necessary to inclose at least 1⅛ pints in a clean air-tight container (can or glass jar), though the entire sample may be so inclosed. It is not necessary to inclose any of the sample if the moisture test is to be made at once. But if 1⅛ pints is inclosed in the air-tight container, the rest of the sample should be placed in a clean cloth sack, as the moisture test is made separately.

The air tight container is, of course, to prevent the moisture in the grain from evaporating. The grain must, for the moisture test, be exactly the same as the lot from which it was taken. This should impress upon the farmer and the country grain dealer the importance of correct treatment of samples. For example, the exposure of a sample of wheat or corn to the air for a few days, unless in very damp weather, would so reduce the moisture content that such sample would not be representative of the lot of grain from which it was taken. The difference in the moisture content might easily change the grain in the sample one or two grades.

Instructions relative to the taking of samples apparently cover all contingencies that are likely to arise—the taking of samples from carload lots, from wagons, canal boats, barges, ships and other vessels; from sacks, warehouses and elevators. In this article, however, one paragraph from the instructions will probably suffice. The paragraph follows:

"In case of bulk grain in a carload or wagon, at least five probes, and as many more as may be necessary, shall be drawn from the grain at different parts of the car or wagon." (The "probe" used for the taking of samples is described and illustrated in the handbook of official grain standards for wheat and for shelled corn.)

THE NEW YEAR dawns upon great problems, but upon greater promise. And each day's problem met fulfills the promise of the year. To each and all the California Cultivator wishes a year of busy and of happy days.

The grain drawn from different points in a lot or parcel is emptied on the sampling cloth and should be thoroughly mixed and placed in a cloth bag; but first, each probe of grain should be examined for odor, temperature, and condition of the grain.

Moisture Test

The moisture test is now generally recognized as almost, if not quite, as important as the test weight per bushel, for moisture is an important factor in the milling value of wheat. Not only does it add actual weight that can not be turned into flour, but excessive moisture makes it necesary for the mill to dry the wheat. This means extra expense as well as the loss in weight in the wheat. The moisture standard is necessary, because it has been proved that wheat containing over 14 per cent of moisture requires intelligent handling in order that it may be restored without great risk of serious damage. The great dread of terminal elevator companies is that the wheat in their bins may heat; but it will not ordinarily heat if the wheat is sufficiently dry.

The same is true of dockage and smut. Speaking generally, millers, as well as terminal elevator companies, prefer to buy clean wheat rather than dirty, even if the latter is a few cents cheaper. While an allowance is made in the price for the dirt or smut in wheat, the screenings that may be taken out and sold may not cover the cost of the necessary work. To eliminate smut, the washing and scouring results in a loss of bran in addition to the expense of doing the work. Therefore, it may be said that while dirty wheat is penalized in the inspection, it is justly so, for the grades are based as nearly as possible on the final test of wheat, namely, its flour making value.

In the inspection rooms, the moisture test is the first in the order of handling samples. It is made from the sample in the air tight container. The percentage of moisture permitted in the different grades of red winter wheat and corn is as follows:

	Wheat,	Corn.
No. 1	13.5	14.0
No. 2	14.0	15.5
No. 3	14.5	17.5
No. 4	15.5	19.5
No. 5	15.5	21.5
No. 6	.....	23.0

The percentage of moisture in grain is determined by a moisture tester, which, with the method of its use, is described in Circular No. 72, issued by the bureau of plant industry of the United States department of agriculture. Both the construction of the tester and the method of its use have been made as simple as possible, so that reliable tests can be made by any careful worker, even though he may not have had special training.

It is not necessary that every farmer should have a moisture tester. The few tests in a season that any farmer, unless he is a very large grain grower, will make would hardly warrant the general buying of testers. Doubtless the nearest elevator company that has a moisture tester would make tests for farmers. Then, too, a group of farmers could buy a tester and install it in some house convenient to them all. Instructions in its use could be had from the county agent.

The method of making a moisture test is to place the grain from its air tight container (100 grams or 3 4/7 ounces of wheat is used in the inspection offices, because of the ease of arriving at the percentage) in a distillation flask and the grain covered with mineral engine oil having a flashing point considerably above the boiling point of water. A thermometer is placed in the flask, held in place by means of a rubber stopper, with the bulb covered with the oil. The flask is connected to a condensing tube in the rear of the tester. When ready, the flask is placed in its compartment over a wire gauze and a gas jet underneath is lighted. The oil is heated to 180 degrees centigrade, which causes the moisture in the grain to evaporate and pass into the condensing tube, from which it drops to a graduate cylinder placed underneath. The percentage of moisture is shown by the scale on this cylinder.

The process is so simple that any careful person can make a test by following the instructions given in Circular No. 72. A single test can be made in 25 to 30 minutes. With a six compartment tester, six tests can be made in about the same time as one.

Scales Used by Inspectors

While scales are not a part of the moisture testing outfit, they are necessary for weighing the sample. Certain types, simple in construction and comparatively inexpensive, have proven satisfactory. Those in common use in inspection offices have a special scoop for pouring the grain into the distillation flasks.

These scales give the weight in grams instead of ounces and grains. The gram is the unit of weight in the metric system. By this system the weight of any given amount of grain is readily changed to percentages.

For example, any original sample is divided by licensed inspectors and one part weighing 1000 grams is used to determine the dockage and test weight per bushel. This amount, 1000 grams, is two pounds and three ounces. Any quantity may be used, but on the scales used, the percentage of dockage is readily determined. If, for example, 50 grams of dockage is sifted out, the dockage amounts to 5 per cent; 40 grams would be 4 per cent, etc.

Smaller quantities of wheat are used in making the other tests. The department recommends from 25 to 65 grams of wheat and 240 to 260 grams of corn. This is approximately one ounce to two and a half ounces of wheat and eight and a half to nine and a half ounces of corn.

To arrive at the percentages in the tests where these small quantities of grain are used, a table is referred to which gives the amounts in percentages of 100 pounds. This table has been published in United States Department of Agriculture Bulletin No. 574. In making the test for damaged kernels in a sample of hard red winter wheat, for example, such kernels are separated by hand from a 40 gram sample (28 grams to an ounce) say. The damaged kernels are then weighed. If they weigh one gram, for instance, reference to a table in Bulletin No. 574 shows that this is 2.5 per cent.

If other scales than those showing the weight in grams (the metric system) were used, it would require considerable work to arrive at percentages. Such scales can easily be obtained, and they can be used as readily as scales that are familiar to every one.

Most Tests Made From Clean Wheat

After making the test for moisture, the remaining tests, in the case of wheat, are made from the sample from the cloth bag. Tests for moisture, temperature, odor, onions, garlic, and live weevils are made before the dockage has been removed from the sample. All other tests are made after the dockage has been removed.

The points to be observed in the odor test in wheat are: Natural, slightly sour or musty, very sour or musty, heat damaged, smutty, garlicky, foreign odor.

Odors in grain are detected as odors usually are—by the smell. There is no artificial or mechanical means of determining this quality in grain. Therefore the accuracy with which it is done depends upon the experience of the inspector and the acuteness of his sense of smell.

Green Manure Crops in Old Citrus Orchards

Written for California Cultivator By J. B. Neff

WE PRESUME that every one who can profitably grow a green crop for plowing under has it planted or is preparing to plant. Considerable doubt is often expressed as to the value of green crops in old orchards, and the growing of such crops has been abandoned by some orchardists on the presumption that it does not pay. It is a fact that when green crops are to be grown in old citrus orchards where the trees are almost touching and but little sunlight can reach the ground the crops do not make large tonnage and will not supply the needs of the trees in humus forming material, but this does not mean that the small crop will not pay its cost of growing and be the source of considerable fertility for the trees. A crop of 20 tons of green material on an acre is not uncommon where melilotus is sowed on open ground or among deciduous trees after the leaves have fallen, but since there is often less than half the ground uncovered in old orange orchards we will assume that not more than five tons can be grown on an acre. The cost of growing an acre will be about as folloys: Seed for half the ground, eight pounds at 12½ cents, $1.00; planting, 50 cents; water and labor when an additional six acre inches has to be used to grow the green manure crop, $3.30, or a total of $4.80 for five tons, which is less than one dollar a ton for the material.

The potash and phosphorus which is in the green crop came from the soil and is in a better form for the trees to use, while at least one-half the nitrogen in the crop came from the air and is clear gain. This nitrogen at present prices would be worth more than one dollar for each ton of green material and would pay all expense of growing the crop.

The humus forming value of manure is usually estimated as being equal to the fertilizing value and in this case leaves a profit of more than $5.00 per acre in favor of the green crop. We must have humus in the soil if we are to grow oranges and lemons, so must not neglect any means of securing it as it is not possible to get sufficient stable manure to supply all the orchards.

County Horticultural Commissioners Meet

One of the strong factors in the upbuilding of the California fruit industry has been its horticultural laws and their efficient enforcement. Their enforcement has been made possible by the enactment of state laws, one creating horticultural commissioners in the county, another creating a state horticultural commissioner with power of appointing quarantine or other officers.

As noted, these officers have given efficient enforcement of these laws, and at the same time there have been mistakes made which constantly call for a revision of the laws. At present the commissioners operating in the counties and the state deputies are entirely independent, excepting, as a matter of good will and for the securing of common efficiency there has usually been united action. But both state officers and various county officers are now feeling the need of more complete revision of the laws under which these various bodies operate. To the end that the best suggestions might be brought together the state organization of county horticultural commissioners recently met in Sacramento and discussed the variout amendments suggested in the state laws. State Commissioner Hecke has felt that there should be closer cooperation and has suggested that the various county officials should come under the entire direction of the state. On the other hand many of the county commissioners maintain that, owing to the wonderful diversity of California conditions and to the fact that even a serious insect pest may have found lodgment in one county and not in another, the various county organizations should be maintained intact and should be supreme within their own boundaries.

While this may be true, it has led to a series of misunderstandings among the fruit growers, the nurserymen and others until it is evident the entire state law demands some changes, but as to the state commission having entire supervision the meeting of county commissioners failed to develop fullest support in this matter. The county commissioners, having expressed fullest confidence in the present state commissioner, referred the matter of legislation to a special legislative committee.

As to the resolutions and the membership of this committee we quote from report of the meeting supplied by Secretary Avery S. Hoyt of the state commission:

Whereas, certain weed pests occur in various counties of this state to the detriment of agriculture; and there is need for a statewide campaign to eradicate and prevent the spread of weed pests, be it resolved, that the State Association of County Horticultural Commissioners put itself on record as favoring such a statewide campaign, and pledge united action in an effort to eradicate serious weed pests which occur generally throughout the state;

Be it further resolved, that the State Association of County Horticultural Commissioners pledges its support to the state commissioner of horticulture and urges the enactment of a law creating a weed department of the state horticultural commission, and that further, its influence will be used with members of the state legislature to secure the passage of any law which will aid in the control of weed pests.

After much discussion, it was de-

FRESNO, CALIF.

cided to submit to the next legislature amendments to the present county horticultural commissioner's law, which would place the supervision of the work in the various counties of the state under the jurisdiction of the state commissioner of horticulture. This matter was placed in the hands of the legislative committee, consisting of O. E. Bremner of Sonoma, William Gould of Yolo, H. H. Ladd of San Joaquin, C. F. Collins of Tulare and C. F. Turner of Placer. As an expression of their opinion on this question for the guidance of their legislative committee, the association introduced and passed the following resolution:

That we the State Association of County Horticultural Commissioners, pledge our confidence in Mr. Hecke's sincerity of purpose and pledge our earnest support in his efforts for the betterment of the service we are pledged to deliver to our respective counties and the state of California.

Saving One Man

Driving rod extension give control over the tractor from the implement operator's seat and save one man's time.

SAVED ONE MAN

THE labor shortage incident to these war times has placed the farmer in a particularly trying position. Unskilled labor suitable for his purpose has been difficult to obtain and able-bodied experienced help almost impossible to secure. To add to his difficulties, demand for greater production has been made upon him. But in spite of these handicaps he has measured up to the emergency in his characteristic manner where a less resourceful man would have acknowledged defeat. The farmer is daily meeting and solving problems which ordinarily would seem to defy solution. Much of the farmer's success is to be attributed to the improved implements he now uses for carrying on his work and which enable him to greatly increase his production per man. Among these implements the tractor has proved the most potent in making his campaign successful.

Recently labor shortage pressing more heavily upon him, the farmer has called upon his ingenuity to further supplement the labor saving features of his tractor, and has not called in vain. He is now extending his tractor controls to the implement he is pulling and, by thus bringing both under the supervision of one man, has dispensed with the services of one helper.

Numerous owners of tractors have successfully operated under these unique conditions during the past season. A few days since a tractor owner in the vicinity of Hanford desired to level some unplowed land. He extended his tractor controls to a six-foot Hanford scraper in the manner illustrated, and thus equipped dispensed with the services of one man, and performed his task successfully and at a trifling cost compared to the expense necessitated if he had used horses.

Labor shortage loses much of its terror when the farmer is tractor equipped.

NEW CITRUS TROUBLE

Some of the citrus districts of Southern California are reporting trouble in the marking or slitting of the skin of some of the earlier ripencing oranges. While not serious it is causing concern as to what it may mean. The Redlands Review reports:

"Some little concern is being caused the packers of Redlands' citrus district and those of other districts in Southern California as well, because of the manner in which some of the oranges are marked this year, fine thin lines running through the skin that throws the fruits, although of finest quality, into the second grade.

"'It is a new one on us,' said one of the packers yesterday, 'for it is not a thrips mark, and I don't know what it is. It is not very serious, because only a percentage of the fruit is marked that way, but this year when prices are going to be so good, it seems a shame to throw fruit into second grade because of such marks, but it must be done.'

"Reports from other sections show that the fruit there has been marked the same way. Some one has suggested that the markings may be the result of the war and the thousands of tiny lines represent the lines of the Allies."

more

than a scrap of paper -the Ghirardelli label

The Ghirardelli label on the Ghirardelli can is *more* than a scrap of paper. It is a *dependable* assurance of Ghirardelli quality. It carries with it the *certainty* that you are getting the chocolate of highest purity and nutriment.

Always dependable —never disappoints!

At the store where you do your trading —in ½ lb., 1 lb. and 3 lb. cans.

Ghirardelli's Ground Chocolate is put up *only* in cans—to safeguard your health and to protect you against inferior substitutes. Look for the label. Then you will be doubly sure that you are getting the *original* Ghirardelli's Ground Chocolate.

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Princess Papershell Almond

What can you tell me of the Princess papershell almond? Are there any plantings in this state?—Inquirer, Los Angeles.

This question was referred to Claud D. Tribble of Elk Grove, and he writes:

"We believe this variety is not used any more. It is one of the very finest almonds, with fine white shell and long, white, sweet kernel, but owing to its very shy bearing is no longer used. Looking over a number of late nursery catalogues we do not find it listed any longer. We understand that there are a few of these old trees at Antelope, Guinda, Corning and Orland. Our informant says he does not know names of parties having these trees but that the nuts were sold through the respective associations. Prof. R. H. Taylor of the University of California, Berkeley, could give more information in regard to this, or Mr. Tucker, president of the California Almond Growers' Association of San Francisco should be able to give useful information."

Raising Rabbits

Please state the best way of raising Belgian hares. What are the best feeds for growing rabbits; also for fattening them? Are there any weeds poisonous to rabbits? If so, please tell me what they are.—Subscriber, Gonzales.

An answer to such a question calls for volumes; it has been referred to a practical rabbit grower, W. D. White, and he gives a few hints:

Rabbit raising is an industry, a business, and success comes only as one puts into it sound practice of business principles. To give full instructions in this one article is impossible, so for further study and instruction we recommend some good rabbit guide, such as we gave in answtr to "Rabbit Questions," on Page 604 of the Cultivator of December 14. As to feeding: Plain alfalfa hay free from dust or smut and good clean rolled barley are necessary. To these may be added green feeds, roughage and concentrates. In green feeds do not give any buttercups, nightshades, tops of potatoes, meadow horsetails, rhubarb, onions or frosted roots or any feed from dusty roadsides. Dandelion, lettuce and kale should be fed sparingly. Carrots are good; chicory fair; hogweed good; pea vines (if dry) good. Potatoes must be cooked. Use judgment in all feeding to animals kept in confinement, as that which they might eat at will if loose, they will overeat of oftentimes when confined, and herein is danger.

The secret of growing rabbits is to keep them growing all the time. Each pen needs different treatment, as much depends on the mothers nurse and weather conditions. Would suggest a study of this point at length in one of the books aforementioned.

For roughage use any of the wild hays properly cured; oat or wheat straws cut in the milk and cured are good. These may be mixed with the alfalfa hay and thus vary the menu. Concentrates, such as oats, corn and various mixtures of bran, oil cake, beet pulp, soy bean meal, are to be used as conditions demand. The writer would be glad to reply at further length in the further study of any of these points through the columns of this paper if desired.

Curing Dates

Please tell me how dates are cured, or are they left till soft on the tree? I have some ripening and if I let them stay on until soft the birds get them. If I pick them they dry up without ripening.—Subscriber, Bostonia.

The artificial ripening or incubating of dates at harvest depends upon the variety. There are some of the hard sweet dates which cure naturally on the tree, but the soft varieties present a more difficult problem. Director Forbes of the Arizona experiment station recommends that the fruit be gathered by the bunch before the fruit begins dropping, also before it is attacked by insects, mold or bacteria. They are usually cured by being confined in chamber or incubator and subjected to moist heat. However, we note in Swingle's "Date Palm": "Usually the whole bunch is cut off and hung up in dry shady place. Remove any dates which have begun to spoil." This matter of ripening has called for a bulletin issued by the Arizona experiment station, which we think will be sent to Californians if postage is forwarded to Agricultural Experiment Station, University of Arizona, Tucson. The bulletin treats on "Chemistry and Ripening of the Date," by A. E. Vincent and "Ripening Dates by Incubation" by G. F. Freeman.

Castor Bean Contracts

What will be the attitude of the government regarding contracting for next year's castor bean crop; also what are other marketing possibilities?—Subscriber, Arcadia.

This matter was referred to Henry S. Gane of the California Castor Bean Association, and Mr. Gane writes: "The war department has positively announced that it is not in the market for castor beans the coming season. As far as selling them commercially is concerned, we are not able to make an announcement at this time. We are taking the matter up with some of the large castor oil producers in the United States to see if we cannot turn over next season's crop for the members of the association or others who care to join us. As soon as we know definitely, we will be pleased to advise you. The buyers, however, can not state anything definite until they know how much the war department will need for their own use. We personally believe that the price will be much lower than what the government is now paying, which is $4.50 a bushel of 46 pounds."

Nitrate of Soda on Apple Trees

Some time ago I saw an article in your paper, on spraying fruit trees with a solution of nitrate of soda, to keep the fruit from falling. Could you kindly give me the formula, as I have lost the paper? We enjoy the Cultivator very much. Thanking you for your many helpful suggestions.—Subscriber, Redlands.

The formula recommended by Messrs. Ballard and Volck and given in the Cultivator of March 26, 1914 is as follows: Nitrate of soda, 50 pounds; caustic potash, 7 pounds; water 50 gallons. At Watsonville the spraying was done on February 2; all twigs were drenched with the spray, about seven gallons of solution being applied to each large tree. Report states: "April 7, 1912. Trees in row sprayed, well in bloom, while those in check row adjoining show only occasional flower."

Evaporation of Water Under Varying Conditions

Written for California Cultivator By J. B. Neff

BULLETIN NO. 177, Office of Experiment Stations, shows that the loss by evaporation from very wet cultivated soils may amount to four inches per week, or twice that from standing water. The loss from soils wet enough in the top layer to produce vigorous orchard growth is about one inch per week, or half that of an exposed water surface. Soils that are fairly dry on top lose about one-quarter inch per week.

Where the temperature is high small amounts of water applied to the surface at frequent intervals and without thorough cultivation are of little benefit, and the evaporation may exceed nine-tenths of the entire amount of water applied. Stirring or turning soil that is not well pulverized may increase the loss by evaporation. The character of the soil does not seem to have much influence on the rate of evaporation.

The loss of water by evaporation can be checked by the application of the water in such a way as to keep top soil comparatively dry. This places the water beyond the influence of the wind, and to a considerable degree beyond the influence of high temperatures, as the daily variation in temperature almost disappears at one foot below the surface.

Records show that the difference of temperature between dry soil in the shade and dry soil in the sun is sometimes 50 degrees and that the average in summer is about 35 degrees. When the thermometer stands at 90 degrees in the sun, the temperature of dry soil in the shade will be 85 degrees, and of dry soil in the sun 135 degrees.

Cultivation after irrigation has the effect of checking evaporation since loose earth is a poor conductor of heat. It is also shown that in extreme cases a difference of 10 degrees will be found at a depth of one and a half inches, between compacted and loose soils.

The experiments on water surfaces showed that decreasing the temperature from 88 degrees to 80 degrees reduced evaporation 20 per cent; reducing temperature to 73½ degrees reduced evaporation 40 per cent; at 61 degrees the decrease was 67 per cent, and at 53 degrees the evaporation was 85 per cent less than at 88 degrees. That is reducing temperature 7 degrees decreased evaporation one-tenth inch per day. The proportionate saving from soil surfaces is probably the same as from water surfaces, and shows the necessity of applying the water deep in the soil, and of frequent cultivation.

When 12 inches depth of water was applied to the soil it was found that 1.65 inches evaporated the first five days. At that time half was cultivated. During the next six days the loss from the uncultivated soil was 1.38 inches, and from the cultivated soil .63 inches, saving .75 inches in the six days by cultivation. When less water was applied the cultivation could be done sooner and a smaller percentage lost by evaporation.

Soil receiving water enough to cover it 3.14 inches deep lost as follows in 14 days: With no mulch, .72 inches; with a four-inch mulch, .21 inches; with an eight-inch mulch, .1 inch; with a ten-inch mulch, .03. These mulches were dry soil placed on the watered soil and give better results than can be had in a field, but show that large savings can be made by proper cultivation.

When 5.19 inches of water was applied on the surface the loss in ten days was 1.11 inches. When applied in three-inch furrows the loss was .99 inches; in six-inch furrows the loss was .94 inches; in nine-inch furrows the loss was .82 inches, and in 12-inch furrows .63 inches.

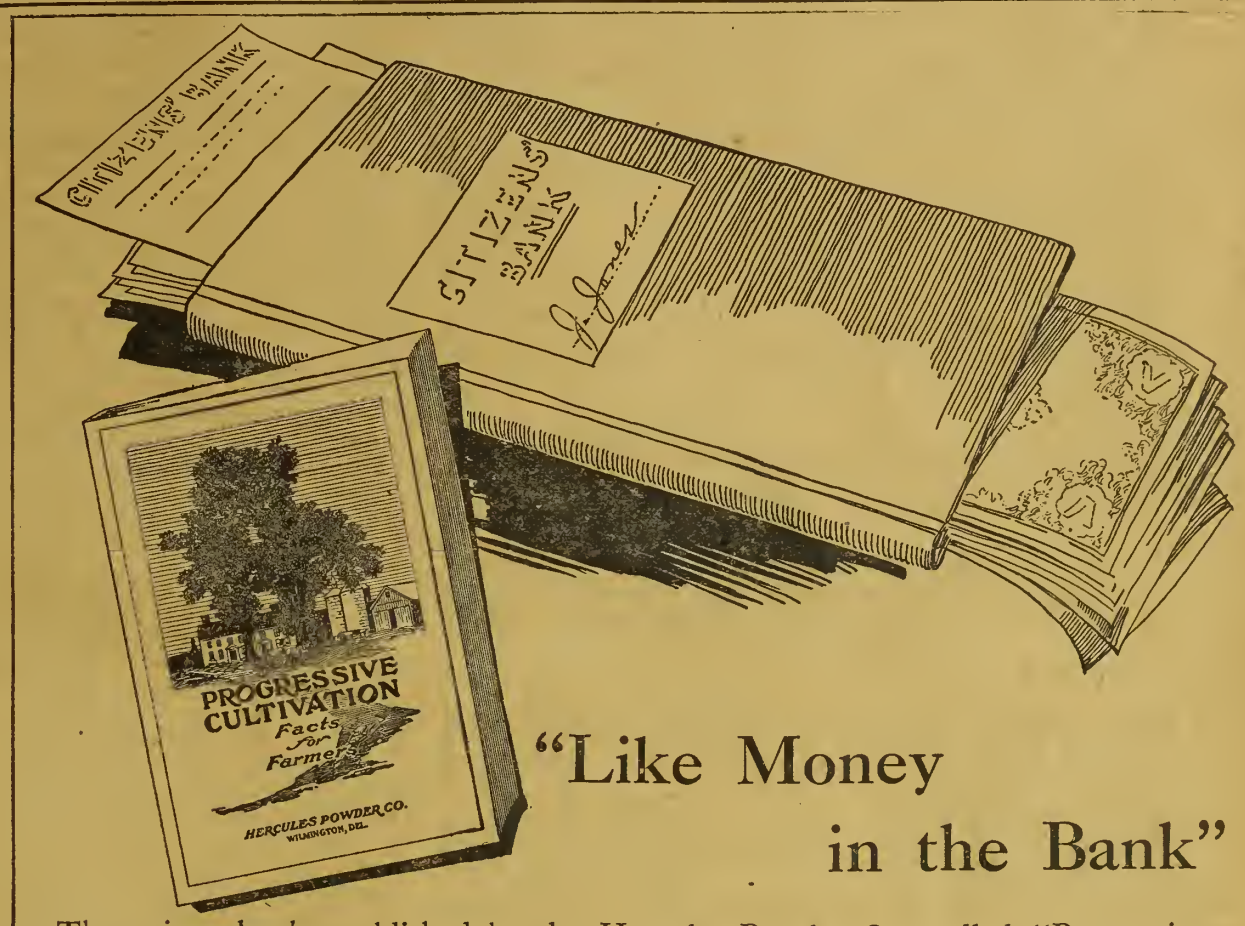
The soil in each case was cultivated to a depth of four inches on the third day. Other experiments as to different depths of water showed approximately the same results.

The experiments show a saving in a six day period by cultivation of 6¼ per cent of the water applied, and a saving of 9¼ per cent in a ten day period by using 12-inch furrows in addition to the cultivation.

A point very forcibly brought out is the large loss when water is applied in frequent light irrigations. Unless the nature of the soil and crops requires such irrigations, much water can be saved by using larger amounts and less often.

The experiments were made in the vicinity of Riverside, and the soil is described as follows: A sandy loam of good texture, more or less micaceous and granitic in origin. The soil is, throughout the tract, underlaid by a highly micaceous and more or less gritty loam at depths varying from two to five feet. The grit consists of small fragments, partly granitic, with its mineral still intact, and of single grains of feldspar and quartz loosened from the rock by weathering agencies. Still deeper down this mixed loam and grit is underlaid by a bed of almost pure grit of the same character, and reaching in places many feet in thickness.

The man who says his childhood was the happiest period of his life must be missing a lot of fun.—Cottrell's.



"Like Money in the Bank"

There is a book, published by the Hercules Powder Co., called "Progressive Cultivation". It tells you of all the various uses of explosives on the farm and will be sent free to any farmer who fills out and mails the coupon printed below. This book has been of invaluable service to farmers and orchardists who are anxious to get from their land a maximum of yield with a minimum of labor and expense.

HERCULES DYNAMITE

is one of the very valuable helps to the farmer in his struggle with the National problems now facing him;—the problems of labor shortage and the Country's immediate need of all food supplies.

Send for your copy of "Progressive Cultivation" today. It will tell you how to use explosives in planting your orchards and in keeping your bearing trees in good heart, in digging your ditches and draining your land,—in fact, in doing much of your heavy work at less cost and at much less labor than by the old, back-breaking methods.

We do not claim that explosives can do everything on the farm but we *know* that, judiciously used, Hercules Dynamite can be made of invaluable service to you. It will help to put cash in your bank and at the same time to produce the bumper crops that the Country needs.

A Letter from Bossy

Dear Folks, I want to tell you how much better I feel since taking Kow-Kure—I give many times more milk and I feel as fit as a fiddle.—Bossy

If a cow could speak she would talk about her health as people do—because cows suffer from ailments, little and big, the same as human beings. When a cow is sick, she needs medicine as much as a sick person does.

Mere rationing will not eliminate disease; medicinal treatment is necessary. The most common cow ailments, such as Abortion, Retained Afterbirth, Lost Appetite, Bunches, Scours, etc., result from a diseased condition of the digestive or genital organs. Any of these diseases and many others can be successfully treated or prevented by using Kow-Kure, the great cow medicine.

Kow-Kure is scientifically prepared for the treatment of cow diseases only. It puts the vital organs in condition to eliminate disease and function regularly. Prevent sickness by occasionally using Kow-Kure. Feed dealers and druggists sell it—60c. and $1.20 packages.

Free book, "THE HOME COW DOCTOR," sent on request.

Feeding Systems in Winning Herds

BULLETIN No. 301, by Prof. F. W. Woll, just issued from the University of California press, contains complete data of the California state dairy cow competition. Much of the data has appeared from time to time in the columns of the Cultivator. One of the features of the bulletin, aside from the very valuable data contained therein, are the statements by the owners of the winning cows regarding the systems of feeding that proved successful. Believing that the stories of these successful dairymen will be of interest and value to our readers we quote as follows:

J. W. Coppini, Ferndale.—At the first inception of the California State Dairy Cow Competition, I fully realized the object and benefit to be derived from it, and decided to enter every cow in my herd.

About two months before entering, my cows were put dry and fed as follows: All the mixed rye grass and clover hay they would eat up clean, together with a liberal ration of beets, and about three pounds of grain or dried beet pulp, as I happened to have on hand.

After freshening, the grain ration was increased to four or five pounds per cow daily. During the spring and early summer months green cut grass was fed in the barn during milking, and later, as the grass became short, oxheart carrots were gradually substituted, and later beets and hay during fall and winter months. They were milked twice a day and pastured the year round; kept in the barn at night in the winter and also in the day time when real stormy. Plenty of bedding was always provided.

Guy H. Miller, Modesto.—At the beginning of the contest, the cows were being fed a molasses dairy feed. A little later a ration composed of three parts crushed barley, two parts shorts and one part linseed meal was substituted. For the first month it was fed with a small amount of beet pulp. As the cows did not like beet pulp very well, it was discontinued December 1. The cows were fed alfalfa hay and the above grain mixture up to April 1, 1917. We then began feeding the first cutting of alfalfa and foxtail green as part of the night feed. About the first of May crushed barley alone was substituted for the former mixed ration. The ration then was crushed barley and alfalfa hay, with green alfalfa as part of the night feed. In July crushed oats was mixed with the barley, half and half. The alfalfa hay and alfalfa soiling was continued as before.

On August 1, the oats were left out of the ration, alfalfa hay continued, and green kaffir corn was given in the night feed. This ration was continued until September 10, when we ran out of kaffir corn. Alfalfa hay and crushed barley and oats were fed, in the proportion of two parts of barley and one part oats, to September 25. The cows were then turned out a part of each day to pasture off what was left on the alfalfa fields in the way of green feed, haying being over on account of short irrigation season. The cows were pastured about two weeks, receiving alfalfa hay in the morning and a light feed of the same at night, the grain ration of oats and barley being continued. Pasture was discontinued October 10 and cows were then on dry feed entirely. October 22, as the price of barley and oats had soared out of reason, we turned to molasses dairy feed for a concentrate. This dairy feed is supposed to consist of one-third each of molasses, crushed barley and "dairy chop." This ration of alfalfa hay and molasses feed was continued to the end of the contest.

The ten cows that won the second herd prize were fed 20,677 pounds of concentrates during the 504 days they were in the contest, an average of 6.8 pounds per day, the largest average amount of concentrates being given to Goldie of Venadera, 10.2 pounds, and the smallest amount to Martha of Venadera, 3.6 pounds.

The cows were fed and milked twice daily throughout the contest, with the exception of Lorita of Venadera, one of the older cows that now leaks her milk very badly. She was milked three times daily for six weeks, but as she seemed to leak just about the same, her three times milking was discontinued. When not in the barn night and morning being fed and milked, the cows ran in a corral adjoining the barn at all times, except the two weeks they were pastured a part of each day. There is a closed-in shed in connection with the corral for protection during bad weather.

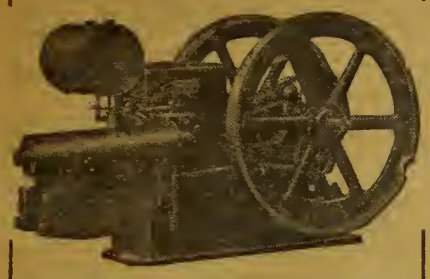
A. W. Morris & Sons Corporation, Woodland.—Miss Valley Mead De Kol Walker was milked four times a day during the first four months and three times a day during the last six months of the record period. Her grain ration varied from ten to eighteen pounds a day, consisting of equal parts of ground barley, ground oats, and wheat bran, with one to two pounds cottonseed meal and two to four pounds soy bean meal. A little linseed meal was fed in place of the above concentrates at times. Her roughage consisted of corn silage during the winter, about 15 pounds once a day, and five to ten pounds of dried beet pulp a day. She also had fresh beets during part of the test, which were fed in place of the silage. In addition to this, she of course had what alfalfa hay she would clean up. The above feeds were varied in amounts according to the cow's appetite for them. She was kept in corral and box stall and fed at each milking.

The other cows were handled in the same manner, and their rations consisted of the same feeds, varied in amounts according to the production and peculiarities of the cows. These other cows were milked three times a day and were kept with the herd and given a light feed of rice bran, wheat bran and beet pulp.

Iver Iversen, Arcata.—During the months of April, May and June, my cows were fed green clover pasture, green oats and vetches in the barn, twice daily, and also four pounds of a mixture of wheat, cocoanut meal and cottonseed meal, daily per cow. In July and August they were fed green peas and clover pasture, and also four pounds grain. During September, October, November they were fed green Indian corn (Yellow Dent), carrots (120 to 150 pounds per cow daily), and six pounds mixed grain as above mentioned. During the months of October and November they were also fed 10 pounds alfalfa hay per cow. From December 1 to March they were fed from 125 to 150 pounds beets per cow daily, with six pounds grain feed and ten pounds alfalfa hay.

F. Stenzel, San Lorenzo.—The cows that were entered in the competition were fed like the balance of the herd. The daily rations fed until March 15, 1917, were 50 pounds wet brewers' grains, 10 pounds dried beet pulp, one pound linseed meal, with alfalfa hay and mangels. About 60 pounds fresh cut green alfalfa was fed March 15 to November 10, and after that time about 35 pounds of alfalfa hay was fed daily per head. On account of the high price of mill feeds we left them out of the ration entirely. This was very likely a mistake, for by adding a small amount of mill feed, the result in the competition might have been different, especially in the case of Alice. Another thing that worked against the best result was a change in the milker and feeder during the competition period. The first six months the cows were milked three times a day and cared for by a competent, careful man. After he left they were milked twice a day by an inexperienced feeder.

Witte Irrigating Engines



Kerosene - Distillate 2 to 30 H. P.

Pump your water with a WITTE. All you need is a centrifugal and my Special Model Kerosene-Distillate Engine. I can lay your engine down at least cost. Live Stock News Notes

Cattle at $50 per Cwt.

The champion carload of steers at the recent International — yearling Herefords from the S. M. S. ranch in Texas, fed by J. W. Frazier of Illinois—sold for $50 per cwt. They averaged 1126 pounds. It is interesting to note that these steers were dropped on the range and demonstrate in a powerful way the possibility of improvement of range stock through wise use of pure bred bulls.

Fewer Cattle to Feed Lots

Figures compiled by the bureau of markets show material increases in the number of stocker and feeder cattle shipped from 26 markets in 1917 and 1918, as compared with the number shipped from the same markets in 1916. The shipments from these markets during the first eleven months of 1918, however, showed a decrease of 139, 044 or 3.3 per cent, as compared with the first eleven months of 1917, but an increase of 16.6 per cent over the 1916 shipments. The most noticeable decrease in 1918 as compared with 1917 was during November, yet the shipments during November, 1918, were 53 per cent greater than the shipments for November, 1916. March, April, May and August shipments in 1918 showed an increase as compared with shipments during the same months in 1917.

Voorhies to Return

Dairymen of this state will be interested to know that E. C. Voorhies, formerly assistant professor animal husbandry in the University and who now holds a commission in the army, will return soon and take up his work in the dairy division at the University farm.

A Hereford Sale at San Francisco

Joseph E. Painter, general manager of the California International Live Stock Show which will be held at San Francisco early in February, states that a sale of Hereford cattle will be held during the show regardless of the recent decision of members of the Pacific Coast Hereford Breeders Association to hold their annual sale at the University farm later in the season.

George Wendt with Henderson Co.

George Wendt, known throughout the West as a most capable Holstein farm manager, is now in charge of the big Henderson Company herd at Sacramento. This herd has a wonderful lot of highly bred heifers close to freshening and under the new management these will be fully developed.

Holmes Holsteins Doing Well

R. L. Holmes, Modesto, recently completed a number of good records with his registered Holsteins. An especially pleasing one was made by Penopa Lockhart 2nd, a junior three year old, who made 23.39 pounds butter in seven days. She is a highly bred heifer, being by Sir Rag Apple Korndyke and out of the 25.56 pound dam Penopa Lockhart.

A Fine Showing from Higdon

Tulare Holstein Farm, owned by W. J. Higdon, Tulare, is contributing some fine records to California Holstein development right now. The five year old cow Pauline Soldene De Kol 3d heading the list with 30.84 pounds butter and 576.1 pounds milk in seven days. Mona Fobes, a senior four year old daughter of Mutual Fobes Longfield De Kol, made 26.61 pounds butter and 523.8 pounds milk in seven days, 109.63 pounds butter and 2325.3 pounds milk in 30 days. The five year old cow Troutbrook Pontiac Starin made 26.51 pounds butter and 571.1 pounds milk in seven days and 110.32 pounds butter and 2367.1 pounds milk in 30 days.

Mitchell Holsteins on Test

Black Patti, a splendid registered Holstein cow owned by Walter F. Mitchell, Visalia, is on official test and has 26.11 pounds butter to her credit in seven days and is milking above 90 pounds per day. Jennie Wren, a junior four year old in the Mitchell herd, has over 21 pounds to her credit in seven days and is still on test.

DISC PLOWS

Designed especially to meet the plowing conditions of the Pacific Coast—built to the same high standards of material, design and workmanship as the "Caterpillar" Tractor.

Built primarily for use behind the "Caterpillar" Tractor, these plows HAD to be exceptionally good—first, because they had the enviable "Caterpillar" reputation to uphold; second, because the "Caterpillar" Tractor's ability to do the harder, heavier kinds of work that other tractors can't handle necessitated that the plows, too, should be superior in strength and design.

"Caterpillar" Disc Plows are heavy and strong, yet light of draft and easy to operate. They have made good, in years of service, where other plows have failed. They have aided tractor success and increased tractor capacity by lessening delays to the outfit. Send, today, for the "Caterpillar" Disc Plow catalog.

The Tagus Ranch Sale

Widely advertised as "America's Greatest Farm Auction Sale," the Tagus Ranch sale at Tulare completely fulfilled every claim made for it and will go down in public sale history as one of the greatest events of its kind.

The sale was scheduled to extend over four days but the addition of large numbers of animals and implements not listed carried the sale over an extra two days.

Opening on Tuesday, December 10, the sale went on continuously until the afternoon of Sunday, December 15, when the last carload of beef cows was sold.

Col. Ben A. Rhoades of Los Angeles gave an exhibition of salesmanship and endurance in this sale that has unquestionably never been equalled in America. He occupied the block during every minute of the six days of selling, and finished with as clear a voice and as genial a manner as on the forenoon of the first day. His work was one of the big topics of conversation among the thousands of visitors who attended the sale during the week.

The arrangement and management of the sale was handled personally by Charles L. Hughes, Sacramento, who again demonstrated ability of a high order. Under his management, from the advertising prior to the sale down to the final accounting, the big sale moved smoothly and rapidly, without a single hitch.

A feature of the event was the presence in the box during a portion of the sale of Mr. Hulett C. Merritt, multi-millionaire owner of Tagus Ranch. His keen comment on animals and implements going under the hammer frequently livened the proceedings.

Harold B. Rhoades acted as ring man throughout the sale and made an excellent impression by the cleverest and fastest ring work he has ever done.

The first day of selling disposed of the registered Holsteins, the 80 head bringing upwards of $18,000.

On the second day 200 head of registered Duroc-Jersey hogs were sold, including about 40 suckling pigs, for upwards of $11,000, or an average of over $65 for the 160 lots sold. This was a very satisfactory average considering the large number of spring and summer pigs in the lot. A selling record was set when the entire herd went under the hammer in exactly four hours.

The top animal was the great young boar Orion's Golden Col. that fetched $675. Next high boar was California's Defender, that sold for $450. The high sow was Crimson Queen, a daughter of Slocum's Crimson Wonder, that went for $520.

The heaviest buyer of Durocs was G. W. Emmons, Oakland, who secured the two top boars and a choice lot of sows and young stuff.

The sale of registered stallions and mares was the most successful ever held in California, although many of the top animals sold far below their real value. The top price was for the Belgian stallion Cadet, who sold for $2100; next the Belgian stallion Adonis at $1900, and next the Percheron stallion Paulus of Paicines at $1450. Belgian mares sold up to $505, for a two year old filly, and Percheron mares and fillies up to over $500, with an average of over $300. W. Mayo, Newhall, and E. L. Cebrian of San Francisco were prominent among the buyers of registered Percherons and Belgians.

The Angus cows and bulls were widely scattered to many buyers but sold at very moderate prices.

The implements sold briskly, the 15-35 Sandusky tractors averaging around $1800, and other implements finding keen demand. It was necessary to carry the implement sale over until Saturday and only a comparatively small crowd showed up that day. As a result some of the special bean and beet implements were not brought in.

The sale was held in a big tent, into the arrangement of which Sales Manager Hughes had introduced some original and satisfactory ideas, permitting the buyers plenty of opportunity to see in plain view every item offered.

Complete totals of the sale show over $135,000, which sets a new Pacific Coast record.

Mr. Merritt donated the lunch for the entire six days of sale to the Red Cross, and something over $500 was netted for the good cause.

Winter Brood Sow Management

With every prospect for a continued strong demand for pork products it will be to the advantage of every hog producer to take such care of his brood sows as to insure strong litters next spring.

Practically all sows have been bred—or will be shortly, and the care accorded the sow from now on until farrowing time will determine very largely the value of the litter.

There are three very common mistakes made in brood sow management. They are either permitted to get too fat; are allowed to become run down; and are not forced to take sufficient exercise. Proper feed and exercise are absolute essentials.

It is a mistake to allow sows to become over fat. There is little question but that fat affects the fecundity of a sow—resulting not only in smaller litters, but very often the pigs come lacking vitality. Then too, an over fat sow is very apt to be clumsy in taking care of her pigs. A greater mistake is to allow the sows to become thin and run down. Such sows can not properly develope strong litters, and after the pigs are born the drain of nursing is extremely heavy.

The more one studies the live stock game the more he becomes convinced that the greatest factor in success is common sense and good judgment. The care of the brood sow should be along common sense lines and the condition in which they are maintained should be dictated by good judgment.

In feeding a brood sow the fact that the sow is doing double duty should not be lost sight of. Young sows must be kept growing, and mature sows should be maintained in reasonable flesh, while they are devolping the litter. The kind of ration required by the pregnant sow is one furnishing plenty of protein—needed for tissue building. In this state question of supplying protein is largely solved through a wide use of alfalfa. However during the months when alfalfa pasture is not available it is usually advisable to furnish some protein concentrate, such as tankage, oil meal, shorts or middlings, bran, etc. The amount of concentrate required can be very materially reduced by feeding alfalfa hay or alfalfa meal. The principal difficulty in feeding alfalfa

hay is to get the sows to eat enough, and for that season it is well to feed some additional protein concentrate.

Any of the following rations will prove satisfactory, and the choice should be based on local cos . The amount to be fed will be governed entirely by the condition of the sow and her individuality—the aim being to keep her in strong, vigorous condition—not fat.

Barley, oats and shorts, equal parts by weight.

Barley and shorts or middlings, half and half, by weight.

Barley nine parts, tankage one part. If mill feeds are scarce a ration of three-fourths barley and one-fourth alfalfa hay or meal should give satisfactory results. A ration of wider variety can be had by feeding barley 10 parts, shorts or middlings, five parts, bran three parts, oil meal or tankage one part. Most hog men would prefer to feed these rations wet, and if skim milk is available its addition would greatly improve them. A few roots can be fed to advantage. Many feeders add beet pulp to their brood sow rations, thus adding succulence and increasing the bulk somewhat. The barley should always be fed ground or rolled. For practical purposes corn or milo can just as well replace barley.

Care should be taken that at no time do the sows become constipated.

Exercise is absolutely essential and insures stronger litters and better conditioned sows. Sows on pasture will usually take sufficient exercise, but when kept in a dry lot they usually have to be forced to take the needed exercise. If the lots are so arranged that the sleeping quarters are at one end and the feed troughs at the other the sow will be compelled to walk. It may be necessary to drive them short distancees.

Feed wisely, but not too heavily—and see that the sows have exercise.

NECROBACILLOSIS

Reports come from Illinois of the treatment of a hog disease known as necrobacillosis. Other names for it are canker sore mouth, bull nose, etc. Affected pigs are runty and unthrifty—they simply won't do well, but the disease is not fatal like hog cholera. It is reported that rarely more than a quarter of a herd succumb to the disease.

I think there has been some of the disease in the Sacramento Valley, and where affected pigs have been killed and destroyed it has generally been considered more profitable than to bother with them.

There is a serum treatment for the disease, however, and it is very satisfactory, according to the report received. The cost is 50 to 75 cents per pig. Sometimes two treatments are required. For best results it is advised to treat before the disease has made much headway.

I know of one lot of pigs that got "dumpy" and sort of "dopey"—had bleary eyes and running noses and a little fever. The owner thought it might be a type of chronic cholera and gave them a big dose of serum. This did not do any apparent good. The pigs lived but did not make any growth.—W. S. G.

FEED REQUIRED FOR RAISING DAIRY HEIFERS

The bureau of animal industry reports that the dairy division in an experiment conducted at the experiment farm, Beltsville, Md., found that the feed necessary to raise five dairy heifers for one year averaged 125 pounds of whole milk, 2420 pounds of skim milk, 889.9 pounds of grain, 568.3 pounds of alfalfa hay, and 4411.9 pounds of corn silage. At birth the average weight was 79 pounds, and at one year the weight had increased to an average of 520 pounds. The grain mixture used consisted of 375 pounds of corn and cob meal, 200 pounds of wheat bran and 100 pounds of linseed oil meal.

King Korndyke Pontiac
(shown above)
by every right of inheritance should transmit great production and high class type. His sons and daughters have already proven his ability to transmit type of the first rank—daughters with the big, deep bodies and the ample, fine textured udders that go with large dairy production. As for his sons, one of them sold for $6500.00 at public sale, going to head W. J. Higdon's fine herd at Tulare.

Two daughters of King Korndyke Pontiac recently freshened in our herd and made very satisfactory records. King Korndyke Pontiac Charlotte, under official test made 22.92 pounds butter in seven days as a junior three year old. Natoma Superba Pontiac, freshening at two years four months, made 19.25 pounds butter in seven days. We have several other of King's daughters to freshen this winter and they look especially promising.

You need one of his young sons in your herd. Come and see what we have on hand or write for pedigrees and prices. We make liberal terms if desired.

Briggs

"He Has Developed Wonderfully"

Is the universal statement of all who saw our great junior herd sire

King Korndyke Pontiac 20th

when we bought him as a calf, and who again saw him out on the show circuit this year, where at California State Fair he was defeated in class only by the twice grand champion bull.

The way he is deepening and lengthening out, and the splendid vigor which he possesses, are most pleasing to us, as he is doing even a little bit better than we expected of him.

And his first calves that are now coming are certainly beauties. It is not too early to begin to figure with us on one of his young sons for your herd. Come and see them or write for description and price of one.

NOTE: We are selling some choice, highly bred cows and heifers bred to King Korndyke Pontiac 20th in the Tulare Sale, November 20-21.

Our Entire Herd is Tuberculin Tested

Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Boulevard, Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.
Unsigned communications receive no attention.

Cow Pox

My cow has the following symptoms: There are hard lumps about the size of a marble on the udder and some along the top of her back. They develop slowly and eventually break. There are also some small pustules on the udder. For about two months after calving I noticed a pinkish fluid in the bottom of the pans after the milk was skimmed and poured off. Have been unable to breed her so far. What is the trouble and what is the remedy?—Subscriber, El Cerrito.

It is probably what is called cow pox but that usually shows up only on the udder. The lumps on the back may be due to warbles. See article on warbles on page 581 of the Cultivator of December 7. The cow pox may be easily transmitted to another cow by carrying some of the serum from one of the blisters on the hands to another cow, or one may get it himself, which would be the same as being vaccinated. Mix three pounds of epsom salts and two pounds of common salt and give a handful of it in the feed once a day, feed her laxative feed and use a solution of permanganate of potash; half a dram to the quart of water, to bathe the ulcers on the udder to keep it from spreading. It will not interfere very much with the flow of milk nor the health of the cow in any other way.

Worms in Dog

I have an English bull terrier, three years old, in apparently perfect health but in the last year he has become subject to fits. He gets dizzy, falls on his side, paws the air, froths at the mouth and is unconscious for about five minutes. Suddenly he comes to himself and seems dizzy for some time afterwards and is thirsty. He is perfectly harmless at this time and apparently none the worse for his experience. Is there anything I can do to cure him?—Subscriber, Los Angeles.

The fits are probably due to worms in the stomach. Have your druggist prepare ten powders, each containing ten grains of areca nut, and ten powders, each containing five grains of santonin. Give one powder of the areca nut every morning in half a cup of sweet milk and one powder of the santonin every night by putting it well back on his tongue. There is very little taste to either of the medicines and you will probably have very little trouble in giving it.

POULTRY PROSPECTS IN STANISLAUS

As to poultry conditions in Stanislaus County, Mrs. J. G. Tupman writes:

"Prospects for a good year were never better, orders are exceeding anything we have ever had. Although a few have gone out of business others are going in, and those that stayed in are increasing their flocks. Our hens are in fine shape, and laying like they meant business. We culled very heavy last year and expect to have very fine chickens this year. Have 1100 hens, all large and healthy."

NATIONAL LIVE STOCK MEETING

T. W. Tomlinson, secretary, has called the American National Live Stock Association to meet in Denver on January 21 for its twenty-second annual convention. The session will last three days.

The call states that there will be discussion of the work of the bureau of markets in the regulation of stock yards and commission men, the regulation of prices of hides and wool by the war industries board, precautions against future outbreak of the foot and mouth disease, and influenza among horses and railroad service.

HARTSOOK LOSES GREAT SOW

The famous Poland China sow, Big Knox Girl, first prize aged sow and reserve grand champion at the 1918 state fair, owned by Fred Hartsook, Lankershim, is dead. It is thought that an injury she received while being unloaded at the Liberty Fair was the direct cause of her death. Big Knox Girl was considered one of the most valuable sows in the state, and her loss will be keenly felt by Mr. Hartsook.

A NEW DUROC RECORD

During the International Live Stock Show, Herbert W. Mumford sold at public auction 55 head of Duroc-Jerseys—mostly sows—for an average of $428. Brookwater Lass D., grand champion at the show, topped the sale at $2225, at which figure she became the property of Thos. Johnson of Ohio. The average recorded represents the record for the breed.

A fine rain visited several sections of Southern California last week.

Growers in Brawley district plan to increase their market through the growing of additional varieties of truck crops and shipping mixed carloads.

CLEAN CUT WEEDER AND MULCHER

Killefer Quality *Killefer Efficiency*

It is just what the name implies. It is the most effective tool for keeping down the growth of weeds after rains or irrigation on orchard, bean, beet or grain lands. It does twice the work with the same team of any other tool for this purpose, and as the knives overlap each other it is impossible to miss anything in their course. Our patented knives are formed with a straight throat so that they wear uniformly from heel to point and are all stamped with our quality trade mark.

Orchardist will find this tool a valuable one for leveling down furrows and for preparing the ground for the cultivator. The large range of work makes it almost indispensable, and the extremely low price at which it is sold brings it within the reach of all. Made 4, 5, 6, 8, 10 and 12 feet sizes.

The Killefer Manufacturing Company
2209-21 Santa Fe Ave. Los Angeles, Cal.

Grange Resolutions

MASTER FRANK L. HUNT of the California State Grange attended the recent annual convention of the National Grange at Syracuse, regarding which he writes:

"Altogether this was a very 'forward looking' session, and much important work in connection with agricultural life was disposed of in different ways. Perhaps the most important single document that passed through the National Grange was the one on 'Agricultural Reconstruction.'"

From the resolutions we quote:

"The farmers of America are proud of their part in the world war. In loyalty and devotion, in food production, in financial aid and in the gift of their sons they have again shown their sturdy Americanism and have justified the confidence always reposed in them when serious danger threatens the republic.

"Just as agriculture has had a vital part in the war, so it must have a strong voice in the reconstruction program that is to follow. This task is hardly less gigantic than the great war itself, and will command the best thought of our leaders. Broad-minded statesmanship demands that our entire citizenship, without distinction of class or occupation, shall unite in keeping the nation steady in the inevitable price leveling process that must come. Justice to all must accordingly be uppermost in our minds while we insistently urge that the interests of agriculture so fundamental to the prosperity of the whole nation must be safeguarded at every point.

"Holding the first national gathering of farmers since peace has become definitely assured, it is clearly the duty of the National Grange as a recognized spokesman of the organized farmers of America to state clearly and forcefully the needs and demands of agriculture in the program of readjustment. To fail is to invite neglect and to merit contempt."

As to profitable agriculture the resolutions add:

"Profitable agriculture is the keynote of our declaration. A prosperous and progressive agriculture with an independent, self respecting citizenship in the open country is the surest guarantee of an enduring national life. Farming must be made as profitable as any other occupation involving the same amount of investment, business ability and hard work, or our democracy must fail and our people go hungry.

"Facing the most stupendous tax levy which the nation has ever seen, we demand that so far as consistent with national safety, war contracts be cancelled and the hundreds of boards and commissions and the thousands of clerks and employees made necessary by the war shall be released from their responsibilities at the earliest possible moment. Just as we have earnestly urged the spending of the last dollar and the use of the last man to win the war, so now we as insistently demand that the most rigid economy shall be exercised in governmental expenditures.

"The present system of marketing and distributing is clumsy, wasteful, costly and inefficient and lends itself readily to the most offensive forms of speculation and control. It jeopardizes adequate food production by establishing the lowest possible price to the producers and in turn naming the highest possible price to consumers. Cost of production plus a fair profit should determine the price on farm products. Unnecessary middlemen, especially in the retail trade, should be eliminated. Service with a fair profit rather than control with all the profit the traffic will bear is our standard for the middleman. Conforming to this standard he should be encouraged by patronage. Refusing, he should be supplanted by every available form of direct and cooperative marketing. We recommend the extension of cooperative shipping associations, the establishment of city retail markets, the construction of municipal warehouses and terminal markets, the careful grading and marketing of farm products with personal trade marks, the extension of parcel post marketing, and the establishment of such regulation and control as will effectually remove the evils that have for decades discouraged producers and burdened consumers. We further demand that all food and feed products be sold under such laws and regulations as will prevent one product being bought and sold as and for another."

As to the press and free speech and zone postal rates: "The farmer, more than any class, is dependent on the mails for guidance, happiness and intelligence. Free speech is fundamental; censorship should be removed. We demand that the archaic and un-American zone system now in force in respect to mailage of periodicals be discontinued.

"We demand that railroads be returned to their former owners; that abuses from overcapitalization and mismanagement be corrected. As to public highways, "We demand that federal funds shall not be used in extensive boulevard systems, but that market and post roads be given first consideration" and "We urge that road construction be used as a shock absorber against oversupply of labor." "We oppose the continual domination of our vital interests by men who neither understand nor justly estimate the position and service of American farmers."

"We believe the secretary of agriculture should be a practical farmer." As to land tenantry: "Every means should be provided to assist the young man of character and training to secure a homestead of his own."

"We advocate establishment of a system of personal cooperative credit."

"We oppose the proposed plan of providing swamp and arid lands by drainage and irrigation for returning soldiers as unsound and impractical."

"We demand that in the readjustment of tariff schedules agricultural products be given the same protection as other commodities."

"We demand a system of education that will direct the farm youth toward the farm, not away from it."

REPORT OF LAND BANKS

The farm loan board reports:

The statement of condition shows that the banks have made loans to farmers to the amount of $139,378,156. Their capital stock has increased from $9,000,000 to $15,975,220. They have issued farm loan bonds to the amount of $146,122,200. They hold among their assets United States government bonds and treasury certificates to the amount of $14,850,000. Their excess of expenses and interest charges over earnings is $211,609.09, which is a reduction of over $200,000 since the previous semiannual statement, and amounts to less than one and a half per cent of their present capital. Three of the banks show an actual surplus. Before the close of the present month, two banks will begin the repayment of the stock originally subscribed by the government. The total payments by borrowers overdue on October 31 amounted to $86,073, of which $51,117 was less than 30 days overdue, and only $10,730 was 90 days or more overdue.

Turn Stump Land Into Money

Clear your stump land cheaply — no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

Works by leverage — same principle as a jack. 100 pound pull on the lever gives a 48-ton pull on the stump. Made of the finest steel — guaranteed against breakage. Endorsed by U. S. Government experts.

HOW TO GRADE GRAIN

Continued from Page 661

In the grain inspector's or supervisor's office a Boerner sampling device is used to thoroughly mix, mechanically, the large sample and then separate it into two exact parts. One of these parts is used to determine the dockage; the other is put through the sampling device two or three times more, in order to reduce the sample, thoroughly mixed, to a size that will permit of easy and more rapid testing. The sampling device is described and illustrated in United States Department of Agriculture Bulletin No. 287.

This device is not necessa for one doing only occasional sampling, for the sample may be thoroughly mixed by hand on a table, spread out, and equally divided until a sample of the desired size is secured.

Determining Dockage

In the revised "Official Grain Standards of the United States for Wheat" a certain character of foreign material is designated as dockage. It is defined as follows: "Dockage includes sand, dirt, weed seeds, weed stems, chaff, straw, grain other than wheat, and any other foreign material that can readily be removed from the wheat by the use of sieves, cleaning devices or other practical means. Also, undeveloped, shriveled, and small pieces of wheat kernels removed in separating the foreign material, and which can not be removed by properly rescreening or recleaning, are also designated as dockage."

The amount of dockage is calculated in percentages. In determining the percentage of dockage, fractions are disregarded. The dockage is either 1 per cent, or 2 per cent, etc. Finer distinctions are not regarded as necessary.

In making the dockage test, 1000 grams, or two pounds three ounces, of wheat is taken and cleaned by hand. The following cleaning devices are used in the offices of federal grain supervision:

A small wheat tester (commonly called "oat-kicker") or device for removing barley, oats, wild oats, pieces of straw, weed stems and other coarse matter from wheat. This is a modified form of the machine already in general use in the spring wheat states where the dockage system has been practiced for many years. Also, a set of perforated metal hand sieves consisting of a bottom pan, in which the several sieves nest, a fine seed sieve, a buckwheat sieve, a fine and a coarse sieve, and a scalper sieve.

The sizes of the perforations are given in the handbook already mentioned. It is absolutely essential that the perforations of the sieves be exactly as given. A slight variation in the dimensions will materially influence the percentage of dockage. Sieves which are comparatively cheap are advertised in grain journals.

A detailed description of the method of determining the dockage in wheat is given in the handbook. However, it seems important to note here that the instructions say that any wheat kernels that remain on the scalper sieve should be picked out and returned to the wheat and should not be considered as dockage. Also, the dockage that is removed is rescreened in order to recover as much of the broken kernels as possible, and they are put back into the wheat.

The dockage will therefore be represented by the coarse foreign material in addition to the finer screenings obtained by hand sieving.

Since any foreign matter remaining in the wheat after the removal of dockage is considered as "foreign material other than dockage," and is a factor in the grading, great care should be used in sieving the samples.

Smutty wheat is designated as "wheat that has an unmistakable odor of smut, or that contains spores, balls, or portions of balls of smut in excess of a quantity equal to one ball of average size in 50 grams of wheat."

The term "general appearance" refers to such conditions as bright or not bright, distinctly low quality, small inseparable stones or cinders, and treated wheat.

Test Weight on Clean Wheat

The test weight per bushel is one of the main factors in determining the grade.

To determine the test weight per bushel, a quart tester is used and a sample of wheat from which the dockage has been removed is taken. The dockage should always be removed before making the test. The test should be made with a quart tester, and under average conditions a sample of 1000 grams of wheat (two pounds 3 ounces) weighed before the dockage has been removed, will give sufficient dockage-free wheat for determining the test weight with the quart tester. If the wheat contains a large amount of foreign material, however, it may be necessary to remove the dockage from more than two pounds and three ounces.

In Bulletin No. 472 the manner of determining the test weight and the tester used are described and illustrated. The improved tester reduces to a minimum the liability of personal error in making the test.

Incorrect Methods

Some of the common incorrect methods of filling the "brass kettle" in order to determine the weight, are: To pull the kettle through the grain until it is full; to sink it part way into the grain and fill it by pulling the grain over by hand; to fill the kettle by shoveling the grain into it with the hands; to fill it from a bag, pan, or funnel, the grain being poured from varying heights; or to pour the grain in a small stream sometimes and again in a large stream.

These methods give irregular results and should not be used. Furthermore, uneven results are obtained by following some wrong method in striking the excess grain off the kettle. This is often done with the scale-beam, a piece of broomstick, a pencil or other makeshift. Also, the kettle is sometimes tapped or jarred before the surplus is struck off; this should never be done. Because of the widely varying results that have been obtained in experiments when using such methods of filling the kettle and striking off the surplus, it becomes apparent that it is of vital importance that uniform methods be followed.

The tester already referred to consists of two main parts; namely, the stand with hopper and overflow pan, and the test kettle with a special beam.

The feature of the device, besides the special beam, is the hopper or funnel, through which the kettle is filled. This swings from a post fixed in the base to which it is attached. A feature of the hopper is a valve at the outlet, which holds the grain in the hopper until the inspector releases it. The opening through which the grain drops into the kettle is one and a quarter inches in diameter.

When properly adjusted, the opening is exactly two inches above the top of the kettle and exactly over the center. This is important, for to secure uniform results, uniform methods must be followed, and this height above the kettle has been adopted as standard. The valve should be closed while the hopper is being filled, and then opened wide with a quick motion. When the kettle is filled to overflowing, the hopper should be swung out of the way, so that the surplus grain can be struck off the kettle where the latter stands, in order that it shall not be jarred.

The excess grain should be struck off with the zigzag motions, using a wooden "straight edge" ⅜ inch thick, one and a quarter inches broad and 12 inches long, with the edges rounded. This style of stroker should be used in making all tests.

In using the ordinary test kettle, a funnel with a one and a quarter inch outlet may be suspended over a solid stand so that the opening will be exactly two inches above the kettle when the latter is in place. The outlet should be closed by holding a card against it until the funnel is filled. By removing the card, the kettle is filled; then the surplus should be struck off as described. In any federal grain supervision office a Cox funnel may be seen. This funnel has legs attached, which rest on the top of the kettle, and when in place the opening in the hopper is the correct distance from the kettle. This funnel is cheap, yet gives satisfactory results.

It is necessary, after the weight of dockage in the small sample has been found, to convert the weight into percentages. This, when using the small scales mentioned, is a simple matter.

"How can the farmer know whether the grain buyer is giving him a fair deal?" is a question sometimes asked. Obviously, he can not know, unless he can grade his own grain.

Any farmer or grain dealer, however, may seek information relative to any question of grading from the nearest office of federal grain supervision, of which 35 have been established, one at each of the principal market centers of the country. Should a farmer or a country shipper think that he is not getting the grade that he should for his wheat or corn, he should write to, or call at, the nearest office of federal grain supervision, state his case and ask for advice. The supervisor in charge will give him full instructions as to how to have a sample of his grain inspected. The California office is at San Francisco, 1131 Merchants Exchange Building.

NO WONDER!

A rookie had an important request to make at headquarters. He carefully formulated and rehearsed the speech he would make in presenting the request and timidly entered the office. The lieutenant on duty looked up from his desk and roared:

"Stand at attention!"

The rookie straightened himself and slapped his hands to his sides.

"Put your heels together!" roared the lieutenant.

The rookie complied.

"Now salute!" ordered the officer.

The rookie saluted.

"Now, what do you want?" the officer queried.

"I don't know," said the rookie.

CROP PRODUCTION

Is controlled by the kind and quantity of plant food furnished the tree or plant.

It is not enough to merely fertilize. It is important that the tree be fed material giving maximum results under California conditions.

These materials are furnished in

Hauser's Organic Fertilizers

Correct fertilizer for California conditions.
Send for fertilizer booklet, tells you why.

Hauser Packing Company
Los Angeles

Protect your spindles with Mica Axle Grease. It forms an even, slippery coating which prevents friction and makes easier pulling—no hot boxes—just like putting ball bearings on your wagon. And it lasts twice as long as common axle grease. Get a can from your dealer today.

POULTRY

Hens; heavy, 31; light, 28; colored, 32; broilers, 37@41; fryers, 33; roasters, 30; old cocks, 20.

Ducks, 25; ducklings, 28-30; geese, 28; turkeys, 30-34; squabs, 40-43; Belgian hares, 20.

LIVESTOCK

The market for the better grades of steers is reflecting the Christmas demand, and prices have advanced about a half dollar on the top grades reaching the Los Angeles market.

The demand for good cows continues strong and the suppy is only moderate. The quality of the medium and common grades is rather below standard.

The hog market continues strong and while the quotations show an advance of 25 cents, the fact should be borne in mind that only the real tops fetch that figure. The bulk of sales remains at $16.50 to $17.00.

The market for lambs in Los Angeles is in a temporary bad way; most of the yards are full of lambs and prices are ruling unsteady.

Yearlings and wethers are in good demand and prices are firm.

The market for ewes has shown considerable improvement, due to a falling off in receipts.

Report of live stock conditions on the Los Angeles market as compiled by the United States Department of Agriculture, Bureau of Markets, through the local office:

Good Steers .....12.50@14.00
Common .....9.00@10.00

DRIED FRUITS AND RAISINS

Prunes — Bulb basis: 30-40s, 10; 40-50s, 9½; 70-80s, 8½; 80-90s, 8; 90-100s, 8; in 25-lb. boxes, 20-30s, 18½; in 50-lb. boxes, 100-120s, 5¾; 120s up, 5¾.

Peaches — Bulk basis: Standard yellows, 11¼; ch., 11¾; fy., 12½; extra fy., 13¾; slabs, 10¼; standard Muirs, 11¾; ch., 11⅞; fy., 12⅞; extra fy., 14; slabs, 10¼.

Raisins—Muscats, pkge. seeded; fy., 36 16s. 9⅝; fy., 54 12s, 7¾; ch., 36 10s, 9⅛; ch., 45 12s, 7¾. Bulk seeded, in 25-lb. boxes: Bakers, 8; loose, in 25-lb boxes, recleaned and floated, 1-cr., 8⅛; 2-cr., 7½; 3-cr., 8; 4-cr., 8¾; layers, ordinary pack, 20-lb. boxes, 3-cr., 1.85; 4-cr., 2.10; 6-cr., 2.95; 10-lb. boxes, 3-cr., 1.05; 4-cr., 1.20; 6-cr., 1.65; 5-lb. boxes, 3-cr., 65; 4-cr., 70; 6-cr., 90; vineyard run layer raisins, 50 lbs., 3.00; 100 lbs., 7.50.

Figs—Bulk basis: White Adriatic, extra fy., 17½; fy., 15¾ .. ch., 14; Calimyrna, extra fy., 25; fy., 23½; packages, ch. to fy., 12 10s, 1.75@1.80; 24 8s., 2.90@2.95; 50 6s, 4.30@4.40; 70 4s, 4.40@4.50.

Pears—Bulk basis: Fy., 19½; extra ch. 17; ch., 15½; standard, 12@14.

Apples—Lb.: Extra ch. to the evaporater, 13½; jobbing price, 14½.

Apricots—Standards, 9½; ch., 13; extra ch., 14½; fy., 16; extra, 17½; Moorparks, 19; slabs, 11.

RICE

Prices which rice millers of this state have voluntarily agreed with the food administration for California to pay to growers for paddy rice are as follows:

No. 1 and No. 2 Japan, in sacks, $4.32 per 100 pounds.

No. 3 and No. 4 Japan, in sacks, $4.16 per 100 pounds.

Prices for other grades will be paid for on a basic value proportionate, and no higher prices than those quoted above for any grades whatever will be paid.

The millers agree further to sell cleaned rice and by-products for prices not to exceed the following:

Fancy Japan, 1½c per pound.
Choice Japan, 7⅜c per pound.
Fancy second heads, 6⅞c per pound.
Screenings, 5⅝c per pound.
Brewers', 5¼c per pound.
Rice polish, $50 per ton, carlots.
Rice bran, $36 per ton, carlots.

NUTS

The Almond Growers' Association has established opening prices as follows per pound:

Nonp. 27½
I.X.L. 25½
Ne Plus 24½
Drake 20

Outside dealers have named prices above these quotations and it is understood association stock is practically closed out and prices withdrawn.

Walnuts: Net prices have been named by the California Walnut Growers Association:

No. 1 Softshell 28
No. 2 Softshell 25
Jumbo 30
Fancy Budded 31½
Golden Gate Budded 29

Franquettes, Eurekas and other fancy varieties sold on sample. No. 1 Softshell guaranteed 88 per cent good; Fancy Budded, 90 per cent. In case of worms or damage by ants not more than five per cent.

HONEY

Cash to producers, country loading points:

Extracted, Water White, supplies very light, 22@23½; White Sage, supplies very light, 20@23; Light Amber, supplies very light, 18@20½; Dark Amber, 18@19 lb.; Beeswax, supplies moderate, 35@40 lb.

GRAIN

Wheat—Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles terminals:

Hard Wheat—	Per Bushel	Per Cental
No. 1	$2.20	$3.62 2-3
No. 2	2.17	3.61 2-3
No. 3	2.13	3.55
Soft White—		
No. 1	$2.18	$3.63 1-3
No. 2	2.15	3.58½
No. 3	2.11	3.51 2-3
Club and Sonora—		
No. 1	$2.16	$3.60
No. 2	2.13	3.55
No. 3	2.00	3.48 ½

For sacked grain add nine cents per bushel of 60 pounds to above price. Deduction of three-fourths of a pound is made for weight of standard grain bags. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to merit.

Barley — Feed, 2.17½@2.22½ per cental for choice spot; shipping, 2.25-2.27½; milling, nominal.

Oats—Red feed, 2.35@2.55 per cental; seed, do, 2.85@3.00, white recleaned at 3.15@3.20.

Corn — Egyptian, 2.75@3.00 per cental for choice white; Milo, 2.65@2.70. Rye nominal.

HAY

Under date of December 21, Scott, Magner & Miller says:

Receipts the past week 775. Trade during the week has been extremely light as it usually is at this season of the year, holiday shopping being about the only business going on. Considerable damaged hay, mostly alfalfa, arrived from the river districts and has been offered at figures that cannot possibly be satisfactory to the producers but this hay must be disposed of as it arrives as it is not in condition to keep any length of time and therefore must be sold by consignees at whatever prices can be obtained. This, naturally, hurts the sale of hay in good order and until such time as this damaged hay stops coming forward the market must necessarily take on an easy tone. We suggest holding consignments until after the first of the year.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling expenses must be added according to conditions.

Fancy Wheat Hay (light 5 wire bales) .....25.00@27.00
No. 1 Wheat or Wheat and Oat Hay .....23.00@25.00
No. 2 Wheat or Wheat and Oat Hay .....17.00@21.00
Choice Tame Oat Hay .....22.00@24.50
Other Tame Oat Hay .....17.00@20.00
Wild Oat Hay .....17.00@19.00
Barley Hay .....17.00@19.00
Alfalfa .....15.00@19.00
Stock Hay, in order .....15.00@18.00
No. 1 Barley Straw, bale .....50@80

Damaged hay, all kinds, according to condition.

SEEDS

Flax .....8@8½
Millet .....5@5½
Rape .....2½@5

Citrus Fruit Market

Los Angeles, Dec. 24, 1918.

Oranges are selling at almost abnormal prices and practically all holiday offerings have been cleaned up.

Lemons on the contrary, have been in a most unsatisfactory condition and some exceptionally low sales have been made.

Shipments

Shipments of citrus fruits to date since November 1, 1918: Southern California: oranges 1004 cars, lemons 1042, total 2046. To same date last season; oranges 2053, lemons 481, total 2534. Central California this season; oranges 2564, lemons 217, total 2781. Last season to same date; oranges 1556, lemons 541, total, 2097. Northern California; oranges 194, last year same date, 171.

BRITISH COTTON MILLS ASKING FOR AMERICAN COTTON

The managements of cotton mills in England are asking the government for more tonnage for the transportation of cotton from America. They declared that the increasing shortage of raw cotton was likely to cause the mills to be closed unless immediate steps were taken to increase the supply.

The Official United States Bulltin, published under order of the President, chronicles all official operations of the government. It is sent without charge to officials of the United States government and governmental institutions. To private concerns a charge of $5.00 a year or $3.00 for six months is made, the same plan that is now in effect regarding the sale of the Congressional Record.

The war has aroused a sleeping world to the possibilities of accomplishment. We never before knew how to attack problems.

The maximum price for milk in Rome has been fixed at 18 per quart. In 1914 the price was from seven to eight cents per quart.

ARMSTRONG NURSERIES

The 1919 Armstrong Nursery catalogue is fully up to its predecessors. It is printed on fine paper, giving opportunity to bring out the full beauty of the large number of half tone engravings. However, we note that in size the catalogue is somewhat reduced in order to follow the war time conservation program of saving of paper. If the Cultivator is mentioned the catalogue will be sent for the asking by writing Armstrong Nurscries, Ontario.

The L. A. P. A. Show

Written for California Cultivator By Jean A. Koethen

LOS ANGELES poultry lovers are fortunate this year in having an opportunity to visit three shows instead of the single show of former years. First came the Liberty Fair show, which was unavoidably postponed from October to December. Last week, following close on the heels of the Liberty Fair, came the Los Angiles Poultry Association's show in the Coulter Building on Broadway, and we have the January show still to look forward to. Whether or not such a multiplying of shows is a good thing for the industry, it certainly gives every breeder ample chance for showing his birds and every one who wants to know who's who in poultrydom opportunity to find out.

The L. A. P. A. show was a good show in every way. Naturally the number of entries was smaller than that of the midwinter show in former years, but the quality was of the best, and 670 birds, the official number of entries, is about as many as one can look over intelligently at one time. This number does not include pigeons, which occupied the second floor, nor the pheasants which shared the front window honors with a magnificent Bronze turkey, but it does include chickens, turkeys, geese and ducks.

A number of new names appeared on the breeders' cards, and there were many of the old standbys, among whom were noted Mrs. E. B. Martin, E. E. Emerson, Mrs. Walter Babb, Goodacre Bros., the Hocking Poultry Farm, Mrs. Ben Davis Jr., Gill & Warrick, J. Fowler, J. C. Pike, F. X. Price and Geo. W. Masterson. Rancho Del Martino and E. E. Emerson took most of the White Leghorn ribbons, and this class was extremely creditable. The first pullet, a dainty beauty of perfect Leghorn type, took four ribbons beside the blue. Any one who imagines White Leghorns are utility birds only had only to take a look at Leghorn Alley to be convinced that they are the best of show birds as well.

The first R. I. R. cock displayed more ribbons than any other bird in the show, having three color specials, three shape specials and a special honor ribbon. He was a bird of wonderful mahogany color, and the fact that there were six points on his comb did not seem to worry him at all. Color in Reds has grown darker from year to year as standard requirements became darker and more definite. One sees few of the lighter colored birds. It is necessary, I am told by breeders to insist on dark color because the lighter shades fade.

The $50 Liberty Bond offered by the Globe Grain and Milling Company for the best display of standard poultry was won by the Hocking Poultry Farm, which exhibited a remarkably fine string of Anconas, the best pen being particularly good, both in color and type. Another Liberty Bond, offered by the executive committee for the best display of any one variety from Northern or Central California, was won by L. B. Cary of Reedley, whose string of Dark Cornish seemed to my uncritical eye to be the finest ever shown in Los Angeles. The Dark Cornish are birds whose remarkable exhibition qualities do not always appear at first glance. One needs to study them to appreciate their color and shape.

Barred Rocks were an unusually large class, and the ribbons were divided among over a dozen exhibitors. When this is the case it always speaks well for the estimation in which a given breed is held by the community at large. It is possible for one exhibitor, who has bred or purchased a fine long string of birds, to come into a show and clean up all the ribbons, with only one or two competitors, or perhaps with none at all. In this respect it has always seemed to me our poultry show system is far from perfect. When a breeder advertises "1st 2nd, 3rd cock, 1st pullet, 1st and 4th hen," etc., at a given show, who knows how many birds were in the competition? It is very easy to get the blue sometimes.

Black Minorcas were a large class, in spite of the fact that J. V. McConnell of Garden Grove, who is usually a large exhibitor, entered no birds. A prize offered by Mr. McConnell for the best Black Minorca female (McConnell strain), and another offered by E. B. Martin for the best display of Minorcas, both went to a New Jersey man, A. Albright, Jr., of Newark. So far does Mr. McConnell's candle throw its beams.

There was one pen of Black Rhinelanders, a comparatively new breed, and another of an absolutely new breed called the Missouri White Fluff, birds whose claim to distinction seems to be that their feathers look more like fur than fluff. There were half a dozen pit games and the usual number and variety of bantams.

Besides the New Jersey Minorcas there were White Wyandottes from Oregon and Barred Rocks from Oregon, and an entry of Light Brahmas from Salt Lake City. There were Anconas from Sacramento and Buff Orpingtons from Santa Barbara, White Rocks from Redlands and Barred Rocks from Cucamonga and Point Loma. The medal for best cockerel in Asiatic class went to James Crabtree of Oakland, whose Black Langshans took all awards but one. Black Langshans have been a rather neglected breed here of late, and it is well that we are reminded of their excellence in both show and utility lines.

Turkeys and waterfowl had a department all to themselves at the rear of the building. I have left turkeys till the last because I hardly know how to do them justice. There were 28 entries, all but two being from the yards of J. Will Blackman in Los Angeles. Mr. Blackman has certainly discovered the secret of color and size in Bronze turkeys and he must also have learned how to raise a majority of the poults he hatches. Any one who can contribute to the building up of the turkey industry, as Mr. Blackman seems to be doing, is a public benefactor. Seven Toulouse geese, and coops of Rouen, Muscovy and Fawn Runner ducks completed the ground floor display.

On the second floor the soft cooing of pigeons blended with the medley of crows, cackles, and quacks from the floor below. The exhibition was by no means the largest ever, but was very creditable for war time. Runts, Tumblers, Pouters, Homers, Carneaux, Jacobins and all the rest were on hand in their best clothes to say that the pigeon industry, if it can be called by that name, is fully alive, and wants only opportunity to come to its own again.

Bulk Handling Costs Less

There were 16 tons of grain lost in a recent shipment of 2,500 tons of sacked grain from Vallejo to Stockton.

Mould, rats, gophers—leaking sacks—were the direct causes of that enormous loss.

The California milling concern that made the shipment handled its next shipment of 2,500 tons of grain over the same route—in bulk.

Out of 2,500 tons—only one-half of one ton of grain was lost. A saving of fifteen and a half tons! With grain at $2.20 a hundred that saving was considerable. In addition the entire cost of the sacks was saved.

Save the entire cost of Sacks.

By using sacks your crops are at the mercy of rats, gophers, bad sacks, thieves and rain. You pay for extra help during threshing time.

It is needless. Calco Metal Grain Bins eliminate extra labor and make your grain vermin, fire and weather-proof. The Calco Bin cuts out the high cost of sacks. One Calco Grain Bin will last a great many seasons—sacks must be bought each year.

Write for the booklet, "Calco Grain Bins." It's free, and worth your careful reading. It will open a way to you to save and sell more of your grain. Write for it today.

419 Leroy St., Los Angeles 408 Parker St., Berkeley

The Cultivator Patterns

8522—Ladies' Slip on Waist. Cut in sizes 36, 38, 40 and 42 inches bust measure. The waist is to be slipped on over the head like a middy.

8799—Ladies' and Misses' Slip on Blouse. Cut in sizes 16 and 18 years, and 36, 38, 40 and 42 inches bust measure. The blouse hangs straight from the shoulders, but is held in to the figure by a loose sash of the material.

8535—Children's One Piece Dress. Cut in sizes 2, 4 and 6 years. The dress has a tiny shoulder yoke and the lower part of the dress is brought in to fit in three broad box plaits.

8794—Ladies' One Piece Dress. Cut in sizes 36, 38, 40 and 42 inches bust measure. The closing is on the shoulder, as the dress slips on over the head.

8534—Ladies' Apron. Cut in sizes 36, 40 and 44 inches bust measure. The pattern is in two large sections—the long front is gathered to a straight band, giving a little fulness which is very becoming.

8782—Girls' Bloomers. Cut in sizes 2, 4, 6, 8, 10, 12 and 14 years. The bloomers are cut full to give plenty of freedom.

8776—Ladies' Two Piece Skirt. Cut in sizes 24, 26, 28, 30 and 32 inches waist measure. The flat back is formed by two very wide box plaits.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

Household Department

FROM DAY TO DAY

Over the sorrow and over the bliss,
Over the teardrop, over the kiss,
Over the crimes that blotted and blurred,
Over the wound of the angry word,
Over the deeds in weakness done,
Over the battles lost and won,
Now at the end of the flying year,
Year that tomorrow will not be here,
Over our freedom, over our thralls,
In the dark and the midnight the curtain falls.

Over our gain and over our loss,
Over our crown and over our cross,
Over the fret of our discontent,
Over the ill that we never meant,
Over the stars of our self-denial,
Over the strength that conquered trial,
Now in the end of the flying year,
Year that tomorrow will not be here,
Quietly final the prompter calls,
Over it swiftly the curtain falls.

Over the crowds and the solitudes,
Over the shifting, hurrying moods,
Over the hearths where bright flames leap,
Over the cribs where the babies sleep,
Over the clamor, over the strife,
Over the pageantry of life,
Now is the end of the flying year,
Year that tomorrow will not be here,
Swiftly and surely from starry walls,
Silently downward the curtain falls.
—Harper's Bazaar.

THE PRODIGAL FATHER'S NEW YEAR VOW

CHARLOTTE ANN STETSON did a very unusual thing when, on the morning of December 31, she sat down to rest. "I'm plumb tired," she said, to her little brood of rather shabby children, who had viewed, with some amazement, this unprecedented act of their usually active mother. She smiled reassuringly at them. She felt very happy, possessed temporarily anyhow, of that compensating peace that always comes to one when any of life's faraway goals has been safely reached. Just a twinge of discomfort hindered complete contentment. What would the neighbors say? There was the tiny thorn in her complacency. Public opinion in Hartsville had, unanimously in the past, condemned shiftless Jake Stetson, Charlotte Ann's unworthy husband, as an "ornery, no account, good for nothing." Some of the Hartsvillites had called him a "lazy loafer." Every man's tongue had been against him and these were but a few of the many judgments Jake's neighbors had offered, and Charlotte Ann, recalling them, wondered what they would say when they saw the splendid, rather ornate monument that was to be erected to his memory in the old hill graveyard, on that very day.

She had saved the money, dime by dime. Even spare pennies and nickels had not been despised; though she hardly acknowledged it to herself, the monument was to be a sort of atonement for all the harsh and cruel scoldings she had bestowed upon the idle and easy-going Jake when he had been with her. His shiftless ways had been such a thorn to her ambitious spirit. She arose now and going to a shelf took down and read, for perhaps the hundredth time, a well-thumbed circular. It was the horoscope of one born between July 10 and August 10, and among other prophecies was one that read "and he who is born between these dates will often manifest a strong disinclination to manual labor." Remorse was always keen within when she read this remark, and it was its compellant influence that had forced her repentant soul into the long struggle of scantiness and saving that had characterized and scrimped the past two years.

"He couldn't help it," she used to murmur; "being born in them dates, tiredness was in his very bones and me a calling him 'lazy' and 'no good' and 'ornery'."

It was in one of these remorseful spells that the idea of erecting a testimonial to the memory of the misguided martyr came to her. Jake had been lost in the waters of Bayberry Creek during the rush of its currents in an early thaw, and while he was trying to help Walt Andrus out of the stormy water into which he had slipped. "That shows," Charlotte Ann used to say to her children, "that shows that your pa was a hero, too, and deserves to be remembered just as much as any of them war fellows that try to kill their fellowbeings instead of rescuing them."

The children agreed. They had liked their happy-go-lucky father and little Jake had announced his intention of growing up to be a man "just like pa."

Charlotte Ann's maternal ambition being strong within her, she had winced at this announcement, but had consoled herself with thinking complacently that "try his best, he couldn't be just that kind of a man, seeing he was born in March and had a different horryscope."

They had never recovered Jake's body. It had probably been swept away, people said, down to the river, and perhaps to the ocean. The Canada Daily News had given him quite an obituary puff, ending with the usual quotation that greater love did not exist than that which "gave its life for its friend."

"Though Walt Andrus wan't no great friend, thought Charlotte Ann, "it was him that used to say Jake could do the least work in the most time of any man he ever seen or heard tell of." So the cheerful rays of the December sun fell upon a dazzlingly white and somewhat overgrown, rather than imposing monument, that set forth in decorated inscriptions the virtues, much magnified, of the departed Jake. It was a tall stone. It could be seen from far and near, and anyone approaching the cemetery from any direction, could not fail to be attracted by its glittering ornateness. In a wreath of roses at the top was the word, in immense letters, HERO. A little lower one could read, Jacob Stetson, Born 1875-Died 1910, and the quotation, "Greater love hath no man than this, that he give his life for his friend." Nor was this all. In a rose garlanded and covered base he that paused could read:

"Mark the Perfect Man"

"He just loved roses," said Charlotte Ann, proudly and tenderly, as she and her little brood stood reverently before the monument and admired its bountiful proportions and florid decorations "When it comes spring, we'll go into the woods and get some rose bushes and p'raps, p'raps, we may send off and get a few real, nice, pretty ones from some seed place. Your pa did like flowers so." "Pa liked most everything better'n work, didn't he," queried Ann.

"Now, Lottie Ann, you know your pa couldn't, being born tired, and we mustn't lay it against him," answered her mother.

More people visited the hill graveyard that December day than had been there before since the last Decoration celebration. The news spread and many of those who had wondered where all the money Charlotte Ann had earned, must have earned, by her constant, unremitting toil in the years since Jake passed away, knew now that here was the materialized solution of the problem. They nudged each other and smiled when they read the inscriptions, but some of them felt that they understood. Lost values have such a marvelous power of aggregation. Very few, in the face of such a proof of devotion, ventured to air their old and scornful opinions of the departed.

"After all, a woman knows her husband best," was the verdict of the jury that assembled each evening at the village store, "and after all, your man's your man, and where there is children its best to teach them to honor his memory," agreed the Ladies' Aid Society, although there were a few who, under their breath, wondered if the money the monument cost had not better have been spent in some new clothes for the rather scantily dressed offspring of the eulogized parent.

"You ought to have seen that little Lottie Ann look at Georgianna's new dress and sash this fall," said one dissenter. "Why, if eyes could have burned them up with longin', that child's would have done it.

And she told Georgianna, afterwards, that when her ma had saved up enough money to get something they all wanted, then she was going to have a pink dress, pink sash and stockings and some kid slippers. Poor child! Seems to me "'twould have been just as well to have cut down a little on that gravestone and have gotten the youngsters a few new duds." Then she muttered something doubtful, about anyone's being a "perfect man, leastways, any Stetson, living or dead." But Jake's last act had somewhat idealized him in his fellowmen's eyes, and most of them approved of Charlotte Ann's atoning memorial.

"USE EVERYTHING" IDEAS

These are the days when we are using our heads to plan best use for what we have, whether it's food or clothes and whether it's for our own family or some other family that needs help in this country or abroad.

Here is a good idea worked out for war times—not a new one, but good:

This housekeeper had in her bedding closet two thin old blankets made by her grandmother in the days before the Civil War. They were worn too thin for any but summer use, and the ends had been many times shortened and rebound. One was worn in several places. This worn one was used as a comfort pad, covered with satine and tied. It really makes a much warmer covering than one would think. The other, which showed no thin places, was dyed scarlet and made into a wonderfully comfy bathrobe.

An old black worsted shawl, also belonging to her grandmother, was brought forth from an ancient trunk. It was all wool, but had turned an ugly rusty color and the moths had punctured it in several places. This was re-dyed a good black and also made into a warm bathrobe. What did she do with the moth holes? There

is where she showed a streak of clear genius. Well, there weren't many of them and they were small and one corner was embroidered with black silk in a graceful pattern of hop leaves. So she took in hand a threadful of black embroidery silk, and where she found a very tiny hole she embroidered a tiny dot; where the hole was larger a little leaf, some with little curling tendrils from the stems. And she didn't spend much time and work on the embroidery either; it was all of the free-hand, impressionistic variety.

The effect was charming—Japanese, if you like. The old shawl had fringe all around and was six feet square. One end was cut off at the shoulders, leaving the shawl long enough to almost touch the floor. Some of the fullness was taken out at the shoulders, the rest gathered into a cape. The two ends of this strip—where the fringe turned the corners—were sewed together and shaped into a graceful collar, and two pieces from the middle — with fringe on one side — were used for the armholes cut in the cape. This made a really beautiful and distinguished looking lounging robe. And don't let anybody tell you we haven't good dyes any more, for we have. Where one carefully follows directions the results are entirely satisfactory.

Ideas Exchanged

Above is a small contribution from one woman's experience. Let us have some of yours. Any hints along the economy or conservation line will help many of us. The Cultivator will be glad to receive and publish them and for each published will pay a six months' or twelve months' extension of subscription.

KEEP STEP

Even in the most delicate dessert sugar economy can be practiced. Dark syrups are excellent in dark ice creams, honey is delicious in a frozen dessert and maple mousse is a favored delicacy.

Ice Cream

One quart thin cream, one tablespoon vanilla. Sweeten with three tablespoons sugar, one-half cup corn syrup, cane syrup, maple syrup or honey—or one-third cup light syrup, one-third cup honey or maple syrup—or two-thirds cup honey or maple syrup. For variations add two-thirds cup unsweetened peach pulp or other fruit or one and a half squares chocolate. Vanilla may be reduced one-half when maple syrup is used.

TALE OF A PIPE

It was quite the unusual thing for O'Connor to turn up late to his work and great was the surprise when he got in one morning ten minutes after time.

"Hello! This ain't usual!" said the foreman. "Did you miss the train?"

"No," answsred O'Connor, "but when I got to the car, begorrah, I found I had forgot my poipe. Home I rushed, and the missus says: 'Phwativer is to do?' 'Shure, I've forgot my poipe!' says I. 'Ye great loon,' says she, 'it's in your mouth!' And, bejabbers, so it was; but if she hadn't seen it I should have come without it, after all."

"Don't be discouraged. Faith is not a sentiment, but an act of will.

"Don't wish you were serving in some different line from that you are in. You are needed where you are.

"Don't criticise unless your criticism is constructive, and will help.

HOUSEKEEPING HINTS

A tablespoon of washing soda and a cup of vinegar poured down the sink will clean out the most stubborn of clogged pipes.

A piece of starched net or lace put under a hole in a lace curtain will be hardly visible when pressed smooth with a warm iron.

Grape leaves laid between layers of pickled cucumbers are as good (and more wholesome) as alum to retain the fresh, green color.

A root of horseradish, washed, scraped and put in the vinegar jar will keep the strength of the vinegar and add a pleasant pungent flavor.

When roasting meat add a few drops of vinegar to water used for basting to make the meat more tender.

Lemon juice mixed with salt will remove iron rust; wet the spot with the mixture and then hold over a vessel of hot water.

Use a snap clothes pin in the kitchen to help in turning pies and cakes in the oven.

An excellent remedy for mildew is to saturate an article with kerosene. Roll it up and let it stand for 24 hours and then wash in very hot soadsuds.

Fruit canned without sugar can be sweetened later by opening and reheating with sugar, sorghum, molasses, sugar cane syrup, white syrup, beet syrup, honey, or maple sugar.

Syrup made by reducing the juice of grapes, apples or pears to one-seventh of the original volume can be used in preserving, in canning or on the table to replace sugar to a great extent.

All fruits can be canned successfully without sugar for future jelly making, pie filling, and marmalades. Can in hot water, in their own juice, or the concentrated juice of apples, pears, or grapes.

Fresh fruits and green vegetables used freely in the diet will cut the demand for very sweet desserts.

Too much sugar is used on the American table, with a consequent loss of variety and piquancy of flavor. The nutty flavor of grains, the natural sweetness of cornbread, the distinctive flavor of fruits and the real coffee taste are too often smothered with sugar.

For dark cakes, and chocolate, coffee, or caramel ice cream use half and half sugar and molasses. For light cakes and light creams use half and half sugar and white syrup.

If fruit is allowed to become soft ripe on the trees it will acquire enough sugar on its own account to make it very palatable for canning without sugar. Where fruit is abundant, can ripe fruit in its own juice.

Serve very ripe, sweet peaches, pears and figs without the addition of sugar.

Drying fruit concentrates the sugar. The amount of sugar in some fruits is over 50 per cent. Dried fruit makes excellent jam, pickles, salads and ice cream, and when eaten as stewed fruits needs less sugar than fresh fruit.

Some get rich on small incomes; others die poor on large ones. And the difference is thrift.—Cottrell's.

"The spaces of land and sea are nothing where common purposes bind."—General Pershing.

There are many substitutes for wheat flour but no substitutes for peace.

BEET COFFEE FORBIDDEN IN OCCUPIED BELGIUM

A certain Teutonized Brussels paper advised its readers some time ago to use roasted beets among other things as a substitute for coffee, and then it was forced by the chicory division—a German invention—to recall that a decree of November 22, 1916, forbids private individuals to roast beets. The consumers may replace the latter, it said, by peas, grape pits, raspberry and blackberry seeds or by broad beans.

In the preparation of his "coffee," therefore, the inhabitant of invaded Belgium had a veritable embarrassment of riches to choose from among the various "ersatz" mentioned above, as well as numerous others.

LOST HEARING

Aunt Elvira rushed into the house hysterical. "I've lost my hearing!" she shouted.

"You have?" her frightened sister shouted back. "How do you know?"

"See that man out there playing that hand organ? Well, I can't hear a single note!" and Aunt Elvira wept afresh.

"That's a moving picture photographer at work," snapped her sister.

IRONCLAD KHAKI

(Twill Cloth)

Uncle Sam's Boys and Girls both wear garments of

Federal Farm Loans

Long Term **Low Rate**

All loans made on an amortization plan whereby the borrower repays the principal gradually with each interest payment.

Over three thousand satisfied borrowers in this district. It will pay you to investigate.

For information apply to the nearest National Farm Loan Association or write direct to.

Federal Land Bank of Berkeley

Berkeley, Cal.

Poultry for Profit

Read what Portland Oregonian has to say about this book and its author.

There is a woman down in California who knows more about poultry than all the men in the state, and this, too, for that matter. Her name is Jean A. Koethen, and she has written a book which is published by the California Cultivator of Los Angeles, and called "Poultry for Profit." It costs a dollar, postpaid, and it ought to be in the hands of every one who is keeping hens. This paper has reprinted a lot of matter written by Mrs. Koethen and, because of its quality, her book is recommended. Climatic conditions in these states are so nearly alike that what is good or bad for fowls there is the same here. The price of three dozen eggs will get the volume and its purchase is a good investment.—Portland Oregonian.

Send in $1.00 for book or $1.75 for book and California Cultivator.

Cultivator Publishing Co., 115 N. Bdwy., Los Angeles

Do Cultivator readers want the daily reports of the Bureau of Markets of the United States Department of Agriculture? If so fill out and send to the California Cultivator, 115½ North Broadway, Los Angeles, the following blank:

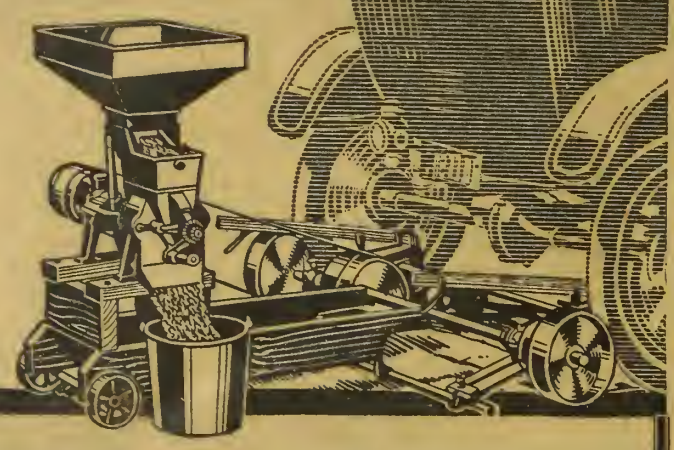
Farm Hand Wants Work



PUT YOUR AUTOMOBILE TO WORK running all your farm machinery. LAY Porta Power, an implement instantly attached to rear tires, delivers 5 to 8 H.P. at the belt.

LAY Porta Power

Costs much less than stationary engine, and far superior, because it takes the engine to the job, not the job to the engine. Thousands of enthusiastic farmer users. Quickly pays for itself in these times of labor scarcity and high prices for farm produce.

WRITE FOR FULL PARTICULARS

L. A. Young Industries, Inc.

Portable Power Implements for the Farm

DETROIT Dept. 108 MICHIGAN

Start Right to Grow More

NEVER before has there been so loud a call for more and still more grain, coming from all points of the compass. Never did you face so great an opportunity to help the world and yourself. Never were good tillage tools so necessary!

Good tillage implements—like **Deering** and **McCormick** disk harrows, peg and spring-tooth harrows, cultivators, etc.—make mellow, uniform seed beds, free from lumps, moisture-holding, allowing crops to grow to vigorous full yield. Real cultivation means more bushels and more dollars, and the dollars will pay for your investment.

Deering and **McCormick** disk harrows have these big, new improvements: The **Third Lever**, which controls the depth of penetration, regardless of soil condition. The **Exclusive Attachment of the Tandem**, which forces the tandem always to cut the ridges left by leading gangs, yet allows perfect flexibility at turns.

Remember the other tried and thoroughly-satisfactory features—built-in angle steel weight boxes; adjustable forecarriage; tall, hard oilers, convenient and protected; 4-wear wood bushings, improved scrapers, etc.

This year every added bushel counts doubly. Start right with right seed beds. See the local dealer and write us now about **Deering** and **McCormick** tillage tools.

Correct Lubrication for the "L"-Head Type Engine

This, the "L"-Head type of automobile engine, like all *internal combustion engines*, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. ZEROLENE fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude*

"Proven Entirely Satisfactory"

Only perfect satisfaction can account for the use of ZEROLENE by the majority of automobile owners.

Leading coast distributors also testify that it is "a most satisfactory motor oil."

They know from the records of their service departments—and we know from exhaustive tests—that Zerolene, correctly refined from selected California asphalt-base crude, gives perfect lubrication with least carbon deposit. Get our lubrication chart showing the correct consistency for your car.

At dealers everywhere and Standard Oil Service Stations.

STANDARD OIL COMPANY
(California)

ZEROLENE

The Standard Oil for Motor Cars

We Manufacture Levelers for Any Power From 6 Horses to a 75 H. P. Tractor

A Schmeiser Leveler

of the "Giant" Type

WILL WORK WONDERS ON YOUR FARM

Moving immense amounts of dirt daily, and working on ground too tough for horses and Fresnos to tackle, SCHMEISER POWER LAND LEVELERS are now being used with utmost success by a great many ranchers, large and small—also by contractors—saving their owners time, labor and money.

WE SEND THEM ON THREE DAYS' TRIAL

So extremely simple, a child could operate one, as a simple twist of the wrist raises and lowers the bucket or holds it stationary, as the case may require.

YOU SHOULD
send for our LATEST catalog J-600 which is full of interesting information on LABOR SAVING DEVICES and machines for moving the earth.

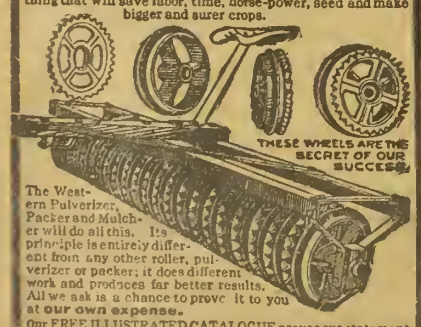
GOOD FARMING PAYS

Every farmer and land owner should be interested in something that will save labor, time, horse-power, seed and make bigger and surer crops.



The Western Pulverizer, Packer and Mulcher will do all this. Its principle is entirely different from any other roller, pulverizer or packer; it does different work and produces far better results. All we ask is a chance to prove it to you at our own expense.

Our FREE ILLUSTRATED CATALOGUE proves our statement and contains lots of valuable information on up-to-date and better farming and is worth its weight in gold to any farmer or land owner who doesn't think he knows it all. Send for it today.

WESTERN LAND ROLLER CO., Box 400 Hastings, Neb.
